HISTORY OF THE CHANGE OF THE SABBATH.

BY JAMES A. BEGG, GLASGOW.

Prefatory Remarks.

Under a deep sense of responsibility does the author enter upon the discharge of what he esteems an important duty. And, at the outset, he is desirous to prevent if possible all misconception of the nature of his meditated office. The idea he entertains, then, of what is needed, imposes upon him no necessity of attempting to furnish a new general Ecclesiastical History. That at which he aims is rather to present, as God may enable and afford opportunity, such of the results of his investigations as are calculated to elucidate the means and the manner by which was at first introduced, and afterwards consummated, the existing declension of the Church from the observance of the Seventh Day as the Christian Sabbath. As one of the means of recalling those who fear the Lord to a remembrance of the only sanctified and blessed day, by the correction of erroneous ideas that prevail as to the circumstances which led to such general departure from the commandment of the Lord, he has long contemplated seeking to bring more prominently into view, and into proper relation, some of the acknowledged facts which seem fitted to serve that purpose.

But, although satisfied of the truth of what he shall be called thus to present, the author is very conscious of the great imperfection chargeable upon the manner in which this will be effected. As qualifying for the proper accomplishment of the object sought, he claims few special advantages beyond a love of truth and a desire that his Saviour may be glorified. He has indeed turned up many a volume; but makes no pretension to having had access to peculiar sources of information. In such a case, especially, as an inquirer, he must be principally indebted for his information to the writings of those who have been in no degree favorable to the views here sought to be advanced, but who, led to a preference for the opposite, have themselves taken part in the apostacy bewailed, and whose connection in church communion, in most instances, had already induced them to regard with preference the first day of the week, as that which is to be sanctified. Yet, with all their prepossessions and imperfections, he conceives that patristic remains and early Ecclesiastical History exhibit with considerable clearness, when viewed from the Sabbath stand-point, the important facts which enable us to trace, with some degree of certainty, even the manner and progress of the deplored change. The conviction of this, on the part of the writer, has often occasioned the more his regret that full use has not been made of the materials so furnished, by brethren more competent for the task—a regret which he expresses the more decidedly from a consciousness that his efforts are very far from having exhausted the subject. He has not even done what, in other circumstances, and with more leisure than his present avocations admit, he might fairly have hoped to accomplish. For he has not been enabled to realize aright his own conception of what might be achieved. For no inconsiderable period has his attention been directed to this department of Sabbath inquiry; still, to very many of the works he could have wished to consult he has not had the means of access. Generally, indeed, where his object has been attained, it has been chiefly by a more minute examination, in its connection, of information supplied by authors accessible to those disposed perseveringly to seek to elicit the truth from that by which it is overlaid. While, therefore, expressing regret at the disadvantages under which his inquiries have been prosecuted, he may be allowed to remind the impartial reader that whatever evidence is derived from such sources as those already indicated, must necessarily be regarded with less suspicion than if they had been received through a medium more favorable to the Sabbath cause. References will generally be given, that the bearing of the evidence adduced may be the more easily scrutinized, and that the legitimacy of the conclusions drawn may be determined; and in cases where matters of fact founded upon are likely to be questioned, the source from which such special information is derived will be the more carefully intimated. Whether he have succeeded or not, the writer has been anxious in all cases for the accuracy of what is advanced; and any failure in this respect would occasion to himself lasting sorrow.

Esteeming it as incumbent upon all who believe, to use whatever gifts they may have received in earnestly coming to the help of the Lord, it is the author's desire, from time to time, and according to the ability divinely vouchsafed, to contribute to the maintenance of His Sabbath cause. Either to aid or to encourage others capable of higher efforts to better results in the work of the same Lord and in the same field, will yield him true happiness; and he trusts that any such will not be less disposed to do their part by supplying what he may have omitted that is needful to be known, or by correcting where he may have erred.

The nature of the work, and the object which the writer has in view, will necessarily bring before the reader more of the failings than of the faith of some who on many accounts are worthy of being held in Christian esteem and grateful remembrance. But, while we cannot but grieve over the obvious aberrations even of those in whom may have been, in no inconsiderable measure, the image of Christ, and while we use as beacons their blemishes, we must not be unmindful of the peculiar temptations under which they may have fallen. And, especially, in charging upon the Church the guilt of forsaking one of the commandments of the Lord, the author will not be satisfied with pointing to the fact, or with exhibiting the evidence thereof; it will be his endeavor to trace the evil to its source, often unimportant as at first it might be deemed. For History is read to little purpose, if it be regarded only as a record of the doings of those of the days gone by, without seeking to turn the lessons thus afforded to present and personal account. It is therefore with the hope and desire that we ourselves may be taught more effectually the necessity of watchfulness to prevent *the beginnings* of sin, as well as instantly to remove whatever of it is perceived to have found a place unobserved, and in no spirit of imagined superiority, that we shall proceed to the painful investigation.

Glasgow, April 14th, 1354.

UNIVERSAL PEACE—NO. 1.

BY C. ROLLIN BURDICK.

War and its Consequences.

To aid his fellow men in physical, moral, and intellectual development, is the true province of the writer of the nineteenth century. Light is streaming from above and all around, teaching men a holier and better way than has been pursued, almost universally, by nations in the adjustment of their political difficulties. To collect and condense, as in a sun-glass, some of these rays of light, and to bring them to bear upon a part of the human race, is the object of this essay. This light comes up from past history, gle[illegible] the annals of present times, pours forth its full beams from the constitution of man and the economy of human society, and shines with still brighter rays from the pages of revelation. Peace and good will to men is written in pencilings of this glorious light, on the broad canvas of God's dispensations to man, both spiritual and temporal. It only remains for men to read it there, and to make a practical application of it, and the necessities of war will soon cease.

In view of the evils of war, it is truly painful to contemplate the fact that it has been the aim of many, and the result of still more of the works of both ancient and modern ~~writers, in the language of the poet~~ Virgil, "To arouse warriors with the brazen trumpet, and kindle up the battle with its blast." But such is not my ambition. I enter upon a more pleasing and glorious theme—the contemplation of peace—a hush from the din and consummation of war, after its clangor has rung throughout the world for so many centuries. 'Tis true, that the pictures of war which I shall present will be revolting, but we must look the evil in the face before we can cure it.

Man has been prone to blood and carnage, ever since Cain bathed his hands in fraternal blood. The world's history presents us with little less than one continual battle-field, from the beginning until the present day—contending parties fighting for the mastery—clan exterminating clan—petty state despoiling petty state—nations annihilating nations—empires swallowing up empires—cities sacked, and God's beautiful earth transformed into a gloomy and sterile desert, by the folly and wickedness of man. To present a full and complete history of war and its atrocities, would be little less than giving a full and complete history of man; and such a history would fill many hundred tomes. Therefore only a bird's-eye view can be presented in the space allotted to this subject.

Before the flood rolled its waters over the globe, and buried humanity in one common watery grave, we find man engaged in war and depredation, murder and carnage—"violence filling the earth." Indeed, this disposition was one of the grand causes of man's destruction by the deluge. But this tremendous outburst of indignation did not cure this deep-seated propensity. As soon as man gained a little power, he began to use it in war and aggression on those that were weaker. Plunder, and a thirst for military glory, have ever been the chief causes of war—the active agents in pouring out enough blood to submerge the whole of the American Union. It is estimated, on good authority, that fourteen thousand millions of human beings have perished on the battle-field—enough to people fourteen worlds like ours with as many as now dwell upon its surface. Add to these the numbers that have perished by famine and pestilence, the legitimate sequents of war, and we swell the aggregate enormously. We may safely say, that the suffering and misery of humanity have been increased four-fold by this curse of war. When we take into consideration that all the mighty nations and empires that rose in ancient times, and many of modern times, gained their power by aggressive war, held it by the same agency, and finally were blotted out of the catalogue of nations by war waged by more successful rivals, we are irresistibly led to conclude that the above estimates, to say the least, are not too great. As further proof of our assertions, we will enter more minutely, and at some length, into statistics, &c., illustrating the evils of war.

We will first notice the Assyrian Empire. Nimrod, its founder, an ambitious aspirant after power and military renown, was the first after the deluge to rear the bloody standard of war, and wave it in triumph over the fallen carcasses of his fellow men. In his steps have followed troops of hungry jackals, foul hyenas, and blood-thirsty tigers in human form, driving the ploughshare of destruction over the ruins of fallen cities, towns, and once fruitful fields. He, first inflamed by his success against the wild beasts, turned his prowess against humanity, founded the empire of Babylon and its dependencies, entrenched himself on the plain of Shimar, a plain of inexhaustible fertility, and became the terror of surrounding nations. Babylon and Nineveh, girt about by their impregnable walls, and vastly enriched by their incalculable resources, held undisputed sway in the East for many decades. They were almost constantly engaged in war. Armies after armies were poured out from their gates, bearing desolation and death wherever they pursued their successful course, and devoting themselves to slaughter wherever they were unsuccessful. As an instance of the scale of their warfare, and the number engaged in some of their wars, we have only to revert to the account given in sacred writ, where the angel of death shook his wings over the hosts of Senacherib, encamped before Jerusalem, and 270,000 men lay dead upon the plain the next morning. The hundreds of thousands of besiegers who fell under the walls of these cities before their capture, come in also for their share in the ever accumulating testimony against war. Babylon and Nineveh, notwithstanding their great strength, were destined to fall, and millions were slaughtered during the numerous captures and re-captures which they experienced, and at their final overthrow. After Babylon had been subdued by the Medes and Persians, it remained a long time in their hands, but it finally rebelled. Darius sat down before its walls, to reduce its inhabitants to submission. It had already laid in provisions enough to enable the people to endure a twenty years siege. But in their timidity they thought it best to take measures to meet the exigencies of a siege protracted longer. They barbarously decreed that all the women, except the mother and best beloved of each family, should be put to death. This unparalleled decree was executed. The running blood of hundreds of thousands of helpless women, shed by the hands of husbands, brothers, and fathers, must have presented a scene too appalling to look at, or even to contemplate at this late period. Yet such scenes are but the legitimate progeny of war. It blunts all the finer feelings of human nature, and leaves the affections but a gloomy and sterile desert.

Darius having failed in every attempt to enter Babylon, finally brought about by stratagem what he could not effect by open force of arms. He concerted a plan with one Zophyrus, a Persian noble, and after having flogged him and cut off his ears and nose, he sent him to the Babylonians as a deserter, he showing his mutilated condition as the reason of his desertion. He gained their confidence by several successful sallies against the Persians, and he was finally entrusted with the guardianship of the walls, which enabled him to open the gates to Darius. This event shows what spirits are nourished by war. Zophyrus was a treacherous deceiver, and Darius was a coolly calculating murderer; for he had pre-arranged what men should fall in the sallies of Zophyrus, and he thus murdered seven thousand of his own men.

At the sack and conflagration of Selencia, by the Romans, three hundred thousand victims were sacrificed to the demon of war. Blood, blood, human blood, is the cry of this demon continually. Devastation, ruin, utter overthrow, are the food upon which it feeds. Babylon and Nineveh, with their temples and palaces and lofty domes are now leveled in dust. Instead of the noise and busy hum of swarming people, the shriek of the owl is heard in her desolate habitations. The last dying wail of murdered men and women has gone up and died away into a sullen calm. Death, launched from their high walls, no more falls upon besieging foes, and the snorting war-horse and thundering war-chariot no more dash out from their brazen gates.

Among the many weak worms who have cajoled themselves into the belief that they were something more than mortal, and consequently had claimed the prerogative to rob and murder humanity, was Xerxes, the proudest and weakest man that ever stood up as an inglorious way-mark of the past. Had we not been furnished with numerous instances of similar men, we could hardly persuade ourselves that such a man could live—a man so utterly forgetful of everything but self—a man who esteemed the lives of his men of no more value than the lives of the dogs that followed his camp, only so far as they ministered to his ambition. Yet such wretches have been the means of nearly all the bloody wars that have retarded the progress of humanity. They have grasped the sabre, and plunged it into the hearts of men. What but the mad ambition of the Czar of Russia, has involved Europe in a war which threatens to be universal, and incalculably serious in its consequences? Xerxes collected the most numerous army that ever sallied forth to battle, with the intention of annihilating Greece, which did not number, in men, women, and children, more than his retinue. His land and sea forces numbered more than three million men, and in the wake of this numerous host there followed women and sutlers enough to increase the aggregate to more than five millions. He led his army across the Hellespont—sent them to battle; nine tenths of them were destroyed, and the remnant, unsuccessful, retreated with their inglorious monarch, with great precipitation. Such was the fate of this expedition. The cost in blood and treasure cannot be estimated. Five millions engaged in destructive war for two years must have consumed incalculable treasure.

Shiloh, N. J., June 4, 1854.

BIBLE ANECDOTE.

I had a striking example of the power of the Bible on the mind of an unbeliever, who was a determined opposer of the truth.

At the house of a nobleman, where a large party had assembled, I conversed with a captain of the navy, and a surgeon; the conversation was extremely painful to me, as they argued and cavilled angrily. I answered them from the Bible which I held in my hand. Our host having listened to us for some time, said, "It appears to me necessary, before answering these gentlemen from the Bible, that you should declare to them what it really is, because I am aware that your antagonists are not convinced of the divinity of this book." "What! my Lord," replied I, "if I were to draw the captain's sword, and wound him therewith, would it be requisite to make him sensible that he was wounded, that this gentleman (the surgeon) should testify—1st. That the sword is of good steel; 2d. That the blade has a keen edge; 3d. That the muscles and veins being cut, this gentleman is obliged to feel? Is not the proof of a sword being a sword, demonstrated by its point and edge? And think you that the Everlasting God, who has spoken this word, which he declares to be sharper than any two-edged sword, has not given to it a sufficient efficacy to strike and penetrate the conscience of one of his creatures, a man, a sinner? No, gentlemen," continued I firmly, (several of the rest of the company were now around us, and listened with apparent interest)—"no, I do not believe that the truths contained in this holy volume require, that to be recognized as such, man must affix the seal of his approbation, or that the true and living light cannot enlighten the understanding of a mortal until the fœtid and vascillating flame of the lamp of reason is united thereto."

Upon this the captain withdrew to the recess of the window; whilst I answered several questions concerning faith and its consequent peace. The captain appeared agitated; and after some minutes had elapsed, he returned and said to me with visible emotion:

"Pray tell me, if the habitual joy and security which you now possess are results of the principles which you hold?"

"Sir," replied I, affectionately, "whenever I expose myself to the rays of the sun, I receive not only light but heat therefrom. In like manner, whenever I read or meditate on the word of truth and life, I experience the same effect on my soul, because it is impossible to contemplate by faith, Jesus the Son of the Father, and the brightness of his glory, without having a deep sense of the vivifying light which emanates from and beams in Him."

DON'T PAY YOUR MINISTER.

Don't pay your minister. I don't now, but I used to. Learn a lesson of me, all ye generous parishioners. I paid and overpaid my minister once, and I can't begin to tell what he came to. A rusty and an humble heart always go together. Brethren, you never knew it to fail. Mean clothes, an unfilled pocket, a failing heart, and the graces of a lowly mind, are inseparable; and if you want sermons tried with fire, if you hate discourses full of the pride of great thoughts, keep your minister low; but if you love him, and can't stand it without paying him, why, then pay him; but O, I beseech you, be careful *how* you do it! Let that salary come in prudent little dribblets, and don't say anything about it beforehand; if you do, your minister will know what a day or a week will bring forth, and he'll thank God and take courage before the time. Yes, he'll go a little ahead of his blessings. And his wife, too, happy soul, will give up her economy, and where then will be that beautiful embellishment of the pastor's home? If you hint that you have any idea of paying up, ten chances to one, she'll forget to make new tea of the old grounds. And that bonnet of hers, that has stood the storms of seven winters, and finally become cocked, will be walked up garret. And the little feet at the parsonage will walk into church all covered with gay morocco, and that dear little baby, three years old, will hold up her feet and look at her little red shoes when father is preaching. So, don't let father and mother, or any of the children, get an inkling of the step you are about to take. If your pale, toiling minister looks as if he'd like his salary, anticipate his petition, and tell him there is nothing like the clerical profession to abase pride and exalt humanity. Then, for fear that flesh and spirit *will* fail, and give out altogether in the operation, cheer him up a little by paying him a little.

[National Era.

HE DOETH ALL THINGS WELL.

I remember how I loved her,
When a little guileless child,
As I saw her in the cradle,
And she looked on me and smiled;
My cup of happiness was full,
My joy no words can tell,
And I blessed the glorious Giver,
Who doeth all things well.

Months passed—the bud of promise
Was unfolding every hour;
I thought that earth had never smiled
Upon a fairer flower;
So beautiful, it well might grace
The bower where angels dwell,
And waft its fragrance to His throne,
Who doeth all things well.

Years fled—that little sister
Was dear as life to me,
And woke in my unconscious heart
A wild idolatry!
I worshiped at an early shrine,
Lured by some magic spell,
Forgetful of the praise of Him,
Who doeth all things well.

She was the lovely day-star
That round my pathway shone,
Amid this gloomy vale of tears
Through which I journeyed on!
Its radiance had obscured the light
Which round his throne doth dwell,
And wander far away from Him,
Who doeth all things well.

That star went down in sorrow!
Yet it shineth sweetly now,
In the bright and dazzling coronet
That decks the Saviour's brow;
She bowed to the Destroyer,
Whose shafts none may repel;
But we know, for God has told us,
He doeth all things well.

I remember well my sorrow
As I stood beside her bed,
And the deep, heartfelt anguish,
When they told me she was dead;
And oh! that cup of bitterness!—
Let not thy heart rebel—
He gave—He took—He can restore—
He doeth all things well.

From the Christian Index.

PREACHING NEVER IN VAIN.

Ephrata is an irregular village, built and occupied by a society of Seventh-day German Baptists, on the Cocalico creek, in Lancaster county, Pennsylvania. It contains several very ancient and singular buildings, the principal of which are The Brothers' House and The Sister's House. These two houses are very large, and are four stories high, each containing a chapel.

In 1831 this village, on the invitation of a medical gentleman, then residing in its vicinity, was visited by two ministers of the gospel from Philadelphia, who were traveling in the interior of the State, with a view to health. One of these ministers ceased from his labors a few years after. The survivor has received the following letter, which he offers for publication, with the hope that it may be useful to some of his brethren in the ministry, who may be called to labor when worn with fatigue and drooping in spirits. It may encourage them not to be weary in well-doing, because in due season they shall reap, if they faint not.

Bordentown, N. J, April 23d, 1854.

My Dear Sir,—For a number of years past, I have intended to communicate an interesting incident to you, with which you yourself were personally connected, although it is very probable that you remain ignorant of any agency in it to this day. So it may be in innumerable instances with the hard-working, self-sacrificing ministers of the gospel, who toil on until their strength is spent in the vineyard of the Lord, and only become acquainted with the results of their labors, to win souls, when the crown of their jewels is presented to them in the bright courts of the heavenly Canaan.

Recall the visit you and dear brother J. made to us at Ephrata in the summer of 1831. On that occasion I had an appointment for you both, to preach in the old "Saal" attached to the "Sisters' House," without having consulted either of you. When we were about to go to the meeting, you may recollect, that you made the following remark: "It would be much more agreeable to me to spend the evening in the quiet of the family than preach to a people, (Germans,) few of whom will be able to understand us." Bro. J. replied: "Bro. D., *a Gospel Sermon is never preached in vain.* Let us try and be faithful; and although we may never hear of any good from our effort, the last day will reveal it; *the Gospel is never preached in vain.*"

Towards evening on the day you arrived, and just before you addressed the small flock of my German brethren and neighbors, Benjamin Konigmacher, the Deacon of the Church at Ephrata, who was much annoyed, constantly, by one of his unregenerate tenants, (an *infidel,* and withal an exceedingly headstrong, troublesome man, in all his dealings,) called on him purposely to urge him to attend the meeting.

"It's for no use, Benjamin," Kurtz replied, sneeringly, "it will be the same old song over again."

"We don't know that until we hear them," the Deacon retorted, "they are ministers from Philadelphia, and they may give us some fresh ideas to think about and to talk about. At any rate, it will be a satisfaction *to me* if you attend. I want some persons there who can understand English."

"Well, well, Benjamin, I'll go, *to please you,*" Kurtz answered.

Kurtz was as good as his word, but sat behind the door, to be as much out of sight of the people as possible; yet showed his contempt for the service by keeping his hat on during all the exercises.

Next morning the deacon met him, and accosted him kindly: "Well, neighbor Kurtz, what do you think of *that preaching?*"

"I don't know what to think of it," he muttered slowly.

"I could not expect more from you, for you were asleep all the time," replied the deacon.

"Asleep, Benjamin, asleep!" exclaimed Kurtz, "*no I wasn't.*"

"Why," retorted the deacon, "you were *nodding* all the while Mr. D. was preaching, and all near you saw it."

"Did I? If I did," he added, "it was not because I was asleep, *nor sleepy,* neither."

"What then?" interrogated the deacon.

"Why—why—Benjamin," he reluctantly resumed, "if I *nodded,* I was unconscious of it; but *I could not help it*—could not help saying to myself, *It is the truth*—but *I didn't mean to show it.*"

Late in the fall of 1834, I returned to Ephrata on a visit, and on entering Benjamin Konigmacher's house, I found Kurtz there arranging some old standing business affairs, with the deacon's son—some distracted accounts they had always differed about whenever they attempted to settle them. Now all was mildness and gentleness. So great a contrast in a man's manner and disposition, I have never witnessed. Instead of blustering and wrangling, whenever they had an item before them, on which any difference of opinion had, heretofore, been entertained, Kurtz was as yielding as a lamb, and uniformly replied to all such matters: "*Make it as you think right; I do not wish any thing that I cannot take with me into eternity.*"

After he left the room, I asked, in amazement, "What is the meaning of all this, in old Kurtz?" I was informed that from the time you preached, on that occasion, at Ephrata, he became a thoughtful, a changed man; and about one year afterward, was baptized and united himself with the First-day German Baptists. He was then, (1834,) as exemplary a man as might be found, in the neighborhood, and maintained a consistent walk during the remainder of his days; which terminated some years since.

We left Ephrata soon after your visit to us; but I acknowledge that I ought to have apprized you of the above circumstance, soon after I became acquainted with the foregoing facts. I now pen it to relieve myself from the promptings of a duty, which has frequently pressed on my mind, to encourage you, and any other of your ministering brethren to whom you may show it, *to sow the good seed, whenever an opportunity presents,* even when enfeebled in health, and weary from the fatigues of travel, assured of the truth of good Bro. J.'s position, that *no gospel sermon is ever preached in vain—the word shall not return void.*

Very truly, yours, &c. W. M. F.

A BEAUTIFUL INCIDENT.

We witnessed a beautiful sight yesterday. It was this. Away from the crowd, and seated upon the plank which makes the dock, sat a matronly German dame, and around her were six small children. The mother was one of that class of humane looking females into whose mild eyes it is refreshing to look, for there you see kindness and a loving, meek, lowly expression. She was poorly clad, her clothes being of the coarse, stout texture which emigrants, and especially the poorer class, are compelled to wear. Her children, for such we took them to be, sat around her, evidently expecting something, for ever and anon they would turn their heads towards the street, as if somebody was to return to them. Ah! see yon sturdy German, with his blue smock and heavy boots. Notice the grateful smile that plays across his sunburnt features, and notice the loaf of bread which he bears in his hand. Surely, he is the father of the children, and 'tis the bread which they have been expecting. Our conjecture was true, for the man seats himself beside the female, and the children huddle around their parents in eager haste, while the younger and more impatient lift their tiny hands in supplication for the staff of life. 'Tis a pretty sight! But look again, the father has spoken, and see the loaf is laid aside, the sturdy sire, the matronly dame and the children all are on their bended knees with uplifted hands addressing the throne of grace, offering up their blessings to the giver of all good for his care and goodness. It was indeed a sublime sight. There in the open air, there among the busy world, among the noise, bustle and confusion of business, this devout family of strangers were offering up their prayers to a beneficent God, and returning blessings for the many favors received from His hands. It was a scene that would fill any one with awe.

[Albany Transcript.

Praying to Saints.—Adam Clark thus comments on the account of the rich man calling upon Abraham: "He cried and said, Father Abraham have mercy on me," &c. There was a time when he might have prayed to the God of Abraham, and have found mercy; now he dares not approach that God whom in his lifetime he had neglected, and he addresses a creature who has neither the power nor authority to bless. This is the only instance in the Bible of praying to saints; and to the confusion of the false Popish doctrine which states it to be necessary and available, let it forever be remembered, that it was only practiced by a damned soul, and then without any success."

Worship of the Heavenly Bodies.—Mr. Wood says, that when traveling in the deserts, he found himself so struck with the beauty of the starry firmament, that he could hardly suppress a notion that these bright objects were animated beings of some high order, and were shedding important influence on this earth. From this effect upon himself, he was sure that in all times the minds of men in those countries must have had a tendency to that species of superstition.

THE SLAVERY QUESTION.

It is a significant fact, that the project of dividing the American Union is seriously talked of by multitudes, who, a few years ago, derided the thought. We do not, for ourselves, suppose that such a thing will take place; but the fact that it is now a topic of discussion among so many northern people, who are not, like their southern confederates, in the habit of bullying their neighbors with threats which they do not mean to execute, is one of the note-worthy features of the present time. It shows that the moral sentiment of the North, in regard to slavery, is fast acquiring a strength which will not longer be trifled with. It shows that the time is near, when the government which, above all others, claims to be the home of freedom, must make good its claim, or consent to take its place among those which are great engines of oppression.

In the Old World, the struggle between freedom and slavery is approaching a crisis. In what is called the Eastern Question is involved the great conflict between oppressed humanity on the one hand, and the arrogations of despotism on the other. And while it would seem, that the time had well nigh come for God to destroy them that have destroyed the earth, it would also seem, that God is determined that this government shall continue to answer the end for which He designed it, in giving encouragement, in the way of sympathy and example, to those who, in the coming struggle, shall fight for the inalienable rights of man. Southern slavery has, hitherto, neutralized the influence of our government in this respect, to a very great extent; and with such an abomination still cleaving to us, our example would be little better than a burlesque, and our pretended sympathy for the oppressed masses of the Old World but mockery.

Simultaneously, therefore, with the gathering of the storm in the Old World, the crisis approaches here. Slavery becomes more rampant, more exacting, more outrageously oppressive; but this must needs be, that the true nature of the system may become manifest. It has been looked upon as an evil, but not as so intrinsically wrong but what it might be tolerated to a certain extent. Hence, "compromises" have been resorted to, in the hope that, stripped of its worst features, what remained of it would be innocuous. But its recent exactions have demonstrated that its name is *total depravity*. The system is abomination throughout, embodying not a single atom of good. It admits of no purification; the only right way of dealing with it, is to destroy it entirely. It was necessary that this, its true nature, be made manifest; otherwise, we had gone on compromising with iniquity, till the theory of equality so nobly developed in our Declaration of Independence had been forgotten, and the benefit of it lost to mankind.

We are not discouraged, therefore, at the present aspect of things. The encroachments of the Slave-Power demand vigilance on the part of the friends of freedom, but not despondency. They are but the legitimate result of concessions heretofore made, and the plain lesson which they teach is, that Slavery and Freedom cannot live together. It is not because Slavery feels secure in its power, that it fills the air with such roarings, but rather because it has an instinctive dread of the gathering strength of Freedom. The cloud that was no bigger than a man's hand, is fast filling all the heavens, and Slavery howls in fearful apprehension of the destruction which awaits it.

The final struggle must come, however. Convulsions may come with it, and it is even possible that the Union may be sundered. But man's right to himself and to the avails of his labor, and his right to worship God, free and unrestrained, must be vindicated. God has no attribute that can espouse the wrong side of this controversy. The grant of dominion over the earth, to subdue it, and thereby accumulate wealth, must be made good to the black as well as to the white man. The oppression which robs the black man of this dominion, and vests it wholly in the white, is such direct and positive interference with God's government, that it cannot always continue. A system which ignores, nay, denies, the black man's personal responsibility, and assumes to determine to what extent he may consecrate himself to his Maker, can be founded only in the wisdom that is earthly, sensual, and devilish.

The right must triumph in this struggle. The theory of government developed by our political forefathers was the dawning of day upon oppressed humanity. That day shall not turn to darkness again. The crushed masses of the old world, struggling for deliverance, must not be left to look upon American liberty as a mere farce, and conclude that freedom is but an abstraction, never to be practically realized. They must not be left under the dejecting idea, that oppression, in some form, is the inevitable destiny of mankind. A refutation of that idea must be furnished them in the disenthralled condition of every one who treads American soil. And we cherish the conviction, that the aroused moral sentiment of the North will not slumber, till the last vestige of slavery is banished from our land.

T. B. B.

THE CENTRAL ASSOCIATION.

The 19th annual meeting of the Seventh-day Baptist Central Association was held with the 2d Brookfield Church, commencing on Fifth-day, June 8th, and closing in the afternoon of the following First day. The delegation was large, and represented nearly every church connected with the body. The Eastern Association was represented by S. S. Griswold, the Western by N. V. Hull, and the North-Western by A. W. Coon; besides whom there were present from a distance several brethren not delegates.

The Introductory Discourse, which occupied the morning of Fifth-day, was preached by James R. Irish, from Galatians 2: 19, 20.

James R. Irish was chosen Moderator, and J. B. Wells and D. P. Curtis, Recording Secretaries.

The afternoon of Fifth-day was taken up in hearing the letters of the churches, and the reports of the Executive Committee and other officers and committees appointed last year. These reports were all presented in writing, and gave a very clear and encouraging view of the manner in which the officers had fulfilled their several trusts.

The Executive Committee reported, that under their direction, the 2d Verona Church had been supplied with preaching by Eld. Christopher Chester a part of the year; that Eld. James Summerbell had visited the churches at Verona, Watson, South Richland, and Pinckney; that Eld. Joshua Clarke had visited the churches at Preston, Otselic, and Newport; and that Eld. Lebbeus M. Cottrell had been employed to labor in Preston, Otselic, 2d Verona, and Newport.

Reports in detail were also presented by each of the above-named brethren.

Eld. Chester's report says: "I have supplied the 2d Verona church with preaching once a week from the first of June to the first of October, 1853, and once in two weeks from that time to the first of April, 1854. During my labors with the church, there has been generally a good state of feeling. One person has been added by letter, and others have expressed a desire to receive baptism and unite with the church."

Eld. Summerbell reported that on his visit to Richland he found but one family in which the Sabbath was observed. "Some have moved to the West; and others, finding it inconvenient to observe the Sabbath, have fallen in with the multitude to keep the Sunday." Regular meetings have not been sustained for more than two years. There is now little or no prospect of sustaining a church at Richland, nor is the field considered particularly inviting for missionary labor. Brethren residing there were advised to remove to the neighborhood of some of our societies, where they can with less difficulty keep the Sabbath. At Pinckney, Bro. Summerbell found only five or six professors of religion who keep the Sabbath; meetings have been held only occasionally for two or three years; the former preacher and several members have moved West, and other members have joined the Independent Church at Adams Center. As a missionary field, this place is considered about like Richland.

Eld. Joshua Clarke visited the church at Preston; found that though meetings for preaching were sustained, the Lord's Supper had been administered only once in several years, and that the church was in a discouraged state; but he visited from house to house, appointed a covenant meeting, which was tolerably well attended; administered baptism and the Lord's Supper, and had a pleasant and profitable season with the church. He then went to Otselic, where he visited from house to house, and administered the Lord's Supper. He was absent on this tour 11 days, traveled 100 miles, made 26 family visits, conversed with 75 persons on the subject of religion, attended one covenant meeting, preached two sermons, and administered baptism to one caudidate.

Eld. Lebbeus M. Cottrell had preached at Otselic three times, and visited twelve families. At Preston he had spent four Sabbaths, preached six times, and visited twenty-one families. At 2d Verona he visited seventeen families, and preached three discourses. At Newport he preached twice and visited eight families. About two months had been occupied in these labors. One result of his visit to these societies was a conviction that the greatest hindrance to their prosperity is the want of discipline. The ordinances had not been enjoyed by them regularly for several years.

—On Sixth-day morning, the first business was the appointment of standing officers for the coming year. John Maxson of DeRuyter was appointed Treasurer; James C. Rogers of DeRuyter, Corresponding Secretary; Willard D. Wilcox, Eli S. Colgrove, and Russell G. Burdick, Executive Committee; James Summerbell delegate to the Western Association, and Joshua Clarke delegate to the Eastern Association.

Reports were then presented by the Committees on the State of Religion, on Education, and on Publications. The Business Committee also presented a report embodying a series of resolutions for discussion. One resolution protested against Secret Societies, and exhorted members of the churches to keep aloof from them; another expressed regret on account of the passage of the Nebraska Bill, and advised Christians to abandon the political parties which favor slavery, and act only with such as favor freedom; another urged Family Prayer; another approved the plan of a denominational building in New York, &c. These reports and resolutions we shall probably print in full.

The afternoon of Sixth-day was taken up in considering the reports of standing and special committees; one of which related to the difficulties existing among Sabbath-keepers residing in Jefferson County, N. Y. The letters of the 1st, 2d, and 3d Brookfield and Lincklaen churches called attention to those difficulties, and requested the Association, if possible, to do something for their settlement. The subject was referred to a special committee, which advised the appointment of a council to visit Jefferson County, with a view of aiding in a settlement, and that the churches and brethren there be requested to cooperate. A council was appointed, consisting of T. B. Brown, Joseph Potter of Hopkinton, George Greenman, T. E. Babcock, Leman Andrus, John Maxson of DeRuyter, and J. M. Allen. The Corresponding Secretary was instructed to communicate with the churches, and on receiving assurance of their co-operation, to notify a meeting of the council on the first Fourth-day in January, 1855. It was also voted, that the day preceding be observed throughout the Association as a day of fasting and prayer.

On First-day there were two sessions for business, which were mostly taken up in discussing the resolutions presented by the Business Committee.

The Association adjourned near evening of First day, to meet again at DeRuyter on Fifth-day preceding the second Sabbath in June, 1855. James Summerbell to preach the introductory discourse; Elias Burdick, alternate.

Report on the State of Religion.

Your Committee on the State of Religion would respectfully submit the following report:

The letters from the churches, compared with those of former years, evince that we are standing still, rather than advancing in religion. Our last year's report would well describe the condition in which the present year finds us, with the exception, that while we are standing still, time is rolling on, the wicked are growing stronger in sin, and the powers of darkness appear to be steadily gaining ground. "While men slept, the enemy came and sowed tares among the wheat, and went his way." We have great reason to fear, that the wo pronounced on those that are at ease in Zion, is coming upon us. How far family worship, prayer and covenant-meetings are sustained, we have no means of knowing; but we fear these well-springs of love, union, and spiritual prosperity, are sadly neglectd among the churches. "A tree is known by its fruits." To bear no fruit, is to be a bad tree. We earnestly entreat our churches to apply the great moral lever of prayer in their families and among their neighbors; then, at our next annual gathering, the good news will roll in from every direction, that the moral world, so long upside down, is being turned right, sinners are flocking to the Saviour, and churches being built up and strengthened. "Men ought always to pray, and not to faint." We entreat our churches to review their walk during the past year, and *now* begin, in the strength of God, to "go forward." We are glad that we can refer to the letters from some of our churches as an evidence that there is yet faith on the earth, and that God is yet on the giving hand. Some report revivals and refreshings; these cheer our hearts, like the gushing spring in the desert the heart of the weary traveler. It is time for us to awake out of sleep, and with renewed energy and zeal engage with our whole hearts in the work of God in the salvation of the perishing. Then shall our churches be reünited and strong. Like Mount Zion, they shall never be removed. May we act upon the principle, that for us not to make advancement is in reality to go backward.

Report on Publications.

The Committee on Publications have had under consideration the subject referred to them, and submit the following report:

The Committee considers the interests of the denomination so far identified with the operations of the Publishing Society, that its progress and extension will be much influenced by the support and encouragement the Society receives from the churches and individuals composing the Seventh-day Baptist denomination. The *Sabbath Recorder*, as a weekly publication devoted to the best interests of the churches, is well worthy of an extensive patronage, and no family in the denomination should be without it. We as a Committee consider the Sabbath Tracts published by the Tract Society as forming the best Sabbath Manual extant, and would recommend them, particularly in their volume form, as a most important auxiliary to the library of every family in our country, for the perusal of their children and friends; and we look forward in hope that the contributions to this department of religious benevolence will soon enable the Society to increase the extent and variety of their Tracts, until they will embrace every important religious interest. We esteem the *Seventh-day Baptist Memorial* as a very valuable quarterly. It is rescuing from oblivion a great amount of historical matter, which will increase in value as time advances; and we would recommend this publication to all the members of the Association, as worthy of their patronage. The Committee would commend to parents, especially, for the use of their children, and young persons in their families, the *Sabbath-School Visitor*, as well calculated to promote the moral and religious interests of the young. And in view of the successful and enlarged operations of the Publishing Society, we as a Committee would commend to the favorable notice and liberal patronage of the churches and members of the churches of the Association, the contemplated publishing house in the city of New York.

Rev. Messrs. Fletcher and Poore, Independent Ministers, who are about quitting Manchester, England, in order to arrange and superintend the missions in South Australia, intend to carry with them an iron chapel, fitted with every accommodation for worship, as well as several houses. The chapel will cost £1,000.

LETTERS FROM PALESTINE—NO. 1.

Getting ready for Sea—High-st. Church, Charlestown—The Parting—Life on the Ocean—Sea-sickness—Our Home.

BARK ROSE POOL, Second-day,
4 P. M., 4th month 24, 1854.

We are now about fifty miles south-east of the island of Pantalaria, and 90 miles from Malta, in the Mediterranean, or Great Sea of the Bible, and sailing from one to five, and sometimes eight knots, as the breezes happen to favor us. The day is fine, the weather pleasantly warm, with a slight swell, and of course but very little motion to the vessel. From twenty to twenty-five sail are in sight, of which two are English transports, or war vessels, bound up the Mediterranean. The Captain, whose eye is the keenest through the glass, says that the men are habited *a la Turque*—a pretty sure sign that they have an object ahead; and perhaps are this moment ruminating on the glory with which they hope to robe themselves on the battle-field. Would that, on reaching the Bosphorus, if indeed they be bound there, their hopes might be cut short in finding nothing of that sort to do.

Before proceeding further in relating matters and things around me, I will return to my native land, and speak of things more in the order in which they have occurred. My time being wholly devoted to the missionary work, it will not be expected that I shall write many letters, save those written for the *Recorder*. These will be written, first, to answer the special request of hundreds in the denomination with whom it has been my pleasure to become acquainted; and, second, to furnish news from the "Old Land"—the Land of the Bible, in which all are supposed to be interested. I shall aim to give you, dear friends, a plain, unvarnished and truthful account of my labors, incidents of travel, daily occurrences, news, &c., for the sole object, by this humble means, of continuing and increasing the missionary spirit, and thus glorifying our Lord and Redeemer.

Although it was expected that we should have sailed in the early part of the winter, it was not till the 6th of March that we began in earnest to move towards the ship. Word was received at 6 P. M., that our freight must be shipped the next day, as the vessel was to sail the day following. Through the kind aid of brethren in Westerly, R. I., (which place we had made a rendezvous for some weeks previous,) all our goods were taken to the depot by 10 o'clock that evening. At 2 A. M. I took the cars for Boston; arrived at 5½, and occupied the day in errands and shipping the goods. The 8th was rainy and unfavorable for going to sea. My family, Bro. S. and family, accompanied by several brethren and sisters from 1st Hopkinton, Westerly, and New London, arrived at an early hour. Walked twice to Providence depot, to the bark, to the shipper's office, and attended to errands. In the evening attended a prayer and conference meeting with the High-st. Baptist Church, Charlestown, Eld. Hiram Hutchins, pastor. Found them enjoying a revival; several young converts were present, whose expressions gave evidence of a heart full of love and joy, and strong in faith, giving glory to God. It was the writer's privilege, when he first sailed for Hayti, to spend some weeks with this people. They were then holding a protracted meeting; the church, newly constituted, had to labor under trials and against opposition peculiarly the lot or heritage of reformers in all ages; yet a goodly number were added to them; precious indeed were the seasons we enjoyed together. From them he afterwards received material aid for the mission. The present religious interest, the renewing of old acquaintances, and being about to depart again for a foreign field, made the meeting one of thrilling interest. We all could adopt the language of the Apostle: "It is good for us to be here." Many were the words of cheer and good will they expressed for my encouragement. Said an aged sister, with much fervor: "I feel that God will be with you; therefore, go in His strength, and fear not. The vessel's cargo of *rum* and *tobacco* will not harm you, if you 'touch not, taste not, handle not;' go and preach the gospel to Jew and Gentile, and the Lord be with you." This church is warmly enlisted in the reforms of the day. The pastor is a member of the Free Mission Board.

About noon of the 9th, we held a farewell meeting on the quarter-deck. Then came the trial—the sad parting; for the steam-tug was at hand to tow us into the stream. I thought I should bear the separation without undue emotion, the labor of preparing for the voyage during two days and three nights, having fatigued me beyond measure. But the agony of soul which M. exhibited was more than I could bear unmoved. "O, uncle Nathan, I do not want you and Susan to leave me yet." During our stay at Bro. Langworthy's she had learned to call him uncle. Said Eld. L. of Chelsea: "I perceive, brother, that you have before this known something of the trials of a missionary." The scenes of the past ten years, the sundering afresh of tender ties, and an unknown future, came up and passed in review in a moment. I could not reply. With gushing tears, and feelings inexpressible, I hastened to the cabin, where I cried to the Lord to take away our anguish of mind, and reconcile our little one to the final adieu to her friends and privileges. Presently, a well known voice called to us from the wharf: "Come up on deck, and show us your faces once more." A few more words of parting, as the bark moved slowly away, and then, when we could no longer see faces, nor distinguish persons, we exchanged tokens of affectionate parting by the waving of handkerchiefs. These, too, were soon lost in the distance. So fare you well, dear friends. Long, long shall we remember your features, your standing on the wharf, the anxious, tearful look and commendation to God; your pains and expense to accompany us from your homes to the ship, and your many acts of personal kindness and unbounded hospitality.

"Now," said M., "I am not going to cry any more," and true to her word, she always speaks with a smile of her dear good friends and playmates in Westerly, Plainfield, Shiloh, and other places where we have traveled. Rest assured, children and young friends, you are and often will be spoken of and remembered, as we come around the family board and altar, as also in the house of prayer. Seldom a day passes without a few household words of good times enjoyed in this and that family and society; then the little tokens of remembrance, old and young, public and private interviews; each comes in for a share, and all to sweeten life, yea, sometimes even to make us fancy ourselves in your very presence.

Not sailing that day, as we had expected, I went ashore for a few things; but returning too late for the small boat, I walked to Charlestown and tarried with Bro. Jonathan Howe, by occupation a printer. The 10th was very stormy, and so long as the weather continued thus, we could not hope to put to sea. Bro. H. presented me with an umbrella and some stationery; value, $3 72. He is ever known as diligent in his Master's cause, doing good unto all as he has opportunity; liberal with his own earnings, and withal very humble. Though nearly eighty, he walks or rides to his office in Boston, and there from morning to evening he employs himself reading proof, (without glasses, I believe,) and performing perhaps an equal amount of labor with any of his fourteen hands. God has blessed him with a pious family, who shine as lights in the world. "I wish to work as long as I live. When I can be of no more use in the world, then may the Master call me to himself. When I awake in the morning, my prayer is: Lord, may I do something this day to advance thy glory." Such were some of this good man's last words to me, whose prayer is, Lord, sanctify me through thy truth; thy word is truth.

Among other notions wanted by our little company was the last *Recorder*. But think you, reader, that the *Recorder* could be found in Boston? Perhaps you wonder how any one, under the circumstances, could expect to find a copy of a Seventh-day Baptist paper where none of the people live. Yet it may be even so. After visiting several offices, I called upon Mr. Garrison; but, like the others, he had mislaid it; expressed his regret; said it was a well conducted paper, and in lieu thereof gave me a bundle of his latest exchanges. Determined to have it, I walked to Charlestown, and succeeded at Eld. Hutchin's. A little more running about, calling upon and parting with old friends, the last of whom were Elds. O. E. Ayers, E. R. Warren, and H. Hutchins, finished the week's labor. Went aboard just as the Sabbath drew on. By this time the weather looked more favorable, and as there was some prospect of sailing by early morn, Elder A. B. Burdick thought it best to leave us. "Farewell; farewell; trust in God; we commend you to God and to the word of His grace;" were words of parting, deeply felt and full of meaning. May our lives show that we daily realize their import.

Sabbath morning, the 11th, came in with a fair wind and fine clear weather. The pilot came aboard at 7 and left us at 8. In a few hours we took the last view of our native land, and that, too, in a plight quite unsuited for prayer or praise, poetry or prose; for by this time, the breakfasts of most of us were scowlingly and spitefully given to the fishes, followed by dreadful struggles to do more of the same sort. A most unpleasant feeling is sea-sickness—what a hanger-on, and how incurable, except as it cures itself. We severally have been more or less afflicted with this plague of the sea, from one day to three weeks. Even then, hardly a day passes that myself and mine do not suffer from nausea, head-ache, &c. Ah! there is but precious little of pleasure to be taken, or of beauty to be seen, in a life on the ocean. When poets and amateurs of song treat of the poetry of life on the ocean wave, I am reminded of the saying that "distance lends enchantment to the view," and sometimes am wicked enough to wish them as severe a trial as it has been my lot to experience. Colton, in his "Ship and Shore," speaks very truthfully of sea-sickness, as the "persecuting plague of the ocean, foul and ghastly as Milton's personification of sin at the portals of the lower world * * * where the poor wretch has every thing of death but its insensibility, * * * a rankling, broiling, clinging nest of torture."

As I began to feel better, I looked anxiously around for something to while away the weary hours. The sight of books and the thought of study, were far from agreeable. Recollecting my claim to the name of Yankee, I went to whittling playthings for the children, then to splitting wood for the steward, occasionally lending a hand at the braces, or *ropes*, as the landsman would call them; and then, as strength increased, to walking the decks. This last exercise I practice daily, rain or shine, storm or calm, and find that it essentially relieves giddiness, head-ache, weakness, besides giving an appetite for the varieties of the table. For some weeks I have so far enjoyed myself as to be able to do considerable at daily reading and study. The passengers likewise find plenty to do of work and play, just as the feeling induced by the weather happens to come over them. The children come in for their part of reading the Bible, studies, jumping the rope, whirling the top, dressing dolls, and going to tea parties.

Our home (the bark) is a vessel of 284 tuns burthen, 107 feet in length, 23½ breadth, and 12 feet hold; was built at Eastport, Me., and named after the builder's daughter; was launched 12th month, 1852. She is freighted with logwood, coffee, tobacco and rum. Expects to return freighted principally with wool. Fifty barrels of the *fire-water* is on the main deck. We have proved the bark to be a fast sailer, but a few hours being required to come up with and pass all the vessels, ships, barks, brigs and schooners; and scores of them we have left far behind. Even the Wild-Fire, which sailed ten days before us, was passed off Malta. It is now the 27th. So much for boasting. I could say something of the narrowness of our accommodations, but as they are endurable, and we have lived through rough and smooth thus far without accident, save a few bruises, I will say we have no wish to complain of them. We are all contented in this respect, and happy. The Rose Pool is clipper built, and in a storm or stiff breeze lurches and plunges, then jumps to meet the foaming billow and answers her helm with a quickness that shows her determined to go ahead and outride the waves. Could our friends ashore be with us at the table in rough weather, or in a calm with a heavy swell, they would see some strange sights, and perhaps feel as strangely too. Imagine us at meal time, sitting at all sorts of angles; the soup—hot gruel, (for corn meal gruel with the sick is all the go at sea,) tea or chocolate, or sauce, perhaps two or three of these at once, spilling unceremoniously into our laps—the dishes rattling on to the floor—away goes the bread—the stools slip and carry us leeward, and the steward, who has just entered with the tea-pot or some savory dish in one hand, and a mug to each finger of the other, fetches up against or in one of the state-rooms, with open eyes and mouth, and uplifted hands, somewhat after the manner of the Mason's grand hailing sign of distress; and you will have a rough sketch of a most rough, unpleasant, ludicrous reality. I had not thought of closing this number with a table scene at sea, but as my two sheets are full, and the epistle longer than I wish it, I bid the readers adieu till another week.

Yours truly, WM. M. JONES.

THE JEWS IN JERUSALEM.—The present Jewish population of the Holy City amounts to 5,000 souls of the Sephardim Congregation, 2,000 of the Russo-Polish, and 70 of the German-Dutch Congregation. All taxes are paid by the Sephardim, the others being considered as strangers, who enjoy the protection of European Consuls. Heavy taxes are paid for the permission to pray in sacred localities and ruins. This congregation has 31 synagogues and colleges. The Chief Rabbi, who must be confirmed by the Sultan, is elected by the members of the congregation. He has to superintend everything, and is responsible for everything. At least three-fourths of the congregation live upon charity, and the congregation is deeply in debt. This year everything is exceedingly dear, so that the fate of the poor is very melancholy. Everywhere one sees pale, emaciated faces. A measure of wheat, which formerly cost 8 piastres, is not paid for with 20 piastres, &c.

OBITUARY NOTICES.—There are some persons (says the Connecticut *Courant*) who think they fail in their duty to the memory of deceased friends, if they neglect to connect with the public announcement of the death a verse of poetry or some declaration of their private worth. The simple announcement of a death is always proper and in good *taste*—more than that, unless the deceased person has been a public man, is generally the *reverse*. Such announcements are interesting only to the friends and relatives of those who have died, and such generally know whether deceased persons lived in "love and charity with their neighbors," and in the daily discharge, to themselves and their families, of all the duties of life. If they did, it is unnecessary to speak of it—if they did not, all the newspaper paragraphs in the world will not make those believe it who know to the contrary.

MATERIALS OF WESTERN CHURCHES.—In a town in Illinois, thirty-ssven persons were recently received into the Baptist church. Of these, three were Norwegians, one Scotch, two Irish, thirteen English, one Canadian, and seventeen were born in Lancashire, one in Devonshire, four in Yorkshire, three in London, one in Kent, one in Somersetshire, and one in Wiltshire. Of the Americans, one was born in New Hampshire, one in Vermont, one in Massachusetts, one in Pennsylvania, six in Virginia, two in Connecticut, one in Michigan, and four in Illinois.

MISSIONARY STATISTICS.—There are now supported by the Protestant Missionary Societies, in Great Britain and the United States, in North America, 147 missionaries; exclusive of those in the domestic field, in South America and the West Indies, 367; in Africa, 229; Western Asia, 41; Burmah and Siam, 40; India and Ceylon, 409; China, 69; South Sea Islands, 120; among the Jews, 44. Total, 1,482. Besides these, there are employed, 191 assistants, and 2,028 native assistants. Of the missionaries, 375 are from the United States, and 679 from Great Britain.

At the recent sitting of the North Carolina Diocesan Convention of the Protestant Episcopal Church, a letter was received from Rev. Dr. Forbes, of St. Ann's (Roman Catholic) Church, in New York, offering to refund the money which the late Bishop Ives received from the diocese just before his departure for Europe. This letter was referred to a Committee, and a reply was ordered to be sent to Dr. Forbes, saying that the Convention makes no demand for the money, but that Mr. Haight, its Treasurer, is authorized to receive all sums belonging to the Diocese.

RELIGIOUS INTELLIGENCE.

The London Record says that the large receipts of the religious societies in the past year show that the first want, at the present moment, is not of money, but of that which money connot supply. Human agents whose lips the live coal from the altar has touched, are chiefly needed. From the willingness of the people to give, larger sums could be raised than are at present, if the Societies could but say, "We have found the right men—do you provide us with the necessary money."

Revivals of religion are reported in the Baptist churches in Deerfield, N. H., Elkstown, Va., Cambridge, Mass., Plymouth, N. Y., and Laight street Church in this City. Since the beginning of 1850, there have been added to the last named 333 persons. The Presbyterian Church in Wilson, N. Y., is also being revived, as is that in Pittsburg, Penn.

Some Boston ladies have for the last forty years maintained a Society to give the Gospel to the Jews. They have contributed to the support of Rev. Mr. Schauffler, of Constantinople. At their recent annual meeting they determined to disband, and leave their mission in the hands of the American Board of Foreign Missions.

Rome, as it appears from a recent census, contains a population of 175,000, divided into fifty-four parishes, and amongst them twenty-nine bishops, one thousand two hundred and eighty priests, two thousand and ninety-two monks and members of religious orders, one thousand six hundred and ninety-eight nuns, and five hundred and thirty-seven ecclesiastical pupils.

The missionaries in Gormany of the American Baptists Missionary Union were much blessed in their labors last year. At Memel, fifty-two members were added by baptism; at Elbin, fifty-six; at Rozengath, five; at Stettin, eighteen; at Heilbroun, twenty-nine; at Wettingen, ten; at Halsbeck, six; at Jever, twenty; at Oldenburg, three.

We are (says the *Asmonean*) informed that the people of Jerusalem, through their chief Rabbi, have addressed a circular letter to the Rev. Dr. Lilienthal, the Rev. S. M. Isaacs, Dr. S. Abrahams, and Mr. H. Moses, requesting that the $50,000 bequeathed by the late Mr. Touro of New Orleans, may be transmitted to them without delay.

A Mr. Beaumont, of Holmfirth, England, has erected, at his own cost, as a *thank offering for his success in business*, a neat church edifice, which he has presented to the Baptist church of that place, and which was opened with appropriate services on the 4th of January last. Are there not many Christian merchants who might go and do likewise?

The receipts of the British and Foreign Bible Society, during the past year, amounted to the munificent sum of £126,665, which was some £8,225 more than any previous year. The issues of the Society were 1,367,528 copies; the total issues amount to nearly 28,000,000 copies of Bibles and Testaments.

The will of Mrs. Jane Wilson, of Steubenville, Ohio, contested on the ground that she was of unsound mind, has been broken, thus giving her relatives some $214,000, which she had bequeathed to the Presbyterian Foreign and Home Missionary Societies.

The Roman Catholic Bishop of Boston was mulcted in the sum of $2,000, in a suit brought before the Court of Common Pleas in Hampden county, Mass., to recover the value of a note given on account of the Roman Catholic Church in Springfield.

The wife of Dr. Ives, late Bishop of North Carolina, was admitted into the Roman Catholic Church, in Rome, on Good Friday. This lady is the daughter of the late Bishop Hobart, Protestant Episcopal Bishop of the Diocese of New York.

The contributions to the English Wesleyan Missionary Society for the year 1853 amounted to about *five hundred and seventy-three thousand* dollars, being an increase on the preceding year of about $45,000.

Rev. George A. Perkins, an accepted missionary of the American Board, and destined to the Armenians in Western Asia, was ordained at Farmington, Me., on the 25th ult.; sermon by Rev. Dr. Shepard, of Bangor.

Rev. C. W. Guillard and wife, sailed from New York in ship Shooting Star, on the 9th of April, for Canton, as Missionaries under the appointment of the Southern Board. Mr. Guillard was from Albion, N. Y.

A few members of Dr. Sprague's society, Albany, have made up a purse more than sufficient to pay a mortgage upon his dwelling house of three thousand dollars, and presented it to him.

Mrs. Phillips, wife of the Free-Will Baptist missionary in India, recently returned to this country, accompanied by her eight children, and a Santal convert.

The Tunkers, a German sect, held their annual meeting near Ashland, Ohio, from the 1st to the 4th inst. About 40,000 persons were present on Sunday.

Rev. Messrs' A. D. Wilson and William Nesbitt, of Pennsylvania, late missionaries to Liberia, have returned to this country.

The veteran missionary in Greece, Rev. Dr. King, is expected soon to arrive in this country, with one of his daughters.

Revivals of an interesting character have taken place in Easthampton, Mass., Castleton, Vt., and Rockville, Ct.

The London City Missionaries number one to every 500 families. The income the past year was £27,484.

PASTORAL DUTY.—The *Christian Advocate*, a Methodist paper, says: A lay brother thinks if preachers generally would attend to pastoral visiting, they would suffer less in regard to their pay; that is, they would, as a general thing, get most, if not all of the salary promised them. Perhaps so. We know a preacher who makes it a point to see some one member of his charge, and have a talk on religion, every day of his life, except when sick or providentially hindered. He is a successful preacher, and the Lord blesses his labors wherever he goes. He gets also, we believe, his quarterage pretty promptly.

THE PROCEEDINGS IN CONGRESS last week were nearly devoid of interest. The Senate was in session only one day. The House was in session five days, nominally discussing the Pacific Railroad Bill, but really listening to speeches upon any subject which members wanted to talk about.

European News.

European news to May 31st has been received; of which we give the substance.

The most important news is that of the position of Austria and Prussia, which has assumed a more unfavorable aspect toward the allies.

The latest advices from the Baltic state that Gustavsvara was bombarded on the 22d of May by the allied fleets, but without effect, and that the attack would be resumed on the 24th.

The French and English troops remain near their place of embarkation on the shores of the Bosphorus, and no indications are yet given that they are to be very suddenly moved toward the immediate theater of hostilities.

The Russians, unable, on account of the blockade, to defend the seaboard of Circassia, had evacuated all their positions from Batun to Anapa—a distance of 200 leagues. They burned all their own forts and retired to Kutais, in the interior. The Circassians came down from the mountains and took possession of all the posts which the Russians had occupied, making prisoners of 1,500 men, whom they surprised at Sukkum-Kaleh.

Considerable alarm is felt at St. Petersburg, and great preparations are making for the defense of the city. It is also reported that a large portion of the City of Riga has been leveled to the ground, in anticipation of an attack.

The operations of the Greek rebels by land and sea are receiving energetic treatment at the hands of both the English and French, and have been very essentially abridged, if not entirely suppressed. Four pirate ships have been captured by one French vessel of war, and carried into Rhodes.

California News.

The California mails to May 16th were received in New York on the 8th inst.

The steamers from Aspinwall and San Juan brought nearly three million dollars in gold dust. The accounts from the mines continue to be encouraging.

Walker, the fillibuster, and the remains of his party, had arrived at San Francisco, and given themselves up for trial.

A destructive fire had laid the town of Yreka in ashes.

It is asserted that a vessel in San Francisco harbor was being fitted up to act as a privateer under the Russian flag, as soon as the final declaration of war shall have reached there.

The Governor states in a message to the Legislature, that the public lands appropriated to educational purposes in California amount to more than seven and a half millions of acres.

Silas E. Burrows, a wealthy citizen and formerly a prominent merchant of New York, sailed from San Francisco on the 11th inst., in the clipper Lady Pierce for Japan, on a peaceable and private mission to the Emperor. Mr. Burrows took with him a quantity of fine goods for presents, and declared his intention to present his vessel to the Emperor if he was well received and permitted to remain. The vessel took no goods except stores and presents, and no passangers except Mr. Burrows and his son.

A Treble Murder.

Between 12 and 1 o'clock on the morning of Sabbath-day, June 3d, a man named Wickham, together with his wife and a negro boy, were murdered near Greenport, L. I., by a man named Beheehan. Wickham was a retired New York merchant, and Beehehan was a foreigner who had been employed by him for a year or two, but discharged a few days previous to the commission of the awful crime. After a search of two days, in which nearly a thousand persons took part, the murderer was discovered and arrested, when he made the following confession:—

I started from Greenport at about 8 o'clock on Friday night, for Cutchogue, and arrived at Wickham's house by 11 o'clock. I got the post-ax from the wood pile, and got into the house through the kitchen window, and passed up into the kitchen garret where the negro boy slept. I struck him three or four blows over the head with the ax. [He did not kill him, owing to the lowness of the roof, which prevented his swinging the ax. The garret was situated on a level with the floor upon which Mr. and Mrs. Wickham slept, and communicated by a door which open upon the second story hall of the main building. The last door upon this hall was the one in which the murdered couple slept.] On opening the hall door, Mrs. Wickham opened the door of her room and asked, "Who's that?" and added immediately, "Nicholas, what are you doing here? What do you want?" Mr. Wickham sprang to the door at the same moment, and I attempted to strike him with the ax. Mr. W. grasped it, and I then struck him in the mouth with my fist; Mr. W. got the ax out of my hand and struck at me with it; I caught the handle as it descended, and struck him twice again with my fist; the third blow knocked him down; Mrs. Wickham was crying out, "Don't kill him, Nicholas; take any thing you want, but don't kill him;" and in her struggles with me she tore off my shirt; I struck Mr. Wickham several times with the ax while he lay upon the floor, and had struck Mrs. Wickham several blows with the ax in the scuffle; while I was striking Mr. Wickham I observed that Mrs. Wickham was getting out of the window; I pulled her back by the feet, and then finished her with the ax; I can't tell how many times I struck Mr. Wickham, but he got up three times, and I hit him several blows each time; I then passed back into the kitchen garret, and fastened the door after me; went down stairs, through the parlors, and up the stairs of the main building to the servant girls' room, but I found the door and the window open. Finding they had escaped, I tried to get down stairs, but could find no door, though I had a light with me, so that I was obliged to pass into the second story hall and through Mr. Wickham's room to the window. I threw my ax and lamp out of the window and then dropped out myself. I went back to Greenport; got there at 2 o'clock in the morning, and went to bed and slept till morning, intending to leave by the steamboat for New London in the morning. But on looking out of my window I saw many persons whom I knew, moving about, and therefore did not dare to attempt it. I then walked upon the railroad, thinking to get upon the cars and go to New York; so I walked along thinking to stop the train and get on some distance from the depot. I passed into the bushes and remained there during the day, and at night went to the house of Mr. Thompson, an Irishman, and asked for a drink and some food. Mr. Thompson said: "You are the man that lived with James Wickham, are you not?" I replied, "Yes." Thompson then stepped between me and the door, and presented a gun to my breast, saying, "You are the murderer; then you can't pass out of here; if you do, I shall shoot you;" I drew a pistol and said, "I have murdered, and have not done yet; if you stop me I will shoot you." Thompson saw several persons with guns near his door, and turned to call them to his assistance, when I jumped out of the window and ran for the woods; I got there ahead of them and escaped; I then crossed the woods to the Railroad bridge to get to New York, on foot; I was then hailed and ordered to stop by some one, who snapped a gun or pistol at me; I turned and ran to the woods again, chased by several men, one of whom shot at me as I entered the woods, but without injuring me; I laid down in the woods, and laid there until 8 or 9 o'clock Sunday morning, without food. On Sunday morning, three different men, who were on my track, passed within a few feet of me, but did not see me. Soon afterward I started off to the westward. I was again discovered, and returned to the bush, pursued by the people. On Sunday night I made another attempt to get west, toward the City, and was stopped, and shot at by three men; some of the shot passed through my sleeve, the rest over my head. I went back to the woods again, and laid down. On Monday morning I saw the people searching the woods, but did not change my position. I laid still until they come within a few feet of me, and I saw they had discovered me. I then took a razor from my pocket and cut my throat. I was then taken.

SAD ACCIDENTS.—The *Mauch Chunk* (Pa.) *Gazette* issued an extra on the 9th inst., from which we extract the following melancholy intelligence:—

"This afternoon, as several persons, (Irish laborers at the Beaver Meadow wharf,) were engaged in unloading a dirt scow just above the dam at this place, the line by which the boat was held was broken by the force of the current, the boat went over the dam, and, melancholy to relate, *four persons were drowned*. The boat came to the surface bottom side up, and two persons succeeded in making their escape, one by climbing upon the boat, the other being forced by the current on to or near the beach."

The *Springfield* (Tenn.) *Intelligencer* records a most distressing accident, which occurred at Port Royal Mills on Saturday, 27th ult., resulting in the death of three young ladies. It seems that Miss Adams, Miss Madden and Miss Picket, in company with Mr. S. Weatherford, were attempting to cross Red river in a canoe, when it struck a snag and precipitated them all into the stream. Every effort was made to save the young ladies, but all in vain, and Mr. Weatherford was nearly exhausted in his attempt to save them, before he reached the shore.

STOPPING PAPERS.—The following, from the *Boston Post*, contains suggestions which deserve consideration from every patron of a newspaper:—

"When will men, women, and postmasters, learn that it is of no use to return papers without designating the place from which they come? "Job Ficklemind wishes his paper stopped," says the marginal reading. And does this Mr. F. live in Nova Scotia, Texas, or in some corner of New England? We might find out in one or two hours, if we had the time to throw away. And perhaps not then; for it is likely there are several of the above-named on our books. So the paper continues to go, and the publisher gets a sound scolding once a week.

"Worse still; many order their paper stopped, after it has run four, six, or eight weeks over the time, and not a word said about arrearages. This might be borne now and then, but such a leakage the year through would sink a bigger ship than ours. A business that depends on small sums must take care of small sums; and at the risk of being thought unfair and unaccommodating, we must conclude to send the paper until full payment is made. Those who are not willing to pay little sums, can remain on our books till the subscriptions amount to a sum they consider worth noticing."

THREE DAYS AND THREE NIGHTS WITHOUT FOOD.—A young woman from Bremen arrived in New York, scarcely able to speak a word of English, and proceeded directly to Wisconsin, in company with an acquaintance, to visit a brother residing there. Having finished her visit she started back with her friend, who understood our language well. On the way, in the confusion incident to hastily changing cars, she missed her friend. On she came, however. Not only was she unable to speak a sentence of English, but she was without a cent of money. The conductor came for her fare; she shook her head, and—possibly on account of her good looks—he let her pass. She had too much pride to beckon for food, and so she continued on without any. Three days and three nights she went without a mouthful to eat. She became sick at her stomach, and could not retain on it the cold water which she drank. She describes the sensation of hunger, which became powerfully intensified, as "gnawing" and horrible in the extreme. At the end of the three days she arrived in New York. She was taken suddenly sick with fever, and lay on her bed for two months. [Evening Post.

AMERICAN D.D.s.—A protest has been made against the recognition of degrees from American "Universities," conferred upon persons in Great Britain. At a meeting of the Established Church Synod of Angus and Mearns, upon an intimation that the minister of Fordoun was now designated Dr. Buchan, Mr. Whyte, of Fettercairn, objected to that style being accorded him—urging that, as a Church Court, they had no right nor power to acknowledge a title having a foreign origin. No decision was come to, it being stated that the subject was likely to come before the Assembly.

SUMMARY.

In 1844 or 1845 a merchant by the name of Cordell, doing business at Jefferson City, Mo., suddenly disappeared, and the supposition was that he had been murdered. His estate was settled by the Courts, and his wife and family returned to her father's roof, where they have since remained. To the surprise of all parties, Mr. Cordell returned to his home last week, and accounts for his leaving home by supposing that it was during a period of mental alienation. He has been in Mexico, and from thence to New York, and has now returned to Missouri.

The silk mills in Paterson, N. J., belonging to Mr. John Ryle, are situated near the banks of the Passaic and close by the Falls. They are said to be the most extensive Silk Mills in the United States. They employ 700 hands, and produce weekly about 1,600 pounds of silk, viz.: Tram, organize, sewing, embroidery, spool-silk, and silk-twist—the aggregate value of which is about sixteen thousand dollars.

An enterprising American proposes to do away with stone and bricks as a building material, and build glass houses in all coming time. He proposes to fill an empty mould of any required size with coarse, heated gravel which must be cemented by glass poured upon it and cooled gradually. He believes that in this way a cheaper, handsomer, and more durable building material than any now in use would be afforded.

Mr. A. Cofurn of Ontonagon, Michigan, in a letter to J. C. Holmes of this city, says that he raised last year on 16 acres of land, at Ontonagon, 2,500 bushels of potatoes, worth $2,500, and 16 tuns of oats in sheaf, and hay worth $400; making the total value of the products of the 16 acres $2,900. The expense of raising this crop did not exceed $500.

Wheeling, Va., lately chose a Temperance Municipality, which refused to license. The Legislature of Virginia overruled this action; whereupon, the Board granted licenses at the following rates: "For the Spring House $4,000; M'Clure $2,000; for each seller by wholesale and retail, $5,500; retail only $1,500."

Darius Davidson, a celebrated naval architect of Boston, proposes to construct an immense steamship, 800 feet in length. She is to be driven by 16 separate engines, having a total of 5,000 horse power, at the average speed of 25 miles per hour, and to have berths and state rooms for 3,000 passengers. These figures seem large ones, but we are fast traveling towards their realization.

A large elephant attached to a Menagerie, while on the way to Fall River, got beyond the control of his keeper, and killed three horses on the road, and smashed the wagons, and seriously injured two men, who were in the wagons. The elephant was finally captured near Slade's ferry, and taken to Fall River.

It is thought they have got a new edition of the Declaration of Independence at the South, especially calculated for that latitude. The following is said to be the beginning of the precious instrument: "White men are born with considerable freedom and endowed with inalienable rights, among which are life, liberty, and the *pursuit of niggers!*"

The second annual meeting of the Women's New York State Temperance Society was held in Utica, Wednesday, June 7. The attendance was quite large. The proceedings were conducted with much dignity and good taste, and were characterized by the utmost unity of sentiment.

A dispatch dated Newport, R. I, Tuesday, June 6, 1854, says: The funeral of the late Judah Touro, of New Orleans, was solemnized to day in the Jewish Synagogue, with imposing ceremonies, and with every demonstration of respect, in which the city authorities and public bodies joined. Many Hebrews from abroad were present.

The Boston *Traveler* says that in New England generally, so far as heard from, the prospect for grass and grain crops is very promising. There is much apprehension, however, about fruit. The Portland *Argus* says that in that State the crop of fruit promises to be very abundant.

A dispatch dated Louisville, Saturday, June 10, 1854, says:—Mrs. Dennistown, daughter of ex-President Tyler, and wife of the Rev. Mr. Dennistown, Rector of St. Paul's Church in this city, died on Thursday, after a short illness.

A gentleman residing at Fort Wayne, Indiana, under date of June 2, writes that the locust trees in that city and vicinity are being destroyed by a worm which bores into the trunk, making a hole similar to that produced by a gimblet.

Mr. Henry Quinn, who kept a boarding-house at Nashua, N. H., on Monday morning intending, as is supposed, to take a nipper of another article, by mistake swallowed a dose of bed-bug poison, and was soon a corpse.

On Sunday, May 21st, while a street preacher was holding forth in the New York Park, a row occurred, during which several persons were stabbed.

It is stated that more than one hundred persons, from the age of eighty down to ten years, have been the subjects of a late revival in Castleton, Vt.

There was a slight frost in various parts of Berkshire, Hampshire, and Franklin Counties, Mass., on the night of the 3d inst., but little damage was done.

The Receivers of the Commercial Bank, of Amboy, N. J., have just declared a second dividend of 40 per cent., payable at the State Bank at New Brunswick, on demand.

The injunction against the Cochituate Bank of Boston has been made perpetual, and its affairs will be wound up.

The Chicago *Democrat* thinks the population of that city, by the 1st of January next, will be one hundred thousand.

A new Bank has just commenced business at Hornellsville, on the Erie Railroad, called the Bank of Hornellsville.

Charles Hinman, of Lockport, N. Y., is trying the experiment of hoeing drilled wheat. It costs about $5 an acre.

On the 18th of May, the apple blossoms were at the full in Massachusetts. It is seldom that they blossom earlier.

Three ships went ashore on the Jersey coast last week. No lives were lost, and probably the ships and cargoes will be saved.

MARRIED,

In Albion, Wis., April 13th, by Eld. Z. Campbell, CHARLES R. HEAD, M. D., to Miss SERAPHINE POTTER, all of Albion.

In Clarence, N. Y., June 3d, by Eld. Rowse Babcock, Mr. ROWSE BURDICK, of Royalton, to Miss LUCINA L. HULL, of Clarence.

In Wellsville, N. Y., June 4th, 1854. WASHINGTON I. CRANDALL to SARAH J. RANDOLPH, all of Scio.

At Andover, N. Y., June 4th, by Eld. N. V. Hull, Mr. WARREN A. BUNDY to Miss ELECTA J. LEE.

At East Hounsfield, Jefferson Co., N. Y., June 6, 1854, by Eld. Enoch Barnes, Mr. A. JUDSON WELLS, of DeRuyter, Madison Co., to Miss ADELAIDE E. UTTER, of East Hounsfield.

DIED,

In Waterford, Conn., April 26, 1854, HANCY A., wife of Thomas S. Rogers, in the 27th year of her age. She was born in Truxton, Cortland Co., N. Y., and was the daughter of Elijah E. and Catharine Benjamin, who are still living in that town.

Located near the village of DeRuyter, N. Y., she early gathered about her in that place a circle of choice friends, to whom she greatly endeared herself by her affectionate and obliging disposition. At home and in society, she was preëminently modest, unobtrusive, and amiable in her habits. In her youth, this prominent trait of mind nourished in her a reliance upon the pure, the good, and the beautiful for happiness and instruction; and gave to her acquaintances the decided promise of future usefulness, by developing in her heart the love of the truthful and a strong interest in religious associations. Although taught fashionable indifference to the claims of piety, and encouraged to seek pleasure in the mirthful and giddy throng, she always exhibited that sedateness and unassumed candor, which belong to those accustomed to heed seriously the monitions of conscience, and possess strong convictions of the sinfulness and lost condition of their own souls. So religiously disposed was her mind, that she felt an abiding necessity laid upon her, in order to live contentedly or happily, to embrace Christ and practice piety.

In the winter of 1848, she was married and removed to Waterford, Conn., where she continued to reside until her death. Immediately after settling with our people in this place, she embraced conscientiously the Sabbath, and in a few months publicly professed faith in Jesus Christ and united with the Waterford Church.

The universal testimony is that she lived a Christian, and by her godly conduct adorned and comforted the church of which she was a member. She exhibited no particular deficiencies or excesses in her religious experience, but in her was developed an interesting symmetry of graces, so becoming a child of God. If there be in her Christian character any one point, more than others, which might be set forth for imitation and which seems to have been readily engrafted upon her retiring and self-distrusting disposition, it would be her habit of practicing *constant and quiet self-denial*. Her prayers and religious conversations were always affecting, because they seemed to come from a heart rich with devotional feeling and the grace of God.

About six years previous to her death she had a severe attack of the measles, which so deranged her constitution that she never fully recovered her health. She had been declining in strength for several months; but a few days before her death she appeared to rally, and her complaint, the congestion of the liver, which was probably accompanied with the quick consumption, gave her friends less cause of alarm. But at 2 o'clock in the afternoon of the 26th of April, she suddenly died; and so unlooked for was the event to herself, that death gave no opportunity for a pang to be added to her departure from earth, where she left a child then eight months old and a husband who was absent on a voyage to the West Indies.

The funeral took place on the Sabbath, April 29th, and was attended by a large circle of mourning friends. Sermon preached by Eld. Alfred B. Burdick. W. C. W.

At Green Brier Run, Va., June 2d, 1854, of nervous fever, after an illness of five weeks, MARY, consort of William F. Randolph, aged 50 years. The deceased embraced religion and became a church member in early life. She was ever a faithful attendant at the house of God, and by her labors, prayers, and solicitations through life manifested much anxiety for the prosperity of the Redeemer's kingdom on earth, particularly for the conversion of her children, friends, and acquaintances. During her last illness, while the body was racked with excessive agony, caused by the destructive workings of disease, sending forth many involuntary groans, entire resignation pervaded the mind. She was sensible to the last, her conversation was calm and affectionate, evidencing that the departing spirit was nearing that peaceful shore where the dead that die in the Lord rest from their labor, and their works do follow them.

In Arcadia, Richmond, R. I., after an illness of 2 years and 3 months, of consumption, HANNAH T., wife of Ira S. Brown, and daughter of Benjamin Tillinghast, Esq., of West Greenwich, in the 29th year of her age. The uncommon kindness of friends and neighbors did much to relieve the tediousness of her last sickness, which she ever bore with more than ordinary Christian fortitude and resignation. Her sympathy was very strong for the poor. despised and oppressed sons of Africa. She was an esteemed member of the Free-Will Baptist Church of Warwick, and leaves a husband and two small children, and a large circle of relatives and friends to mourn their loss, which all believe to be her eternal gain.

In Wellsville, N. Y., May 4th, 1854, SARAH ANN NOBLES, aged 15 years. The deceased was believed a subject of saving grace, and died in hope of immortality and eternal life.

In Scio, June 2d, 1854, CHARLES H., infant son of William and Louisa Benjamin, aged 7 months and 9 days.

RECEIPTS.

FOR THE SABBATH RECORDER:

John S Smith, Chaumont	$2 00	to vol. 11	No. 52
Elias I Maxson, West Genesee	2 00	11	52

WILLIAM M. ROGERS, Treasurer.

☞ DEA. WELLS K. GREEN requests his correspondents to address him at Park's Corners, Boon Co., Illinois.

Western Association—Executive Board.

THE Executive Board of the Western Association will meet at Alfred Center on the morning of June 22, 1854, previous to the opening of the Association. All communications designed for the action of said Board should be forwarded to the Secretary as early as practicable, that the Board labor under no embarrassment in making their annual report.

E. R. CLARKE, Clerk.

Water Cure.

MOUNTAIN GLEN WATER CURE AND SUMMER RETREAT, at Plainfield, N. J.

A. UTTER, M. D., Physician and Proprietor.

If beauty and variety of scenery, pureness of air and water, *personal professional attention*, neatness, cheapness, and good cheer, are requisites of such an institution—these are combined at the Glen.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A M, 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M, passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7 30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare.

GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c.

D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations.

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

P. S. Almost any number of certificates can be sent you, if you wish it.

To Printers.

A NEW EDITION OF THE SPECIMEN BOOK OF BRUCE'S NEW YORK TYPE FOUNDRY, was published in September, 1853, and will be given to those proprietors of Printing Offices who will send for it, or it will be forwarded to them by mail on receipt, in advance, of fifty cents for the postage.

In it are exhibited many articles never before shown; there have been added to the Foundry new varieties of Roman Types from Nine-line Pica to Pearl, various imitations of Writing, a great number of fancy founts, borders, both plain and illuminated, labor-saving rules, and a complete foundry of German.

The types now manufactured are cast from a new combination of great durability, and are usually kept on hand in large quantities. Every fancy fount is sold by weight, and at the printed prices, which are from ten to twenty-five per cent. less than those of some other foundries. All other printing materials are furnished at manufacturers' prices, either for cash or credit.

Printers wishing to open accounts with me, or whose dealings have been long suspended, are requested to accompany their orders with city references to prevent delay.

Printers of newspapers who choose to publish this advertisement, including this note, three times before the 1st of August, 1854, and send me one of the papers, will be paid for it in type when they purchase five times the amount of their bill from me, of my own manufactures, selected from my specimens.

GEORGE BRUCE,
13 Chambers-st., New York.

51-3

Miscellaneous.

The Evening Hearth-Stone.

Gladly now we gather round it,
For the toiling day is done,
And the gray and solemn twilight
Follows down the golden sun;
Shadows lengthen on the pavement,
Stalk like giants through the gloom,
Wander past the dusky casement,
Creep around the fire-lit room.
Draw the curtains!—close the shutters!
Place the slippers by the fire!
Though the rude wind loudly mutters,
What care we for wind-sprite ire?

What care we for outward seeming?
Fickle Fortune's frown or smile?
If around us love is beaming,
Love can [illegible] beguile!
'Neath the cottage roof and palace,
From the peasant to the king,
All are quaffing from Life's chalice,
Bubbles that enchantment bring.
Grates are glowing—music flowing
From the lips we love the best;
Oh! the joy—the bliss—of knowing
There are hearts whereon to rest!

Hearts that throb with eager gladness—
Hearts that echo to our own—
While grim Care and Haunting Sadness,
Mingle ne'er in look or tone.
Care may tread the halls of Daylight—
Sadness haunts the Midnight hour—
But the weird and witching Twilight
Brings the glowing Hearth-stone's dower.
Altar of our holiest feelings!
Childhood's well-remembered shrine;
Spirit-yearnings—soul-revealings,
Wreaths immortal round thee twine!

Process of Haymaking.

In haymaking, the object of the farmer is to preserve the hay for winter use in the condition most nearly resembling the grass in its perfect state; and in order to accomplish this, it is necessary, in the first place, to know when the grass has reached that state, that we may thus fix upon the proper time for mowing.

Chemistry informs us that, of the various ingredients which compose grass, those portions which are immediately soluble in water are the most fitted for purposes of nutrition; and, therefore, it should be cut at that period when the largest amount of gluten, sugar, and other matter soluble in water, is contained in it. And that period is not, generally speaking, when the plants have shot into seed; for the principal substance is then woody fiber, which is totally insoluble in water, and therefore unfitted for being assimilated in the stomach. It has been shown that, "when the grass first springs above the surface of the earth the chief constituent of its early blades is water, the amount of solid matter being comparatively trifling; as its growth advances, the deposition of a more indurated form of carbon gradually becomes more considerable, the sugar and soluble matter at first increasing, then gradually diminishing, to give way to the deposition of woody substance;" the saccharine juices being in the greatest abundance when the grass is in full flower, but before the seed is formed. During all the latter part of the process of fructification, the formation of the seed, &c., the sugar rapidly decreases in quantity, and when the seeds have arrived at maturity the stem and leaves begin to decay; so that if the grass is not cut when in flower, a great amount of nutriment will be wasted. Many of the natural pasture grasses, however, are exceptions to this rule; some possessing a greater nutritive value when the seed is ripe than at the time of flowering. * * It is obvious, from the foregoing remarks, that nearly every species of grass—no matter whether it contains most nutriment when flowering or when seeding—yields the most profit, in hay and lattermath, if it be cut when in flower. "It has, indeed, been proved that plants of nearly all sorts, if cut when in full vigor, and afterwards carefully dried without any waste of their nutritive juices, contain nearly double the quantity of nutritive matter which they do when allowed to attain their full growth, and make some progress towards decay."

The proper season for mowing the grass, so as to secure the largest amount of nutrient properties within it, being thus determined, the next consideration is—the preservation of these useful qualities in the hay.

Experiments show, that out of the various constituents of which grass is composed, the mucilage, starch, gluten, and sugar (which are soluble in water) are alone retained in the body of an amimal for the purposes of life, the bitter extractive and saline matters being considered as assisting or modifying the functions, rather than as being truly nutritive parts of the compound, and being voided with the woody fiber. The woody fibre serves only to give bulk to the food, and therefore distension to the stomach, which, when moderately filled, brings those muscles into active exercise which tend so much to promote healthy digestion, by keeping the food in constant motion.

The principal object, then, which is to be aimed at in haymaking is, to retain the soluble portion of the grass in perfect integrity.

This cannot be completely accomplished, because of the imperfection in our present mode of haying, and the many casualties attending it. From various experiments made by Dr. Thompson, it has been found that 37½ parts (by weight) of grass form only 100 when made into hay. This amount of grass contains of matter soluble in hot water 28.13 parts, and in cold water 8.21 parts; but instead of this amount, the equivalent quantity of hay, or 100 parts, contains only 16 instead of 28 parts soluble in hot water, and 5.06 instead of 8¼ parts soluble in cold water. A very large proportion of the soluble, or nutritive matter of the grass has obviously disappeared in its conversion into hay. The result of the process has therefore been to approximate the soft, juicy and tender grass to woody fiber, by washing out or decomposing its sugar and other soluble constituents. The great cause of this deterioration is the water which may be present, either from the incomplete removal of the natural amount of water in the grass by drying, or by the absorption of this fluid from the atmosphere. "Water, when existing in hay from either of these sources, will induce fermentation, a process by which one of the most important constituents of the grass, namely, sugar, will be destroyed. The action necessary for decomposition of the sugar is induced by the presence of the albuminous matter of the grass; and the result is, that the sugar is converted into alcohol and carbonic acid; and that alcohol is produced in a heated haystack, in many cases, may be detected by the similarity of the odor disengaged to that perceptible in a brewery."

The process of haymaking, then, is the removal of this moisture from the grass; and Dr. Thompson has found that the only method which succeeds in preserving grass perfectly entire is by means of artificial heat.

The quantity of water, or volatile matter, capable of being removed from hay at the temperature of boiling water varies considerably; the amount of variation during his experiments being from twenty to fourteen per cent. If the lower percentage could be attained at once by simple drying in the sun, the process of haymaking would probably admit of little improvement; but the best newmade hay that he has examined contained more than this amount of water, the numbers obtained verging towards twenty per cent. When it contains as much as this, it is very liable to ferment, especially if it should happen to be moistened by any accidental approach of water. Rye grass, contains, early period of its growth, as much as 81 at any per cent. of water, the whole of which may be removed by subjecting the grass to a temperature considerably under that of boiling water; but even with a heat of 120°, the greater portion of water is removed, and the grass still retains its green color—a character which appears to add greatly to the relish with which cattle consume this kind of provender. The advantages attained by this method of making hay are sufficiently obvious. By this means all the constituents of the grass are retained in a state of integrity; the sugar, by the absence of water, is protected from undergoing decomposition; the coloring matter of the grass is comparatively little affected; while the soluble salts are not exposed to the risk of being washed out by the rains, as in the common process of haymaking.

From the above chemical observations, made by Dr. Thompson, in its recent researches upon the food of animals, we learn the theory of haymaking; the inquiry now is —how, in practice, can we best approximate to the correct principles laid down?

It is an essential point that the mowers should be good workmen, and perform their work neatly and evenly, making the scythe cut as near the ground as possible, in order to insure the greatest bulk of hay, and facilitate the springing up of the young shoots of the eddish or aftermath. They generally begin work before sunrise, and remain until after sunset; from one acre to an acre and a half, according to the bulk of the crop, being a fair day's work for a man. A soon as the dew is off, the mowmen should be followed by men and women with forks, who shake and spread the swaths evenly over the whole surface of the meadow; or this may be most economically and expeditiously done by means of a tedding machine, drawn by a horse, which will do the work of twelve or fifteen haymakers, and distribute the grass more thinly and evenly as it crosses the field.

And this must not be allowed to lie long beneath the scorching heat of the sun without being turned; for by thus doing, the upper part becomes brown and withered, whereas it is desirable to keep it as green as possible. All the grass which has been tedded and turned during the day, ought to be thrown together the same evening in "windrows;" that is, long rows throughout the field, gathered together by the haymakers working in opposite directions, the two outside women, or boys, using rakes, the others forks; the hay gradually accumulating, whilst thus being sent on from one to another, towards the place of the intended row, until it forms from a party on each side, a double row, and two men follow, putting these two into one compact "windrow," about five feet wide and three high. Or, the hay may be put together into small heaps or "footcocks," the former method being preferable for expedition, and affording sufficient protection from heavy dews, the latter more secure from the injury of rain, and may be adopted if the weather prove cloudy or adverse. The following morning, or on the return of suitable weather, the whole must again be thrown out, so as to secure the greatest possible benefit from the sun's rays and drying winds; and the grass mown on the preceding night, and early that morning, may be tedded when the dew is off, and afterwards turned; and provided it be fine drying weather, the first day's hay will soon be sufficiently made—that is, it will have lost most of its moisture, the chief part of its natural juices will remain, and as it has been well scattered about and frequently turned, this will have been effected without some portions of the grass being too much withered and others still too succulent. It still retains its fine light green color, and the farmer's aim now is to secure it with the greatest possible haste. For this purpose, the hay is gathered together into rows, and the rows divided and collected into "hay-cocks;" which may be done by forking, but if the sky is overcast, and threatens rain, the large windrows should be drawn up into large cocks by horses, two horses walking, one on each side of the row, dragging a rope after them, which passes round the end of the row; two men ride upon this rope, and as the horses proceed, the hay rises up between them, forming a heap; and this, having slid far enough to accumulate a sufficient quantity, the rope is lifted up, the hinder portion of the mass pulled up on to the top, and another cock commenced. Care should be taken that the cocks are "made up" neatly and well, to keep out the rain, and the horse or handrakes must be kept going during the whole time. All the hay must, in due course, be made and cocked after the same manner. Unless the aspect of the sky betokens approaching showers, the smaller kind of hay-cocks, made by rolling up the windrows, with forks into proper sized heaps, will be best.

The next morning, or as soon as the weather permits, they may be well thrown out in "staddles" of a few yards in width, to insure the hay being sufficiently well dried; and it will then be ready for loading.

Of course, the farmer must not be implicitly guided by any given rules for haymaking; in this operation he has to depend upon a very fickle and changeable power, namely, the influence of the weather, and he must vary and modify them to suit circumstances. The object to be aimed at can alone be exhibited to his view, and a model method pointed out for him to imitate as closely as he can. The description given of the chemical nature of this process explains to the haymaker what he has to do, and perhaps the following truths will assist him in discovering the most eligible way of doing it:—

1st. He must remember that the chief point is to preserve the hay from dew and rain—water washes away the soluble salts and other matters, and, when in the stack, will cause fermentation, and that injures the hay by destroying some of its most valuable properties; therefore, bring it into windrows, or make into footcocks at nightfall, and never open it in the morning until the dew has evaporated.

2d. Bear in mind that, if the weather is unfavorable, the less it is disturbed the better, and the longer it will retain its native powers. Hay has been found to preserve a great amount of its nutritive qualities for many days, nay, even weeks, when mown wet, or when saturated with the rains whilst lying in the swath; if, therefore, the weather be unfavorable, it will be better not to tedd the hay at all, nor even turn over the swath. If repeatedly dried and wetted again, it soon becomes valueless; this error of meddling with hay amidst frequent showers must, if possible, be avoided, for it is far better to have it somewhat tainted in the hay-cock than thus exhausted of its nutriment, and spoiled, by being repeatedly spread.

3d. Take care not to allow it to remain long under the hot beams of the sun without being turned; this will preserve the color and fragrance of the grass; so that, without baking it too much, (thus destroying its virtues,) it may be so dry that as little heating or fermentation as possible shall occur in the stack, remembering also that coarse grass does not require so much "making" as fine, succulent herbage. [Cyclopedia of Ag.

The Progress of Incubation.

From the *Rural New Yorker* we extract the following:—

The progress of the incubation of the chicken in the natural way, is a subject curious and interesting. The hen has scarcely set on the egg twelve hours before some lineaments of the head and body of the chicken appear. The heart may be seen to beat the end of the second day; it has, at that time, somewhat the form of a horse shoe, but no blood yet appears. At the end of two days, two vesicles of blood are to be distinguished, the pulsation of which is very visible; one of them is the left ventricle, and the other the great artery. At the fiftieth hour, the auricle of the heart appears, resembling a noose folded down upon itself. The beating of the heart is first observed in the auricle, and afterward in the ventricle. At the end of seventy hours the wings are distinguishable; and on the head two bubbles are seen for the brain, one for the bill, and two others for the fore and hind part of the head. Toward the end of the fourth day, the two auricles, already visible, draw nearer to the heart than before. The liver appears towards the fifty day. At the end of a hundred and thirty-one hours, the first voluntary motion is observed. At the end of seven hours more the lungs and stomach become visible; and four hours after this the intestines, the loins, and the upper jaw. At the hundred and forty-fourth hour two ventricles are visible, and two drops of blood instead of the single one which was seen before. The seventh day the brain begins to have some consistency. At the hundred and ninetieth hour of incubation the bill opens, and the flesh appears on the breast; in four hours more the breastbone is seen; and in six hours after this, the ribs appear forming from the back, and the bill is very visible, as well as the gall bladder. The bill becomes green at the end of two hundred and thirty-six hours; and if the chicken be taken out of its covering, it evidently moves itself. The feathers begin to shoot out toward the two hundred and fortieth hour, and the skull becomes gritty. At the two hundred and sixty-fourth hour the eyes appear. At the two hundred and eighty-eighth the ribs are perfect. At the three hundred and thirty-first the spleen draws over the stomach and the lungs to the chest. At the end of three hundred and fifty-five hours the bill frequently opens and shuts; and at the end of the eighteenth day the first cry of the chicken is heard. It afterwards gets more strength and grows continually, till at length it is enabled to set itself free from its confinement.

In the whole of this process, we must remark that every part appears exactly at its proper time; if, for example, the liver is formed on the fifth day, it is founded on the preceding situation of the chicken, and on the changes that were to follow. No part of the body could possibly appear sooner or later, without the whole embryo suffering; and each of the limbs become visible at the fit moment. How astonishing must it appear to an observing mind, that in the substance of the egg there should be all the vital principle of an animated being! that all the parts of an animal's body should be concealed in it, and require nothing but heat to unfold and quicken them! that the whole formation of a chicken should be so constant and regular; that exactly at the same time, the same changes will take place in the generality of eggs! and that the chicken the moment it is batched is heavier than the egg was before!

Give Your Son a Trade.

The following sensible article appeared in the New York *Mirror*. We commend it to the perusal of all parents:—

Next to education, which is the *great* buckler of liberty and shield of freemen, nothing is more essential to the independence and prosperity of our country than that every man should have the mastery of some useful trade. Better have any than none; though, as a general rule, the choice of a trade should not be left to chance nor to the caprice of a moment. With an honest trade, a man is independent, if he so chooses. There was never yet a time when the mechanic and artisan had naught to do—never a time when their genius and industry could not find, by a little care, prompt employment and fair remuneration.

The men of trades—the real creators of whatever is most essential to the necessities and welfare of mankind—cannot be dispensed with; they, above all others, whatever repute they may be held in by their more fastidious fellows, must work at the oar of human progress, or all is lost. Be they tailors, shoemakers, carpenters, masons, blacksmiths, or of any other vocation, they are equally necessary to the wants and enjoyments, as well as to the independence of all communities. But few brown handed trade workers think of this, or appreciate the position and power they compass.

Give your son a trade, no matter what fortune of money or this world's goods he may have, or seem likely to inherit. Give him a trade, and if possible an education—at any rate, a trade. With this he can always defy temporal want, and he can more easily acquire the education, as a *dernier* resort, than the trade. More easily, simply because, while you may never impress him with the necessity of the education, you can insure him with the conviction that a trade is essential to feed, clothe, and render him independent, and, for his own present and after peace, it were better that he should be ignorant in his independence than ever so much educated and miserably dependent.

But in our free country, there can be, ordinarily, no difficulty in securing both education and a trade to every youth, thereby fitting him to enter the ranks of manhood defiant of those obstacles which intimidate so many tradeless, professionless, young men. Such are the peculiarities of fortune, that no mere outward possession can be counted on as absolutely secure or protective to man. Hoarded thousands and millions may be swept away in a day, and their once possessor be left with no means of livelihood or independence. Let such an one have but some useful trade, and he can snap his finger at ordinary misfortune.

We have read of a wise monarch who decreed that his sons must learn useful trades, or be cut off from their prospective inheritance. They murmured, yet obeyed the decree. The eldest prince, as the quickest trade to learn, took to basket-making. In process of time he became king, and reigned in his father's stead. In time, also, revolution came upon him and overthrew him, and he fled companionless, save his wife and children, and wandered long disguised and unknown. During this period, by a recurrence to the simple trade learned in his youth, he made himself and his family independent; and this is only an illustration of how necessity or misfortune may be overcome, and how an honest, useful trade may always serve a man.

The sons of the rich, as well as of the poor, should be strengthened by this possession. If never used beyond the learning, no harm is done, while possibly it may be of incalculable good. It is a weapon, which, once secured, like education or knowledge, cannot easily be wrested from one's grasp. Only get the bent of a boy's mind and give him a trade in accordance therewith, and, whatever may be his after fortunes, he shall tell you from experience or observation that one of the wisest general provisions of life, is the securing to every young man some useful trade.

Cultivation of Potatoes.

The old practice of hilling up corn and potatoes, is discarded by the best cultivators. Still, there are some who yet cling to the old ways, that might be of benefit in a wet and humid climate, where a necessity exists for raising the plants up out of a superabundant moisture. But, in a climate like ours, where long continued droughts parch up the earth, as they frequently do in many sections, the flat culture, with planting on or below the surface, is the better plan. Where the soil is well underdrained and subsoiled, potatoes planted below the surface, without any hilling, succeed the best. In such situations, the superabundance of rain passes down through the earth, leaving its ammonia and other fertilizing principles for the benefit of the growing plants, while in the dryest weather the roots of the plants search their food so deeply in the generous soil that they keep in a vigorous condition.

We find in the last volume of the "Transactions of the New York State Agricultural Society," some remarks of Prof. Coppock, before the Erie County Agricultural Society, that are worthy of consideration. In remarking that we need to husband by deep tillage, &c., all the moisture we can for the sustenance of our plants, he adds:—"Hence we require flat culture and flat or sunken garden beds, with a deep and permeable soil, that shall catch and oblige to pass through it every summer shower."

His method of cultivation he gives as follows:—"In the culture of potatoes, after the land is thoroughly ploughed, and harrowed smooth, I plant with the spade, thus:—Strain a line, if convenient, North and South; a man puts in his spade spit deep, say seven inches; the first earth he scatters; he then steps back, and at about twenty inches he puts in the spade to the same depth. The soil thus raised, covers the first planted, the third covers the second, &c. A boy to drop the cut potatoes, two eyes to a hole, will attend very well to three lines. Thus you will perceive they are sure to be at equal depth and width, about three feet, and in a perfect line. The field planted, a light harrow is passed over it, and again in the course of eight or ten days, disturbing the first growth of weeds, and keeping the surface mellow. After the plants are up, run a cultivator through once in ten days, until they are in blossom, when, after that, they should not be disturbed. With such a culture I have had great success, and the cost has not exceeded $6 per acre, exclusive of seed."

The hilling of potatoes, at the time of hoeing, is not only useless, but positively injurious. Injurious in warding off the moisture, but more so in disarranging the economy of the plant. All who have harvested potatoes will have noticed, that different varieties set their tubers differently. While some kinds are huddled together and near the surface, others are deeper in the soil and more scattered in and around the hill. If left to itself, in good and generous soil, the plant sets its tubers at their natural distance from the surface, and in that position where they will receive the elements necessary for their growth to the best advantage. So it is with the roots of the plant that ramble about the soil for sustenance for the whole plant. Hence, when we hill up the plants at hoeing time, we cover the roots and the incipient tubers to an unnatural depth, and the plant is obliged to expand a portion of its energies to overcome this unnatural state, forced upon it, which of course retards the full development of the tubers, and consequently gives a lighter crop, if it does not indirectly aid in the development of the "rot."

The practice of the writer has been, in planting his potatoes, after the ground was ploughed and smoothed with a harrow, to drop the potatoes, in pieces or whole, according to size, directly upon the surface, or slightly below the surface, and then to cover, making at once all the hill desired. The after culture is to keep the ground loose and free from weeds. With this method, the labor in the end is less, particularly as the digging is less laborious, while the result has been quite satisfactory. Where the soil is not underdrained and well subsoiled, this method is perhaps preferable, one season with another, to deeper planting. But, with a *deep* soil, deep planting, and perfectly flat culture, is without doubt the best. At all events, those who have such land should give Professor Coppock's plan a trial sufficient to make a satisfactory test. Such a method certainly gives the easiest way to conquer the weeds. [Rural Farmer

Instinct of the Honey Bird.

This extraordinary little bird, which is about the size of a chaffinch, and of a light gray color, will invariably lead a person following it to a wild bees' nest. Chattering and twittering in a state of great excitement, it perches on a branch beside the traveler, endeavoring by various wiles to attract his attention; and having succeeded in doing so, it flies lightly forward in a wavy course in the direction of the bees' nest, alighting every now and then and looking back to ascertain if the traveler is following it, all the time keeping up an incessant twitter. When at length it arrives at the hollow tree, or deserted white ants' hill, which contains the honey, it for a moment hovers over the nest, pointing to it with its bill, and then takes up its position on a neighboring branch, anxiously awaiting its share of the spoil. When the honey is taken, which is accomplished by first stupifying the bees by burning grass at the entrance of their domestic domicile, the honey bird will often lead to a second and even to a third nest. The person thus following it ought to whistle. The savages in the interior, while in pursuit, have several charmed sentences which they use on the occasion. The wild bee of Southern Africa exactly corresponds with the domestic garden bee of England. They are very generally diffused throughout every part of Africa, beeswax forming a considerable part of the cargoes of ships trading to the Gold and Ivory coasts, and the deadly district of Sierra Leone, on the western shores of Africa.

Interesting as the honey bird is, and though sweet be the stores to which it leads, I have often had cause to wish it far enough, as, when following the warm spoor or track of elephants, I have often seen the savages, at moments of the utmost importance, resign the spoor of the beasts, to attend the summons of the bird. Sometimes, however, they are "sold," it being a well known fact, both among the Hottentots and tribes of the interior, that they often lead the unwary pursuer to danger, sometimes guiding him to the midday retreat of a grizzly lion, or bringing him suddenly upon the den of the crouching panther. I remember on one occasion, about three years later, when weary with warring against the elephants and hippotami which roam the vast forests and sports in the floods of the fair Limpopo, having mounted a pair of unwonted shot-barrels, I sought recreation in the humbler pursuit of quail shooting. While thus employed, my attention was suddenly invited by a garrulous honey bird, which pertinaciously adhered to me for a considerable time, heedless of the reports made by a gun. Having bagged as many quails and partridges as I cared about shooting, I whistled lustily to the honey bird, and gave him chase; after following him to a distance of upwards of a mile, through the open glades adjoining the Limpopo, he led me to an unusually vast crocodile, who was laying with his entire body concealed, nothing but his horrid head being visible above the surface of the water, his eyes anxiously watching the movements of eight or ten large bull buffaloes, which, in seeking to quench their thirst in the waters of the river, were crackling through the dry reeds as they cautiously waded in the deep mud that a recent flood had deposited along the edge. Fortunately for the buffaloes, the depth of the mud prevented their reaching the stream, and thus the scaly monster of the river was disappointed of his prey. [Cummings' Adventures.

VARIETY.

"Medical men," says Dr. Gorden, "are familiar with the fact that beer drinkers in London can scarcely scratch their fingers without the risk of their lives. A copious London beer drinker is one vital part. He wears his heart on his sleeve; bare to a death wound even from a rusty nail or the claw of a cat." Sir Astley Cooper, on one occasion, was called to a drayman who had received an injury in his fingers from a small splinter of a stone. Suppuration had taken place. This distinguished surgeon opened the small abscesses with his lancet. On returning he discovered that he had forgotten his lancet case; going for this, he found his patient in a dying state. "Every medical man in London," concludes the same writer, "dreads a beer drinker for a patient."

The boys of the Ragged School Shoe-black Society in London, earned by cleaning shoes in the streets, during the year 1853, the sum of eight hundred and fifty-three pounds. Of this, four hundred and seventy pounds were paid to the boys, one hundred and ninety-two pounds put by for them in bank, and one hundred and ninety-one retained for expenses. The number of pair of boots cleaned during the year by thirty-six boys, was two hundred and four thousaud seven hundred and fifty, or about four thousand pair every week.

There is now in full bloom in the Liverpool Botanic Garden, a beautiful specimen of the *Wistaria sinensis*. This splendid plant, which is considered the finest specimen in Britain, covers a space of wall amounting to nearly nine hundred square feet. At the present time there are about six thousand *racemes* or bunches of flowers on it, each bunch bearing on an average fifty-five flowers. In addition to the pleasure given to the eye, this plant yields a most grateful perfume.

From Parliamentary returns, it appears that the expenditures of England, during the war, from 1803 to 1815, inclusive, amounted to £1,159,729,256, or close upon five thousand eight hundred millions of dollars. In the last years of that war, the expenditure run thus: £103,421,538 in the year 1812; £120,952,657 in 1813; £116,843,889 in 1814; and £116,491,051 in 1815—in which last year the campaign commenced in April and finished at Waterloo, in June.

In the United States Senate, recently, the Committee on Agriculture made a report recommending that an appropriation be placed at the disposal of the President, and applied at his discretion, to purchase Mount Vernon, to be converted into an experimental farm, connected with an agricultural school, and both be attached either to the Smithsonian Institution or Patent Office. The report was debated and finally agreed to.

It is said there are two words, and two only, in our language, which contain all the vowels in their regular order. They are "abstemiously" and facetiously."

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir.—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me
Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. Sands; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

The Sabbath Recorder.

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

TRACT OPERATIONS.

To the Editors of the Sabbath Recorder:

On resuming my agency for the American Sabbath Tract Society, I have thought it might be well to give an abstract of my journal through the *Recorder*, that the members of the Society, or others interested, may know somewhat more than they otherwise can of this business.

I left home March 7, 1854, to go to Greenmanville, Ct., having been invited by the brethren there to deliver some lectures in that vicinity on the subject of the Sabbath. I reached Mystic on the morning of the 8th, about half past three o'clock, and put up at the hotel. In the morning I went to Bro. Griswold's. During the rest of the week, we were making arrangements and preparing for some Sabbath lectures. On the eve of the Sabbath, and on the Sabbath, I preached for brother Griswold's people.

On First-day, the 10th, went with Bro. G. to Upper Mystic, and by his request preached for the 1st Baptist Church of Groton, which he was supplying at that time. The Rev. Mr. Miner, who had been serving that church for some time previous, had preached several sermons, for the purpose of showing that there is no Sabbath. Bro. G. requested the privilege for me to lecture on that subject to them that afternoon and evening, to which they consented. I accordingly gave two lectures there, in which I reviewed two of Mr. Miner's sermons, before mentioned, and which had been published in pamphlet form some time previous. The congregations at these lectures were of usual size for that place, and quite attentive. But it was evident that the no-Sabbath doctrine had got a strong hold among them.

The next evening, the 13th, I lectured in Lower Mystic, at Floral Hall, pursuant to previous notice. The Rev. Mr. Daget, a Methodist at Upper Mystic, having delivered a discourse on the change of the Sabbath some time before at that place, and repeated the same at Lower Mystic, the brethren sent and borrowed said discourse, and I reviewed it at Floral Hall. The congregation was quite large at the Hall, but did not seem to be very much interested, and numbers of them left before I was through. I noticed, that a number of those who left were young persons; and I presumed that as the lecture was considerably occupied on quotations from history, it was too dry for them.

It was afterwards concluded to have a couple more lectures for the purpose of setting forth our own views, and arrangements were made for them. One was given at the 1st Baptist meeting-house at Groton, where I gave the first two lectures on the no-Sabbath doctrine, before mentioned, and the other at Floral Hall. The congregations at these two lectures were not large, but attentive. Notices had been sent to the ministers in the place, to read on First-day, for the lecture in the Hall, but I did not learn that any of them read them to their people, except Mr. Long, the Congregational minister, and he attended that lecture. When I was through, I gave opportunity for any to speak who wished. Bro. Griswold, and Bro. Edmund D. Barker, made some interesting remarks. I should have stated, that the Rev. Mr. Daget, before mentioned, attended my last lecture at Upper Mystic, at the close of which he made some remarks, to the effect that he was pleased with the spirit we exhibited in presenting our views—that he had extensively examined the subject of the change of the Sabbath, and was satisfied that he was right—that he would be glad to discuss that question with me, only he was going to leave in a few weeks for Conference, and had not time to attend to it.

Between the time of my first and last lectures at Mystic, I visited Westerly and Hopkinton, and preached three times, once at 2d Hopkinton, once at 1st Hopkinton, and once at Pawcatuck; also called at Rockville, with Bro. C. M. Lewis, to see Elder Joel Greene, and speak to him about the church there doing something for the Tract Society, but had not time to have a meeting. At the other places I commended the Tract Cause to the regard of the people, and exhorted them to do for the same, which they seemed disposed to do, though I took no collections while there, the time being too short to give any notice for that purpose. Having finished my engagements at Mystic, and being short of money to travel with, Bro. G. Greenman let me have $10 as a donation to the Tract Society. The brethren at Mystic acted nobly in favor of the cause, especially in getting a place to lecture, and notifying the same. Bro. Griswold was active among the rest. The Hall we used cost five dollars a night, which the brethren paid.

I left Mystic on the 21st, and went to Pawcatuck. 22d, went to Newport, via Providence. Called on Mr. Geo. Spicer, at Providence, and took dinner—was kindly entertained by him and his interesting family. The same afternoon I went from Newport to Jamestown—staid that night at Mr. B. Congdon's. I had made arrangements to stay in that vicinity until the first of the week, and in the meantime have a meeting of the brethren to consult as to what could be done in regard to taking up the lease of our meeting-house, held by the 4th Baptist church in Newport. On Sabbath afternoon, I preached in the Baptist house in Bro. Weeden's neighborhood. The next day I attended meeting at the same place, and heard Elder Daniel Carr preach, and made some remarks after he had done. In the evening I lectured on Temperance in the Town House, and though the weather was cold and blustering, the congregation was pretty large and very attentive.

27th. In the night I left Newport by the steamboat for Fall River, thence by railroad to New Bedford, where I arrived in the morning—walked to the widow Arnold Bliss' residence, about two miles out of town, where I had visited some years ago, while he was living. In the evening I went to a Methodist prayer and conference meeting in Allen-st.—had an introduction to the minister, Mr. McKeown—told him I was a Seventh-day Baptist, and wished to get a place to give some lectures on the importance of the Sabbath, and the day to be kept. He said they would like to hear the first lecture, but did not suppose they would be interested in the second, as it might unsettle people's minds, and make them careless about keeping the first day, and so do harm. When meeting was out, it was agreed between us, that I would call upon him next morning. I did so, but he could not make it convenient for me to have his house for a lecture. He said that the Christian Society were without a preacher, and perhaps I could get their house, or that they might like to have me preach for them on First-day. I spent a large part of the morning in going from one committee man and from one trustee to another, in order to get a house, but all to no purpose, only to see how men will shift and turn to get rid of Sabbath arguments, and have them tell me that they did not wish to have the subject presented to the people, lest it might do harm. I tried also to get the City Hall, but the man who had the letting of it was out of the City. I then called on Mr. Sears, owner of a Hall (called Sears' Hall) and told him I wanted his Hall to lecture in. He wanted to know what subject I wished to lecture upon. I replied, The Sabbath. "The Holy Sabbath," he rejoined, significantly. I said, Yes, the holy Sabbath, but not the first day, or Sunday, but the seventh day. "O!" said he, "that's it. Well, I am glad," he continued, "that somebody is going to take that matter up, for if the people are to keep a Sabbath, they ought to keep the seventh day, for that is the right day if there is any, and I have no faith in this making Sunday a Sabbath." And as he made these remarks, he handed me a tract, entitled, "We are all here," and wished me to read it, intimating his aversion to its sentiments. This tract was published by the American Tract Society, and is No. 381. I engaged his Hall for the evening following First-day, and put a notice of my lecture in the *Daily Standard.*

On Sixth-day, March 31st, I went out of New Bedford about seven miles to see some Sabbath-keeping Adventists. I called at Mr. Philip Collins's, where I had understood they were to hold their meeting on the Sabbath. Mr. Collins and family, consisting of himself, wife, and son, received and entertained me very kindly. It being stormy, the people could not get to meeting as they intended. In the afternoon three persons, two brethren and one sister, came in, having been informed that I was there the evening before. Upon these persons coming in, it was concluded to have some religious exercises, and I was invited to occupy as much of the time as I pleased. The meeting being opened by singing and prayer, (in which several of us took part,) I occupied some time in remarks upon *our* history and experience as a Sabbath-keeping people, and the sympathy we had for those who embraced that sentiment, and the interest we felt on learning that numbers of the Advent people had adopted it. I advised them to secure a place for public worship as soon as they could, as indispensable to success in the Sabbath cause. They seemed to be aware of the importance of the same thing, and talked freely of the common interest in which we and they were mutually concerned. Finally, we had a pleasant interview. Among other things, they mentioned that our Tracts had been of great use to the Sabbath cause among them. They seemed to be not only friendly and hospitable, but very devoted. The idea of the annihilation of the wicked is pretty generally held by them. They also hold to feet-washing. They are very much opposed by their Advent brethren who refuse to keep the Sabbath. Many of the latter fix on 1854 for the coming of Christ, but the Seventh-day keepers do not fix on any particular period for the Advent, but think it is near. I remained at Mr. Collins' till First-day morning, when he got a conveyance and took me within a mile or two of New Bedford, where we parted. When we parted, Mr. C. invited me to visit him again, which I promised to do if convenient, and asked him to visit us, and he expressed a wish to do so.

I then walked into the City, and called at the widow Howland's, pursuant to a previous engagement. Mrs. H. is a daughter of Eld. Arnold Bliss, who was a son of Eld. Wm. Bliss. In her youth she united with the church at Newport, but like many others, in after life found her circumstances such as to render it impracticable in her opinion to keep the Sabbath properly, though her views of the subject remain unchanged to the present time. At the Hall, the congregation was not large, but quite attentive. I distributed tracts and papers among them. I then returned to Mrs. H.'s, and spent the night, and in the morning left for Fall River. While there, waiting for the stage to take me to Newport, I distributed about one hundred Sabbath publications. I went into the vicinity where the best residences were to be found, and called at the doors and presented the papers, and asked them to accept them, which they did readily in all cases. By a little inquiry, I found Mr. Joseph Crandall's ship-yard. He not being present, I gave some tracts to one of his men, with my name and address, and returned to the stage office. But before I got out of town, though we were in the stage, Mr. Crandall came to the window, and we instantly recognized each other, though some years had passed since we had met. He said he had been looking for me, and was sorry he was not at home when I called; he said he resided at No. 15 Union-st., and requested me to visit him when I came again. I told him I should try to. The stage being ready to start, put an end to our interview. I left Newport that evening, and reached home April the 5th.

LUCIUS CRANDALL.

STEP-MOTHERS.

Henry Richmond was reading in his primer about a little girl who had a step-mother, and he asked his mother what it meant. Now I have often heard children ask this question, and I have heard mothers explain it so as to give them the idea that nothing is more to be dreaded; that there could not possibly be so great a calamity befall them as to have a step-mother. I have heard mothers deliberately and systematically teach their children never to love or honor any one who might bear to them this relationship; Christian mothers, too, who were professing to endeavor in all things to give their children right principles, and who would on no account inculcate disrespect toward those whom they might meet in the ordinary intercourse of life.

But the mother of little Henry kindly told him that it was possible she might die, and then he would be without a mother to love and care for him, unless his father should have another wife; if he should, then she would be his step-mother, and she hoped he would be a good boy and love her, for she could not take so good care of him and make him happy, unless he loved and obeyed her.

It was the first time I had heard a mother definitely instruct her child on this subject, and I could not help contrasting the lesson here given, with the many to which I had listened; and I alluded to it afterward, asking if it was not an unpleasant task to talk of one who might succeed her in not only her children's but her husband's affections?

She cheerfully and frankly answered, "that, knowing the frail ties which connected her with the living, she could not help feeling that it was quite possible such an event might happen; and if she were taken from her family, she should prefer that one should fill her place who was inspired by the love and interest which a wife and mother alone can feel. A house-keeper or nurse may conscientiously perform her duty, as far as she knows it, but love alone prompts to that self-denial and active interest and exertion which are necessary to the well-being of a family."

An eminent author says: "It seems impossible to eradicate the prejudice which has in some way taken possession of a majority of minds concerning step-mothers, literary ladies, and old maids." It is taken for granted that a step-mother must be cruel, that literary ladies must be slatterns, and old maids unamiable and foolishly precise. Narrow-minded people always jump at conclusions, and condemn a whole class for the deficiencies of one.

A mother might pursue a course in training her children which would be thought peculiarly wise and deserving of commendation, and a step-mother pursuing exactly the same course would receive only censure.

The women who are in no way conspicuous before the world, are not watched as those who are. They may neglect their husbands and children, from idleness, or love of folly even, and people will not trouble themselves to parade their negligence before the world. Jealousy and envy are the cause of nearly all the gossiping and evil-speaking, whether they originate in the sewing-society of a country village, in the city-circles of fashion, or are carried in newspapers and popular magazines.

The "maiden aunt" is usually the isolated member of a family, by whom she is perhaps supported; on whom she is dependent for a home; or she is one who goes from house to house to sew, or toil in some way to gain her livelihood. Those by whom she is surrounded do not feel bound to conceal her faults and foibles, as they do the faults of those who are bound to them by nearer ties; all she does is criticized and exaggerated.

So it is with a step-mother; neighbors and jealous relatives watch all her movements, and make the most of her infirmities. Children receive the impression from books, and from the conversation of friends, that a step-mother can not love them; and when discipline becomes necessary, and reproof must be administered, it is ascribed to any motive but the desire to do them good.

It is quite probably true, that there is no love exactly like a mother's love; to lose her is the greatest loss children can sustain; but a woman who loves her husband will love his children, and pride will also prompt her to wish them to pass creditably through the world.

Mrs. Ware presents a beautiful example to all step-mothers. She manifested none of that unchristian jealousy of a first wife, which is often exhibited. She talked freely to her husband of his first and strongest love, and the evening of every anniversary of her death was consecrated to recalling her memory, and dwelling upon her virtues. To the children, she was ever held up as an example, and the remembrance of her cherished as a sacred treasure. This is the only way a step-mother can secure the perfect love and honor of her husband and her children. She does not love one child less because she loves another, and her husband may not love her less because he has loved another; but the first word of detraction concerning her who is in her grave, in order to strengthen her own influence, will be the surest way to destroy respect toward herself; to arouse the indignation of those who ought to remember their mother only with affection, and who should be sensitive concerning her reputation, and purchase also their ill-will, and, perhaps, hatred for ever.

A few words, especially concerning some new duty, make a deep impression upon a child.

Little Henry remembered the lesson his mother taught him, and reminded her of it in no very pleasant way not long afterward, when she denied him some gratification which he asked.

Throwing himself on the bed in a passion of tears, he exclaimed, "Mother isn't kind to me; she doesn't love me, and never lets me do what I like; well, I hope my step-mother will be kinder to me than she is!"

I repeat it, to prove how indelible are very slight impressions. A woman less noble and high-minded would have answered the questions of her child in such a way as to be sure that whatever she might do herself, she would still be preferred, and the thought of a step-mother only inspire terror; and a woman of less noble and enlarged views, on hearing such an exclamation from a child, would have placed a step-mother before him in such a light as to prevent all danger of his alluding to one, under any circumstances, with pleasant anticipations again. And thus, if she were really taken away, she has taught him to despise the authority and instructions on which his happiness and the whole formation of his character may depend. She may have deliberately planned and effected his ruin! actuated by most unworthy, selfish, and unchristian motives!

How many times have I heard children say, "If I should have a step-mother, I would not mind her, I would not love her, I would never call her mother either!" And I have seen mothers smile with complacency at such language, evidently pleased with the thought of the suffering which the woman would thus endure who should aspire to occupy her position and enjoy her happiness. And that smile of approbation was a volume of unchristian teaching, engendering and fostering almost every unhallowed passion in the hearts of her children. All the prayers of her life-time, and all the direct exhortations to a life of holiness, could not balance the evil accomplished by that one look of approval, of a resolve so at variance with the precepts of Christian faith and practice.

Those who assume this in no way enviable position, have no right to shrink from its duties; they engage to be mothers, and should perform a mother's office, though it insure them far more than a mother's trials; and let those who love their children, and desire their true interest, lay aside selfishness, and the weak, vain love of exclusive devotion, not only whilst living, but also in death, and beware how they teach rebellion and sow dissension between those who must live together and depend on each other for happiness and for the comforts of life.

[Independent.

A THREATENING LETTER.

When Nineveh was in its glory, a successful warrior who sat upon the throne determined to subjugate the small independent kingdoms which lay between his own dominions and those of the Egyptian monarch. Sending an army under the command of his cup-bearer to invade Judea, over which the pious Hezekiah was reigning, he spread desolation throughout the provinces, and alarm in the capital. Before there was time to do more, intelligence which showed that his forces were required elsewhere caused him to retire suddenly. The Assyrian conqueror, suspending his operations, but desiring to perpetuate the terror which he had excited, sent to Hezekiah a threatening letter. He boasted of his ancestral greatness, recounted his victories, and defied any power, human or divine, to defend the Jewish sovereign from the overwhelming forces which would soon arrive. Hezekiah received the insulting epistle and read it. He knew the truth of the Assyrian allegations. He knew that he had to do with an enemy whom no treaties could bind, from whose forbearance there was nothing to hope, and against whom his allies could afford him no effective help. What course did Hezekiah take? What measure did he adopt as the most appropriate to the crisis? "Hezekiah received the letter at the hand of the messengers," we are told, "and read it; and Hezekiah went up into the house of the Lord, and spread it before the Lord." There was one house, in those days, which the Most High had chosen as the house of prayer—one place towards which he had represented his eyes as open "night and day." Thither Hezekiah hastened, taking with him the letter, "and spread it before the Lord." How expressive the action! How easily imitated! We have to do with a Father who seeth in secret, and there is a place where we are encouraged to believe that he will meet us. "Enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father who seeth in secret, shall reward thee openly."

From the Christian Chronicle.

LET ME SEE MY GOOD OLD PASTOR.

BY W. M. FAHNESTOCK, M. D.

[The following impromptu was suggested by the touching incident of the aged disciple, (a colored brother of nearly one hundred winters,) coming forward to behold the limner's lineaments of the late Dr. Staughton, after the ceremonies of the presentation of the portrait of that distinguished divine on the evening of the first Anniversary of the American Baptist Historical Society.]

Let me see my good old Pastor,
As he was seen in days of yore!
His work is done—he's called home—
On earth we see him, now, no more.

How beautiful his gospel feet!
Shod with graces rarely given,
He proclaimed salvation's tidings,
And pointed sinful man to heaven.

How valiantly he kept his post,
How stately, yet meekly, he trod
The battlements of Zion's towers—
The faithful sentinel of God.

Ah! here he is, as erst he stood,
Expounding Sinai's scathing code;
Still unfolding Calvary's boon,
To loose the captive's crushing load.

Yes! in those gracious, speaking eyes,
I read the stirring truths he told,
Of retribution's blighting curse,
As from his burning lips they rolled.

I hear, again, his winning words,
Luring sinners from burning hell—
From Error's ways to living Truth—
As on their pricked hearts they fell.

I feel afresh the holy glow
Of love divine, that filled my breast;
When he, in peaceful accents, lisp'd:
Trust in Jesus, the mourner's rest.

I recognize his radiant smile,
Like heaven's bright, celestial beam,
While gleaming in the liquid grave,
He laid me 'neath the flowing stream.

I live, anew, the joyous hours
Of social bliss in prayer and praise—
Of holy wrestling with our Lord,
And hymning soul-transporting lays.

Keep, O keep my good old Pastor—
Preserve with pious, sacred care,
This living semblance of his form,
For thousands hold his memory dear.

TIME.

The following extract from Thomas De Quincey's essay on conversation, may serve to impress upon the mind of some young man the value of his time—how little of it he can afford to devote to pleasure, so called—and that even though he survive to a good old age—a lot which falls to but few of us—he hath no hours to spare:—

"A day has perished from our brief calendar of days; and that we could endure; but this day is no more than the reiteration of many other days, counted by thousands, that have perished to the same extent and by the same unhappy means, viz., the evil usages of the world, made effectual and ratified by our own lachete. Bitter is the upbraiding which we seem to hear from a secret monitor—'Friends, you make very free with your days; how many do you expect to have? What is your rental, as regards the total harvest of days which this life is likely to yield?' Let us consider. Three score years and ten produce a total sum of 25,550 days; to say nothing of some seventeen or eighteen more that will be payable to you as a bonus on account of leap years. Now out of this total, one-third must be deducted at a blow for a single item, viz., sleep. Next, on account of illness, of recreation, and the serious occupation spread over the service of life, it will be little enough to deduct another third. Recollect that twenty years will have gone from the earlier end of your life (viz., above seven thousand days before you can have attained any skill or system, or any definite purpose in the distribution of your time.) Lastly, for that single item, which among the Roman armies, was indicated by the technical phrase 'corpus curare,' attendance on the animal necessities, viz., eating, drinking, washing, bathing, and exercising, deduct the smallest allowance consistent with propriety, and, upon summing up all these appropriations, you will not find so much as four thousand days left disposable for direct intellectual culture. Four thousand, or forty hundreds, will be a hundred forties; that is, according to the lax Hebrew method of indicating six weeks, by the phrase of forty days, you will have a hundred bills or drafts on Father Time, value six weeks each, as the whole period available for intellectual labor. A solid block of about eleven and a half contiguous years is all that a long life will furnish for the development of what is most august in man's nature. After that, the night comes, and no man can work; brain and arm will be alike unserviceable; or, if life should be unusually extended, the vital powers will be drooping as regards all motions in advance."

THE MOTHER'S LESSON.

Lamartine thus opens the beautiful narrative of his travels in the East:—

My mother had received from hers, on the bed of death, a beautiful copy of the Bible of Royaumont, in which she taught me to read, when I was a little child. This Bible had engravings on sacred subjects on every page. They depicted Sarah, Joseph, and Samuel; and above all, those beautiful patriarchal scenes, in which the solemn and primitive nature of the East was blended with all the acts of the simple and wonderful lives of the fathers of mankind. When I had repeated my lesson well, and read with only a fault or two the half page of historical matter, my mother uncovered the engraving, and holding the book open in her lap, showed and explained it to me as my recompense.

She was endowed by nature with a mind as pious as it was tender, and with the most sensitive and vivid imagination. All her thoughts were sentiments, and every sentiment was an image. Her beautiful, noble, and benignant countenance reflected, in its radiant physiognomy, all that glowed in her heart, and all that was painted in her thoughts; and the silvery, affectionate, solemn, and impassioned tone of her voice, added to all that she said an accent of strength, grace, and love which still sounds in my ear after six years of absence.

The sight of these engravings, the explanations and the poetical commentaries of my mother, inspired me, from the most tender infancy, with a taste and inclination for Biblical lore.

From the love of the things themselves, to the desire of seeing the places where these things had occurred, there was but a step. I burned, therefore, from the age of eight years, with a desire to go and visit those mountains on which God descended; those deserts where the angel pointed out to Hagar the hidden spring, whence her famished child, dying with thirst, might derive refreshment; those rivers which flowed from the terrestrial paradise; the spot in the firmament at which the angels were seen ascending and descending Jacob's ladder. The desire grew with my growth, and strengthened with my strength. I was always dreaming of traveling in the East. I never ceased arranging in my mind a vast and religious epopee, of which these beautiful spots should be the principal scene.

DISCONTENT.

How universal it is! We never knew the man who could say, "I am content." Go where you will, among the rich or the poor, the man of competence or the man who earns his bread by the daily sweat of his brow, you hear murmuring and the voice of complaint. The other day we stood by a cooper who was playing a merry tune with the adz round a cask. "Ah!" sighed he, "mine is a hard lot—forever trotting round like a dog, driving away at a hoop."

"Heigho!" sighed a blacksmith, one hot day, as he wiped away the drops of perspiration from his brow, while his red iron glowed on the anvil, "this is life with a vengeance—melting and frying one's self over the fire!"

"Oh! that I were a carpenter!" ejaculated a shoemaker, as he bent over his lap-stone. "Here I am, day after day, working my soul away in making soles for others, cooped up in a seven-by-nine room."

"I am sick of this out-door work!" exclaims the carpenter, "boiling and sweltering under the sun, or exposed to the inclemency of the weather. If I were only a tailor!"

"Tis too bad!" perpetually cries the tailor, "to be compelled to sit perched up here plying the needle all the while—would that mine were a more active life."

"Last day of grace—the banks won't discount—the customers won't pay—what shall I do?" grumbles the merchant. "I had rather be a pack-horse, a dog, anything!"

"Happy fellows!" groans the lawyer, as he scratches his head over some perplexing case, or pores over some dry record, "happy fellows! I had rather hammer stone than cudgel my brains on this tedious, vexatious question!"

And through all the ramifications of society, all are complaining of their condition, finding fault with their particular calling. "If I were only this, or that, or the other, I should be content," is the universal cry. "Anything but what I am."

THE FINISHED SALVATION.

When Robert Haldane was at Montauban, in 1818, he was visited by a French pastor, from Marseilles, who was violently opposed to the doctrine of justification by faith alone. They entered freely and fully into a discussion of the subject; and Mr. Haldane says, though he was neither an Arian nor a Socinian, yet he had not encountered one who appeared more decidedly hostile to the doctrine of gratuitous justification by faith alone. One evening, as they were walking out together, Mr. H. began to speak on the declaration of Christ on the cross, "It is finished," endeavoring to show that everything necessary for the sinner's acceptance with God was already accomplished, and that Christ is the end (the finishing or accomplishment) of the law for righteousness to every one that believeth.

"In a few minutes," says he, "it pleased God, in infinite goodness and compassion, to shine in his heart, to give him the light of the knowledge of the glory of God in the face of Jesus. He suddenly stopped, and with extended arms, vehemently exclaimed, '*C'est trop grand pour etre vrai!*' (It is too good to be true!) From that moment, there was no more difference of opinion between us—no further opposition on his part—no more objections. In Christ he was a new creature. Old things had in a moment passed away; behold, all things had become new. It was now all his desire to hear more of the great salvation. We returned to town, holding the most delightful communication. He remarked with earnestness, how differently he would preach when he returned to his flock. He wondered that his people should have had patience to listen to such a system as he had been endeavoring for seven years to inculcate upon them, so totally different from the doctrine of the grace of God. When we parted, he who an hour before hated and opposed the doctrine of salvation, was filled with peace and joy in believing."

The next morning the pastor called on Mr. H. in the same state of mind; but perplexed to know what to do, for he had engaged to preach the next day, and the sermon he had prepared would not tally at all with his new views. Mr. H. advised him to take for his subject the inquiry of the jailer, with Paul's answer, and preach extempore, which he concluded to do. The people were astonished, wondering that he now preached the faith which so lately he sought to destroy. On his way home, he preached the same sermon, which produced great excitement, and came near causing the pastor who invited him to preach, to be expelled from his charge.

The account of this young minister's conversion produced a wonderful effect upon his father, a man above eighty years of age. So absorbed was he with the subject, that he went about the house for several days, clasping his hands, and joyfully exclaiming, "*Tout est accompli,*" (It is finished.)

Such is the effect which this doctrine has had on many hearts. It filled the heart of the Philippian jailer with joy.

THE THEORY OF CIVIL GOVERNMENT.

It was a marked era in the history of this oppressed world, when our political forefathers published what they supposed to be the true theory of government, namely, that sovereignty vests in the people. The theory was, at least, an advance upon all other theories that had obtained currency. An intelligent Christian, however, would have said, that sovereignty vests in God, and in God only. For certain it is, that men are the subjects of God's moral government, before they can possibly be held responsible to any civil authority; and as God cannot release them from this subjection, so he can recognize no civil government which interferes with it.

The founders of our Government were not all Christians, however. Some of them were, it is true, but some were Infidels. And with whatever detestation Infidels could look upon the encroachments of tyrants, it was impossible for them to subscribe to any theory of government, which recognized any higher authority than what is of this world. Rejecting the pretensions of kings, there was, therefore, no alternative but an union in that theory which makes the people the supreme authority.

But the kings of the Old World did always admit, that sovereignty belongs to God. Their error lay in pretending that to themselves, rather than to the people, God had committed the right to exercise civil rule. They regarded themselves as a class set apart, by divine appointment, for the express purpose of giving laws to the people, and ruling over them. With this foolish conceit they became intoxicated to madness, and so vain were they of their supposed divine right to rule, that they could not see that the people had any rights, but thought that government was established, pretty much, for their own benefit. Hence, if they chose to oppress, and make the lives of their subjects bitter by the rigors that they laid upon them, they justified it all, on the ground that God had given them the right to do so.

This abuse has begotten the opposite extreme. In our own country we hear it asserted, without qualification, that the will of the people is the supreme law of the land; while the doctrine of a "higher law" has been ridiculed, and repudiated, by the ablest of our statesmen. Said the lamented Webster, "They talk of a *higher law*, somewhere between heaven and earth; I never knew exactly where." Indeed, so far as civil government is concerned, it seems to be taken for granted by politicians, that God has renounced all supremacy, from the time that he rejected the Israelites from being a nation; and any plea for the application of Bible principles to government is denounced as squinting at a union of church and state.

We hold, however, that God is the sovereign of nations, as well as of individuals; though we do not hold, that He has delegated the right to exercise civil rule to a favored few, and made it the duty of all others to be in subjection. Nobody in our country believes in such a right as belonging to a class called the nobility, between whom and the common people there is a distinct line of separation. And the same argument which proves that there is no such privileged class, proves that it is not divinely delegated to the white man to rule over the black. For if God has committed civil authority to the people, as we believe He has, He has committed it to them as men; not as white men, nor as black men, but as men bearing the image of their Creator. And just as surely as He holds kings and despots accountable for their usurpations, so will he call white men to account for so framing and administering government as to make it an engine of oppression to the black race.

The true theory of government is yet to be practically developed. If our own nation persists in its refusal to do it, God will give the honor of doing it to some other. The equality of mankind must be recognized. The principle was recognized in the Israelitish nation of old, and as far as the rude state of the world permitted, it was practically applied. But God designs, as we believe, that under the benign influence of Christianity, and in this advanced stage of the world, it shall be more fully applied. Perhaps this blessed result will not be brought about, till the scattered children of Israel are again gathered, and David their King (Jer. 30: 9,) shall rule over them. If not, we are sure that it will take place then. In the mean time, God will plead with the nations that refuse to act on this principle.

Is not God pleading with our nation now? Has he not been pleading from the time that the anti-slavery movement was first set a-going? Has He not been pleading in the public journals, in our pulpits, and in our legislative halls? Has He not raised up a host of witnesses, who have feelingly asserted the rights of the colored man? Does He not continue to plead, in the moral resistance which is opposed to the execution of the Fugitive Slave Law? Does He not call on us, with the voice of thunder, to let the oppressed go free? Yet, notwithstanding His pleading, the advocates of oppression grow more overbearing, and seem determined that the bonds of the slave shall be made heavier and tighter.

God's Spirit will not always strive. If moral suasion will not suffice, He will plead with this nation as He has with others. He will plead by fire and sword. He will plead by civil convulsions, that will shake the Government to ruin. Nations that oppress are the objects of His special abhorrence; and the time will come, sooner or later, when He will convince our guilty rulers, that nothing is gained by depriving man of his inherent rights.

T. B. B.

LETTERS FROM PALESTINE—NO. 2.

Our Home, again—Liberty and Peace—Meetings, &c.

In my last, I left the reader gazing at a table scene in the cabin at sea. I should have added, that not unfrequently, during this general upsetting, the inner man of one or more would be so completely *boulversé* as to oblige a hasty retreat to the state-room or to the deck. The rules of etiquette, and indeed all rules, are overruled by the present necessity—that most unpleasant and disagreeable of all feelings. You look sober, but the well ones are remarkably pleasant, and manage to force a smile from you in spite of yourself.

So much for the manner of the table; as to the eatables, we have quite a variety, change or course for every day in the week, the greater variety being at dinner. Meals are served regularly at 7 1-2, 12 1-2, and 5 1-2 o'clock. Of bread, we have sea biscuit, warm biscuit, and, in course, corn cake, sweet cake, water crackers, doughnuts, fritters, and toast. Of meat, fresh beef during the first week; regularly, salt beef, tongue, pork, ham, sausage, mackerel, codfish, smoked herring, chicken; porpoise and turtle twice each. Soups, macaroni, rice, pea, and bean. Of vegetables, cabbage, turnips, beets, apples, potatoes; also, butter, molasses, sugar, pickles. For dessert, sago, tapioca, macaroni, rice, plum, boiled apple, and bread puddings, and mince pie. For beverage, chocolate, cocoa, tea, hot and cold water.

I will now speak of the family in this home on the ocean. The captain, his wife and little daughter, and first mate, are from Cape Cod—are very agreeable, and treat us with respect. The second mate is from Norfolk, Va., pretends to own a mile square of land, and some men, ("niggers," *he* calls them,) in the Old Dominion, and yet came to sea without oil clothes, sponged the use of mine, the first mate's, and the captain's. He appeared very penitent when we first sailed, but has become so noted for falsehood, that the captain threatens to send him to the forecastle before he gets back to Boston. Josiah is a sprightly young man of 17, from Boston; has lost his mother, appears to remember her with a good deal of feeling; says she was a praying woman. He is quite intelligent, and of a pleasant disposition, but has learned to profane the name of God. Would that he could be placed under a pious influence. "Jimmy" is a lad of 12 years; is step-son to the steward, and serves as cabin boy; has a good common-school education, (the same as Josiah;) his mother is a Catholic; does not read the Bible; is quite modest in appearance, and disposed to accommodate; this is his second voyage; does not wish to go on another. I most heartily hope he will not, at least till he becomes a Christian. There is Tom, who is occasionally deranged; is from near Attleboro, Mass.; believes in Universalism; of a very sociable turn, but, like the rest, will profane the name of the Deity. Wilson is from Holland; has learned to read English since he came to America, six years ago; have seen him reading his Bible, yet does not respect the name of Jesus. Dan is a native of Clyde, Scotland; is an able, wide-awake seaman. He also reads his Bible; says he belongs to the Church of Scotland; ran away from home when quite young; shipped with his brother, a sea captain, but not liking too free a use of the rope's end, he ran away from him on their arrival in New Orleans; has no idea of ever returning home, though strongly solicited to do so. If he thinks himself a Christian, I fear he is mistaken. John is from near Naples; is ignorant of letters, and careless of his soul. Frank is a Hungarian, from the vicinity of Venice; is always cheerful and quite odd—a sort of counterpart of black Sam in Uncle Tom. Both these are runaways, have no desire to return home, profess to be Catholics, but have no evidence that they fear God. The steward is a Maltese, though now living in Boston; is a Catholic, but "likes all religions," yet the way he jingles the teaspoons and rattles the mugs, just as we invoke a blessing on the table, is a caution, and a pretty sure sign of the kind of interest he takes in such exercises. (The captain always speaks to one of us to ask a blessing.) Withal, he is quite a noted character; has served eight years in the English navy, was in the dreadful battle of Navarino in 1828, cooks and serves up the eatables quite to the satisfaction of the passengers, and by the ship's officers and crew is considered an extra hand; can speak a little of five different languages; and among other exploits has furnished me with some fifty words in Arabic.

I have conversed with all on board on the subject of personal religion, but have nothing of a cheering nature to report; have also distributed tracts among them all. By some oversight, the Sabbath Tracts have been stowed away so that I have none to distribute, yet have had occasion to answer several questions, and talk more or less in behalf of this blessed institution.

The subjects of Liberty, Equality, and Peace, have come in for their share of discussion and serious consideration. But alas! how corrupted are the views and the manners of almost every one on questions of so much vital importance to our happiness. Those who disbelieve the power of religion to change the heart, can have no patience with, nor love for, the equalizing, peaceful principles of the gospel. They say, and I think some of them feel the force of their remarks, that they would like no better fun than to shoot abolitionists, or to see them all put where the dogs could not bark at them. They believe in trading in the bodies of negroes, and profess to found that belief on the Bible.

In regard to public worship, we have had the reading of the Scriptures, praise, and prayer, almost every evening; worship every Sabbath, excepting two, at 10 A. M., and Bible Class at 2 P. M.; worship also on First-day on the quarter-deck, whenever the weather permitted. These were seasons of refreshing to us lone wanderers on the briny deep. We seemed to draw near the throne of grace, and realize that the Lord was round about us, to shield us from harm.

I cannot better note the rest of the events and little incidents of the voyage, than by copying the following from my journal:—

3 mo. 23d. From the time of sailing till the present, have had stiff breezes from the S. W. and S. E. The weather has been quite cold. To-day have strong winds from the S. and E., with rain; the sea is very rough, and the bark labors hard. From 4 P. M. to 4 A. M. the bark was brought to the wind.

4 mo. 11th. In latitude 36° 30′ north, longitude 8° 47′ west. Land birds begin to visit us. Several sail in sight, all bound through the Straits. Our voyage thus far has been very long, owing to contrary winds, and the weather quite cold. But to-day is very pleasant, with a light breeze and smooth sea. A great many curious animalculæ are floating about, some of them four or five yards long, of a most beautiful red, pink, and white. On examination, they appeared to be a water jelly, with here and there an atom of red or Spanish brown, from which, when broken, oozed a reddish liquid. Several porpoises played around us, much to our amusement.

12th. Several porpoises playing near us. "There she blows," cried the first mate, which was the signal for us all to look at a whale—huge monster of the deep that he is. At 6 P. M. the cry of land brought us all on deck; something like a blue cloud appeared away in the distant horizon. The first mate thinks it is twelve miles off. This is the north-western coast of Africa, the land which gave birth to the arts and sciences, and where the wonders of the Almighty and the gospel of Jesus Christ were early displayed. But how thou art fallen! How much and how cruelly hast thou been trodden down by the nations! May the time soon come when all thy wastes shall be inhabited—when all thy untutored tribes shall praise the Lord. A head wind drives us too much to the south. Hope to see the Rock to-morrow.

13th. Off Trafalgar in the morning. A strong head breeze obliged us to tack ship and go over to the African coast. We are now nearing the mouth of the Straits. Before noon, came to under short sail off Cape Spastel. About fifty sail are lying here, scudding to and fro, waiting for a wind to enter the Mediterranean. It is really quite pleasant, after thirty days and more spent on the trackless deep, to come in sight of land, and to see so much of life. Here are ships, barks, brigs and schooners. One is an Austrian man-of-war; two or more are American. See no signs of life on shore. Think there is but little arable soil on this coast. A chain of low broken mountains are before us running N. E. At 3 P. M. the wind lulls; it has blown very hard from the east and south-east. Several sail, in attempting to go through the Straits, have been driven back. We are now on the 34th day from Boston. Feel anxious to go ahead, but not impatient. Know not what is in the future, but feel fully assured that God will provide.

14th. A fine day; some breeze during the night; calm all the morning. Passed Gibraltar on the European side, and Ape's Hills on the African. The Strait appears to be about ten miles wide—possibly fifteen. Eighty sail in sight, all bound eastward. The Rock, the fortifications, mountains and vallies, and the fleet, all together, form a most magnificent and pleasant scene.

23d. A fine day; sailing quite slowly. Passed the Cape and Bay of Tunis, the island of Zembla, cape Bon, and came in sight of the island of Pantalaria, said to belong to Sicily. About twenty-five sail in sight; two of them are English transports. From 5 to 6 P. M. saw several turtles floating about asleep. The Captain had his boat lowered, and with the first mate and one man rowed about, waking up three, and catching one. Quite an exciting time. Fine sport for some; to others, cruel to laugh over the fall of any creature.

24th. Saw the mountains of Sicily, bearing north by east; some thirty sail and two steamers in sight.

25th. Thirty-eight sail in sight. Passed the islands of Gozi and Malta. Saw St. Paul's bay and the city of Valetta. Terraced gardens, wind-mills, and fortifications in abundance. The captain discovered the Wild-Fire, a vessel which sailed from Boston ten days before us. Lat. 36° 2′ north, long. 14° 40′ east.

28th. Several doves flying about us, all too timid to come aboard. At 8 A. M. saw the mountains of southern Greece, capped with snow. The wind blows from them to us, making us feel quite chilly. As the sun shines upon them, the appearance is really brilliant.

29th—Sabbath. Too much motion to the vessel to have worship. Since yesterday have been running from nine to ten knots. Passed Deuro on the right in the night. To-day Andros and Scio (Chios; see Acts,) on the right, and Ipsara on the left, fifty miles from Andros. Saw towns and wind-mills on both of them. All have steep rocky shores, are very mountainous, yet seem to have a good deal of arable land. Rain and mist most of the day, but were favored with a beautiful rainbow and sunset scene at night—came in sight of the main land, to wit, a part of Asia Minor.

30th. At half-past eleven came to anchor in the harbor of Smyrna. Were within 25 miles last evening, but could not make the port in the night. Early this morning, being favored with a very light breeze, we moved up to town very slowly. The sun shone brilliantly, adding much to the beauty of the oriental scenery around us. Though the country on both sides has a barren appearance, here and there are numerous gardens, all green and blooming. Still they are not as beautiful as our own lovely native farms and homes; yet the long time we have been at sea makes the sight of land and of the living doubly beautiful and welcome. At 10 A. M. came up with a Turkish sloop manned by two men, and loaded with wood. They looked singular enough. The captain wears loose flowing trowsers, a jacket, red sash, and turban. There he sits by the tiller, guiding his little craft, and smoking a pipe three feet long, as lordly and happy as ever we might imagine a Crusoe. In complexion he is a dark mulatto, or perhaps more the color of a North American Indian. Spoke to him in Arabic, asked him if he was well, told him that we loved God, that God was good, the wind good, &c.; to all which he replied very politely, and with many more words than we understood. As we neared the town, the Turkish health officer came off, (also a messenger from the consignee,) saluted us, inquired after our health, number, &c., and when he returned, the captain, Bro. S. and myself, went ashore with him. We entered the health office, where, standing in a sort of entry, questions were put to the Captain from the officers within, through a small window. These answered satisfactorily, the interpreter gave the Captain his hand, then the other officers, accompanied with salutations; the front door, or wicket gate, was opened, and we passed into the city. But O such streets, for so large and commercial a town. Shades of Babylon! They are nothing but narrow, crooked alleys, full of human beings and animals, rubbing against each other, and still plodding along, busy each, with his own—Turk, Greek, Armenian, Frank, and Jew, all the same, each in his sectarian or national costume, which to my eyes are strange enough. Went to Mr. ——, the consignee of the bark; were pressed hard to drink liquor or smoke a pipe; not to be impolite, we accepted a cup of coffee. Thence we passed to the French P. O., and thence to the agent of the steamer to Jaffa. They asked $641 for passage and freight to Jaffa, and seven francs per day for board. This would more than use up our funds.

5th mo., 1st. Went aboard the French steamer, which arrived this morning, and leaves to-day at 11 for Jaffa; thence ashore and called upon Mr. Ladd, a missionary from the States. Was introduced to Mr. Mirzan, one of the owners of the Rose Pool. His father was a Frenchman; his mother a Greek. He speaks seven different languages and writes five. He went with us to the agents, but could do no better as to terms than yesterday. Had the mortification of seeing the steamer leave at eleven. The Austrian steamer leaves next Sabbath, but fear their terms are still higher. The French steamer leaves again in twenty days. Nothing disheartened, went and took our families off and took lodgings in the city. We rent a room each for eight piasters per day, and have our meals furnished according to our purse from an eating house, and from the market. Had another interview in the P. M. with the agent. We had made trials elsewhere, and found that by taking our freight by weight, it would probably cost us $120, instead of $416.

2d. After much running about and frequent consultations, we had about made up our minds to stay here and take the next French steamer, when a passage in an Austrian bark providentially offered itself. Her name is Adolar, commanded by Capt. Cosmo Gersaglia. Italian, Greek, Spanish and French are spoken on board. She carries a complement of twelve men. Was bound to Alexandretta, far north of Beirut, to take cargo from there here; goes out in ballast, save what little freight we have. She goes now direct to Jaffa, taking our freight on board and landing it, our passage and board, all told, for *two hundred and ninety dollars.* Although this is more than we thought we ought to pay, it is so much less than we feared it would cost us, that in our straitened circumstances I feel that the hand of the Lord is in it. To Him be all the praise for this deliverance. We are at liberty to take as much freight as we please, (but have no money on which to speculate,) and the cabin and one state room entirely at our command. The cabin is below deck. The vessel registers 350 tuns.

3d. This forenoon all our goods have been taken from the Rose Pool on board the Adolar, without any expense to ourselves. Have seen a copy of the agreement, and only wait for duplicate copy to be signed and presented, when we pay $200, and the balance on our arrival at Jaffa. Our accommodations will not be equal to those of an American vessel, but so much superior to Haytien coasters, that I feel quite contented. The mail closes at 3 P. M., *i. e.* in 15 minutes. I must close, dear friends. Pray for us. We expect to sail the 5th instant. The Lord be with you all.

Yours in Christ, WM. M. JONES.

SECRET SOCIETIES.

To the Editors of the Sabbath Recorder:

In your paper of the 8th inst., under the head of "*Secret Societies,*" is an article signed N. V. H., in which the writer, after expressing much satisfaction in reading a certain Circular previously published in the *Recorder*, goes on to say, "he has no doubt but good has been accomplished by such Societies, yet he sincerely believes that Secret Societies are to be condemned because of the principle of secrecy contained in them"—leaving us to infer, at least, that the fact of their having a secret was prima facia evidence, in and of itself, that they deserve condemnation. Now, not wishing to enter into a defense of any of those Societies, (as I conceive that by their fruits they ought to be known and judged,) and perfectly willing to incur the charge of ignorance from those who are wise in the Scriptures, I would, in all sincerity, ask N. V. H. to give us an explanation why our Saviour, in the texts of Scripture quoted below, enjoined secrecy on his disciples, if the *principle* of secrecy is wrong in and of itself.

In Matthew, 6th chapter and 3d verse, we read, "But when thou doest alms, let not thy left hand know what thy right hand doeth, that thine alms may be in secret." Again, in the 6th verse, "But thou, when thou prayest, enter into thy closet, and when thou hast shut the door," &c. Again, in Mark, 5th chapter and 40th verse, "When he had put them all out, he taketh the father and mother of the damsel, and those that were with him, and entered in where the damsel was lying," &c. In the 43d verse, "And he charged them straitly, that they should tell no man." Again, in Mark, 9th chapter and 2d verse, "And after six days Jesus taketh with him Peter and James and John, and leadeth them up into a high mountain, apart by themselves," &c. There are other examples which might be quoted; but these are sufficient to illustrate the principle of *secrecy in and of itself*, without reference to what the object may be, or whether applied to an individual or a collection of individuals. A fair explanation of the above texts would much oblige

A LAY BROTHER.

THE JEWS OF PALESTINE.

The Jewish paper published in this city, (*The Asmonean,*) in its issue for the 9th inst., gives an Appeal from the office of the Chief Rabbi, London, in behalf of the starving Jews of Palestine. The Appeal is accompanied with letters from Sir Moses Montefiore, and from various congregations of Jews in Palestine. The whole makes as dark a picture of the present condition of the Jews in the Holy Land as can well be drawn.

Sir Moses Montefiore says:—

"Poverty in the East differs vastly from the like calamity experienced in Western Europe, inasmuch as the capability to relieve is in the East confined within the narrowest bounds, and restricted to a very limited number. Such being the general outline of the condition of our brethren in Judea, my feelings were most naturally aroused in their behalf. But judge to what extent my sympathies are now awakened, when, as I inform you, that from the harrowing intelligence it has been my painful lot to receive, both from direct and indirect sources, I learn that 'fathers in Israel'—men profoundly learned in the law, who, so that they may die near the graves of our forefathers, submit to live in the most abject poverty—are now impelled by the very love they bear their children, to sell them to the stranger, 'so,' to use their own words, 'that their offspring may be spared death—death from starvation.'"

The Appeal of the Chief Rabbi says:—

"From authentic documents, which have reached us, not the slightest doubt remains that the present condition of our poor brethren, scattered through the four cities of Jerusalem, Zaphed, Hebron, and Tiberias, is absolutely heart-rending. This is no exaggeration, but a stern and dreadful reality. The almost total failure of the last harvest, which raised the price of all the necessaries of life to an unparalleled height, the present war and general political disturbances, the diminution of the usual resources for the poor, especially those derived from Russia, which has hitherto contributed the most, have brought about an awful famine, aggravated by a great amount of sickness, springing from hunger and distress, which calamities are now devastating the Holy Land. Many of its Jewish inhabitants have already become the prey of starvation, and many more will share the like fate, unless relief, speedy and effectual relief, come from some quarter."

One of the letters from Jerusalem says:—

"The compass of human language is too restricted for us adequately to proclaim the unhappy condition of our community. The elements have made a compact with the legion of human ills, to pour on us the vials of desolation, and to pursue us with remorseless fury. Gaunt famine sits enthroned, and with sable wings outstretched, overspreads and darkens our horizon, shutting out both light and life. And Israel hath waxed very low, even to the dust. The widow and the orphan wander houseless, and bend under the heavy weight of misery. By day one universal cry ascends, 'Give us bread!' the nightfall re-echoes, 'Give us bread!' and the morning takes up the anguished cry. Alas! alas! if tears could be distilled into food, we could to repletion grant the appeal of the supplicants; but the soul mourns forth its reply, *There is no bread;* the staff of life has snapped in twain, and departed from among us."

SECOND-ADVENT SABBATH-KEEPERS.

At the meeting of the Seventh-day Baptist Central Association in 1853, the Corresponding Secretary was instructed to open a correspondence with the Second-advent Sabbath-keepers, with a view of learning their faith and practice. At the recent meeting of the Association, he reported the following letter from one of the leading men among them, editor of their paper, the *Advent Review and Sabbath Herald*:—

DEAR SIR: My limited time and space will not allow me to enter into an extended statement of the faith and hope of that portion of the Second-advent people who observe the fourth commandment. Our publications give our general views in full. These I forward to you, and shall be happy to furnish you with new works when published.

It is now a little more than eight years since the Sabbath was first introduced among the Advent people; and as a people, they rejected it. A few stood firm amidst violent opposition. The Sabbath cause did not advance with us but very little up to 1849. At that time it began to rise, and its progress has been steady and firm till the present; and within a few months, the interest among us to extend the light of the true Sabbath to others, and the readiness of the people to investigate, has greatly increased.

As a people, we are brought together from divisions of the Advent body, and from the various denominations, holding different views on some subjects; yet, thank Heaven, the Sabbath is a mighty platform on which we can all stand united. And while standing here, with the aid of no other creed than the Word of God, and bound together by the bonds of love—love for the truth, love for each other, and love for a perishing world—"which is stronger than death," all party feelings are lost. We are united in these great subjects: Christ's immediate, personal second advent, and the observance of all of the commandments of God, and the faith of his Son Jesus Christ, as necessary to a readiness for his Advent.

With Seventh-day Baptists, we agree in the institution, design and perpetuity of the Sabbath. Though the pioneers of the Sabbath reform with us investigated the subject and entered the field before they saw your publications, yet the writings of the Seventh-day Baptists have been a great comfort and strength to us.

As a people, we hold that it is the design of Heaven that the Sabbath should be extensively published, especially just prior to the Second Advent; and that in the fulfillment of the prophecy of Rev. xiv 6–14, in the Second Advent movement, the "commandments of God" hold a place, as the last great testing truth, just before the Son of man takes his place on the white cloud to reap the harvest of the earth. And here we adore the wisdom of God in giving a truth so simple that every accountable person can learn it, yet so mighty, as the last great testing truth preparatory to the coming of the Son of Man.

Your brother in Christ, JAMES WHITE.

SLAVERY IN CALIFORNIA.—From the following paragraph, which we copy from *The Mississippian*, it appears that slavery is already established in California, and stands some chance of becoming permanent:—

"Two years ago a law was passed by the California Legislature granting one year to the owners of slaves carried into the territory previous to the adoption of the Constitution, to remove them beyond the limits of the State. Last year the provision of this law was extended twelve months longer. We learn by the late California papers, that a bill has just passed the Assembly, by a vote of 33 to 21, continuing the same law in force until 1855. The provisions of this bill embrace slaves who have been carried to California since the adoption of her Constitution, as well as those who were there previously. The large majority by which it passed, and the opinions advanced during the discussion, indicate a more favorable state of sentiment in regard to the rights of slaveholders in California than was supposed to exist.

EXECUTING THE FUGITIVE SLAVE LAW.—*The Christian Witness and Church Advocate*, the high-toned and conservative organ of the Episcopal Church in Massachusetts, devotes a column and a half to the consideration of the recent fugitive slave case in Boston. The closing paragraph of that article expresses the feelings of a large and growing class:—

"It cannot be disguised, that a very great change is going on in public opinion, which will no doubt soon manifest itself in a form that will allow all to act, with effect, who desire the repeal of this law. It is by reason, and not by revolution—by the ballot box, and not by the cartridge box, that we must seek for the remedy of the evil. We hope that all laws will be executed, while they are the laws of the land, not excepting the Maine Law. But we do moreover most earnestly hope that no other attempt will be made to arrest and return fugitive slaves in this community, at least for the present. It might be done; it no doubt would be done, but it would be trifling with a volcano."

THE FUGITIVE SLAVE ACT DECLARED UNCONSTITUTIONAL.—The Hon. A. D. Smith, Associate Justice of the Supreme Court of the State of Wisconsin, discharged S. M. Booth of Milwaukee from arrest in the Glover case, on the ground both of defectiveness in the warrant, and the unconstitutionality of the Fugitive Slave Act of 1850. He holds that act to be unconstitutional, because,

1. Congress has no Constitutional power to legislate on the subject of reclaiming fugitive slaves;
2. Nor to clothe Court Commissioners with the power to determine the liberties of the people, and
3. Because this Act denies the right of trial by jury.

OUR MISSIONARIES IN CHINA.—On Second-day, the 19th inst., we received letters from brethren Carpenter and Wardner, dated Shanghae, March 2, 1854. We have only time to give the closing paragraph of Bro. Carpenter's letter.

"Day before yesterday I went with Bro. Wardner to assist in distributing alms to the poor and preaching to them. We have solicited and obtained about five hundred dollars of the merchats here for this purpose; also, about three hundred garments have been given us to distribute to the poor. These garments, and two hundred dollars in cash, were furnished by our vice-consul, Mr. Cunningham. Our Consul, Mr. Murphy, and his lady, have recently arrived; our minister, Mr. McLane, is expected soon. Our health was never better, nor our responsibility greater. Pray for us still."

THE CRYSTAL PALACE OPEN ON SUNDAY.—Ever since the opening of the Crystal Palace in New York, a desire has existed in some quarters to have it open on Sundays; so that the workmen who have little leisure on week days, may on Sunday view the articles collected there. But public sentiment was too strong against such a measure for the old Directors to sanction it. Under the new administration, however, things are done differently. Great musical entertainments are now being given at the Palace, and last Sunday the word *sacred* was prefixed to *concert* in the notices, and the whole concern was thrown open to visitors. Between two and three thousand persons attended—enough to prove that *sacred* concerts are in favor with the New-York public.

BURIAL OF JUDAH TOURO.—The remains of this wealthy Israelite were recently removed from New Orleans to Newport, R. I., for interment. The funeral ceremonies at Newport, on the 6th inst., are described as very imposing. Delegations were present from nearly all of the Jewish institutions named in Mr. Touro's will. The citizens of Newport tendered the hospitalities of the city to all visitors from a distance, and attended the funeral.

A SLAVEHOLDER'S DEED.—Below is a copy of an old Virginia gentleman's deed of emancipation. It is found in J. J. Marshal's Kentucky Reports, vol. 6, p. 332, where it came up in litigation:

"Upon the principle of love, justice, mercy and truth, and in obedience to the command of the Creator of all things, who commanded us to do unto all men as we would they should do unto us, and to break every yoke and let the oppressed go free, and agreeably to the bill of rights, by which we opposed the power of Britain, I do, by these presents, renounce all claims to any power over man, be he white or black; and I do, upon the house-top, confess my sins, and hope that God, for Christ's sake, will pardon me for what is past; and yet I now freely, and immediately, liberate and quit-claim to a negro man named John, and a negro woman named Lucy, his wife, and a negro man named Brownley, as also a negro girl named Susannah, now ten years old, to go free at the expiration of eight years from this date, as also a negro girl named Rachel, now eight years old, to go free at the expiration of ten years from this date.

"And in witness whereof I have hereunto affixed my hand and seal," &c.

A PAPAL THREAT.—The following horrible threat appeared recently in Archbishop Hughes' official paper, the *Freeman's Journal* of New York. In alluding to the popular tumults which the presence of the Papal Nuncio, Bedini, created in various parts of our country, the editor of the *Journal* says:—

"If the result of this damnable agitation, created and fostered by the daily papers, should happen to end in a general slaughter of misguided men by each other, and a consequent FIRING OF THE CITY IN SOME TWO HUNDRED PLACES AT ONCE, in what repute will the community, sobered and taught wisdom by commercial ruin, hold the miserable newspaper men who will have brought on so fearful a catastrophe?"

THE RELIGIOUS TRACT SOCIETY.—This Society has reached the fifty-fifth year of its age, and its operations are extended to almost every part of the world. Mr. Peto, M. P., presided at its recent anniversary in London. During the past year, the Society has issued 27,376,575 publications, being an increase of 1,524,724. The benevolent income of the year, including the sums received for special objects, was £8,551 11s. 5d. The legacies, £2,423 6s. 5d. The grants of money, paper, and publications, for home and abroad, amounted to £11,206 14s., being an excess over the ordinary benevolent receipts of £4,166 13s. 4d. The sales have reached the sum of £63,400, showing an increase of £4,927 7s.

RELIGIOUS INTELLIGENCE.

A widow woman named Jane Wilson, died recently in Ohio, possessed of a large property, principally in cash. She had no children, but left a number of brothers and sisters in humble circumstances. To these she devised a few small legacies, and gave the residue of her property, estimated at $214,000, to the Foreign and Home Missionary Societies of the Presbyterian Church. Her relatives contested the will on the ground that Mrs. Wilson was not of sound mind, and the jury, without any difficulty, found that the will was not valid, and the estate will be divided equally among the relatives.

The death of the widow of Gen. Henry Gratiot by cholera is announced in the Galena papers. It occurred near Warren, June 1. She was the mother-in-law of the Hon. E. B. Washburn, and one of the seven persons—four of whom belonged to her family—who organized the first Protestant church west of the Mississippi River. This was in 1816, at Bonhomme, near St. Louis, then a little French village. She was one of the few members who organized the first Presbyterian church in Galena, twenty-three years ago.

A church in East Boston borrowed money of an individual, and failed to pay the same. A suit was brought by the creditor against the Roman Catholic Bishop of the Diocese. The court decided, that as the titles of the churches, parsonages, &c., are vested in the Bishop, he was liable in every case, for all the debts of any and every church in his Diocese of which he holds the deed, when such debts are supposed to be contracted with his full knowledge and consent. Judgment was rendered accordingly against the Bishop.

According to a royal decree of Feb. 8th, for the Duchy of Schlesswig, the Jewish congregation of Altona has been deprived of the privilege of Din Thorah, by which Jewish lawsuits, in the first instance, had to be decided by the Chief Rabbi. All the pending lawsuits had to be handed over to the competent courts, and thus the last remnant of that old Jewish institution has disappeared in Germany.

The last published reports of the Theological Schools in the United States, make the number of students connected with them about one thousand four hundred, some three hundred more than it was in 1838. It is estimated that there are needed annually in this country, to supply vacancies made by death and otherwise, from one to two thousand ministers, exclusive of the number made necessary by the increase of population.

Among the recent deaths, we notice that of Mr. H. J. Huidekoper, a prominent man among the Unitarians. He was a resident of Meadville, Pa., a man of great purity and simplicity of character, a rich and at the same time a generous man. He was the founder of the "Meadville Theological School," established jointly by the Unitarians and "Christians," and was a large contributor to its funds.

The First Church in Newport is said to be the oldest Baptist Church in America. It was constituted in 1638. Its first Pastor, Dr. John Clarke, was imprisoned in 1651 for preaching in Lynn, Massachusetts. This ancient church has existed 215 years, and has had 13 pastors.

Mrs. Martha F., wife of John S. Beecher, a missionary of the American Baptist Missionary Union, died at sea, March 31, on her homeward passage.

The Mission House at Rangoon, with about thirty other buildings, was destroyed by fire on the 12th of February last. Its contents were mostly saved.

Rev. E. H. Chapin will deliver an Oration at the Crystal Palace on the 4th of July next.

Abstract of Proceedings in Congress.

SECOND-DAY, JUNE 12.

In the SENATE, the death of Hon. J. F. Snodgrass, member of the House from Virginia, was announced, and the usual eulogies pronounced and resolutions passed.

The HOUSE talked about adjournment all day. It was finally decided, by a close vote, to adjourn on the 14th of August, and *not* meet again in October.

THIRD-DAY, JUNE 13.

The SENATE had up the Vetoed Land bill for the relief of the Insane, and Gen. Cass made a speech thereon, in favor of the Veto, but adverse to the principles which underlie it.

In the HOUSE, the Pacific Railroad bill was thrown over for the session. Mr. Giddings' resolution to expel the editor of the *Washington Union* from the floor was tabled by a vote of 100 against 32.

FOURTH-DAY, JUNE 14.

In the SENATE, after the usual opening business, Mr. Clayton, in reply to an editorial in the *Union*, made a personal explanation, defending the course of Mr. Calhoun and himself in the struggle of 1848, in giving permission to aliens, who had declared their intentions to become citizens, vote in newly-acquired Territories. The House resolution fixing the adjournment of Congress on the 14th of August was taken up. Mr. Gwin moved an amendment to the resolution so as to allow Congress to take a recess from the 17th July to the 16th August. After considerable discussion, the amendment was agreed to by a vote of 25 to 16. The House amendments to the bill regulating the pay of Deputy-Postmasters, was, after a brief discussion, passed.

In the HOUSE, after the reading of the Journal, the consideration of the Civil and Diplomatic Appropriation bill was resumed. Mr. Brooks of South Carolina made a speech against the constitutionality of the Pacific Railroad bill. Messrs. Singleton of Miss., Latham of California, and Cobb of Alabama, followed, and spoke in favor of the acquisition of Cuba.

FIFTH-DAY, JUNE 15.

In the SENATE, Mr. Sumner presented the credentials of Hon. Julius Rockwell, recently appointed Senator from Massachusetts, to fill the vacancy caused by the resignation of Mr. Everett. The Committee on Finance reported back with amendments, the bill providing for the payment of certain creditors of Texas. The bill passed by the House for the extinguishment of Indian titles in the Territory of Minnesota and the State of Wisconsin was then passed. The Senate then resumed the consideration of the President's veto of the Insane Land bill. Mr. Clayton made a speech in favor of the bill, and argued against the veto.

The HOUSE, soon after assembling, proceeded to consider, but did not dispose of, the bill in favor of increasing the rates of postage. Mr. Gerrit Smith moved an amendment to the bill, providing that the Post-Office Department be abolished after the expiration of two years, and that individuals and associations be then at liberty to carry the mails. Pending the consideration of the bill, the House went into Committee of the Whole on the General Appropriation bill. Without taking a vote, the Committee rose and the House adjourned.

SIXTH-DAY, JUNE 16.

In the SENATE, the bill authorizing the coinage of fifty and one hundred dollar gold pieces was taken up. The fourth and fifth sections, being that part of the bill relating to assaying of bullion, and against which the New York Chamber of Commerce had protested, were stricken out, and the bill was passed. Four private bills were passed and one rejected. The Senate then adjourned until Second-day.

The HOUSE at an early hour resumed the consideration of the bill to increase the rates of land postage in the United States. After a brief debate the bill was laid on the table by a vote of 94 to 51. A short time was spent on a private bill, and the House adjourned.

SABBATH-DAY, JUNE 17.

In the HOUSE, the Senate bill authorizing the issuing of registers for certain vessels to the Accessory Transit Company was passed; also, the bill increasing the salaries of Executive and Judicial Officers of Oregon, New Mexico, Washington, Utah and Minnesota Territories; also, the bill to adjust the expenses of the Cayuse War in Oregon. The bill providing for the mail service between the Atlantic States and California, was then taken up. Mr. Mace, Chairman of the Select Committee appointed to investigate the subject, said he would be able, in a few days, to present a report showing astounding frauds and swindling from the beginning of the Pacific mail contracts to the present time. In order to afford an opportunity to look into the subject, the further consideration of the bill was postponed till Third-day week.

European News.

Three days later news from Europe has been received since our last.

Although nothing decisive has yet occurred, the news from the East begins to assume a greater interest. The Russians have at last been driven from the whole line of the Circassian coast, and their only means of communicating with the army which now threatens Kars and Erzeroum, will be, henceforth, by way of the Caspian Sea. The independence of Georgia has been proclaimed. Tiflis, its capital, is still in the hands of the Russians. The allied fleets in the Black Sea have not yet recovered from the fatigue of their recent labors at Odessa.

Silistria still maintains its defense, the Russians having been repulsed at every attack they have made. Omer Pasha, since his conference with the French and English Generals at Varna, is advancing toward the fortress with all the force at his command, and an engagement on a grand scale was expected. The communication between Silistria and Shumla was still kept open, notwithstanding the great increase in the Russian force which invests the former place.

There is nothing of note from the Baltic. The attack on the fort of Gustavsvärn is not confirmed. The French fleet, however, had left Kiel, and would in a few days join Sir Charles Napier's squadron.

In Denmark there appears to have been a *coup d'etat* on a small scale, occasioned by the growing anti-Russian feeling of the people.

EMIGRATION TO NEBRASKA.—The N. Y. *Tribune* says that all persons who desire particular information in relation to the plans, purposes and progress of the Emigrant Aid Company, are requested to send their communications to the "Secretary of Emigrant Aid Company, Boston, Mass." The Company intend to send the first train-load of emigrants to Kansas about the first of August next, and before winter they hope to locate in that Territory not less than twenty thousand settlers. The Company will forthwith forward mechanics and machinery for manufacturing lumber, and proceed to erect receiving houses for emigrants. The Company is now organized and books are open for subscription to the captital stock. The original design of having so large a capital as five millions has been abrogated, and in lieu of annual contributions on the capital as at first proposed, it is now designed to reduce the capital stock to the sum that will really be needed as an immediate working capital, and to change the character of the subscriptions so that the whole amount of them shall be at the call of the Trustees. It is now supposed that a paid up capital of $200,000 will answer all the purposes of the Company. Such an alteration in the charter as this change necessitates, it is the intention of the Company to obtain immediately on the meeting of the Massachusetts Legislature. At the same time a change will be made in the title of the Association which will more fully denote its national character and comport with the wide scope of its efforts.

THE WOOL MARKET.—The editor of the *Wool Grower* gives the following figures as what the various grades ought to range at this season: Saxony, 60 and 75c.; Merino, 50 and 60c.; Three-quarter and half, 35 and 50c.; Common, 35 and 40c. Prices depending on condition more than usual. There has been no change to favor sellers as yet, nor is there any prospect, as the season for clipping draws near. There is no doubt but what Wool is worth quite as much to the manufacturer this year as last. But the condition of financial affairs consequent upon the war, and the high price for breadstuffs, will tend to depress the early market below the point to which it should go. If there should be a good harvest in England and at home, the chances are that the price of Wool will materially advance in the fall. Our opinion, however, is, that at no time this year will the price of Wool equal that of last year. Farmers may do well to hold on, but they will not be wise if they hold beyond a fair offer, because they got more for their clip a year ago. [Tribune.

THE MILITIA LAW.—The Militia Law passed at the last session of the Legislature of New York, requires the commandant of every military company, and the foreman of every fire company in every city and town, before the 15th of June in each year, to deliver to the assessor of each town in his company district, a list containing the names of all persons belonging to their respective companies, which list shall show the town in which each member of each company resides. Every person not exempt from military duty is required to pay the sum of fifty cents a year in the same manner as he pays other taxes. The military fund in each county in the State belongs to the several regiments in such counties, and may be applied for all purposes for which such companies are authorized to use and apply the military funds belonging thereto.

SUMMARY.

At the Novelty Iron Works, in New York, on the 16th inst., E. K. Collins, Capt. Nye, Col. Borden, Horatio Allen, and Thos. B. Stillman and others, in all twenty-two persons, sat down to a lunch, upon temperance principles, inside of the gigantic cylinder of the steamboat Metropolis, now being finished at the docks of the Novelty Works, for the Fall River Line. This enormous cylinder is 105 inches in diameter, working with 12 feet stroke. It is 13 feet and 8 inches in length, and 34,099 pounds in weight. A horse and carriage passed through the cylinder several times without difficulty. After the dinner was over 101 men stood in the cylinder without difficulty, and it could have held several more.

John Freeman, of Indianapolis, Ia., was claimed as a slave by one Ellington, but after much abuse and long imprisonment, was rescued from his perilous situation only by the discovery of the most indubitable evidence that he was a free man, and that the slave who had fled from Ellington was actually in Canada. Freeman brought suit against Ellington for false imprisonment. When the case came on for trial, a few days since, Ellington's counsel consented, rather than do worse, that the jury should find a verdict for Freeman for $2,000 and costs. This is a costly operation for the slave-catcher, but it will teach other kidnappers to be careful.

The City of Glasgow, with its 480 souls on board, is at length given up. She sailed from Liverpool on the 1st of March, with 111 cabin and saloon passengers, and about 292 steerage, her crew numbering 76, including the commander, Capt. Morrison; and from the period of clearing the Mersey up to the present moment not the least tidings have been heard of her. The breaking up of the immense fields of ice to the northward of the Bank, which were borne down the Atlantic in masses, it is said, of some 200 or 300 miles in length, no doubt overwhelmed the vessel in an attempt to force a passage, and caused her almost immediate destruction, not a soul escaping.

From all parts of the Northern States (says a Chicago paper) we learn of immigration to Nebraska and Kansas. A friend who is conversant with German sentiment in Missouri informs us, that large numbers of the German population of that State will cross over into Nebraska and Kansas. The editor of the *St. Louis News* says eleven wagons containing immigrants from Illinois for Nebraska passed through that city a few days ago. The *Cincinnati Commercial* notes the passage of seven hundred Germans through that city for the same land of promise.

A dispatch dated Paterson, N. J., Monday, June 12, 1854, says: A lamentable accident happened in this city this morning. A gravel train had stopped until some cattle were driven off the track, and two laborers on the cars were throwing stones to assist in driving them away, when the train suddenly started, and both the men were precipitated on the track. The head of one of them was completely cut off, seven cars passing over him, and the other had the flesh torn from his legs, and is not expected to recover.

The Boston *Traveler* says: A fugitive slave and his wife, on their way in the cars from the South to a place of safety, a few days since, when within a short distance of this city, discovered their former owner in the same car, who, it appears, had recognized them. The fugitives were in a state of great trepidation, but a friend who learned the facts of the case, induced them to get out when they reached a neighboring village. A covered wagon was procured, and the fugitives were taken with all speed to this city, and embarked on board a vessel which soon after sailed for the British provinces.

A dispatch dated Cincinnati, June 15, says: Twenty-three negroes from Grant County, Ky., made their escape on Tuesday night, They came down the Licking River in disguise, crossed the Ohio below this city, and yesterday took passage on the underground Railroad for Canada. Nine fugitive slaves from Boone County, Ky., were arrested in the suburbs of this city last night. The party consists of four men, two women, and three children, and are in a deplorable condition. One of the men is over sixty years of age.

The editor of the *Cambria Tribune* has just returned from Illinois, and says that Northern Illinois is almost free from the curse of rum-selling and rum-drinking. Very many Counties refuse to license the most "respectable" houses; and in others, public opinion prohibits what the law does not. A prohibitory law, it is thought, will be enacted by the next Legislature. Maine Law Alliances are organized in almost every County to effect this purpose.

Peter Schnessler, in a fit of rage and intoxication, became exasperated at the citizens of Garnetsville, Mo., for an attempt to arrest him for disorderly conduct, and discharged a heavily-loaded shot-gun at the crowd of men in the street. Some six or eight shot took effect in the inferior extremities of John Berry; one in the body of E. Keith, Esq., James Allen, and Felix Howard. None of the gentlemen are seriously injured or disabled, except Mr. Berry, who is not, however, mortally wounded.

A duel was fought on the 3d inst., in Mississippi, near the Alabama State line, between Gen. J. C. Saunders of Alabama, and Judge Evans of Mississippi. Five shots were exchanged, and the parties were wounded, Judge Evans dangerously. The difficulty arose from some harsh language used by Saunders in reply to an address delivered by Evans before the Literary Society of the Western Military College in Alabama.

A Floating Anchor has been invented by Capt. A. F. Lewis, now residing at Turtle, Wisconsin. It is composed of planks, readily and firmly bolted together, in the form of a square-sail, say eight by ten feet, and let down over the bow of a drifting vessel to a depth sufficient to shield it from the action of surface currents; when it (as is certified by sea-captains who have seen it tried) will bring the vessel's head to the wind in any sea, and reduce her drift from four miles per hour to one.

The Welshmen of this country are to hold an "Eisteddfod" or Literary Congress in this City in the autumn of next year. For that occasion they offer six prizes of $300 each, three of $250 each, nine of $200 each, six of $100 each, and one of $50, for the best Essays (in Welsh) on Astronomy, Chemistry, Geology, Natural Philosophy, Logic, Welsh History and Biography, Phrenology, the occult sciences, the best Ode or Poem, &c., &c.

An English journal says that an old Saxon has been using for fifty years, and with perfect success, a remedy for the bite of mad dogs, by the agency of which 'he has rescued many fellow beings and cattle from the death of hydrophobia.' The remedy is to wash the wound immediately with warm vinegar and tepid water, dry it, and then apply a few drops of muriatic acid, which will destroy the poison of the saliva or neutralize it, and the cure is effected.

A very serious collision between an express and freight train, occurred at Olean, on the Erie Railroad, last week. The engineer and fireman of the express train were badly injured, at first supposed fatally, but at the last accounts they were in a fair way to recover. The locomotives and cars sustained a damage of about $5,000. The engineer of the freight train is considered the individual in fault.

Another barrier to the liberty of Commerce has just been thrown down, by a new Danish law, making trade with Iceland free to all nations. This trade, not long since, was a monopoly, held by a small company of Copenhagen merchants, who realized such large profits from it, that the designation of Icelandic traders, by which they were ordinarily designated, was in some degree synonymous with wealth.

The Superintendent of the Banking Department has given notice that the outstanding notes of the Atlas Bank of Clymer must be presented for redemption within six months from the 9th of June. The stock notes will be redeemed at 97 cents, and the stock and real estate notes at 75 cents on the dollar, on presentation at the office of the Superintendent.

A dispatch dated Boston, Wednesday, June 14, 1854, says: A boiler exploded yesterday afternoon in the manufactory of Stephen T. Taylor, No. 20 Brighton-st. Six persons were badly scalded, and two of them—Thos. Beach, the engineer, and H. Allison, an employé—died to-day. The building was considerably shattered.

Thomas Boardman, Fall River, Mass., offers a premium of $100 for the best Tract, not exceeding twelve pages, on *The Scriptural and Political Remedy for the North in the present crisis on Slavery.* Competing manuscripts to be sent to Mr. B. before Nov. 1st next. Three clergymen of Fall River have consented to act as judges.

The Legislature of Connecticut, which has been for some weeks carefully maturing a stringent and well-guarded act of Liquor Prohibition, on the 15th inst. passed it through both Houses by very decided majorities—*one hundred and forty-eight* to *sixty-one* in the House, and *thirteen* to *one* in the Senate.

Mrs. Adeline Penfield was recently chosen Supervisor of Penfield, Ohio, but could not qualify, as the Constitution of Ohio allows none but *voters* to be chosen to that office.

The accounts of the progress of the American Expedition to Japan, leave no room to doubt that it will ultimately be successful, beyond even the anticipations of its projectors.

One of the Commissioners of Excise of the City of Brooklyn was convicted in the Kings County Court of Oyer and Terminer, June 16th, on an indictment charging him, with the majority of the Board, with granting tavern licenses to persons who have not the accommodations required by law. The penalty, if enforced, is a fine not exceeding $250, and imprisonment for not more than one year.

Another Rum Murder is added to the long list of crimes laid at the door of the arch-fiend in New York. On the 16th inst., two men got into a dispute in a grog-shop in Chambers street, which was settled only when one of them, an old man, had been beaten to death. The murderer, who is the keeper of a rum shop in another street, is locked up.

It is being said around the Washington hotels, that the President has before him upward of three hundred applications for the offices in the new Territories of Nebraska and Kansas, and more "documents" coming! There are but fourteen offices to be filled, or about twenty-five applicants for each office.

U. S. Commissioner Wilcox, of Columbus, O., publishes a card in the *Columbus Fact*, announcing his resignation, and intimates that he declines the office because he is unwilling to execute the provisions of the Fugitive Slave Law.

The *Boston Traveler* of Monday evening notices five cases of cholera in that city, and says a number of additional cases have been reported, and the city authorities have taken vigorous measures to thoroughly cleanse the city.

Great competition exists between the Cincinnati, Hamilton and Dayton, and the Little Miami Railroads. The former have reduced the fare from Cincinnati to Buffalo to $4, including state rooms and meals on the Lake steamers. The fare has hitherto been $8.

It appears there have been six gentlemen elected to the Mayoralty of Washington, at different periods, who were printers by profession. Their names are Roger C. Weightman, Daniel Rapine, Joseph Gales, W. W. Seaton, Peter Force, and John T. Towers.

A dispatch dated Cincinnati, Saturday, June 17, 1854, says: The nine fugitive slaves captured here three days ago were given up to their owners this evening and taken to Kentucky. There was no excitement.

The royal parliament of Sweden, at its meeting of March 17th, by a vote of 68 against 58, has passed a law that the Israelites have the right to settle in any part of the kingdom; and the hope is generally expressed, that the emancipation will be carried.

In Jerusalem, the small pox is making horrible ravages, sparing neither young nor old, nor even the vaccinated Europeans. Half a year ago the small pox attacked the poultry, most of which died.

Israel Donalson, of Winchester, Adams County, Ohio, is the only survivor of that noble band who formed the first Constitution of the great State of Ohio, and is now in his 88th year.

Mr. Schlessinger, one of the parties to a recent sham duel in New Orleans, was shot dead by S. G. Ladd, during a quarrel about the duel.

Cases of Cholera occur now and then in New York, and are increasing. Residents and visitors can not be too careful in their habits and diet.

The Farmers' and Mechanics' Bank of New Brunswick has been reörganized under the free banking law of New Jersey. Its capital is $300,000.

The Hon. Gerrit Smith not only declines a re-election, but is understood to contemplate resigning his seat in the present Congress, because of ill health.

Fifty-seven fatal cases of cholera are reported in the bill of mortality for New York City as occurring last week.

New York Markets—June 19, 1854.

Ashes—Pearls $5 50; Pots 5 75 a 5 81.

Flour and Meal—Flour, 7 75 a 8 25 for common to good State, 7 75 a 8 50 for mixed to fancy Michigan and common to good Ohio. Rye Flour 5 50. Corn Meal 3 87 a 3 94 for Jersey.

Grain—Wheat, 1 76 a 1 81 for upper Lake, 2 05 for mixed Ohio. Rye 1 25. Barley 1 00. Corn 80 a 82c. for Western mixed. Oats 50 a 52c. for Jersey, 52 a 55c. for State and Western.

Provisions—Pork 11 75 for prime, 13 00 for mess. Beef 11 00 a 13 00 for country mess. Butter 14 a 18c. for Ohio, 17 a 19c. for State dairies. Cheese 6 a 9c.

Hay—70c. for shipping.

Hops—25 a 33c. for Eastern and Western.

Lumber—16 00 for Eastern Spruce and Pine.

Potatoes—2 50 a 2 75 per bbl. for common, 4 50 for Mercers and Carters, 6 00 a 7 00 for new Bermuda and Charleston.

Seeds—Clover 7½ a 8c. Timothy 18 00 a 21 00 for mowed and reaped. Flaxseed 1 85 a 1 90.

Tallow—11¼ a 11½c. for Butchers' Association.

Wool—33 a 36c. for native American, 42 a 45c. for full-blood merino, 49 a 53c. for American Saxony Fleece.

DIED.

In New York, June 12, 1854, of consumption, AUSTIN COVEY, aged 25 years and 6 months.

In Waterford, Ct., June 6, 1854, of inflammation of the lungs, ELSIE A., daughter of Matthew S. and Milly Saunders, aged 6 weeks and 6 days.

In Verona, N. Y., June 3d, an infant daughter of William C. and Polly Satterlee, aged three years, three months, and twelve days.

LETTERS.

A G Burdick, J Parmalee, G W Post, V M Burdick, J B Wells, N V Hull, Henry Babcock (sent to Forestville,) E B Coon, W C Whitford, L C Rogers, Wm Dunham, Charles Rowley, Halsey Stillman, Leonard Woolworth, J Goodrich, H P Burdick, C M Lewis, C C Sockwell, Rowse Babcock, E Saunders, A Bascom, C R Burdick, E C Green (both rec'd,) Z Campbell, G R Wheeler, J Whitford, J C Ayer, Henry Jackson, E G Champlin, F Babcock, Daniel Pierce, Jr, Wm M Fahnestock, W B Gillett, Elias I Maxson, P B Vars, Rowland Saunders, J F Randolph, O N Brown, E P Larkin, A B Burdick, S R Smith.

RECEIPTS.

FOR THE SABBATH RECORDER:

Chas Potter, Jr, Westerly, R I	$2 00	to vol. 11	No. 52
Clarke Wells, Potter Hill, R I	2 00	11	52
David Dunn, New Market, N J	2 00	11	52
V M Burdick, Elgin, Ill	6 00	11	52
Asa Burdick, Milton, Wis	2 00	11	52
Deborah Carr "	2 00	11	26
C G Stillman "	4 00	10	52
J D Burdick, DeRuyter	2 00	10	13
Wm C Satterlee, State Bridge	1 00	11	26
John Parmalee	1 00	11	52

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Charles Potter, Jr	$1 00	Martin Dunn	$1 00
Chas C Sockwell	1 00	David Dunn	1 00
Erastus P Clarke	1 00		

WILLIAM M. ROGERS, Treasurer.

Western Association—Executive Board.

THE Executive Board of the Western Association will meet at Alfred Center on the morning of June 22, 1854, previous to the opening of the Association. All communications designed for the action of said Board should be forwarded to the Secretary as early as practicable, that the Board labor under no embarrassment in making their annual report.

E. R. CLARKE, Clerk.

Water Cure.

MOUNTAIN GLEN WATER CURE AND SUMMER RETREAT, at Plainfield, N. J.
A. UTTER, M. D., Physician and Proprietor.
If beauty and variety of scenery, pureness of air and water, *personal professional attention*, neatness, cheapness, and good cheer, are requisites of such an institution—these are combined at the Glen.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2.50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commencing Monday, April 10, 1854:—
Leave New York at 8 A M, 12 M, and 4 and 6 P.M.
Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.
Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.
Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare.

GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:
Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.
Dunkirk Express at 7 A. M. for Dunkirk.
Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.
Way Express at 12.45 P. M. for Dunkirk.
Night Express at 6 P. M. for Dunkirk and Buffalo.
Emigrant at 6 P. M.
On Sundays only one express train, at 6 P. M.
These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c.

D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—
Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.
Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.
Express Train, 4 P. M. Accommodation Train at 6.30 P. M.
For Tarrytown at 11 P. M.
For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.
For Peekskill at 10 A. M., 3 and 5.30 P. M.
The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.
Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.
Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations.

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

P. S.—Almost any number of certificates can be sent you, if you wish it.

To Printers.

A NEW EDITION OF THE SPECIMEN BOOK OF BRUCE'S NEW YORK TYPE FOUNDRY, was published in September, 1853, and will be given to those proprietors of Printing Offices who will send for it, or it will be forwarded to them by mail on receipt, in advance, of fifty cents for the postage.

In it are exhibited many articles never before shown; there have been added to the Foundry new varieties of Roman Types from Nine-line Pica to Pearl, various imitations of Writing, a great number of fancy founts, borders, both plain and illuminated, labor-saving rules, and a complete foundry of German.

The types now manufactured are cast from a new combination of great durability, and are usually kept on hand in large quantities. Every fancy fount is sold by weight, and at the printed prices, which are from ten to twenty-five per cent. less than those of some other foundries. All other printing materials are furnished at manufacturers' prices, either for cash or credit.

Printers wishing to open accounts with me, or whose dealings have been long suspended, are requested to accompany their orders with city references to prevent delay.

Printers of newspapers who choose to publish this advertisement, including this note, three times before the 1st of August, 1854, and send me one of the papers, will be paid for it in type when they purchase five times the amount of their bill from me, of my own manufactures, selected from my specimens.

GEORGE BRUCE,
51-3 13 Chambers-st., New York.

Miscellaneous.

[illegible] to her Guardian Angel.

[illegible]

The angel, whom Heaven
Hath sent to my prayer,
To lead me secure
Through paths that ensnare—
Bring me at last
To the land of the blest—
O smile on me now,
Thou heavenly guest.

Oft have I bemoaned,
Oft bitterly wept
The bloom of the rose,
By hidden worm nipped;
[illegible] pure
As heaven's crystal sheen,
Oft suddenly veiled
By dark clouds hath been.

O Angel, deal gently,
My hope is in thee;
Thy wings of gold spread
A shield about me.
[illegible]thful, untried
[illegible]ssion's dark ways,
[illegible] not that art
Whose cunning betrays.

When vanity lures,
With flowers gay and bright,
Yet 'neath their bloom lurks
The serpent of blight;
When folly would tempt,
And draw me astray,
Then haste, child of heaven,
And warn me away.

If on me false love
His shameless gaze turns,
On sneers at the right,
Or holy truth spurns;
Mine angel, then shake
So loudly thy wing,
That, frightened, his flight
My triumph shall bring.

Yet when all alone
A golden harp-string
Mine angel, of thee
A sweet song I sing;
Then breathe in my soul
A sweet spirit tone,
Till all my notes swell
With a charm of thy own.

When under my hand,
Sweet music is given,
And devotion doth bear
My rapt heart to heaven;
Then open to me
That world yet to come,
Till at its bright glow
I weep for that home.

And when thou hast closed,
With fingers of love,
Mine eyes in death's sleep,
[illegible]n called above,
On thee will I lean,
Secure from alarm,
All fearless ever
On thine angel arm.

Then thou with a smile
Shall call me thy bride,
Nor shall the sweet kiss
Of love be denied.
By thy rosy hand,
Led on to my rest,
In peace I shall reach
The land of the blest.

E. H. G.

Economy in Food.

At least one half of the world do not know the meaning of the words that head this article. "Economy in food," they would say, with a stare, "what do you mean? I must buy bread, and I get a precious little loaf for a sixpence, but I can't get any bigger one. I cannot do without meat, and that is awful dear; only think, eighteen pence a pound for beef and mutton! As for lamb, why, poor folks can't touch that; but I must have meat, for I am a hard-working man, and I can't eat meat all the time without potatoes to fill up, and who ever heard of such a price as they are now? and cabbage, and all such truck, is just as dear. I should like to see your economy, if you had to buy food for a family."

So you should, so you may, if you will come where we eat. We believe that a man can work hard, and yet eat no meat. Certainly, there is no need of making a perfect carnivorous animal of himself; and he can eat meat without [illegible] every day to the butcher to get it [illegible] Hard-working farmers eat salted beef and pork, and seldom touch fresh meat except at the annual butchering times. It is not good economy for a poor man to buy fresh meats at any time.

As for potatoes, nine-tenths of them at this time in this city are not wholesome food, and they are the dearest article that is sold for the sustenance of man. The prices that old potatoes are retailed at is equal to five cents a pound, and those from Bermuda eight cents, and the little, watery, precocious, unhealthy things called "new potatoes," are sold at a price equal to twelve cents per pound. At the same time, good family flour is sold for six cents, and yet every body cries, "what a dreadful price!" But there is cheaper food than flour; not only more economical, but more healthy, particularly for a variation of diet. One thing is the various preparations of Indian corn—the poorest of all is the meal ground almost as fine as flour, which almost spoils it for bread. Then there is the article known at the South and West, where it is extensively used, under the name of hominy. Here it is called samp, and is sold at about $2 50 a bushel, and one bushel is worth more that four bushels of potatoes. It is a good, palitable, wholesome, economical food. But a more generally acceptable article is called hominy here; at the West, grits. The first is hulled corn, the grains left nearly whole; the latter is hulled corn, cracked into grains about the size of bird-seed shot, or coarse gunpowder. It sells for three and a half cents a pound. Both are cooked by soaking and slow boiling for hours in clear water, and when eaten as a substitute for vegetables, with meat, are seasoned with salt and a very little butter. Both are very good with meat gravy, or with sugar or molasses. By the bye, sugar and molasses are the cheapest articles of food in New York, and children should be allowed a free use of them upon the score of economy.

Another article is the kiln dried sweet corn, which, though more expensive than either of the two preceeding articles, is nevertheless more economical than meat, potatoes, cabbage, and all sorts of green trash now in market, and it is acceptable to almost every palate that appreciates corn when in the roasting ear.

Another cheap wholesome food is wheat grits. At present, owing to the advance in grain, this preparation is much higher than common, but cheaper than flour, and more healthy.

All these preparations of economical food, are made by the North American Phalanx, and we believe also by Hecker, very largely, and of course sold to somebody that knows how to live in the City.

Dry beans and peas are also articles that should enter much more into the consumption of all who study economy in food. We believe that a dollar's worth of either would go further than six dollars' worth of fresh meat, or ten dollars worth of potatoes.

Rice is another economical article of food, and when mixed with sugar, particularly so. You had better feed a hungry beggar upon rice-pudding than the cheapest fresh meat that you can buy.

Eggs, even at the usual high prices, are cheaper than butcher's meat, and as with rice, if you add sugar to them, you will be able to feed a hungry family far more economically than you are doing at present.

We might continue our list of economical articles of food, but we have no faith in working a reform, because mankind have got so wedded to that old round of bread, meat, potatoes, that they do not appear to know, and much more do any thing else. Yes, they do one thing more; they grumble at the high prices of their favorite food, and yet, keep right along the same, old beaten track made by folly, and traveled by her votaries. [Trib.

An Elephant at Large.

From the *Providence Journal*, and the testimony of an eye witness to a part of the scene, we gather the following particulars of the havoc and destruction made by a large elephant attached to the Broadway Menagerie, which got loose from his keeper on the way from Pawtucket to Fall River.

When about seven miles from Pawtucket he got free from the control of his keeper, and meeting a horse and wagon, belonging to Mr. Stafford Short, he thrust his tusk into the horse and lifted horse, wagon and rider, into the air. He mangled the horse terribly, and carried him about fifty feet and threw the dead body into the pond. The wagon was broken to pieces, and Mr. Short considerably hurt. The elephant broke one of his enormous tusks in this encounter. A mile further the elephant, now grown more furious, attacked in the same manner a horse and wagon, with Mr. Thomas W. Peck and his son. He broke the wagon and wounded the horse, which ran away. Mr. Peck was pretty badly hurt in the hip. Two men took horses and drove ahead to give warning to the passengers whom they met on the way. They came up with a Mr. Pearce who was riding with his little son in a one-horse wagon. He was coming toward the elephant, and being warned by the outriders turned around and put his horse to his speed, but the elephant overtook him, and seizing the wagon, threw it into the air, dashing it to pieces and breaking the collar-bone and arm of Mr. Pearce. The horse, disengaged from the wagon, escaped with the fore-wheels, and the elephant gave chase for eight miles, but did not catch him. The elephant came back from his unsuccessful pursuit and took up his march again on the main road, where he next encountered Mr. Jabez Eddy, with a horse and wagon. He threw up the whole establishment in the same way as before, smashed the wagon, killed the horse, and wounded Mr. Eddy. He threw the horse twenty feet over a fence into the adjoining lot, then broke down the fence, went over and picked up the dead horse and deposited him in the road, where he had first met him. He killed one other horse, and pursued another, which fled to a barn. The elephant followed, but at the door was met by a fierce bull dog, which bit his leg and drove him off. Once on the route, the keeper being ahead of him, saw him plunge over a wall and make for a house. The keeper got into the house first, hurried the frightened people within to the upper story, and, providing himself with an ax, succeeded in driving off the furious beast. On his route, the elephant killed three horses and seriously injured two men, beside the damage to wagons. Our informant says he shall never forget "seeing *that* elephant." He was covered with blood from the horses he had killed. His strength was surprising, for he seemed to handle a horse with as much ease as a terrier dog does a rat. The horses were terribly frightened when they saw the wild elephant. It is believed that a part of the time he ran at the rate of a mile in three minutes. He finally exhausted his strength and laid himself down in the bushes, about two miles from Slade's Ferry. He was secured with chains, and carried over the ferry to Fall River.

Domestic Guano.

The droppings from the hen-roost, if carefully preserved and properly applied, we find a most valuable addition to our stock of manures. For the saving of it we have a roosting place petitioned off in the upper part of a shed for which a tight floor is laid, open at the back side, under which a large and rather shallow box is built, into which receptacle ashes, lime, plaster, and any thing of the kind is from time to time mixed with the cleanings from the floor above. This at the time of corn planting is drawn out, and a small handful dropped in each hill; being careful at the planting to draw a little dirt over it as the corn is dropped, as if it comes in immediate contact with the corn it will in most cases destroy the young sprout. This I consider a better way than to mix with loam before dropping in the hill, as it is less bulky, and the planter who drops his own seed can draw on a little earth before dropping his corn, with no trouble at all. I have had better corn, manured in this way, with no other manure, than from land adjoining, with quite a heavy coating in the usual way.

A Scene from Real Life.

We saw last evening (says the *St. Louis Republican*) an apt illustration of the affection of woman. A poor, inebriated wretch had been taken to the calaboose. His conduct in the street, and after he was placed in the cell, was of such a violent character that it became necessary to handcuff him. The demon rum had possession of his soul, and he gave vent to his ravings in curses so profane as to shock the senses of his fellow-prisoners, one of whom, in the same cell, at his own solicitation, was placed in a separate apartment. A woman appeared at the grating, and in her hands she had a rude tray, upon which were placed some slices of bread, fresh from the hearth-stone, and other little delicacies for her erring husband. She stood at the bar gazing intently into the thick gloom where her manacled companion wildly raved. Her voice was low and soft, and as she called his name, its utterance was as plaintive as the melody of a fond and crushed spirit.

The tears streamed from her eyes, and there, in the dark prison house, the abode of the most wretched and depraved, the tones of her voice found their way into that wicked man's heart, and he knelt in sorrow and in silence, before his young and injured wife, while his heart found relief in tears such as only a man can weep. Though the iron still bound his hands, he placed them, with their heavy insignia of degradation, confidingly and affectionately upon the brow of his fair companion, and exclaimed, "Katy, I will be a better man." Thereupon a rude seat she had spread the humble meal which she had prepared with her own hands, and after he had finished she rose to depart, bidding him be calm and resigned for her sake, with the assurance that she would bring a friend to go on his bond, and that she would return and take him home. And she left him, a strong man, with his head drooping upon his breast, a very coward, humiliated before the weak and tender being whose presence and affection had stilled the angry passions of his soul. True to the instincts of her love and promise, she did return with one who went on his bond for his appearance next morning, and with his hand clasped in that of his lovely wife, she led him away a penitent, and, we trust, a better man. There were those who laughed, as that pale, meek woman bore off her erring husband, but she heeded them not, and her self-sacrificing heart knew or cared for nothing in its holy and heaven-born instincts, but to preserve and protect him whom she loved with all the devotion of a wife and a woman.

Plums.

A heavy soil with a considerable mixture of clay is most congenial to the plum, although its universal culture shows that it readily grows in any.

The bane of the plum tree is the *blackwart;* and of its fruit, curculio. Whenever the former appears, the limb should be cut off and burnt; or if it is too large to be removed, the excrescence should be cut out as thoroughly as possible, and the wound washed with a weak solution of copperas, which, it is said, will effectually check its progress. This disease is happily of rare occurrence in the finer varieties.

The curculio is a small hump-backed beetle, and is the grand pest of all the smooth-skinned fruits. It commences its operations, when the fruit has attained the size of a large pea, by puncturing it with its proboscis and depositing an egg. This soon produces a small white grub, which eats to the center, and causes the fruit to fall. Although many labor-saving devices have been resorted to to defeat its operations, yet none of them appear to be of universal efficacy. Troublesome and expensive scare-crows, like heaps of fresh manure, and brick pavements, placed around the trees; or ridiculous ones, like white rags and white wash, have proved to be, in his sight, only "weak inventions of the enemy." We believe Mrs. Glass's preliminary to cooking the rabbit to be eminently essential to the successful termination of his attacks: "first catch him." This is most effectually done by spreading sheets under the tree and suddenly jarring it with the hand or a mallet, when the creature will suddenly drop from it. Some practice is necessary at first to distinguish him from a dried bug, or fragment of bark, as he lies motionless and innocent upon the sheet, but having attained the skill, wreak your vengeance upon him. This process repeated at sunrise and at sundown, (and if oftener the better,) for a week or so, will effectually preserve your plums; and they are worth the labor.

The Poet Montgomery.

James Montgomery, recently deceased, was born November 4, 1771, at Irvine, in Ayrshire. His father was a Moravian missionary, who, leaving his son in Yorkshire to be educated, went to the West Indies, where he and the poet's mother both died. When only twelve years old, the bent of the boy's mind was shown by the production of various small poems. These indications could not save him at first from the fate of the poor, and he was sent to earn his bread as assistant in a general shop. He thirsted for other occupations, and one day set off with 5s 6d. in his pocket to walk to London, to seek fame and fortune. In his first effort he broke down, and for a while gave up his plan to take service in another situation. Only for a time, however, he was content, and a second effort to reach the metropolis was successful, so far as bringing him to the spot he had longed for, but unsuccessful to his main hope—that of finding a publisher for a volume of his verses. But the bookseller, who refused Montgomery's poems, accepted his labor, and made him his shopman. Fortune, however, as she generally does, smiled at last on the generous youth, and in 1792 he gained a post in the establishment of Mr. Gales, a bookseller in Sheffield, who had set up a newspaper called "The Sheffield Register." On this paper Montgomery worked *con amore*, and when his master had to fly from England to avoid imprisonment for printing articles too liberal for the then despotic government of England, the young poet became the editor and publisher of the paper, the name of which he changed to "Sheffield Iris." In the columns of this print he advocated political and religious freedom, and such conduct secured for him the attention of the Attorney General, by whom he was prosecuted, fined and imprisoned—in the first instance for reprinting a song commemorating "The Fall of the Bastile"—in the second case, for an account which he gave of a riot in Sheffield. Confinement could not crush his love of political justice, and on his second release he went on advocating the doctrines of freedom as before, in his paper and in his books.

In the lengthy period between those times and the present the beliefs which James Montgomery early pioneered in England have obtained general recognition, and, as men become more and more liberal, our poet gained more and more esteem.

He contributed to magazines, and, despite adverse criticism in the "Edinburg Review," established his right to rank as a poet. In 1797 he published "Prison Amusements;" in 1805, "The Ocean;" in 1806, "The Wanderer in Switzerland;" in 1809, "The West Indies;" and in 1812, "The World before the Flood." By these works he obtained the chief reputation he has since enjoyed. In 1819 appeared "Greenland," a poem in five cantos; and in 1828, "The Pelican Island and other Poems." In 1851 the whole of his works were issued in one volume, 8vo., and of which two editions are in circulation; and in 1853, "Original Hymns, for Public, Private, and Social Devotion." This venerable poet enjoyed a well-deserved literary pension of £150 a year.

SPARE THOSE BIRDS.—On no pretext whatsoever should farmers or gardeners permit their birds to be disturbed. Instead of killing or frightening them away, they should make use of every means in their power to induce them to increase in number and become more tame and familiar. The worst of them earn twenty times what they eat; and then, what exquisite pleasure to have your garden, yard, orchard or wood, active and vocal with the music of merry birds. Plant trees for them, build houses, if necessary, for them, and let no cat, dog or boy ever molest them, and they will teach you lessons of domestic bliss—preach you sermons—and warble you such hymns as you hear not elsewhere.

Is it Instinct or Reason?

It is said that the woodcock in New Jersey is building its nest, this year, in open and moist places; and old huntsmen predict in consequence that the summer will be a dry one. There was a time when science, or what was called such, laughed at signs of this description as no better than "old women's tales;" but though many of them are still unreliable, a larger observation of nature has taught that animals have an instinct which not unfrequently becomes prophetic, as in this example. At last year's meeting of the American Association, for the advancement of Science, a curious paper was read on this subject, by Mr. N. B. Thomas, of Cincinnati, who had, for several years, studied the habits of animals in reference to the indications which they might afford respecting the weather. He showed that birds, if the season was to be a windy or wet one, built their nests in sheltered places; but, if it was to be dry, in localities more exposed; that certain kinds of snails always came out, and crept up the limbs of trees several days before rain; and that locusts, wasps, and other insects, were invariably to be found under leaves, and in the hollow trunks of trees, hours before a storm set in. The sagacity thus displayed, if we may call it such, seems to put the higher reason of man to shame. In vain do our most expert *savans* endeavor to predict the character of an approaching season, or even to foretell, a few days in advance, the condition of the weather. The woodcock that unerringly fixes its nest in the spot best suited for the coming summer, or the snail whose tubercles begin to grow ten days before the rain they are preparing to receive, appear, at first sight, to surpass the more developed men. But the inferiority of these lower orders of animals is in the quality of their endowments rather than in the quantity; they have a single faculty to a most extraordinary degree, while man has, as it were, faculties almost infinite. In this adapting each organization to its special position, the wisdom of the Creator is forcibly exhibited.

A Walk in the Arctic Regions.

Dr. Kane thus sketches a morning's walk in the regions of ice:—

"Now, let us start out upon a walk, clothed in a well-fashioned Arctic costume. The thermometer is, say 25 deg., not lower, and the wind blowing a royal breeze, but gently. Close the lips for the first minute or two, and let the air cautiously through nostrils and the moustache. Presently you breathe in a dry, pungent, but gracious and agreeable atmosphere. The beard, eye-brows, eye-lashes, and the downy pubescence of the ears, acquire a delicate white and perfectly enveloping cover of venerable hoar frost. The moustache and under lip form pendulous beads of dangling ice. Put out your tongue, and it instantly freezes to this icy crusting, and a rapid effort and some hand aid will require to liberate it. The less you talk the better. Your chin has a trick of freezing to your upper jaw by the luting aid of your beard; even my eyes have been so glued, as to show that a wink is unsafe. As you walk on, you find that the iron work of your gun in your hand begins to penetrate through two coats of woollen mittens, with a sensation like hot water. But we have been supposing your back to the wind; and if you are a good Arcticized subject, a warm glow has been followed by a profuse sweat.

"Now, turn about and face the wind; what a change! whew! a jack-knife heretofore, like Bob Sawyer's apple 'unpleasantly warm' in the breeches pocket, has become as cold as ice and hot as fire; make your way back to the ship! I was once caught three miles off with a freshing wind, and at one time feared I should hardly see the brig again. Norton, who accompanied me, had his cheeks frozen, and I felt that lethargic numbness mentioned in story books. I will tell you what this feels like, for I have been twice 'caught out.' Have you ever received the shocks of a magnetic-electric machine, and had the peculiar sensation of 'can't let go,' extending up to your elbow joints? Deprive this of its paroxysmal character; subdue, but diffuse it over every part of the system, and you have the so-called pleasure of incipient freezing. It seems even to extend to your very brain. Its inertia is augmented; everything about you seems of a ponderous sort; and the whole amount of pleasure is in gratifying the disposition to rest, and spare yourself an encounter with these latent resistances. This is, I suppose, the pleasurable sleepiness of the story books."

RUNNING GEAR FOR WHEEL CARRIAGES.—The Clinton *Courant* notices a very important improvement in the fashion of running gear for wheel carriages. Its advantages are thus set forth:—

"Firstly, the wagon to which it is attached can be turned, with perfect comfort to the horse, *within a circle of the diameter of four feet*—a great desideratum with city travelers. Secondly, the horse is brought nearer to his work, and does it with greater ease. Thirdly, it is much less liable to disarrangement, and safer than the ordinary gearing, besides doing away with the rattle and clatter of those now used. Fourthly, getting in and out of the vehicle is rendered much easier and more pleasant, as it can be done without touching a wheel. Fifthly, the springs are so arranged that one or four persons may ride without altering their bearing; and in either case, the motion is more pleasant and regular than that of any other wheel carriage in which we were ever before seated. To all these advantages is added the fact that there is no appreciable difference in the cost between the new and old arrangement."

"A Tinpenny, your honor," exclaimed a sturdy beggar at a stage-coach door in Ireland, to a Scotchman with fiery ringlets, but who was quite insensible to the appeal; "a fippenny, your honor; a fippenny, or a penny, or a half-penny, plase ye." Finding the Scotchman inexorable, the beggar altered his tone, and said, "Will your honor plase to lend me a lock of your hair to light my pipe with?"

THE POET PERCIVAL.—This gifted man long since disappeared, like a meteor from the sky. The *Louisville Journal* thus recurs to his singular retirement:—

Self-immured in a room of the hospital in the extreme suburbs of New Haven—a city of which a poet should be proud—this gifted and eccentric being lives, as he has lived for the last quarter of a century, a purely solitary and ascetic life. He is wholly absorbed in intellectual pursuits, and shrinks with painful sensitiveness from all the luxuries and amenities of life. No Eastern anchorite ever abjured more completely the comforts and refinements of elegant rank for the blank privations of his cell—no storied recluse ever more voluntarily renounced a brilliant career of usefulness and fame for the lonely vigils of a hermitage. In this desolation, rejoicing, it is said, in but a single chair, he has surrounded himself with a magnificent library and with philosophic apparatus, from which friend and foe are alike excluded, and in which, though dead to all beside, he seeks and finds the solace and charms of intellect.

IMPORTANT DISCOVERIES.—It may not be generally known, that by the process now in common use for removing the hair and tanning hides, a period of about six months is consumed, and the leather is liable to be burnt and rendered brittle by the lime used in its preparation.

An article has been discovered by Messrs. Ward and Boot, of Boston, and thoroughly tested by those interested in the tanning business, by means of which the hair is removed and the hide is left in such a state that it may be tanned in eight days; and what is of more importance than this saving of time, the leather is left soft and is capable of more service than when treated in the common way. This article is coming rapidly into favor, and the new process must soon supersede all now practiced for the tanning of leather.

The same firm have also discovered a way of scouring and fulling woolen goods, by which the use of soap for this purpose is entirely done away with, and a saving effected of over one-half. This latter process we have heard very highly spoken of by manufacturers who have tried it, and on their authority we do not hesitate to recommend it as being exactly the thing it is claimed to be.

A STRANGE BUSINESS.—A Mlle. Rose is at present engaged in Paris in breeding a very curious kind of live stock, in the shape of live ants, at which business it is said she realizes thirty francs per day. She has correspondents in all the departments, and never receives less than ten bags a day. She makes them lay when she likes, and can get from them, as she says, ten times what they would produce in a state of nature. She sells the eggs to the Garden of Plants, as food for certain species of birds; to the pheasant-raisers of the environs, and to apothecaries for sundry medicinal purposes. Mlle. Rose lives and sleeps in the midst of her insects, and the skin of her whole body has grown insensible to their bites. She is as callous all over as though she were an universal corn. The police lately made her remove from Paris to an isolated house beyond the barriers.

VARIETY.

In the way of an electioneering speech, the following may be considered a model. "My Fellow Citizens! I am no speech maker—but what I say, I'll do. I've lived among you twenty years—if I have shown myself a clever fellow, you know it without a speech; if I'm not a clever fellow, you know that too; and wouldn't forget it with a speech. I'm a candidate for the Legislature—if you think I'm the clear grit, vote for me; if you think Major R. of a better stripe than I am, vote for him. The fact is, either of us will make a good Representative!"

The question is often asked, "Why so many storms and disasters upon Lake Erie? Why the difference between that and the other lakes composing the great chain between the United States and British America?" It is said to be caused by the extreme shallowness of its waters, which are more easily disturbed than the deep waters of its neighbors. Hence the name "Erie," an Indian name signifying "mad," "the mad lake." This name, like all Indian proper names, is very significant of the boisterous character of Lake Erie.

There are no two words in the English language which stand out in bold relief—like kings upon a chequer-board—to so great an extent as the words, *I will!* There is strength, depth, and solidity—decision, confidence, and power—determination, vigor, and individuality—in the round ringing tone which characterizes its delivery! It talks to you of triumph over difficulties—of victory in the face of discouragement—of will to promise and strength to perform—of lofty and daring enterprise—of unfettered aspirations, and of the thousand and one impulses by which man masters impediments in the way of progression.

Mary J. Marshall, of Rockville Ct., wants too much. She asks the Hartford *Times* for a hatchet to split the difference with, a tear from the eye of a needle, a sip from the fountain of love, a bath in the ocean of pleasure, a bud from a barrel of flour, a pin from the cloak of religion, a rock in the cradle of liberty, a hair from the head of the stairs, a peep at the wings of time, and a weight from the scales of a codfish.

It is said that a subject of the King of Prussia, a talented mechanic, being about to emigrate, was arrested and brought before his majesty. "Well, my good friend," said the King, "how can we persuade you to remain in Prussia?" "Most gracious Sire, only by making Prussia what America is." He was allowed to emigrate.

The *Chinese Repository* says that criminals are sometimes punished by making them into a candle. The convict is wound around with cotton, saturated with tallow, and then dipped until he presents the appearance of a gigantic candle, when he is taken and after being "stood up" on his father's grave is lighted.

It is said that the editor of the Massachusetts Life Boat is delighted to learn that "the Czar has refused to treat." The next steamer, he hopes, will bring the news of his joining the temperance society.

In Siberia, the greatest luxuries are raw cats, served up in bear's oil; while in Japan a stewed crocodile, flanked with monkey's feet, is the height of "fat things."

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P. M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass. Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & CO., and by all Druggists, everywhere. 37-3

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

UNIVERSAL PEACE—NO. 2.

BY C. ROLLIN BURDICK.

War and its Consequences.

How shall we find words to speak of Alexander—that man, whose genius was consecrated to the work of slaughtering his fellow man—that scourge of the world, before whom it reeled as if a malign sphere from Heaven's vault had dashed against it, causing ruin and desolation all around. Whirlwinds, thunder-gusts, and earthquakes, were his pastime. He tented his serried hosts under a canopy of smoke of burning cities; his camp-fires by night were burning hamlets, and the music which most charmed his ear was the groans of dying men and the wail of despairing humanity. Seas of human blood were the elements in which he bathed. What a gloomy picture of war is presented in the history of this single man. How profusely did he pour out human blood, and how many demons are now gnashing their teeth in hell, reared up for that place by the evil passions engendered by his wars. He made his way to empire literally over mountains of slain. Thebes, the bloody fields of the Granicus, Isus, and Arbela, fully attest the truth of this. Animated by a spirit of revenge, he attacked ill-fated Thebes, routed her brave troops, murdered her sons, sold her women and children into slavery, and leveled her palaces, temples, and all her habitations, in the dust. The terror of his arms spread throughout Greece, and that once invincible country owned his power. Greece conquered, other nations and people must fall at his feet and do him reverence, if not as fawning sycophants, as conquered victims slain in battle. He crimsoned the Granicus with the blood of thirty thousand human victims. Tyre he leveled in the dust, and even dissolved her ashes in the sea, so great was his indignation against the inhabitants on account of their obstinate resistance. After the surrender, he even caused two thousand to be hung on crosses along the sea shore, there to die a most painful death. Isus saw the running blood of a hundred thousand human victims sacrificed to the demon of war. Arbela heard the tramp of three quarters of a million armed men going to battle, and saw three hundred thousand perish on the field. Persipolis sunk under the flames kindled by one of Alexander's courtesans. The gates of Susa opened for his reception. Babylon unfolded her brazen gates at his approach. The farthest Ind heard the tramp of his battalions, and contributed her quota for the slaughter. Alexander ran his race in a short time; but oh! the misery and desolation that followed in his footsteps, and all to gratify a raving ambition. But his head now lies as low as that of the humblest soldier slain in any of his battles. Let him there rest until the judgment shall reveal the extent of his crimes. We can only mourn that such a stupendous genius should have been devoted to the slaughter instead of the elevation and blessing of mankind. But we should use our best endeavors that no more Alexanders be reared up to blast human happiness.

Africa has nourished her tigers, thirsting for human blood and treasure. Carthage* had her day as the scourge of surrounding nations. Conquest succeeded conquest, until she had enslaved a large portion of Africa, many parts of Europe, and a number of the Mediterranean isles. Army after army of citizens and mercenary troops issued from her gates, spreading terror and wo throughout the world. Reverses or good fortune were attended alike with slaughter. Hymera, in Sicily, at one time witnessed the slaughter of one hundred and fifty thousand Carthagenians, and nearly as many more perished in the same expedition, on the sea. Hannibal, the Carthagenian general, a short time after this, caused three thousand of the same city to be tortured to death in a most shocking manner, to satisfy the manes of his slaughtered countrymen. Selenus fell to ruins under the shock of Carthagenian battalions; 16,000 of its inhabitants were slaughtered, and the women and children were sold into perpetual slavery. Agrigentum shared the same fate, as well as many other towns and cities of Sicily. Hannibal waged an exterminating war on Spain, carrying desolation and wo to many millions. Saguntum, a Roman city, fell into his hands. This was the signal for a terrible war between the rival powers. Hannibal, sworn by his father, from his infancy, to eternal hate against the Romans, burned with an implacable desire to wreak his vengeance upon them. Spurred on by this, mountains, rivers, and deep morasses, could not stop his progress. The Pyranees offered their barriers in vain. He crossed them, led his army to the Rhone, dispersed the Gauls that were assembled on its banks to impede his progress, and, despite their efforts, drew up his legions on the opposite bank. The frowning Alps, with frozen tops piercing the clouds, now stood athwart his way. Their impregnable ramparts were covered with fierce Gauls, who hurled destruction and death down upon his troops. He made the perilous passage, though thirty thousand of his men perished by the missiles of the Gauls, by the overwhelming avalanche, by the choking drifts of snow, and by the bottomless abysses into which many fell headlong. The crossing of the Appenines was almost equally disastrous. He finally found himself on the plains of Italy, and he immediately took up his march for the gates of Rome. He met the Romans near Lake Thrasymenus, and a dreadful conflict ensued, so terrible that an earthquake, which overthrew many cities of Italy, and turned rivers out of their course, was unregarded by the furious combatants. The night closed in over the fallen bodies of many thousand men. At Cannal forty thousand Romans perished, and six thousand Carthagenians. During Hannibal's wars in Europe, he destroyed four hundred towns, and murdered three hundred thousand men. Almost an equal number of his own men must have perished during the time. Such was the work of Hannibal; and such a historian as Miss Willard gives him the epithet of "noble boy" in his younger days; and why? because his heart was filled "with implacable enmity" against the Romans. He must be stamped with true nobility, indeed, whose early education led him to enrol his name among the wholesale butcherers of mankind. It is a sad mistake, and fraught with ruin and death, that a man's nobility consists in military talents, be they ever so well adapted to success. And yet, almost every historian that has delineated the events of the past, has thrown a halo of glory, false and deceitful as hell, around military achievements. We do not respect—indeed we almost loathe—the public executioner, who raises the axe in vindication of justice. And our indignation rises to the highest pitch at the perpetration of such horrid murders as lately transpired on Long Island, and we can hardly be restrained from flaying the perpetrator alive. But there are not wanting thousands among us who look with complacency upon the man who has butchered his hundreds of thousands. Strange inconsistency! But Carthage run her race of blood, and her sun at last went down behind a lurid war-cloud, and was quenched in a sea of gore. After her sanguinary wars with Rome, in which many millions must have perished, her gates were battered down by Roman soldiers, her myriads of inhabitants fell victims to Roman battle axes, her immense wealth was carried off by her captors, and her golden palaces and temples were left in heaps of black and smouldering ruins.

NOTE. In No. 1 of this series, the compositor put the number that fell under Sennacherib, much more than the writer meant to have it. It should have been 185,000.

SHILOH, N. J., June 18, 1854.

THE PALESTINE MISSION.

To the Editors of the Sabbath Recorder:—

I send you the following extracts from a letter which I received from Sister Saunders on the morning of June 3d. The latest date is, City of Smyrna, May 3d, 1854. A. B. B.

ON BOARD THE BARK ROSE POOL,
March 12th, 1854.

MY VERY DEAR BROTHER A.,—I think I will commence writing to you, by making extracts from my journal, and will send it when an opportunity is offered. We expected to have had religious services on board yesterday, but all were so sick that they could not attend to it. All sick this morning, excepting myself. I am now on deck, enjoying this bright morning which has so sweetly smiled upon us. The ocean is beautiful, reflecting the clouds of skies. We are now out of sight of land; yes,

"The land is lost, the waters glow,
'Tis heaven above, around, below."

2 o'clock P. M.—I wish you could step on board and see our company as I am seated here writing—Mr. Saunders and Martha lying at my right; Mr. Jones, wife and daughter on my left, Cap. Harding's wife and child before me, all so sick that they cannot sit up.

Evening.—I have been walking the deck, viewing the clear transparency of the skies. I have never seen the starry vault of heaven so beautiful as now. It fills my soul with wonder and praise to Him who is infinite in wisdom and love.

Second-day, 13th.—We are having most delightful weather, with a fresh steady breeze; the sea is running high, now and then sending a crystal spray upon us. We are just entering the Gulf Stream.

Fourth-day, 15th.—We have passed a fearful night; the sailors were all called at 12 o'clock to take in sail. The second mate told me, that he did not know for several hours how it would turn with us. I asked him how he felt in view of meeting death. He replied: "My mother was a Christian, and I was taught by her to read my Bible and go to Sabbath school; but alas! since her death I have been a reckless youth; yet when scenes of danger come, these instructions come up vividly to my mind." He promised me that he would remember her advice and live a different life. He turned to his duty, and I prayed to God to convert his soul.

Third-day, March 21st.—Pleasant this morning. Mr. Jones and family better. Mr. Saunders and Martha quite well. We have not seen a living creature since the day we left Boston, excepting two gulls, until this morning the mate came down and told us that there was a sail in sight; all ran on deck to see. It was quite cheering to see a vessel, after being eleven days at sea without seeing any living thing except our own crew and company. Our company in the cabin consists of Capt. H., wife and little daughter, the first and second mate; Mr. Jones, wife and daughter, Mr. S., Martha and myself. Capt. H. is a gentleman; he treats us with the greatest kindness; the mates also appear solicitous to make our situation agreeable. The sailors all seem to feel it a privilege to render us a favor. Our table is well furnished with all that is necessary; when Mr. S. or Mr. Jones is at the table we have prayer.

Sabbath, 25th.—Lat. 44° N., long. 31° 50' W. It is a beautiful day, so calm that we are not sailing more than one knot an hour. Our little band gathered in the cabin at half-past one o'clock, (11 A. M. at home,) and returned thanks to our Heavenly Father for his manifold blessings to us, in protecting us thus far on our voyage. We felt that we were remembered by our dear brethren and sisters at home, who were then assembled to worship God.

"Though sundered far, by faith we meet,
Around one common mercy seat."

First-day, 26th.—Have had a very interesting conversation with our first mate on the subject of religion. He has an enlightened mind; still he has not given his heart to God. He referred very prettily to his pious mother, whom he believes is now in heaven, and to her earnest solicitude for his salvation. I left him reading his Bible

April 7th.—We are having a severe storm, wind blowing a gale from E. S. E. with heavy head-sea breaking against the bow of the vessel with such force that her sides tremble and quake, while the rudder groans as if unwilling to yield to the mighty element. The wind is howling through the rigging, and every wave speaks of eternity.

Sabbath, April 8th.—This is the first day that we have been able to stay on deck without our thick shawls and overcoats. We hold our meetings at 10 A. M., and our Bible Class at 2 P. M. We commenced at the first chapter of the Acts. I enjoy our meetings and Bible Class very much.

April 11th.—It is 31 days since we left Boston. We are now 165 miles from the straits of Gibraltar. One of the mountains of Spain was seen this morning from the mast-head, through the spy-glass. The ladies had no invitation to go up, and so we have to forego the pleasure of seeing it.

April 12th.—Lat. 35° 3' N., long. 1° 3' W. This afternoon we heard the cry of "Land ho!" It was a pleasant sound to me, I assure you, for it is 32 days since I have seen land. I went on deck; Tangiers was in full view. (It is on the African shore.) The soft, sweet, balmy breeze was truly refreshing. As I stood and gazed on these mountains, a sadness came over my spirit, as I remembered the poor degraded ones who have been forced from these shores in chains, even to our own dear native land.

April 14th.—Lat. 36° 6' N., long. 5° 19' W. The Captain called us at 5 o'clock this morning to see the Rock of Gibraltar. It is grand and imposing, with its towers, forts, and many magnificent buildings. This is a stronghold of the English. This rock, and the high promontory on the African coast opposite, are called the "Pillow of Hercules."

April 17th.—Lat. 36° 57' N., long. 0° 13' E. The sea is running high, and our good ship is pitching and plunging merrily; but I have become so much accustomed to this state of things, that being [illegible] headlong from my seat across the cabin, or tumbled out of my berth, or drenched to my skin, are all taken patiently, as a matter of course.

April 23d.—Lat. 35° 15' N., long. 11° E. This day opened with a fresh breeze—the crew and passengers are all animation at the prospect of reaching Smyrna soon. We are now just entering the Gulf of Tunis, with the Island of Tunis, Cape Bon, and the Isle of Zembra on our left.

April 25th.—Early this morning we were awakened by the announcement that Malta was in sight, but when we got on deck we found it to be the Island of Gozo, which lies about six miles west of Malta, and stands rather higher; it is completely environed with rocky cliffs, 150 feet high in some places, and is equally mountainous with Malta. Next we were off St. Paul's Bay, west of Malta. Here it is supposed that St. Paul and his company went on shore. It is probable that the passage between these two islands is the "certain creek" which they discovered, (Acts 27 : 39,) "and falling into a place where two seas met, they run the ship aground." Acts 27 : 41. Capt. H. says that when the wind is E. S. E. there is a strong eddy or whirlpool here where the seas meet between these islands.

First-day, April 30th.—This bright morning sheds lustre upon these picturesque mountains of Asia. It was with deep interest that I first hailed these shores, and my heart was filled with tender emotions as I called to mind some of the events in the past history of this country. We are now gliding beautifully along in the Gulf of Smyrna, passing vineyards, olive grounds, and other beautiful fields of lovely fertility, which look as though the people might have an abundance of the good things of this world. The scene is truly charming—everything presents an aspect of sweet repose.

Now, my dear brother, we are safely anchored in the harbor of Smyrna, for which my heart is truly grateful. Mr. Saunders and Mr. Jones have gone on shore to see what they can learn about our passage to Jaffa. I am on deck looking at the City and surrounding scenery. I should think, from the amount of shipping now in the harbor, that Smyrna must be the emporium of the Levantine commerce. It is situated on a rich and extensive plain, bounded by high brown mountains (without trees) on every side, excepting the west, which faces the sea. The distance from the entrance of the gulf on a circuitous course to the City, is about 21 miles. The harbor is so enclosed by projecting capes and headlands, that nothing is visible from the town beyond them. The Turkish burying ground occupies the slope of a hill facing the west. At a short distance from the town, is another, that is owned by the Jews, and is encircled by a deep grove of Cypress trees. I can see them very distinctly from here; also the ruins of an old castle on the summit of a high mountain in the rear of the city. Smyrna has the appearance of a large population and much wealth. The Turks are all around us in boats, with their red caps, and flounce skirts, with some Arabs also. Mr. Saunders and Mr. Jones have got quite a vocabulary of Arabic words from our steward, who is a Maltese, and speaks Arabic very well.

CITY OF SMYRNA, Second-day, May 1, 1854.

DEAR BROTHER A.—I cannot sleep, so I have taken my pen to write you some of the events of the day. Very early this morning Mr. Saunders and Mr. Jones went on shore to see the agent of the French steamers, to secure a passage to Jaffa. They asked them over $300 for passage and freight of each family. We could not pay that price. We asked Capt. H. if we could remain on board until we could obtain a passage. He said he would be glad to accommodate us if they had room. Mr. S. and J. then went to look for board. They found that we could not get board for less than one dollar per day, and poor at that. Our funds would not admit of our paying such a price. They engaged two bedrooms for eight piasters per day (32 cents.) Mr. Jones' room has a window which admits fresh air, ours has none. We could have taken larger, airy rooms, which would have cost 12 piastres per day, (48 cents,) but we do not wish to expand any more than is absolutely necessary. I do not know how we shall get to Jaffa with our means, yet some way will be opened for us, I trust. We can get bread and figs as cheap here as at home—this will be our principal living for the present. We cheerfully submit to this, or any other privation, only that we may labor for the poor heathen, and the glory of God.

CITY OF SMYRNA, May 3d.

I feel like a stranger in a strange land. The scenes here are deeply interesting and surprising—such a babel of tongues, such a variety of dress, from every nation and clime, all crowding into these exceedingly narrow streets. It requires great tact to get along here without being pushed over by a loaded camel, or having your toes crushed by a donkey, or being thrown into a drain by the crowd of poor, half naked creatures who throng the streets. The odor of fruit, tobacco, and various kinds of merchandise, is anything but agreeable. There is a great contrast between the Arabs and the Jews here. The Arabs, with their long dresses streaming in the wind, and fine flashing eyes, giving a strange wildness to their appearance; while the Jew has a meek, submissive countenance. I cannot write you more at present, for it is nearly time for the mail to close. Pray for us, dear brother, that we continue steadfast in the way. May God bless and keep you.

Affectionately, Your sister. MARTHA.

From a letter received at the [illegible], I extract the following:—

DEAR BROTHER,—I have scarce a minute to write. We have engaged our passage to Jaffa in an Austrian Bark, 350 tuns, direct to Jaffa; passage, freight, &c., for the whole, $290. The Rose Pool is a palace compared to her. Her name is Adolar, Capt. Cosme Gersaglia. Remember us to all our dear friends in Westerly and vicinity, for the many kindnesses which we have received from them.

Yours in Christ, C. S.

MINISTER'S CHILDREN.

There is a proverbial saying quite current in some places, reflecting severely upon "Ministers' sons, and Deacons' daughters." The following facts show that it is a slander:

Out of 206 families of ministers and deacons in Connecticut, including 837 children over 15 years of age, 20 had become dissipated and otherwise immoral. Others might have departed for a period from the pathway of rectitude, but they had been reclaimed and hopefully converted.

Out of 433 families of ministers and deacons in Massachusetts, including 1,598 children over 15 years of age, only 20 became permanently immoral. A very large majority became church members and honored their profession by blameless lives. Yet the Orthodox Congregationalists of New England, in a former age, were proverbial for stringent family government, for habitual family prayers, for teaching their children the "Assembly's Catechism," and habituating them to read the Scriptures on the Lord's day. The Sabbath was regarded as holy time, and boys and girls were not permitted to play or to visit each other's houses on that day.

The result of this investigation, which was published in a religious periodical, shows that of 2,535 children over fifteen years of age, out of 639 families of pastors and deacons, only forty, (not two and a half per cent,) turned out vicious. The notion, then, is a fallacy. People take special notice if any of the sons of the ministers of the Gospel turn out bad, and overlook the thousands of ungodly and profligate youth who get their early education in the school of vice.

SHALL I PRAY TO CHANCE?—An English lady, who had forsaken her God and her Bible for the gloom and darkness of infidelity, was crossing the Atlantic, and asked a pious sailor one morning how long they should be out. "In fourteen days, if it is God's will, we shall be in Liverpool," answered the sailor. "If it is God's will," said the lady: "what a senseless expression; don't you know that all comes by *chance?*"

After a few days a terrible storm arose, and the lady stood clinging to the side of the cabin door in an agony of terror, when the sailor passed her. "What think you," said she; "will the storm soon be over?" "It seems likely to last for some time, madam." "Oh," she cried, "do pray that we may not be lost." His only and calm reply was, "*Shall I pray to chance?*"

MONTGOMERY'S LAST COMPOSITION.

Among the hymns for the Sheffield Sunday-School Union, to be sung on Whit-Monday, June 5, 1854, is the following, recently composed for the occasion by James Montgomery, and probably his last poetical composition. Readers of all classes will peruse the last lines of such a man with the deepest interest:

"Welcome, welcome, glorious day,
When the children, year by year,
All in Whitsuntide array,
On their festival appear:
Not with sound of trump and drum,
Nor death weapons in their hands;
Though with banners spread they come,
Humble, peaceful, happy bands!

"With the Gospel-message shod,
Fearless faith their seven-fold shield;
And their sword the word of God,
Who shall foil them in the field?
While a holy war they wage,
Through strange perils and alarms,
Satan's malice, wiles, and rage,
And the world in Satan's arms.

"Prince Immanuel at their head,
These, where'er they face a foe,
By their teacher-captains led,
Conquering and to conquer go:
Still a self-renewing race,
As the elder rise in life,
Young recruits supply their place,
To maintain the endless strife.

"For till Time his roll hath sealed,
And the dead in Christ arise,
(Heaven, and earth, and hell revealed,
Unto all created eyes;)
Soldiers, valiant for the truth,
Shall this holy war prolong;
Men and angels, age and youth,
Sing the Church-triumphant's song.

"Learn we now that wondrous strain,
In our schools, our homes, our hearts,
'Worthy is the Lamb once slain!'
In all languages, all parts:
Then the countless chorus swell,
Round His throne, with glad accord,
Never more to say 'Farewell!'
But 'For ever with the Lord!'"

DEATH OF MR. JUSTICE TALFOURD.

We have never read anything more profoundly impressive than the account, by the Stafford correspondent of the *London News*, of the death of Mr. Justice Talfourd, almost literally upon the judgment seat, and in the midst of a charge, (or we might say at its conclusion, for what more could have been added to the production as it stands?) full of the most noble, the most humane, the most generous sentiments. The correspondent states that his lordship appeared in his usual health, on entering the court, and had been out at six o'clock in the morning, enjoying a morning walk. His delivery of his charge, however, was characterized by much hesitation, and he evidently had difficulty in proceeding with his task. He was presiding in the Crown Court, had reviewed the calendar, and was directing attention to the number of charges of highway robbery which it contained:—

"These crimes," he said, "come—I will not say exclusively, but in the far greater majority of these cases—from those districts which are the most rich in mineral treasures, where wages are high, and where no temptation of want can for a moment be set up as an excuse or palliation for the crime; on the contrary, I have observed in the experience I have had of the calendars of prisoners tried at these assizes—an experience, many of you are aware, extending far beyond my judicial labors—I have observed that in times of comparative privation crime diminishes, and that when wages are high and are earned by a less degree of work, there is a strong temptation to spend them in vicious indulgences, and that crime has increased almost in proportion to the state of prosperity by which the criminals have been surrounded. This consideration should awaken all our minds, and especially the minds of gentlemen connected with those districts, to see in what direction to search for a remedy for so great an evil. It is untrue to say that the state of education—that is, such education as can be furnished by the Sunday schools, and other schools in these—is below the general average; then we must search among some other causes for the peculiar aspect of crime presented in these cases. I cannot help myself thinking it may be in no small degree attributed to that separation between class and class, which is the great curse of British society, and for which we are all more or less, in our respective spheres, in some degree responsible, and which is more complete in these districts, than agricultural districts, where the resident gentry are enabled to shed around them the blessings resulting from the exercise of benevolence, and the influence and example of active kindness.

"I am afraid we all of us keep too much aloof from those beneath us, and whom we thus encourage to look upon us with suspicion and dislike. Even to our servants, we think, perhaps, we fulfill our duty when we perform our contract with them—when we pay them their wages, and treat them with the civility consistent with our habits and feelings—when we curb our temper and use no violent expressions towards them. But how painful is the thought that there are men and women growing up around us, ministering to our comforts and necessities, continually inmates of our dwellings, with whose affections and nature we are as much unacquainted as if they were the inhabitants of some other sphere. This feeling, arising from the kind of reserve peculiar to the English character, does, I think, greatly tend to prevent that mingling of class with class, that reciprocation of kind words and gentle affections, gracious admonitions and kind inquiries, which often, more than any book education, tend to the cultivation of the affections of the heart, refinement, and elevation of the character of those to whom they are addressed. And if I were to be asked what is the great want of English society—to mingle class with class—I would say, in one word, the want is the want of sympathy."

It was while giving utterance to these most impressive truths that the audience became alarmed by the changed aspect of the venerable speaker. His head fell on one side; he was seized with apoplexy. As quickly as possible he was removed to his lodging, where the best professional assistance was called in, but he breathed his last the moment he was laid on his bed. The event produced great consternation and the deepest regret.

SAMUEL RUTHERFORD.

He was a minister of Christ at Anwoth, in Kirkcudbright, and lived in a pretty, sheltered spot called "Bushy Bield." He loved Christ with all has heart, and led many of his flock to love him also. But he was deposed from his office and banished to Aberdeen, a town in the north of Scotland, where scarcely any one loved God, because he would not conform to unjust and sinful laws. His heart yearned so much for his friends and his home and his work in "green Anworth," that he said, "The swallows that built their nests in the kirk of Anwoth were blessed birds." However, suffering for his Lord's sake was easy to bear, and he called his place of exile, "Christ's palace."

Rutherford was afterwards allowed to leave Aberdeen, and he became professor in the university of St. Andrews, and also a minister there, where he lived a great many years; but he was not allowed to die without at least hearing the storm of persecution once more. He was a martyr in will, though not in deed, for the chariot of the Lord bore him to heaven at the very moment that his enemies were clammering for his blood upon earth. Receiving, on his death bed, the summons to appear before the council, his answer was, "Tell them I am summoned by a higher Judge, and I shall soon be where few kings and great folks come." When the messengers, sent to make him prisoner, returned with the news that he was at the point of death, the parliament voted that he should not be allowed to die in the college of St. Andrews; upon which one of the members exclaimed, "Ye have voted that honest man out of this college, but ye cannot vote him out of heaven." Samuel Rutherford's last words were "Glory, glory dwelleth in Immanuel's land." He was buried in St. Andrews' church-yard, where his tombstone is still pointed out; and his voice still speaketh, for when he was at Aberdeen, and at other places, he wrote a number of letters to his friends so full of the love and consolations of the gospel, that perhaps no uninspired pen has been more useful to "Mourners in Zion."

THE OLD NEGRO'S LOGIC.

A clergyman asked an old servant his reasons for believing in the existence of a God. "Sir," says he, "I see one man get sick. The doctor comes to him, gives him medicine; the next day he is better; he gives him another dose, it does him good; he keeps on till he gets about his business. Another man gets sick like the first one; the doctor comes to see him; he gives him the same sort of medicine; it does him no good, he gets worse all the time, till he dies. Now that man's time to die had come, and all the doctors in the world can't cure him. One year I work in the corn-field, plow deep, dig up grass, and make nothing but nubbins. Next year I work the same way; the rain and dew comes, and I make a good crop. I have been here going hard upon fifty years. Every day since I have been in this world I see the sun rise in the East and set in the West. The North stands in where it did the first time I ever saw it; the seven stars in Job's coffin keep in the same path in the sky, and never turn out. It ain't so with man's works. He makes clocks and watches; they run well for a while, but they get out of fix and stand stock still. But the sun and moon, and stars, keep on the same way all the while. There is a power which makes one man die, and another gets well; that sends the rain, and keeps every thing in motion."

What a beautiful comment is here furnished by an unlettered African, on the language of the Psalmist: "The heavens declare the glory of God, and the firmament showeth His handiwork. Day unto day uttereth speech, and night unto night showeth knowledge."

THINGS THAT ARE COMING.

Manhood will come, old age will come, and the dying bed will come, and the very last look you shall cast upon your acquaintances will come, and the time when you are stretched a lifeless corpse before the eyes of weeping relatives will come, and that hour when the company will assemble to bear you to the church yard will come; and the moment when you are put in the grave will come, and the throwing in of the loose earth into the narrow house where you are laid, and the spreading of the green sod over it—all will come on every living creature who hears me, and in a few years the minister who speaks, and the people who listen, will be carried to their long homes, and make room for another generation. Now all this, you know, must and will happen—your common sense and common experience serve to convince you of it. Perhaps it may have been little thought of in the days of careless and thoughtless and thankless unconcern which you have spent hitherto; but I call on you to think of it now, lay it seriously to heart, and not longer trifle and delay, when the high matter of death and judgment and eternity are thus set so evidently before you.

THE TIME SHORT.

On one occasion, the late Rev. W. Blunt requested a lady, whom he thought qualified, to undertake some charge in district visiting, or some kindred engagement. She answered him, rather declining the proposal. "My stay here will probably be too short for me to be of any use. I do not know that I shall be here three months." His answer was brief, calm, and solemn. "I do not know that I shall be here one." He alluded to his time and life in this present world. She saw his meaning, and answered no more, and heartily embraced the work offered her to do. In God's sight, time has in reality no remnants, no shreds, no patches to be thrown away; and the habit of speedy and ready application of our faculties is one of the most important acquisitions which can possibly be formed.

THOUGHTS ON ORDINATION.

Almost every Christian denomination that recognizes an order of persons devoted to the ministry, has some form, rite or ceremony, by which it inducts the candidate into office. Yet, it may be doubted whether any of these forms of ordination can justly claim to have been divinely prescribed. It is so common to have a sermon on the occasion, a prayer accompanied with the Imposition of Hands, and a Charge setting forth the duties of the ministry, together with the Right Hand of Fellowship welcoming the young minister to the cares and responsibilities of the work, that most persons think these things quite essential to an orderly entrance upon the office, and would be shocked if any, or all of them, were omitted.

We have no wish to come into collision with those who are tenacious of these forms, nor any particular wish to have them discontinued. Some ceremonial of induction is proper enough, when one is about devoting himself to the care of souls; and some token of recognition, on the part of those already in the work, is no less so. But we are free to declare our conviction, that none of them is specially enjoined in the Word of God, nor even commended to us by inspired example.

Of these forms, the Imposition of Hands seems to be the one which, above every thing else, is deemed essential—the one in which the essence of ordination chiefly lies. But when Christ "ordained" the twelve Apostles, (Mark 3: 14; John 15: 16,) He did not lay hands on them. When He sent forth the seventy, He employed no such ceremony. They were fully empowered both to preach and baptize, (John 4: 2,) notwithstanding this omission. And when Matthias was received into the apostolic college, we have no account of an ordination ceremony. (See Acts 1: 22–26.)

The Apostles "ordained elders in every church," (Acts 14: 23;) not by the laying on of hands, however, but by taking the suffrages or votes of the members, shown by the stretching out of their hands, as the word (*cheirotonesantes*,) signifies; which being done, they (the Apostles) declared the elders duly elected and ordained. Paul directed Titus to "ordain elders in every city," (Tit. 1: 5,) but as he gave no instructions to lay hands upon them, the fair presumption is, that he was to do it in such manner and form as he and Barnabas had done in the above instance. No instance is given of hands being laid on any ordinary minister, pastor, or elder, at his ordination. And in all instances, where the thing was done at all, it was done by extraordinary persons, as Apostles; and not by them upon any ministers but extraordinary ones; and even then, not at, and for, the ordination of them.

Nor is the argument for ordination by imposition of hands at all aided by what is recorded in Acts 13: 1—3. For Paul and Barnabas were in the ministry before. Paul's conversion had taken place some eight or ten years previous, and "straightway he preached Christ in the synagogues, that he is the Son of God." Acts 9: 20. It is also certain that, previous to their separation to the apostolic office, "a whole year they assembled themselves with the church (at Antioch,) and taught much people." Chap. 11: 26. Indeed, they are called "prophets and teachers," before the command for their separation to the apostleship is given. Their ordination, at this time, is to the apostleship, and not to the ordinary work of the ministry. The whole affair was an extraordinary transaction, and cannot reasonably be pleaded as an example for the popular practice of the present day.

Nor does the case of Timothy help the matter any. Hands were laid upon him by the presbytery, it is true, (1 Tim. 4: 14,) but it should be observed, that it was not an office, but a gift, which was conveyed in this way. Besides, there is no proof that this took place at the time of Timothy's ordination to the ministry. He may have exercised the office for years before, for aught that appears to the contrary. And whoever composed the presbytery, it is certain that Paul was one, since he says, expressly, that the gift which Timothy had, was by the putting on of his hands. 2 Tim. 1: 6. Moreover, Timothy was not an ordinary, but an extraordinary officer in the Church. He was an evangelist, (2 Tim. 4: 5,) not a pastor of any particular church. The office of an evangelist was to preach the gospel to the different Gentile nations. To fit them for this, Christ gave them the gift of *tongues*, by which they were enabled to preach to every nation in its own language; also, the gift of *miracles*, (Acts 8: 6, 13, compare Acts 21: 8,) for the confirmation of their doctrine. Now-a-days, we hear the term evangelist applied to ministers, who go about from place to place preaching the word. But it is clear, that those who, in Scripture, are called by this name, were as much extraordinary persons as the Apostles were, (See Eph. 4: 11.) Now, as Timothy was an extraordinary officer, and as the gift communicated to him was an extraordinary gift, and done by an extraordinary person or persons, so the whole transaction appears to have been an extraordinary affair, not intended to be copied by churches in clothing ordinary ministers with office.

The notion that the Imposition of Hands is essential to the validity of an ordination, has probably grown out of a misunderstanding of the import of the Greek term *cheirotonesantes*, translated "ordained" in Acts 14: 23 Compounded of two other words, one of which means *hand*, and the other to *extend*, it appears to have been mistaken for that kind of hand-extension, which takes place when one lays hands on another. But for this latter, the proper Greek term is not *cheirotonia*, but *cheirothesia*. The former refers to the well known practice in ancient deliberative assemblies—a practice which is still retained in most of our churches—of taking the votes by extending, or lifting up, the right hand. In 2 Cor. 8: 19, the word is rendered "chosen," and is clearly applied to the act of the people, or church members, in electing a brother to a trust of some importance. The passage above referred to, (Acts 14: 23,) might well be rendered, "And when they had *brought about the election* of elders in every church," &c.

But when once the error had obtained currency, that the ordination spoken of in Acts 14: 23 implied the act of laying on of hands, it was very easy to fancy that all those texts which *do* speak of the act contributed something in support of the practice. Hence, they have been quoted as proof-texts for centuries. It has been, in this respect, much as it has been in respect to the Sabbath question. The conceit having once possessed the mind that the first day of the week was a sacred day, it was easy to fancy that every passage of the New Testament, in which the expression occurred, was proof of it. T. B. B.

THE WESTERN ASSOCIATION.

The Seventh-day Baptist Western Association held its 19th annual meeting at Alfred Center, Allegany Co., N. Y., commencing on Fifth-day, June 22d.

Agreeable to appointment, Thomas E. Babcock preached the opening discourse, taking for his text Amos 7: 2—"*By whom shall Jacob arise? for he is small.*"

The Association was organized by the appointment of D. E. MAXSON, Moderator, E. R. CLARKE and A. C. BURDICK, Clerks.

Letters were received from all of the churches connected with the Association, except Ulysses and Darien and Cowlesville. Several of the churches reported revivals during the year; 1st Alfred reported 39 baptisms, and Friendship 25.

From sister Associations, the only delegate present to participate in the deliberations was Amos W. Coon, of the North-western. The delegate of the Eastern Association, A. B. Burdick, started from home in time to be present, but was delayed on the way, and arrived after the business meetings had closed. James Bailey and Geo. B. Utter, from the Eastern Association, were present during a part of the session.

The delegates last year appointed to attend the meetings of the other Associations, all reported that they had filled their appointments. T. E. Babcock attended the meetings of the Virginia and Ohio Associations, H. W. Babcock the North-western, L. Andrus the Eastern, and N. V. Hull the Central. For the coming year, N. V. Hull was appointed delegate to the North-western Association, H. W. Babcock to the Virginia and Ohio, D. E. Maxson to the Eastern, and T. B. Brown to the Central.

In this connection we may as well give the remaining appointments for the current year. D. R. Stillman, of Alfred Center, was appointed Treasurer; and T. E. Babcock, N. V. Hull, T. B. Brown, C. D. Langworthy, and E. R. Clarke, Executive Board. The following appointments were also made for essays to be presented at the next meeting of the Association: T. B. Brown, on the Immortality of the Soul; J. M. Allen, on the Duty of the Church in calling out, sustaining, and ordaining young men for the ministry; H. W. Babcock, on Christians and Politics; D. E. Maxson, on Family Prayer; and Jared Kenyon, on Secret Societies.

On Sixth-day morning, after a sermon by Hiram W. Babcock, N. V. Hull, in compliance with an appointment made last year, read an essay on the Time of commencing the Sabbath. As this essay will soon appear in the *Recorder*, there is no occasion for us here to say more in relation to it, than to bespeak for it a candid perusal.

The Committee appointed for the purpose, presented a series of resolutions, the discussion of which occupied most of the afternoon of Sixth-day, and was participated in by a large number of delegates and brethren. The resolutions adopted will be found below.

We give also, herewith, the Reports of the Executive Board and of the Committee on the State of Religion.

Near evening of Sixth-day, the Association adjourned, to meet at Richburg, N. Y., on the fifth day of the week before the fourth Sabbath in June, 1855, when N. V. Hull is to preach the Introductory Discourse; H. W. Babcock, alternate.

On Sabbath-day there was preaching by James Bailey, Leman Andrus, and Amos W. Coon. On First-day, preaching by Thomas B. Brown, Alfred B. Burdick, and Geo. B. Utter.

Report of the Executive Board.

Your Board have continued the efforts of the domestic mission mainly in the direction of last year, viz: in Potter County, Pa., Erie County and vicinity, Persia and Clear Creek, and somewhat in Tioga, Pa.

Bro. H. W. BABCOCK was employed by the Board to labor in Potter county, Pa., with the churches in Hebron and Ulysses, and at such other points as were most advisable. He reports that ill health, together with his appointment to the North-western Association, prevented him from doing his ordinary amount of labor in the missionary field during the first quarter of the current year. Besides his labor with the churches at Hebron and Ulysses, he has preached on First-days at the Raymond School House, Cobb Hill, Oswayo, Allegany Township, and some other points. He reports a good attendance on the preached word, at all points of his labor, and a desire for ministerial labor to be continued. He further reports, that his labors have been seriously embarrassed in the town of Ulysses, by the influence of Secret Societies, and that the prospects of the Ulysses church are very unpromising, being seriously affected both by Secret Societies and Sabbath-keeping Adventists.

Bro. L. M. COTTRELL, who has labored in Persia and vicinity, reports a favorable state of religious feeling at the different points of his labor, and a reviving influence at Clear Creek. He says that Sabbath Tracts, and Sabbath School Visitors, are doing a good work throughout the region of his labor.

Bro. ROWSE BABCOCK, laboring in Erie county, reports a want of more labor in that vicinity than one misionary can well perform—three churches desiring to be supplied on Sabbath day, together with other inviting fields of labor among first-day communities. He represents the Sabbath question as being favorably agitated in that section, and upon the whole, an increasing interest in the cause of Christ.

Bro. T. E. BABCOCK, from a missionary tour made to Westfield, Tioga Co., Pa., reports nothing very favorable from said field; found here and there a Sabbath-keeper who seemed to manifest some desire to maintain the same. The Board are not able to report so fully from this field as would be desirable, not having received all of the communications anticipated.

We have from each and all of our stationed missionaries, encouraging prospects for labor. Souls have been converted to the cause of Christ our Redeemer, and to the cause of the Sabbath. Bread, we humbly trust, has been cast upon the waters, that shall return after many days. And still the cry comes home to us, Give us the bread of life; in view of which, your Board would call again for your sympathies, your prayers, and your liberal contributions, to aid in this missionary cause, and we humbly hope, that we may all feel ourselves identified with the suffering, the poor, and the destitute—that we may regard their prosperity as our prosperity—that we may feel, that in lending to them a helping hand, and supplying them with the preaching of the Gospel of the Son of God, we are not only discharging our obligations, but are adding to the church of the living God such as shall be saved.

In conclusion, and in taking our leave of the work assigned us, permit us to say, that for this cause we will ever pray, believing that God will vouchsafe to us all he has promised, and feeling that to neglect to do our duty, is to neglect the high behest of Heaven.

Report on the State of Religion.

The Committee on the State of Religion report, that the communications from the several churches do not furnish testimonials of that deep piety, which should characterize a people blessed with the Sabbath, Sabbath Schools, and the ministrations of the word of life. But there are items in the reports that are interesting. Several of the churches communicate that God has visited them in mercy, converting sinners, and reclaiming the wanderer; for which we should render devout thanks to our Heavenly Father. Christian fellowship prevails in most of the churches. Prayer-meetings are maintained and well attended in some of the churches; in others attended by a few; and in some not at all. The Monthly Concert is almost universally neglected by our churches. We find that family prayer is not generally maintained; which, perhaps, may account for that want of progress in vital piety so much lamented by our brethren. These things call, with a voice which should stir our inmost souls, for an humbling of ourselves, and a more thorough consecration to the service of the great Head of the Church. May God so inspire us, that altars of devotion shall be erected in every family, so that we may next year report progress in piety, and the universality of family prayer.

Resolutions.

1. Whereas, the recent action of Congress on what is called the Nebraska Bill, evinces a spirit alike hostile to the rights of man and the principles of Christianity; therefore, *Resolved*, That this new exhibition of wickedness in high places should stimulate the good and pious, of all denominations, to pray unceasingly for the overthrow of American Slavery, and to labor in all lawful ways to bring about a result so intimately connected with the prosperity of our country, and the cause of religion and humanity.

2. *Resolved*, That the pledge which our denomination has given to the world, binds us to "remember the Sabbath day, to keep it holy;" and that our profession is justly open to the charge of inconsistency, when, for the purpose of gain, or convenience, or selfish pleasure, we depart from that requisition of the Fourth Commandment which charges us, our children, our servants and cattle, to do no manner of work.

3. *Resolved*, That the interests of our Publishing Society, as well as those of our Missionary and Tract Societies, should be cherished with undiminished regard by the churches of this body, and that the objects which they respectively contemplate are inseparable from our denominational prosperity.

4. *Resolved*, That this Association considers the enactment of laws to prohibit the sale of intoxicating drinks right in itself, and necessary to the perfecting of the Temperance reform; that it rejoices in the success which has thus far attended the efforts of the friends of Temperance to secure such laws, and advises the continuance of those efforts until the liquor traffic shall every where be illegal, as it is every where immoral and demoralizing.

5. Whereas, our General Conference appointed an Educational Committee, to take such measures as it might deem proper for establishing a denominational College and Theological Seminary, therefore, *Resolved*, That this Association heartily approves of the objects of that Committee, and that we recommend the Committee to take immediate and efficient action for securing the object of its appointment.

TROUBLE ON THE ERIE RAILROAD.—Business on the New York and Erie Railroad was greatly interrupted last week, in consequence of a strike among the engineers. It seems that a rule was recently adopted by the Company, requiring extra care in approaching switches, and making the engineers responsible in case they should run off the track, for want of such care. The engineers construed the rule as rendering them liable to be dismissed and *posted* for accidents which might result from the carelessness of switchmen. But the officers of the Company, in explaining the matter, say that the engineers are simply required to approach switches cautiously and at a reduced rate of speed, and they must not approach a station *where they are required to stop*, at such a rate of speed that they cannot check or control their trains. They are required to see that the switches are turned right, and should they neglect to do so, and run off the track in consequence, *at a station where they are required to stop*, they would incur the risk of dismissal; but not for running off the track between or at intermediate stations, except for gross willfulness or neglect. Should an engineer be discharged under such circumstances, the Superintendent of the Division discharging him would give notice to the Superintendents of other Divisions, and he would be prevented from obtaining employment in the same capacity on any other part of the road." Mutual explanations took place; and we learn that the engineers have concluded to return to their duty, the company agreeing to add five dollars per month to their pay, and to allow them to discharge unreliable switchmen.

We had occasion to pass over this road last week on our way to the meeting of the Western Association. Leaving New York on Fourth-day evening, we were twenty-six hours, instead of thirteen, in reaching Hornellsville, a distance of 330 miles. Returning by the Sunday night train, we reached New York before noon of Second-day, fifteen hours from Hornellsville. Probably everything will be in order before this paper goes to press, and the Erie Railroad will again be, as it long has been, one of the quickest, pleasantest, and safest routes to the West.

LETTERS FROM CHINA.

The Corresponding Secretary of the Seventh-day Baptist Missionary Society, received last week letters from brethren Carpenter and Wardner, dated Shanghae, March 2, 1854. We give below the principal part of those letters.

From Bro. Wardner's Letter.

Shanghae is still held by the rebels, having for nearly five months resisted a force numbering about twenty to one. Both parties seem to have improved greatly in their skill at warfare since the siege commenced. Their battles are becoming much more sanguinary than at first, and their performances more courageous. The imperialists have strongly intrenched themselves on the north-west and south-east sides of the city, and are daily becoming more and more formidable. They have also two encampments but a short distance from my house, say half a mile west and south.

About the beginning of the Chinese new year, it was reported that the Tautae had offered the rebels $400,000 to vacate the city, but the rebels refused to go for less than $800,000. Another report was that the former only offered them a safe passage out of the city, provided they would lay down their weapons. This they wisely refused, for, had they done so, they would, all of them, doubtless, have been brutally murdered. It is said that the families of nearly all of the leading rebels have been exterminated, few, if any, having their families with them.

I understand that the Tautae has sent to the United States for two mortars and several thousand shells, in order to *shell* the rebels out of the city. It would seem from this that he does not expect to get possession very soon. But the fact itself is something of a compliment to "barbarian" improvements.

For two or three months the imperialists have occupied an ancestral hall a little west of the north gate, belonging to the Ningpo residents, which they used as a battery, bringing them within speaking distance of the city wall. In some of their engagements, a cannon ball fired from the rebels, opened one of the coffins there deposited, which was found to contain gold and silver instead of a human body. Upon this hint, they opened all the coffins there deposited, and found that five of them contained treasure.

There is much evidence that the rebels are becoming hard pressed for means to carry on their warfare, and they are forcing money from all whom they ascertain to be in possession of it, whether it be in the city or out of it. Some of our old neighbors have been imprisoned and tortured, and many others have been put to death. One very wealthy man, who lived near Ya-zoo-loong, has to pay $500 per day, to save his head. Many, whose money has been sent off into the country, are taken and kept as hostages, while one or two of their friends or relatives are sent out after it, and those kept must pay the forfeiture if it is not brought in. All sorts of goods and crockery are taken from the merchants and hoarded up to be turned into money as opportunities present. Their numbers are also constantly diminishing, while that of their enemy increases; three thousand fresh troops having just arrived. The Tautae has established himself across the Soo-chow creek from the foreign factories, and is now receiving duties from foreign vessels.

On the sixth of the present month, about 6 o'clock A. M., the imperialists sprung a mine under the wall opposite their battery, above-mentioned, opening a wide passage, through which they attempted to enter, but were resisted and forced back with much loss by the rebels, who, besides the use of their fire arms, threw down bags of powder with lighted matches attached, which exploded in their midst, some of which were mixed with other substances so as to burn slowly, besides hurling arrows and brick-bats upon them. As the former retreated, they followed them, and demolished their battery, capturing all their guns, and drove them back to their encampment. The loss on both sides must have been considerable, though it is thought that there were at least ten imperialists slain to one rebel. One of the imperialists was shot, and beheaded just outside Mr. Yates' yard, and after being beheaded, one of the rebels ran from his place of concealment, in order to spear him, and while in the act of doing so, he also was shot and fell dead upon the headless corpse he was so wantonly butchering. Our North American Indians are not more given to revenge and deliberate cruelty than are the Chinese, when excited, and when they know they have the power in their hands. It is said, the rebels are in the habit of eating the hearts of all the spies they take. And it is not an unheard-of thing for the Chinese to flay their enemies alive, or cut their flesh from their bones by piece-meal, or burn and chop them in pieces by slow degrees, besides a variety of other torturing methods.

This protracted scene of warfare is producing a great amount of suffering among the poor inhabitants, both in and out of the city. For several miles each way from the city, the imperialists have plundered the inhabitants to an alarming extent, and in multitudes of instances demolished their houses, besides killing quite a number.

A few weeks ago, the American missionaries got together and consulted about what measures could be adopted for the relief of the suffering. Some of the American merchants had expressed a willingnesss to contribute, and accordingly a subscription paper was drawn up and circulated, and about $550 has been pledged. Three committees of two each were then appointed to search out the destitute, and distribute the alms. It fell to my lot to be put on one of them to make surveys in the region of country about my residence, in company with Rev. Mr. Keith. We commenced on the 7th, by visiting from house to house, examining carefully into their condition, and giving out tickets to be brought in to a specified place at a specified time, and at the same time improved every convenient opportunity to throw out a word of exhortation and instruction. There had lately been a heavy fall of snow (for Shanghai) and the walking was exceedingly bad. But we were soon made to feel that bad walking was of very slight importance when we came to see the wretchedness and destitution that prevailed. We found many whose residences, in the suburbs, had been destroyed, and they robbed of all their money (if they had any,) furniture, clothing, food, &c., and compelled to seek shelter wherever they might be so fortunate as to find it. And many, also, whose dwellings are situated right in the scene of conflict, and constantly exposed to the flying messengers of death, and yet are too poor to get away. On our return at night, we were headed by a battle at the little south gate, and were obliged to go a good deal out of our way, and even then had to pass nearly in range with the rebels' guns; but we passed unhurt.

On the 9th, we renewed our surveys, finding more wretchedness than on the preceding occasion, and more than can well be described. We selected another village, about two miles from the west gate, for a second place of distribution, about one-third of which was burnt and torn down by a band of imperial robbers in October, who also killed two of the residents. We saw the widowed mother of the two unfortunate men who were killed, in a very destitute condition. Between this village and the west gate, at least one-half of the people's houses were either wholly or in part demolished. In one half-demolished house we found a woman and five children in an extremely destitute condition, sleeping on the ground, with only a little straw or dried grass for a bed, and nothing much better for a covering, and with hardly a bowl left to eat out of.

On our return we found them fighting again at the south gate. To avoid danger, we struck off into the country, but happened to select a road that led us right in front of a new fortification, which the imperialists were building, and at which the rebels were aiming their shots. The first warning we had of our danger was the whistling of a ball but a few feet above our heads. One or two had been killed there a short time before we passed.

On the 13th, the rebels sallied out and attacked the imperialists near the little south gate, where they were also fortifying themselves, by filling up the houses with dirt, along nearest the wall. A skirmish ensued, which, according to the account of the French missionaries, resulted in the loss of about 100 of the imperialists. The rebels, after setting fire to the said buildings, returned with several prisoners and flags, and some weapons.

On the 14th, according to previous arrangement, I went to distribute cash, 100 each, to those who had before received our tickets. At each of the places designated, we found some hundreds assembled. After the necessary arrangements, we went into a room, leaving the multitude outside, and standing in a door or window I addressed them a few words of exhortation, recommending them to "seek that bread which came down from heaven, whereof if a man eat he shall not die," warning them at the same time of the awful judgment which had been threatened to all who, like them, preferred to worship gods of their own make, rather than the God who made them. After thus distributing to those who had received tickets, we devoted the rest of the day in visiting from house to house where we had not previously been.

On the morning of the 15th, the rebels sallying out of the north and west gates attacked the imperial camp on the north-west side of the city, but were repelled by overwhelming numbers. The battle continued about two hours, with considerable loss on both sides, and they were finally driven back. This is said to be the bloodiest battle that has yet been fought, and is the first real defeat the rebels have met with.

A Russian steamer left this port a few weeks since for Japan, and returned again a few days ago, reporting that they had effected a treaty in which the Japanese agree to allow vessels from all nations to land and get supplies, &c., without let or hindrance, during 1854, and in 1855 their country shall be open to trade for all nations.

The United States fleet is now on its way thither, if it has not already arrived. Where are the Seventh-day Baptist missionaries for that inviting field? The rust of former ages is still clinging to us, which must be scoured off, or it will eat out the very vitals of our denomination. How rapidly the fields are whitening, and yet what a holding back from the work. The tabernacle must now go unfinished for want of supplies, while the Israelites had to be restrained from doing too much.

From Bro. Carpenter's Letter.

From the *Pekin Gazette's* own showing, the capital is in a very defenseless state. This news increases our hope that the Tartar Dynasty is soon to give place to that of their conquerors. Many, however, believe that the country will be no better governed, and that foreigners will fare no better for the change. This class of persons, of course, consider all the pretensions of the revolutionists to Christianity, to be mere pretensions for political purposes. They ground their belief upon the following among other facts: 1st, The rather cool reception which His Excellency Governor Bonham met with last spring. They were fired upon, and when arrived at Nankin, they were not allowed to see the chief. 2d, The long time they have been so near to foreigners without manifesting more disposition for intercourse with them. 3d, The haughty manner in which they received the French minister last December. But the opium question, with which all foreign interests are so mixed up in China, may account for their not being more disposed to intercourse with foreigners at present. And their notions of royalty and the etiquette of the court, may account for what appeared distant in their manner of treating the ministers of other nations. In fact, we are all too little acquainted with them to speak with great confidence in regard to their disposition towards foreigners. That they observe the Sabbath of the fourth commandment, appears to be pretty well attested, and we have not heard it disputed. It was on the 11th of March last year that I first heard that the revolutionists kept Sunday. That was twelve days before they took Nankin; of course it was before we knew much about them. I happened to be in the Chapel of the London Mission, where, after service, I was making some inquiries of Dr. Medhurst about the revolutionists. He told me what I did not learn before, viz: that "they say grace at meals and keep Sunday, and that is against you." But the uniform testimony of all who have been amongst them is that they keep Saturday. At first it was supposed to be a mistake, as their almanac gives Sundays as the worship days. Perhaps it is still regarded as a mistake by our first-day friends. They say so little to us upon this subject, that we really do not know how they think and feel upon it. Mr. Roberts still remains in Shanghae, no safe opportunity having offered for going to Nankin. The prospect now is, that until the taking of Pekin be announced, the way to Nankin will not be less dangerous than at present. There are reinforcements from the south expected soon, a part for Shanghae and a part for Nankin. These are imperialists.

Since I last wrote, I have been into the city six times. Another ball has struck our house, coming through the roof, and there has been much rain since. But I happened to discover the place and mend it before the house was much wet. Since the 19th of December, the day I brought out my teacher, our house has been kept by two friends of the teacher, a mutual accommodation to them and us. Their house was so injured by cannon balls, I was told, that it was not safe living in it. They have no access to our chamber rooms.

There is much suffering in the city, and the prospect is, that they have not yet drank the most bitter dregs in their cup of sorrow. Shanghae has heard the Gospel, and rejected it, and now sore judgments are lowering upon her. She *would not* be gathered into the fold of the Great Shepherd, and now her house is left unto her desolate. She labored only for the meat that perisheth, and now that is nearly exhausted, and starvation is staring her in the face; death is looking in at her windows. She trusted in her idols, but now, in the time of need, they have forsaken her.

Our friends of the Chung family suffer with the rest, and I have not found it consistent with my sense of duty to neglect them entirely. The old blind Ana, the grandmother of Ne-May, has suffered as little from the war as any of them. Ne-May's husband's father has been apprehended, beaten, and is kept in custody for the sake of extorting money. A considerable portion of their goods has been taken. Ne-May is much care-worn. Her mother has been ill for some time, and is an object of charity, and appears very grateful for favors. Possibly at the eleventh hour she may conclude to yield to the claims of her Heavenly Father.

As I walk through the empty streets, so lately crowded with passengers, and now and then look upon the woe-begone countenance of some lone tenant of the once crowded shops, or meet the haggard form of some starving beggar, stretching out his or her withered hand for a few cash, then it affords me a kind of melancholy pleasure to be able by word or deed to alleviate in some degree the suffering that is weighing them down. And it is painful to be obliged so often to turn away from the most pitiful appeals, the most urgent entreaties that I should rescue them from their perilous condition by getting them out of the city.

OPEN COMMUNION.

As this subject has been introduced into the *Recorder* of late, I have yielded to a pressing temptation to say a little, since an interchange of sentiment may do no harm.

In reading these articles, had I been an individual of another denomination, I should certainly have considered myself classed with the vilest of men. There is, to my understanding, at least, an incestuous person and a first-day professor placed on the same seat, though he is called a brother believer in Jesus Christ. It is of no use to talk of kind feelings, and of coming into close and intimate contact, by an interchange of preaching, and by uniting in social meetings for conference and prayer, after intimating that these persons are walking disorderly, flagrant violaters of all morality, practicing works of darkness, &c., not proper characters or of a proper faith to commune with us at the Lord's Table. If they are disqualified to sit down with us and eat bread and drink the sacramental wine, they are not suitable persons for us to have any thing to do with religiously—all friendship and intercourse ought to be broken up. In my view, there is a strange inconsistency in first classing them with true believers in Christ, and then refusing to celebrate the Lord's death, as an atonement for sin, and as the ground of all our hopes of salvation, in which doctrine there is a perfect agreement. The main object of the Lord's Supper is to keep us effectually alive to a fundamental doctrine, and to the amazing love of Christ in dying for us—a remembrancer, and a season for a public declaration of our faith in and love to Him. What other sentiment or doctrine do we sanction, when we eat the sacramental bread, and drink the wine, together? Not any, as I can perceive. If we are to refuse to commune with a professed Christian, and one too whom we call brother, because he cannot see as we do on one point, and the idea is carried out to its full latitude, it would break up the communion nearly altogether. If we compare sentiment and creed among professors we shall find a strange jargon. In all Christian bodies or organizations, there is a great diversity of opinion respecting doctrine. Among the First-day Baptists there is almost every shade of doctrine, from high Calvinism to low Arminianism. In our own body, we have as great a diversity—some Unitarians, some Universalists, and some pretty strong Arminians, &c. Now, if we carry out our own sentiments, and refuse to commune on account of difference of opinion on some one given point, where are we landed? Why, as it appears to me, at no communion at all.

I have no wish to be tedious in my remarks, but there is one point upon which I want to touch. The writer of those articles on Communion, says that he can see no advantage in open communion. Let us try this point for a moment.

First—In the great doctrine presented in the Lord's Supper, all real Christians agree, whatever their denominational peculiarities. In many other points of doctrine and sentiment, there is considerable difference and diversity; but here no disagreement—all feel and acknowledge themselves sinners, and, without a divine atonement, lost, hopelessly lost, and that for ever. In the death of Christ, they all find one resting place, and coming together around the table of the Lord, and eating one bread or loaf, they all unitedly declare that Christ is all their salvation and trust. How prominently does this transaction present to a perishing world the only true foundation of the Christian hope.

Second—How much does the coming together of all true believers in Christ, in the observance of this ordinance, tend to promote Christian love. The Christian world divides and subdivides, and because of their differences they cannot declare together, in this transaction, the foundation of all their hopes, and hence coldness and distance toward our fellow believers; but let them come together at needful and favorable seasons—let all barriers be removed which occasion this coldness—and it will soon be said by an observing world, See how these Christian love one another. By refusing to eat with one another, we refuse the most striking mark of friendship.

Third—By the act of communing together, we may have greater opportunities and facilities for convincing Christians of their errors. When Christians of another sect come together for communion, and to raise the one common and glorious standard of Christianity, we turn our heel upon them, and say we have no fellowship with you; and when we come together for the same purpose, we close the door upon them, and say, Stand off, for in you cannot come. Is this kind of antagonism, or hostility, likely to prepare the mind to receive conviction, or to lead to reflection and examination? Nay, but most likely to harden and confirm in views already imbibed. It is commonly said, that by mixed communion we encourage error, though no one has ever endeavored to prove that any doctrine, save that of atonement by the death of Christ, the fruit of divine love, is celebrated. To my mind, however, close or denominational communion not merely encourages, but tends to confirm error. Coming together in this act, the kindest and most affectionate feelings are awakened, and we can better reason with our fellow Christians on disputed points, and are more likely to lead them to a candid examination.

Fourth—If communion with other bodies of Christians was allowed and encouraged, the piety and Christian character of many of our denomination would be promoted, preserved and improved. Many members of our churches are scattered abroad, without the means of grace on the Sabbath, and barred out from the privileges of communion, and thus without the promotives to piety on the one hand, and with the worldly influence and wild notions of errorists on the other, lose their identity as professing Christians, and become dead and, useless. But if they were encouraged and sanctioned by our churches, to maintain a connection with some other Christian orthodox body, as the social principle requires, they might be preserved and made a blessing.

Arguments are many, but I forbear.

Geo. R. Wheeler.

THE EASTERN ASSOCIATION.

I wish to call the attention of the churches composing the Eastern Association, to the recommendation of this body, at its late annual session, for the employment of one missionary the whole year, to labor under the direction of the Executive Committee. In compliance with said recommendation, the Executive Committee have engaged Elder Lucius Crandall to devote his whole time in their employ, and under their direction, if the churches raise a sufficient amount to defray the expense. The Committee also have appointed Elder Henry Clarke to labor at South Kingston one half the time, as heretofore. A Committee was also appointed to ascertain the probable expense of our missionary operations the ensuing year, and apportion the some among the churches. (See their report appended to this article.)

The several churches are requested to report to me, assoon as practicable, their response to the report of the Committee, as no definite action can be had until I receive their answer.

S. S. Griswold, Clerk.

The Committee to whom was referred the apportioning of the amount necessary to defray the expense of the missionary operations within the bounds of the Eastern Association, the ensuing year, submit the following:—

The whole expense of the mission labor contemplated will be about six hundred dollars, one hundred of which, it is expected, will be drawn from Newport, to be expended in labor by the missionary under the direction of the church there; also, twenty dollars from the South Kingston church, for labor to be performed there. Your Committee also feel confident that the brethren at Phœnix, R. I., will raise some twenty-five or more dollars, as their portion for aiding in the enterprise; which would then leave sum four hundred and fifty-five dollars to be raised by the churches, which we have opportioned as follows:—

Newport,	$5 74	2d Hopkinton,	$23 98
Piscataway,	21 11	3d Hopkinton,	42 84
1st Hopkinton,	90 20	Westerly,	13 32
Shiloh,	51 25	Plainfield,	22 14
Waterford,	21 11	Pawcatuck,	36 08
Berlin,	59 86	South Kingston,	4 10
Marlborough,	24 19	New York,	9 63
Petersburg,	19 88	Greenmanville,	10 45

Total to be raised by the churches, $455 88

As it is quite probable that some of the churches can easily raise more than their opportioned sum, it is to be hoped they will do so, as some may fall short.

Will the churches return an answer to the Secretary immediately?

S. S. Griswold,
George Greenman, } Committee.

Greenmanville, June 22, 1854.

The Missionary Work.—The following paragraph from a letter written by the late Mrs. Emma C. Judson, under date of Maulmain, April 10, 1849, no doubt expresses the feelings of many a self-denying missionary:—

"Mr. J. is progressing very rapidly with the second part of his Dictionary, while the first is passing through the press. He has also the pastoral care of the native church. You will readily perceive what an extensive field this last circumstance affords me, if I only have the strength and grace to cultivate it. And oh, it is delightful work; it is a most precious privilege to be allowed to do a little for Christ—I do love mission work—and the cause of missions—and the cause of Christ—and the children of God, more and more every day of my life; and every night I go to my pillow, with a heart—oh, *so* full and happy! I am happy and grateful to my Heavenly Father, because he has hedged me round with blessings—and as a crowning blessing, he has allowed me to make some sacrifices for Christ, and to try, though in a very weak, imperfect way, to do good to those for whom the Saviour died."

Ordination of a Missionary to the Copts.—Last Sunday evening the services pertaining to the ordination of the Rev. C. F. Martin as a Missionary to the Copts were performed in the Church of the Puritans, before a large congregation. The opening prayer was made by the Rev. Mr. Jocelyn. The scripture lesson, from the 118th Psalm, was read by the Rev. Dr. Burchard. The ordination sermon was preached by the Rev. Dr. Cheever, from the XIXth Psalm, 1st verse, and IIId. chapter of Ephesians, 21st verse. The young Missionary ascended the pulpit, and was received by the officiating ministers. The Rev. Dr. Burchard offered up the ordination prayer. The charge was then delivered to the candidate by the Rev. Mr. Thompson. After the charge, the Rev. Mr. Thompson extended the right hand of fellowship to the Missionary, in a solemn and impressive manner. The Rev. Mr. Martin dismissed the congregation with a benediction.

Teachers for the West.—Ex-Governor Slade, the Corresponding Secretary of the Board of National Popular Education, has issued another Circular for teachers, from which we copy whatever is important as matters of information:—

"The sixteenth class of teachers of the Board of National Popular Education will assemble at Hartford, Conn., on Friday, the 11th of August. Ladies wishing to join the class should send written applications to Miss Nancy Swift, at South-Hadley, Mass., by the middle of July. The age, residence, and religious denomination of each applicant should be stated, with the branches she can teach, and her experience in teaching. Testimonials in regard to education, capacity to teach, natural peculiarities, and moral and religious character, should accompany the applications. Some experience in teaching, and a *thorough* acquaintance with the common branches, are indispensable. A large proportion of the applications to us for teachers require a knowledge of the higher branches. Music teachers are wanted. A capacity to sing is important."

"On arriving at Hartford, the teachers will take hacks (for which twenty-five cents only can be demanded) to the "Orphan Asylum." They will board in common with the Superintendent, at an expense to them of $2 a week. In case of manifest inability to defray this expense, aid will be given by the Board. Let the poverty of no good teacher prevent her applying. *The course is gratuitous.* We pay the traveling expenses to the West. The teachers may refund this, if able, to aid in sending out more teachers. We wish it to be distinctly understood, that we expect they will teach at least two years, should health permit."

The Late Mrs. Judson.—The late Mrs. Judson, whose death was announced recently, was about 40 years of age. Her maiden name was Emily Chubbuck. Her native place was Eaton, in Madison County, New York. She first became known to the public as a writer for periodicals, and, under the assumed name of "Fanny Forester," acquired great reputation as a writer of refined taste, as the author of "Alderbrook" and other volumes in the school of light literature, all inculcating moral lessons, and tending to increase her reputation as a female writer of great delicacy and elegance of style. In June, 1846, Miss Chubbuck astonished her many admirers by an entire change in her career and pursuits, in announcing her resolution to devote herself to a Missionary life, and of course leaving her native country with but doubtful prospects of a future return to her relatives and friends. At that time she became the third wife of the Rev. Adoniram Judson, D. D., Baptist Missionary to Burmah, in Asia, and on the 11th of July, she embarked with her husband and other Missionaries, in the ship Faneuil Hall, from Boston for India. The Missionary labors of Dr. Judson in Burmah, or Eastern India, extended over a period of about thirty-nine years, terminating with his death, in Septemper, 1850. Soon after the death of her husband, Mrs. Judson returned to the United States, and for the last two years had been in somewhat feeble health.

"Done unto me."—*The Christian Watchman and Reflector*, of Boston, in commenting on the late surrender of Anthony Burns, says: "And who was the victim? It would be enough to say that he was a man; but we must add that he is a member of a Christian church and a preacher of the Gospel to the poor—a member of the colored church at Richmond, the largest Baptist church, probably, in the United States, numbering some 2,700 communicants. We ask all who with him are 'knit together, in one communion and fellowship, in the mystical body of Christ,' to consider well, whether they can say, in the day of his appearing, that they are pure from the charge of despising one of his little ones. He who said, 'One is your Master, even Christ, and all ye are brethren,' 'and shall not God avenge his own elect, which cry day and night unto him?' will then say, 'Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto Me.'"

☞ The Minutes of the Eastern Association were completed last week. Those of the Central Association will be ready this week; and those of the Western probably next week. A parcel will be put up for each church connected with the Associations, and in most cases they will be forwarded by express or otherwise; but our friends who have an opportunity to send for them to this office, had better do so.

David P. Curtis requests his correspondents to address him at Verona Mills, Oneida Co., N. Y.

Dreadful Tragedy.—A dispatch dated Providence, Monday, June 19, 1854, says: A terrible tragedy occurred at Millville, Mass., last Saturday evening. A man named Alexander Hewitt, being jealous of his wife, assaulted her with intent to kill, when she ran to the house of Mr. Owen Brown and claimed his protection. Her husband pursued her, armed with a pistol, and fired twice through the window. Mr. Brown received a ball in his forehead and died instantly. Mrs. Hewitt then ran out and was followed by her husband, who shot her in the back of the head, and then escaped to the woods. On Sunday morning he came in and delivered himself up, but before doing so took a dose of strychnine, and died soon after. Mrs. Hewitt still lives, but cannot long survive. Hewitt was subject to fits of dissipation, and was in liquor during the enactment of this dreadful affair.

The friends of the proposed new Methodist College in Troy, N. Y., are successfully engaged in promoting the plan; about $50,000 having been already pledged by the citizens of that place. The terms are, if Troy raises $100,000, the institution will raise an equal amount. Hopes are also entertained that the State Legislature will afford it some aid.

In the little State of Rhode Island, it is said that about sixty divorce cases were recently pending before the Supreme Court; and in California, divorces have become so common that the newspapers publish regular lists of them, in the same manner as marriages and deaths.

Abstract of Proceedings in Congress.

SECOND-DAY, JUNE 19.

In the Senate, the Chair presented a communication from the Indian Department, relative to the removal of the Florida Indians; also a communication from the Navy Department in favor of the establishment of a National Armory near the coal fields of North Carolina. Mr. Seward presented a memorial from a citizen of New York, claiming to be the inventor of a battering ram of tremendous force, thirteen of them being capable of defending the coast from Maine to Texas. The bill reörganizing the Navy Department was then taken up. Mr. Mallory offered a substitute for the bill, which, after considerable discussion, was adopted, and the bill was read a third time. Mr. Douglas' bill changing the time for the annual meeting of Congress from the first Monday in December to the first Monday in October, was taken up, debated at some length, and then laid over for the present. The consideration of the Veto Message of the President on the Indigent Insane bill was then resumed. Mr. Seward, having the floor, made a lengthy and able argument against the course pursued by the President.

In the House of Representatives, after the usual opening business, Mr. Churchwell made a personal explanation in reply to some remarks made by Senator Bell. Mr. Campbell of Ohio also made an explanation. Mr. Churchwell replied with much warmth, and an exciting scene followed. After considerable time spent, the matter was dropped and order restored. Mr. Hillyer of Georgia introduced a bill fixing the time for the meeting of Congress on the first Monday in November instead of the first Monday in December, which, after considerable debate, was finally passed, and the House adjourned.

[In looking through the proceedings in Congress during the remaining days of last week, we find but little if any thing worthy of note, and therefore omit any further account.]

European News.

We have ten days later news from Europe, the substance of which will be found below.

The news from the seat of war on the Danube is highly interesting. The Russians have made a breach in the fortress of Silistria, but owing to a freshet in the river were delayed in storming, and when finally they did attempt that operation, were repulsed with great slaughter. It is said that at one encounter of the sort, 4,500 of the assailants were left dead in the trenches, but this is probably an exaggeration. It was calculated that the fortress would yet hold out long enough for a reinforcement of 70,000 men sent forward by Marshal St. Arnaud to reach the place. This body consists of 25,000 French, 15,000 English, and 30,000 Turks. When it arrives, there must at least be a great battle between the Russians and the allies.

At sea nothing has been done either by the fleet under Dundas or that under Napier.

In England, there has been a change of Ministry, Lord John Russell becoming the President of the Council, the Duke of Newcastle taking the newly-created office of Secretary of War, and Sir George Grey being made Colonial Secretary.

It is reported that the Insurgents, assisted by Europeans, had driven the Imperialists from Shanghai. The battle between the Europeans and the Imperial troops before Shanghai is thus accounted for: The European and American residents being continually insulted and robbed by the Imperialists who were besieging the city, formed a corps of 300 volunteers, with four pieces of cannon, and accompanied the insurgent garrison in making a sortie. After a lively combat the Imperialists were defeated and fled, leaving the victors in possession of their camp, artillery, and an immense booty.

California News.

By the steamers North Star and Illinois, we have California news to June 1st.

About $1,300,000 in Gold was on freight by the steamers North Star and Illinois.

In the case of the French Consul, Mr. Dillon, who was tried for a violation of the Neutrality Act of 1818, the Jury were unable to agree, and further proceedings have been suspended.

A large fire occurred in San Francisco on the 31st ult., which consumed between thirty and forty buildings. The town of Marysville has also been visited by a terrible conflagration, destroying property to the amount of $200,000.

SUMMARY.

William A. Jenkins was tried in Jefferson County last week, for seduction, under the promise of marriage, under the law of 1848. It was the first trial of the kind ever had in that County. It elicited considerable interest, as the charge has been over a year pending, and great efforts have been made for the defense. The evidence closed, and the case went to the Jury who rendered a verdict of guilty. The prisoner was sentenced to the State prison at Auburn for the term of three years.

A dispatch dated Boston, Friday, June 23, 1854, says: Chief Justice Wells of the Common Pleas and Municipal Courts, died suddenly this afternoon at his residence in Cambridge. He occupied the bench of the Municipal Court yesterday until late in the afternoon, when, feeling unwell, he adjourned the Court until this morning. His disease is said to have been inflammation of the lungs.

The *Courier and Enquirer* says: A dispatch has been received from Mr. Gregg, our Commissioner at the Sandwich Islands, that the native Government throws itself into the hands of the American party for protection from French, English and other foreign settlers. The Commissioner has been empowered to accept the island for the United States, and assure the native Government of American protection.

Mr. George W. Aspinwall died near Germantown, Pa., on Monday, June 19. He was on the steamer San Francisco, bound to South America for the benefit of his health, when she was wrecked, and was taken by the bark Kilby to Boston. He has since then been to Cuba and Europe, but failing to regain his health, returned in the Arctic to die among his friends.

An American shipbuilder, Capt. L. McKay, of Boston, has just returned from Europe, with contracts from foreign merchants, for the construction of a number of first-class ships, to the value of about $1,000,000. The clipper ship "Lightning," built by the same parties, went to England last February, and attracted universal attention. Her cabins were considered as ravaling in splendor the Queen's yacht. She was transferred to the English flag, and immediately filled up with passengers and freight for Melbourne—the freight list amounting to £15,000.

The Association of the Dutch churches in New York City are constructing one of the most elegant churches in the city, on the corner of Twenty-ninth-st. and Fifth-av. It is paid for out of the proceeds of an acre of land, left to one of the domines, years and years ago, by a parishioner, for the pasturage of a cow.

The receipts of the British and Foreign Bible Society, from all sources, during the last financial year, were about $1,100,000. The issues of the Society during the year amounted to 1,367,528 copies. Total issues of the Society up to this time, 27,938,631 copies.

The decease of Col. Kirby, who bore a distinguished part in the war of 1812, and has for many years occupied the part of Collector of Customs at Fort Erie, C. W., is announced in the Buffalo journals. His death occured on Wednesday morning, and his age was 69.

John F. Plato, of Batavia, hauled 359½ bushels of wheat at three loads, which he sold for $808 50. One load of 138 bushels was drawn by a single pair of horses. This pair are valued at $800. This load of wheat brought $311 25.

The Rev. Phineas Fish died at Cotuit (Barnstable) on the 16th instant, aged 69. He was more than forty years a faithful and exemplary Missionary to the Marshpee Indians.

The editor of the Boston *Gazette*, who is an officer in the Boston Light Infantry, says that nine-tenths of the men on duty, when Burns was taken away, sympathized with the slave.

The census returns of 1850 report but 520 colored persons in the whole State of New Hampshire, which is a less number than in any other free State, except Iowa.

The Hon. Daniel Wells, Chief Justice of the Court of Common Pleas in Massachusetts, died at his residence in Cambridge on Friday, June 23.

A man advertises for a competent person to undertake the sale of a new medicine, and adds, that "it will be found profitable to the *undertaker!*"

Ex-President Van Buren and son were at Naples last month, and, it is stated, will spend the next winter in Egypt.

The Buffalo *Commercial* pointedly contradicts an intimation that ex-President Fillmore favors the Nebraska Iniquity.

WILLIAM M. ROGERS, Treasurer.

MARRIED,

In Bridgewater, Oneida Co., N. Y., on the 18th inst., by Eld. W. B. Maxson, Mr. G. T. Davis to Miss Louisa Rhodes, all of Bridgewater.

In West Edmeston, N. Y., on the evening of the 21st inst., by Eld. J. Clarke, Mr. Amos S. Stillman to Miss Eunice Burdick, both of the above place.

DIED,

In Saugerfield, N. Y., on the 16th inst., Mrs. Orilla Crosby, wife of Mr. Henry Crosby, aged 32 years and 6 months.

Water Cure.

MOUNTAIN GLEN WATER CURE AND SUMMER RETREAT, at Plainfield, N J.
A. UTTER, M. D., Physician and Proprietor.

If beauty and variety of scenery, pureness of air and water, *personal professional attention*, neatness, cheapness, and good cheer, are requisites of such an institution—these are combined at the Glen.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Clothing Establishment.

THE subscribers, under the firm of Titsworths & Dunn, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commencing Monday, April 10, 1854:—

Leave New York at 8 A. M., 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mall Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations.

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

To Printers.

A NEW EDITION OF THE SPECIMEN BOOK OF BRUCE'S NEW YORK TYPE FOUNDRY, was published in September, 1853, and will be given to those proprietors of Printing Offices who will send for it, or it will be forwarded to them by mail on receipt, in advance, of fifty cents for the postage.

In it are exhibited many articles never before shown; there have been added to the Foundry new varieties of Roman Types from Nine-line Pica to Pearl, various imitations of Writing, a great number of fancy fonts, borders, both plain and illuminated, labor-saving rules, and a complete foundry of German.

The types now manufactured are cast from a new combination of great durability, and are usually kept on hand in large quantities. Every fancy fount is sold by weight, and at the printed prices, which are from ten to twenty-five per cent. less than those of some other foundries. All other printing materials are furnished at manufacturers' prices, either for cash or credit.

Printers wishing to open accounts with me, or whose dealings have been long suspended, are requested to accompany their orders with city references to prevent delay.

Printers of newspapers who choose to publish this advertisement, including this note, three times before the 1st of August, 1854, and send me one of the papers, will be paid for it in type when they purchase five times the amount of their bill from me, of my own manufactures, selected from my specimens.

GEORGE BRUCE,
51—3 13 Chambers-st., New York.

Miscellaneous.

From the N. Y. Independent.

Each Mother's Love the Best.

As I walked over the hills one day,
I listened and heard a mother sheep say:
"In all the green world there is nothing so sweet,
As my little lammie with his nimble feet,
With his eyes so bright,
And his wool so white;
O, he is my darling, my heart's delight.
The robin, he
That sings on the tree,
Dearly may dote on his darlings four;
But I love my own little lammie more."
So the mother sheep, and the little one,
Side by side, lay down in the sun,
And they went to sleep on the hill-side warm,
While my little lammie lies here on my arm.

I went to the kitchen, and what did I see
But the old gray cat with her kittens three;
I heard her whispering soft. Said she:
"My kittens with tails all so cunningly curled,
Are the prettiest things there can be in the world.
The bird in the tree,
And the old ewe, she
May love their babies exceedingly;
But I love my kittens from morn to night:
Which is the prettiest I cannot tell,
Which of the three, for the life of me,
I love them all so well.
So I'll take up the kittens, the kittens I love,
And we'll lie down together beneath the warm stove."
So the kittens lie under the stove so warm,
While my little darling lies here on my arm.

I went to the yard, and I saw the old hen
Go clucking about with her chickens ten;
And she clucked, and she scratched, and she bristled away,
And what do you think I heard the hen say?
I heard her say: "The sun never did shine
Or anything like to these chickens of mine;
You may hunt the full moon and the stars, if you please,
But you never will find ten such chickens as these.
The cat loves her kittens, and the ewe loves her lamb,
But they do not know what a proud mother I am;
For lambs nor for kittens I won't part with these,
Though the sheep and the cat should go down on their knees,
My dear downy darlings, my sweet little things,
Come, nestle now cosily under my wings."
So the hen said,
And the chickens sped,
As fast as they could to their warm feather bed;
And there let them lie, on their feathers so warm,
While my little chick lies here on my arm.

The Real Railway King.

The London *Times* makes the following remarks, on the erection in the Great Hall at Euston Square terminus, of a statue to George Stephenson:—

"In early life a collier, working for his daily bread in the bowels of the earth, he mended watches in his leisure hours, that his son might share the blessings of education. While his fame as a mechanical and civil engineer was still in its infancy, he elaborated experimentally the same result as to the safety lamp which Sir Humphrey Davy reached by the process of philosophic induction. The tramways of the coal mines and the rude forms of the first locomotive engines grew under the strokes of his vigorous intellect into a mighty system, which has already exercised an incalculable influence upon industry and civilization. That one who, when a boy, was a 'hurrier' in a coal-pit, should, by the force of native genius, rise to a position such as that which the statue in the Hall of Euston station commemorates, may well be regarded as a proof that the days of romance are not yet over, nor the giants of an elder world without their types in modern times. Perhaps it is also to be viewed as a characteristic of the age, that the fame of such a man is so quietly left to the good keeping of the works which he has achieved. The traveler hastening on his way should pause at Euston station, to contemplate the masculine form, and massive, energetic features of him who, by combining the blastpipe with the tubular boiler, first endowed the locomotive with its tremendous speed—who, during his busy manhood, superintended the construction of more than 2,500 miles of railway—who thought out every thing connected with our first iron highways—and who engineered lines extending in unbroken series from London to Edinburg."

The Japanese at an American Dinner.

The London *Times* publishes a letter from the U. S. steamer Susquehanna, dated, "Off Yokohama, Bay of Yedo, March 24," from which we make the following extract:—

"As for any advantages to be immediately derived from commerce with these people, I am doubtful on that point; we saw no evidence of any wants or of any superfluities, but who can anticipate what commerce can create, the superfluities which she can make necessaries, and the unknown which she can call into existence? But, if our first adventurers come here under the impression that the Japanese are ignorant because they are inexperienced in commerce, they will find themselves mistaken, for not even the Chinamen understand the art of making things appear to the greatest advantage with more skill than the Japanese. The presents of fruits and sweetmeats were so arranged in the boxes as to appear of twice the real quantity, and everything is so contrived as to be over-estimated by all but the closest observer. On the 1st of March Capt. Buchanan gave Yzaiman, the Governor of Uraga, and nine of his suite, a dinner on board this ship, the first foreign dinner, perhaps, ever given in Japan. They enjoyed themselves in perfect confidence, and relished our food and liquors with the taste of gourmands. They had never tasted turkey before, and asked permission to take portions of it and of other things on shore to show to their friends, which they did, wrapping them up in paper, very much like Chinese paper, leaves of which constituted their pocket-handkerchiefs. They intuitively accommodated themselves to our customs, especially that of emptying their glasses; and used the knives and forks with nearly as much dexterity as perseverance. They returned thanks for our toasts, and reciprocated them with more than the tact of an Alderman; as, for example, Captain Buchanan gave: "May the kind feelings which so happily subsist between our Japanese friends and ourselves prevail throughout both countries." Governor Yzaiman promptly replied, with thanks for the sentiment and assurances of its reciprocity, and hoped that the American and Japanese would soon be enabled to visit each other's countries. Capt. Adams proposed: "The health of the Emperor, and a long and happy reign." Gov. Yzaiman immediately replied that he appreciated the compliment to his Emperor; and filling all the glasses himself, drank the "Health of the President of the United States, and a happy administration." Lieutenant Duer, with a few happy remarks, proposed: "The health of Governor Yzaiman," at which he blushed; but, with admirable presence of mind, proposed the health of "Commodore Perry, and all the officers of the squadron." All this passed, of course, through the interpreters, and each toast was drunk in our manner, with all the honors; the huzzas appeared to divert them very much, and they joined in them with great glee. Lieut. Brown sang a song, which they answered with a verse or two of a Japanese song. I trust the difference of taste did not make our song sound in their ears as their song did in ours, for it was more like the roaring of lions with bad colds than anything else I can compare it to. One of our marines died, and they allowed us to bury him on shore, in a romantic spot, near one of their own cemetries, with the three volleys and the funeral service by the chaplain. What a difference between whose people expected, and what our guns have realized for us! It was absurd to attempt to treat with these people without a force at command sufficient to answer, by silence alone, all their prevarications and excuses to gain time, which appears to be of no value to them. They were to have dined with the Commodore on board the Powhatan—I mean the Princes who negotiated the treaty—on Monday the 27th, and no doubt had a glorious time. We laid down a circular railroad, and the beautiful miniature locomotive and car went round with great velocity and regularity, to the admiration of the Japanese, many of whom made several circuits in the car. We also set up a mile of magnetic telegraph, which succeeded in spelling Japenese sounds, from one end to the other, of course making them see that it could be done, but they evidently did not comprehend for fully believe it."

The Killer Whale.

At a recent meeting of the American Scientific Association, a paper, "On the Whale," was read by Lieut. Maury, which brings to the notice of naturalists a species new to them, although long known to whale-men. They call it the "killer whale."

The killer is about thirty feet long, not heavy, yields about five barrels of oil, and is especially remarkable for its habits of destroying the right whale and the Kamskatka whale. This it does by surrounding the right whale in numbers, assailing its head, seizing and rending its lips, and at length tearing its tongue, after which it proceeds more deliberately to feed upon the body. The most remarkable feature about the killer whale (of which several rough drawings were exhibited) is its dorsal fin, which stands up perpendicularly five feet, and is the chief instrument wherewith they assail their prey.

Lieut. Maury offered testimony to the same effect from Captains Ludlow and McKenzie, going to show how terrible and fierce a tyrant is this species of whale, infesting the whole ocean from pole to pole, and oft contesting with man the possession of the body of the right whale, by both so much sought. The tongue of the right whale, the delicacy so much in favor with the killer, is an enormous oily mass weighing three or four tons.

Mr. Walker testified to seeing on the coast of Brazil a killer whale thirty feet long, hanging to the body of a whale which had been taken.

Lieut. Davis has brought the subject to the attention of Professor Agaksiz, who pronounced the killer to be a distinct species.

The Resources of Japan.

Foremost among the resources of Japan are its fisheries. The sea and its productions, we believe, contribute fully as much to the sustenance of the natives as do the fruits of the earth—rice, perhaps, excepted. One of their productions has a value which is not confined to the spot, but extends to us—to our enterprise, and our trade—we mean the whale, or, as they call it, *kudsuri*. There is nothing of which such extensive use is made by the Japanese, both for rich and poor. It is found all around Japan, but particularly in the sea Keumano, the most important territory of the Empire; and it also prevails in the islands of Tsussima and Goto, and upon the coasts of Omura and Nomo. These whales not only afford oil in great abundance, but their flesh, which is considered very wholesome and nutricious, is largely consumed. No part of them, indeed, is thrown away—all is made available to some useful purpose or another, excepting only the large shoulder bone. The skin, which is generally black, the flesh, which is red and looks like beef, the intestines, and all the inward parts, besides the fat or blubber, which is boiled into oil, and the bone which is converted to innumerable uses—all is made available to purposes of profit. We have gone into these few particulars respecting the whale, because it is that which has brought our countrymen into contact with Japan. Many of our ships have for some considerable time past frequented those seas for capturing the whale, an occupation which, it is found, might be pursued with great advantage under a commercial treaty with the Government of Japan, whose inhuman laws at present not only prevent any assistance being rendered to shipwrecked mariners, but expose them to positive maltreatment, and even to violent death. To obtain redress in this respect was the primary object of Commodore Perry's expedition.

Japan abounds in natural and artificial productions of great value. Its mineral riches are enormous, and include metals of various kinds, especially gold, silver, and copper. Sulphur and niter are also found in large quantities; there is no want of coal, and there are precious stones of almost every variety; agates, sapphires, jaspers, cornelians, and even diamonds; while pearls are found in great plenty among the shells upon the coast. Then the fertility of the soil is very great. The mulberry tree grows extensively and affords food for countless myriads of silk worms. The *Kadsi*, or paper-tree, serves innumerable useful purposes, including the manufacture of cloth, stuffs and cordage. The *cerusi*, or varnish-tree, is another valuable production of the country, yielding large quantities of a milky juice which the natives employ to varnish, or *japan* as we call it, various articles. Then there are the bay-tree, the camphor-tree, the fig-tree, the cypress-tree, with very many more, all more or less valuable, and from which a great variety of useful things are made; and last, though not least, there is the tea-shrub, from the leaves of which the common drink of the people is brewed, and which is capable of yielding a valuable article of commerce. Trees growing nuts of various kinds are abundant; the maple is extensive and excellent; bamboos are very plentiful, and of great use, as they are everywhere in the Indies; they cultivate as much hemp and cotton as they can find room for in their fields; and as to rice, which is the main food of the natives, that grown in Japan is considered the best in all Asia, and it can be produced in almost any quantity. Their corns are of several sorts; besides the *komi* or rice, there are the *oomuggi*, a kind of barley; the *koomuggi*, their native wheat; and the *daidson*, a species of bean—all of which abound with superior farina.

The manufactures of Japan have hitherto been confined almost exclusively to their own domestic wants; but many of them are nevertheless valuable as articles of export. Our adoption here and throughout Europe of the term *japan*, as applied to certain kinds of varnished ware, indicates how well known has been their peculiar excellence in, if not their invention of the useful art. They make various articles from the paper tree resembling our *papier maché*, which they paint and varnish very highly—and these might form objects of considerable trade. Their silks, muslins, and cotton goods are most of them very superior, and some of them are calculated to become highly *récherché*; and their carvings in wood, ivory, pearl and fish-bone, are most ingenious and elegant. These are but a few of the products of their handicraft; but they are sufficient to show, taken in connection with their natural productions, how varied and how valuable are the resources of the Japanese.

To Preserve Eggs.

Some of your correspondents inquire about the best method of keeping eggs fresh; and as we have a plan here which I have not seen mentioned in any of the replies which have been given to these inquiries, I send it to you, particularly as I find it better than any I have seen mentioned:—

Take a half-inch board of any convenient length and breadth, and pierce it as full of holes (each $1\frac{1}{2}$ inch in diameter) as you can without risking the breaking of one hole into another. I find that a board of two feet six inches in length, and one-foot broad, has five dozen in it, say twelve rows of five each; then take four strips of the same board of two inches broad, and nail them together edgewise into a rectangular frame of the same size as your board; nail the board upon the frame, and the work is done, unless you choose, for the sake of appearances, to nail a beading of three-quarters inch round the board on the top; this looks better, and sometimes may prevent an egg from rolling off. Put your eggs in this board as they come in from the poultry house, the small end down, and they will keep good for six months, if you take the following precautions: Take care that the eggs do not get wet either in the nest or afterwards; (in summer, hens are fond of laying among the nettles or long grass, and any eggs taken from such nests in wet weather should be put away for immediate use;) keep them in a cool room in summer, and out of the reach of frost in winter, and then I think the party trying the experiment will have abundant reason to be satisfied with it.

I find there are some in my larder which I am assured bave been there nearer eight months than six, and which are still perfectly fresh and good; in fact, it is the practice here to accumulate a large stock of eggs in August, September and October, which last until after the fowls have begun to lay in the spring. If two boards are kept, one can be filling, and the other emptying at the same time. This is an exceedingly good plan for those persons who keep a few fowls for the supply of eggs to their own family; but would, perhaps, not do so well for those who keep a large stock of hens, as it would take up too much room.

I have endeavored to account for the admirable way in which eggs keep in this manner, by supposing that the yolk floats more equally in the white, and has less tendency to sink down to the shell, than when the egg is laid on one side; certainly if the yolk reaches the shell the egg spoils immediately. [Farmer.

The Black Wasp of Van Dieman's Land.

In the warm summer days, during our residence at Port Sorell, and more particularly in the evenings, we had often noticed a large kind of black fly darting in and out of the house with a loud, sharp, whizzing noise, and, on a more attentive observation, we found a most tragic addition made to our list of antipodean contrarieties—nothing less than the discovery of a savage and sanguinary war carried on by flies against spiders, and pursued with such vigor that one would believe the Tasmanian flies were bent on avenging tyrannies and grievances suffered at the hands of the spiders by the whole winged-insect family all the world over.

We had observed the forcible and noisy abduction of many an unlucky web-spinner, before I could satisfactorily make out what because of them, as the frequent seizures made, apparently by the same fly, forbade the conclusion that they were forthwith devoured; but, by dint of sundry watchings and pursuits of the flies, and by eking out and piecing together my various small scraps of information and discovery, I at length acquired a tolerable knowledge of the habits and practices of my busy black neighbors.

In size and shape they exactly resemble a large English wasp, but are wholly black, and possess formidable stings, a quarter of an inch long. They build very remarkable cells or nests of earth, finely tempered and formed in layers of tiny mud-pats, like a swallow's nest. Many of these were placed in a small wooden out-house, between the upright studs and the weather-boarding of the wall; several were formed on a shelf in the porch, where some small pieces of wood lying heaped together offered convenient nooks; and one wasp, resolving to have a more costly lodgement than his friends, took possession of a meerschaum pipebowl which lay on the same shelf, and very snugly laid out his house in its interior. All the nests I have examined are arranged in the same manner, the whole fabric being from two to four inches long, and rather less than an inch broad; the external shape of the mansion, whether square, triangular, or pentagonal, depending a good deal on the site chosen.

When completed, no aperture is left; but on being opened, three or four cells are usually found, two or three containing each a soft white chrysalis in a cocoon of white web; and the largest apartment of the mansion is devoted to the purposes of a larder, and is always found full of spiders, of all varieties of size, color, and kinds, all closely and neatly packed together, with their legs trussed up, so as to occupy the smallest possible space. The strangest part of the affair is, that the spiders are not dead, but remain perfectly soft and flexible in every part; and, on being exposed to the sun and air, and stirred, a feeble movement is evident in them, as though they were paralyzed or stupefied in some manner, so as to be unresisting victims and good fresh meat at the same time. The storehouse is thus well supplied, doubtless for the benefit of the chrysalis tenantry, on their awaking to the knowledge of life and appetite.

I have rarely been more interested by any new insect than by these black wasps, ungentle and ferocious though they be; for there is a daring, dashing energy and brisk industry about their ways and doings, that is very amusing and perfectly original. The bee—dear little, hard-working, persevering fellow that he is—can still afford time for many a coquettish peep into blossoms and buds that he deigns not to taste; and, even when arrived at home with his two pannier baskets loaded with their heaped-up golden treasure, can stay for a few moments, friendly hovering to and fro, and pleasant exchanges of hum and buzz with his helpmates. The ant, whose ways of thrift and industry even Solomon bids us "consider and be wise," never takes a straight road, but with a bit of plunder in her nippers thrice her own size, runs hither and thither, up straws and round sticks, or may be into a labyrinth of a violet root, when she plays at bo-peep with you ten minutes before going forward again.

But the black wasp has none of these wandering weaknesses of character; solitary, stern, ruthless, and resolute, he goes about his work of cell-building and spider-catching. If you chance to be near his chosen place of abode, you may see him dart past with a bit of mud or a victim, and a shrill, sharp whizzing is continued for some seconds or a minute, during the operation of packing away his load, when forth he darts again, straight and swift as an arrow, and the next moment very probably invades the peaceful retreat of some cobwebbed recluse, who until now, safe from brooms and housemaids, has meshed and devoured his flies in comfort, but is at length seized, trussed, and packed up, half-alive, by the dark avenger.

Unparalleled Verdancy.

Here is a relation in the Baltimore *Argus*, showing a verdancy hitherto unparalleled:—

At an early hour on Saturday morning, while a country dealer from Anne Arundle was standing in the market beside his wagon of country produce, a fashionably attired young man came up, entered into a conversation, in the course of which he remarked that he was agent of a hotel, and wished to purchase for the proprietor and use thereof several quarters of veal, fifty dozen eggs, and some hundred pounds of butter. As the articles named constituted the country dealer's stock in trade, he began to eulogize them for excellent quality and unparalleled cheapness, and at length it was agreed that both should proceed together to the hotel, where the smooth-tongued sharper alledged that the proprietor would doubtless conclude the bargain forthwith and pay the dealer for all the stock in solid gold and silver. Delighted with the idea of disposing of his goods on such prompt and advantageous terms, the countryman left his wagon in charge of his little son, and proceeded to meet the hotel-keeper without delay. In a few moments afterward, as both were crossing Pratt-st. bridge to the supposed place of destination, they were stopped by a slender youth, whose soapy locks were shaded by a white hat. He was a stranger, he stated, just arrived in the city, with a very valuable, newly discovered article, which could not fail to make the fortune of its possessor. Saying this, he pulled from his pocket a dark-looking powder, folded in a white paper, and stated that any one, by sprinkling three pinches of this powder upon water of any extent, in one half hour thereafter all the fish within three miles square would become mesmerized and drawn in a solid mass up to the feet of the powder sprinkler, who could thus secure fish, eels, &c., in any quantity, without the trouble or delay of seines, nets, hooks or lines. A great discovery this, truly, thought the credulous countryman, while his conductor made light of the affair, and urged him to continue his way to the hotel. White hat thereupon stated that he was willing to sell the secret for making the wonderful powder for $50, and as a proof of its efficacy, added that within the time specified he could have all the fish in the falls floating beneath their feet.

The conductor of the countryman sneered palpably at this assertion, and white hat expressing his willingness to prove the matter by a heavy wager, pulled forth $50 in notes, and defied the others to cover the amount. The pretended hotel agent could only find in his wallet a $100 bill, and in a confident tone of triumph requested the countryman to exchange it for him with two fifties. The unsuspecting dealer, wishing to keep in with such an extensive customer in prospective, and becoming really interested in witnessing the experiment, handed over two genuine fifties, and received the flimsy in exchange. The bet was then made with an agreement that both hold their own stakes, after which, with due solemnity, a pinch of the powder was thrown upon the water below. In a few moments the "hotel agent" became apparently so much interested that he declared the proprietor of his house must also witness the experiment—remarking to the countryman at the same time that such an arrangement would be so much more convenient, as it would enable both to perfect the sale of the articles spoken of without further trouble.

The speaker thereupon departed, and after patiently remaining the remainder of the specified term, white hat, with a most melancholy expression, acknowledged that the experiment had failed, and handed his $50 note over to the country dealer with strict injunctions to deliver it over to the "hotel agent," when he returned, which would doubtless be in a few minutes. Away went the fish-powder man, and that was the last seen of him or the agent, notwithstanding the credulous dealer, in the hope of seeing the latter, loitered around the bridge until compelled by uneasiness to return to his wagon, where his son informed him that a short time after his departure, the hotel agent, appearing with a servant man, received and carried of a quarter of veal, and a basket of eggs, on representing to the lad that his father wished him to send the articles round to the hotel, that they might be paid for upon delivery to the proprietor. The bewildered countryman then began to snuff one of those long-tailed animals called "ye rat," and his exasperation burst all bound when he discovered a short time afterward that all the notes received from the "agent and fish-powder" were upon the old worthless, broken Globe Bank of New York.

Draining Lands.

A judicious system of drainage is one of the most important requisites upon a farm which occupies a low position, or embraces a tract of swampy land. It seems to change the nature of the soil completely. It renders it comparitively light and porous, and capable of absorbing all the nutritious elements afforded by sun, wind, or decaying vegetation. The wheat, corn, oats and grasses, send down strong roots into that part of the soil never penetrated before, and find there an abundant source of nourishment. After the completion of a system of drains, every successive year improves the soil. They act like the veins and artiries of the human body, giving warmth, life and strength, and constantly opening new and increased sources of fertility.

A writer in the Patent Office Report says that in ditching, if the amount of water to be discharged is large, there should be a wide open ditch; but wherever the amount is small, the ditch should be narrow and covered. Open ditches are used by many persons upon all occasions; but unless the amount of water is too large to admit of them, underground drains are decidedly preferable. They drain the land better; as they never fill up when properly made, they involve no expense in clearing them; and they occupy no space upon the surface. On the sides of an open ditch the plowman must often leave from a quarter to half an acre of land to turn upon; but he can drive over a covered drain without inconvenience and instead of giving the soil in its vicinity up to the production of weeds and bushes, he raises upon it the best grain in the field.

One of the most simple modes of building covered ditches is as follows: After digging a trench of the required size, procure a large number of short staves of oak, or some other lasting wood, two or three inches in thickness, and the wider the better. Place one end of these upon the bottom of the ditch on one side, and lean the other against the opposite side, breaking joints. Then cover them with earth, and the drain thus formed will last many years without repairs. Another mode which has been successfully tested, is to use earthern tiles, made in the shape of a half cylinder and jointed—spreading out several inches on the lower edges, so as to form a surface to rest upon. The farmer will find a thorough system of draining cheap in the long run. [Journal.

A Freeman in Bondage.

We have been recently informed, (says the N. Y. *Tribune*,) of an outrageous case of kidnapping which took place in the neighboring State of New Jersey. The following are the principal facts, as they have been communicated to us: Some twelve or fifteen years since, a resident of Monmouth County, N. J., by some means came in possession of a negro boy, aged about twelve years, whom he sent to school for a short time, and whose affection and confidence he won by affected kindness. At length he suggested to the boy that he had better learn a trade, and recommended him to the proprietor of a bakery in the neighborhood, to whom the boy was bound. Thus matters went on, until the keeper of the establishment concluded to remove to Louisiana, when the boy was notified that he must go likewise, and informed for the first time that he was not his own master; that he had been bought, the sum of $600 having been paid for him. Accordingly, he was taken to Louisiana, where he has since remained and now lives. A gentleman residing in New Jersey, who is engaged in navigation, and runs a vessel to Louisiana, while lying at one of the public wharves in that State last winter, was accosted by an intelligent negro man, who desired to know if his vessel did not hail from New Jersey. The captain replied in the affirmative. The negro said he judged so from the appearance of the vessel. The captain then asked the man what he knew about New Jersey. The negro replied that he was taken from that State and sold into slavery, informing him who did it, at the same time giving him the names of all the principal inhabitants in the town whence he was sold, telling him, also, where he attended school, &c. The captain, being acquainted with the place, knew his statements were correct, and promised to use his influence to secure to him his liberty.

Such is the statement we have received from a gentleman who vouches for its entire accuracy. The negro boy has now grown up to manhood, and is said to possess more than ordinary intelligence. His master asks $2,000 for him. It is further stated that the brute who kidnapped and sold him is still a resident of New Jersey, living somewhere in Burlington Co.

Creeping Things.

Let me put a spider into any lady's hand. She is aghast. She shrieks. The nasty ugly thing. Madam, the spider is perhaps shocked at your Brussels laces, and although you may be the most exquisite painter living, the spider has a right to laugh at your coarse daubs as she runs over them. Just show her your crotchet work when you shriek at her. "Have you spent half your days upon these clumsy anti-macassas and these ottoman covers? My dear lady, is that your web? If I were big enough, I might with reason drop you and cry out at you. Let me spend a day with you and bring my work. I have four little bags of thread—such little bags! In every bag there are more than 1,000 holes—such tiny, tiny holes! Out of each hole thread runs, and all the thread—more than 4,000 threads—I spin together as they run, and when they are all spun they make but one thread of the web I weave. I have a member of my family, who is herself no bigger than a grain of sand. Imagine what a slender web she makes, and of that, too, each thread is made of 4,000 or 5,000 threads that have passed out of her four bags through 4,000 or 5,000 little holes. Would you drop her, too, crying about your delicacy? A pretty thing, indeed, for you to plume yourselves on your delicacy, and scream at us." Having made such a speech, we may suppose that the indignant creature fastens a rope round one of the rough points of the lady's hand, and lets herself down lightly to the floor. Coming down stairs is noisy, clumsy work, compared with such a way of locomotion.

The creeping things we scorn are miracles of beauty. They are more delicate than any ormolu clock or any lady's watch, made for pleasure sake, no bigger than a shilling. Lyonet counted 4,041 muscles in a single catterpillar, and these are a small part only of its works. Hooke found 14,000 mirrors in the eye of a bluebottle, and there are 13,300 separate bits that go to provide nothing but the act of breathing in a carp.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan, $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns and process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound and quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM, *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N.Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & CO., and by all Druggists, everywhere. 37-3

UNIVERSAL PEACE—NO. 3.

BY C. ROLLIN BURDICK.

War and its Consequences.

Next looms up to our view Rome, once the mistress of all the known world. What fountains of human blood has *she* caused to flow! During a thousand years of her existence, she was but twice at peace, and then only for a short time. The tramp of her legions was heard in the frozen North, in the sunny South, in the East, and even up to the pillars of Hercules. Although she can boast of having produced many of the noblest men and women, yet she was ever driven by that mad spirit of war, which at first gained for her power, but at last hurled her headlong from the pinnacle of her glory into the vortex of a miserable overthrow. The multitudes that perished in her wars are truly appalling. In one battle between two nations of Gaul (now France) and the Romans, 200,000 perished, and the bones of the victims were afterward used by the inhabitants to fence their vineyards. About the same time, 80,000 Teutones, one of the above nations, fell in battle; and the next northern campaign witnessed the slaughter of 140,000 Cimbri. In one battle between Pyrrhus, one of the Grecian kings, and the Romans, 25,000 were slain; in a battle between Scipio and Asdrubal, brother of Hannibal, 40,000; in a battle between Suetonius and Boadicea, in Brittain, 80,000. Eleven hundred thousand Jews perished at the siege of Jerusalem by Vespasian, and in the reign of Adrian, five hundred and eighty thousand more. At Cyrene there fell by the hands of Jews 220,000 Greeks and Romans. In the reign of Trajan 240,000 were slain in Cyprus and Egypt.

Among the scourges of the human race, Rome has furnished her quota of men. At the head of these stands Julius Cæsar. He was a relentless murderer; for I must be permitted to say, that all men who lead their legions to slaughter in aggressive war, are relentless murderers of the blackest dye, although when not in battle they may lay just claim to common humanity. The man who can bathe his hands in the blood of a fellow man, save in the defense of his heaven-derived rights—the man who can remorselessly trample in the blood and mar the sacred visage of a brother with his heel, or drive the iron-shod steed over his fallen carcass, is worse than the brutes, for they are seldom found in mortal combat with their own species. Yea, that man is a devil incarnate. Julius Cæsar has been lauded to the skies, by those who have been deceived by the false glare of military glory; and yet he could do all that a man can do to work the extermination of his race. Gaul, Brittain, Germany, Italy, and Spain, bled profusely under the stroke of his falchion. The bones of millions slain by him, lay whitening for many years on a hundred battle fields, as grim testimonials, heart-sickening monuments, of his depraved ambition. As an example, in one battle in Germany, under his leadership, four hundred thousand of the enemy perished. What kind of praise is due such a man, and how can he meet the pale ghosts of those murdered men in the spirit world? Rome, after running her bloody race, fell a victim to the same kind of injustice that she had been inflicting for so many years upon other nations. The wild inhabitants of the North, many of whose forefathers had been slain in battle by the Romans, collected their numerous hosts, and came rushing down upon enervated Italy, like an Alpine avalanche, overturning everything in their way, until they finally knocked at the gates of Rome for entrance. At those fearful knocks Rome shook to her very foundation, and her inhabitants trembled with mortal fear, even as her victorious army had formerly made other people tremble. Her gates yielded, and Rome became the vassal of northern barbarians. But the struggle was fearful, and the number slain was appalling, and degrading to the human species. According to Procopius, there fell of the Goths during the twenty years war carried on by Justinian, 15,000,000; and in Africa, by this same prince, 5,000,000 perished. These are terrible, and appear almost doubtful estimates, but when we take into consideration that Europe was then densely populated, and that war was one of the chief employments of men, they will not appear so incredible. A number of millions must have perished during the campaigns of Napoleon, and the spirit of lenity to the conquered which characterizes modern warfare, makes battles far less bloody than they were in more ancient times.

During the thirteenth century, arose Jenghiz Khan, a most bloody and tyrannical despot. During his wars, 14,470,000 are said to have perished. During the Crusades, those mad, fanatical expeditions to wrest the holy sepulchre from the hands of the infidels, several millions perished by the sword, the pestilence, and famine. At the defeat of Atila, king of the Huns, 800,000 were slain; by the Saracens in Syria 60,000; and in Spain, 37,000; and during the invasion of Milan by the Goths, 300,000. One hundred thousand fell in the battle of Fontenay, 150,000 at Yermouk, and 250,000 in a battle between Charles Mentel and the Mohammedans. In the siege of Vienna, in 1683, 70,000 perished, and in a battle in Persia, in 1734, 60,000. Have we not enumerated enough? These details are sickening to dwell upon. But we must look into the depths of the wound, and probe all its parts, before we can apply any effectual sanitary measures. These are but bird's-eye views of the destruction of life by war.

War is the sum of all cruelty. Its atrocities are unspeakable. The outrages of man upon his fellow man, inflicted by the license of war, are horrid beyond description. It puts out the generous fires of our nature, and makes us perfectly callous to the sufferings of our fellows. Hence we need not wonder if we find monsters in human shape, in an age when war is considered an honorable employment, and even made the means of elevating men to the highest offices of the State. We are made to shudder by the atrocities committed by our American Indians; yet their atrocities are but the legitimate sequents of that system which, even in the full blaze of this nineteenth century, the civilized world clings to as a means of adjusting political difficulties. We see in them but the picture of what we ourselves are tending to, more or less, in every warlike movement we make. War is degrading, anti-progressive, retrogressive; and the more a nation indulges in it, the sooner will its sun set in a night of barbarism, or be put out in its mad career, quenched in blood and tears.

We are not in lack of overwhelming evidence. We have only commenced murder statistics. We could fill a volume with the same bloody catalogue. Napoleon Bonaparte furnishes enough testimony to make a world sick of war, were they not strongly infatuated. We need not descant on the character of this man. The man who has stood, a blazing meteor leering through the storm of battle, and threatening annihilation to his species, needs not that his infamy be heralded by a humble scribe. He is well enough known already. But to illustrate still further, we will look at the statistics of slaughter in some of his battles. In his first battle at Monte Notte, across the Alps, 1,000 of the enemy were slain; at Millesimo and Biastro, at least 15,000 perished; at Ancoler, during three battles, on three successive days, 12,000. Four or five thousand perished in the naval battle at Aboukir, and 15,000 in the land battle at the same place some months after; at the battle of Austerlitz, at least 16,000; at the battle of Jena, as many as 10,000; at the battle of Eylau 50,000; at Landsberg, 5,000; in the battles of Lonato, Castiglione, and Midola, 30,000 or 35,000; about 12,000 at Bassano; at the defense of Saragossa, 12,000 or 15,000; and when, at last, in another siege, the French succeeded in taking the city, they did it at the dreadful sacrifice of 20,000 human beings. At the dreadful battle of Borodino, 80,000 were left dead on the field. Napoleon entered Russia with an army of 500,000 men, and in that disastrous campaign he lost 450,000! At his last struggle on the field of Waterloo, 65,000 must have been slaughtered. We have contemplated but twenty of Napoleon's battles. He is called the hero of a *hundred* battles. Millions more must have perished during those eighty battles which we have not mentioned.

For a more minute contemplation of the terrors of the battle-field, we will revert to one battle, viz. the battle of Borodino. Napoleon had marched his army victoriously into the heart of the Russian dominion. The Russians had fled before him, but they had destroyed everything that could give aid or comfort to the French troops. Napoleon was rendered desperate by these distresses, and was spurred on to make more active exertions for the preservation of his army. He was marching towards Moscow, and already within a few days march of that city. The Russians halted at Borodino, and collecting their mighty forces, resolved to withstand the dreadful torrent that was sweeping over their land, and save their beloved city. The French came up, and 300,000 men prepared to mingle in one of the most dreadful conflicts that ever shook the earth. The battle could not have been otherwise than awful in its consequences. The French were nearly a thousand miles within the territories of an enemy, with the prospect of a severe winter before them, destitute, in a great measure, of the means of sustenance, and conscious that defeat would be their utter destruction. Napoleon exhorted his soldiers thus: "Soldiers, here is a battle you have longed for; it is necessary, for it brings us plenty, good winter quarters, and a safe return to France. Behave yourselves so that posterity may say of each of you, he was in that great battle under the walls of Moscow." On the other hand, the Russians were fighting for their hearth-stones, their altars, and everything that was dear to them. Their wives, their children, stretched out their hands to them for protection from their invaders. Moscow contained hundreds of thousands of them. The priests of the Greek church entered their camp, clothed in their priestly robes, and exhorted the soldiers to deeds of daring against their haughty invaders. The unmitigated evils which Napoleon had heaped upon Europe and the world, were recounted to them, and safe entrance into paradise was ensured them if they perished bravely fighting for their rights. Thus prepared, the two great armies lay encamped on the night of the 6th of Sept., 1812, awaiting the dawn The morning of the 7th at length dawned upon the sleepless hosts. The hour came for fight, and the thunders of two thousand cannon were the prelude to the dreadful din. The tigers of war were let loose, and the commotion was indescribable. Whole regiments were swept away at once by the cannon-shot. The two armies fought under a canopy of smoke which shut out the light of the sun, and left them no other light than the flashes of cannon and musketry. The sabres of forty thousand dragoons met and clashed in this dreadful gloom. Countless bayonets bristled through the dense and sulphurous vapor which rolled over the combatants, and the earth drank the blood of thousands pierced by them. The earth smoked with human blood; dissevered heads, disjointed limbs, the brains and entrails of men and horses, lay heaped together and scattered around in promiscuous and horrible confusion. The groans of the dying, the unheeded prayers of the maimed and helpless, pleading to be spared from being crushed to death by the tramp of horses, or the grinding wheels of heavy ordnance, and the curses and imprecations of the infuriated combatants, mingled together in more horrid and sickening din than the vollied thunder of a thousand French cannon, answered in harsh discord by the discharge of an equal number on the part of the Russians, and the breaking crash of ten thousand muskets. The battle continued throughout the day, and night threw her sable mantle over the bodies of 80,000 dead and dying. On the next day full 25,000 horses lay scattered over the field. "But the most horrid spectacle was the interior of the ravines. Almost all the wounded who were able to drag themselves along, had taken refuge there to avoid the shot. These miserable wretches, heaped one upon another, and almost suffocated with blood, uttering the most dreadful groans, and invoking death with piercing cries, eagerly besought us to put an end to their torments."

The above delineation is no exaggeration. On the contrary, it falls infinitely short of what has been re-enacted a thousand times upon this sin-cursed and war-trampled earth. In view of such horrors, what but the most outrageous depravity and mad ambition can induce rulers and intriguing politicians to plunge nations into war?

SHILOH, N. J., June 25, 1854.

EVANGELICAL MISSIONS IN HAYTI.

To the Editors of the Sabbath Recorder:—

The following article was received last winter, with a request to translate for publication—(it is written in French)—which, however, has not been complied with till now, on account of a press of business consequent upon preparing to leave for Palestine. The writer is a Haytien, a young man of excellent attainments, a convert from Romanism and from Infidelity. For some months he was a very faithful and acceptable teacher in my school at Port de Paix. While there, he was awakened to see his lost condition as a sinner, and to give his heart to God. He is now a member of the Baptist Church at Jacmel. Could I transfer the beautiful style, both of language and of penmanship, in which the article is written, I should feel that I was presenting something worthy the attention of the reader. It was written for the occasion of a missionary meeting at Port au Prince in 1851, and contains matters of interest in the history of Haytien Missions to that time. Since then, as before, God continues to bless the labors of his servants. O Hayti! my desires often go up to the mercy seat, that all thy children may receive the gospel, and thy mountains soon be made vocal with the praises of the Lord of missions.

WM. M. JONES.

Austrian bark Adolar, 46 miles S. E. by E. from island of Rhodes, 5 mo. 11, 1854.

Translation.

The voice of Wilberforce, of Clarkson, and of their honorable adherents, has been heard for the suppression of the African slave trade and of slavery. It was their eloquence which awakened the attention of evangelical missionaries to the wants of Hayti, whose colored population had just broken their chains, and declared themselves free, powerful, and independent. In 1817, two Wesleyan missionaries, Messrs. Brown and Catts, visited at Port au Prince, Alexandre Petion, then President of the Republic of the West and South, [terms for the departments of the west and south in the western part of the island,] who gave them a cordial welcome, invited them to preach in his own palace to his officers, soldiers, and guard, and gave them assurance of perfect liberty to travel through the country, to preach and build churches where it best suited them. In seeking thus to favor Protestantism, Petion wished to destroy the influence of Romanism, of which the abbeys Gaspar and Marion, and their consorts, were the most disorderly champions, and who fomented contentions the most pernicious to this young and growing society.

Henry Christophe, ever powerful in the North, (another department of the western portion of Hayti,) under the title of "King of the State of the North," planned the ruin of Petion and of his young republic, by raising an army of thirty thousand men, and an African force which was to be furnished him by the governors of the neighboring English islands, with munitions of war and gold, necessary for the conquest of the whole island—all to form a colony under the name of the Kingdom of Hayti. The crown, institution of the nobility, arms, public instructors, were already received from England; from which also military stores of the first quality were imported, and many of her officers served in the ranks of his army.

Means were adopted to make the English the national language. English schools were opened at Cape Haytien, under the direction of a Rev. Mr. Morton and his family. Christophe, a distinguished officer in more than one respect, appeared willing to accomplish any thing by the shedding of blood. He had sent some young Haytiens to a college in London, where some of them squandered away their time in idleness. Complaint having been made to him, to this effect, he wrote to the president to cut off their heads, which of course was not put into execution.

The Catholic churches in the Department of the North were nearly all closed, and the priests assassinated, with the exception of Corneille Brelle of the Cape. Christophe spared him, that he might obtain from him the secrets of the confessional, but afterwards imprisoned him, gave him a slice of bread and bottle of water, and abandoned him to his fate—starvation. This too was at the moment when the priest thought to have escaped to a foreign land, where he might enjoy the treasures he had gleaned from more than one family.

Christophe was a black Creole from the island of St. Christopher, one of the Little Antilles. During his youth he had served in an English hotel, and being English by birth, he had there learned all the tricks and manœuvres of the landlords of those parts. Far be it from us to accuse the generous English of being accomplices in the revolting acts of the infernal policy of this rebellious chief! But in becoming a principal of the party in his interests, that government, mighty as it was, and favoring Christophe's views, seemed to ignore the horrors committed in the North, and even left other parts of the island in ignorance of the same. No! The noble and majestic diadem which to-day encircles the brow of the young and virtuous Victoria, is not that which then domineered over England.

It was in the midst of this state of things, that the Rev. Thomas le Sauvage, a native of the isle of Guernsey, preached in Port au Prince against war, proclaiming peace and good will, prayer for and love to our enemies; and, in short, that we should do good to them who despitefully use and persecute us. These sentiments, proclaimed among a people to whom the gospel was an impenetrable mystery, and who never heard of the gospel in their churches, only in an unintelligible language—a nation of warriors, where every child of ten years was taught to look upon his existence as inseparably connected with a glittering bayonet, whose heart grew warm at the roar of cannon, and whose ideas were expanded at the smell of powder; these sentiments, I say, were heard with scorn, and the preacher was regarded as a secret agent of some foreign power. A riot ensued; the multitude surrounded the house of the messenger of God, and threatened to stone him. The efforts of the police and the voice of legal authority were rendered nearly powerless. The people called themselves republicans; their will was dominant. An aged mother was killed in her attempts to keep her son from the Protestant meeting. Some thought her death accidental; be that as it may, the young man, truly penitent, was condemned to die. As might be expected, this melancholy affair added still more to the fury of the populace. I am happy to add, that the like has not been recommitted in the country. Protected by the authorities, the missionary was permitted to retire in safety to his native land, bearing with him the esteem of numerous respectable citizens of the country. Shortly after, the Wesleyan Missionary Society of England accorded to Pierre André a magnificent Bible, in token of the loyal and generous assistance rendered by him to appease the popular effervescence.

The gospel has been preached in Hayti since 1817. For the safeguard of Religious Liberty our own social compact has in its different revisions thus expressed itself: Constitution of 1805, Empire of Hayti, Art. 50—The law admits of no governing religion. Art. 51—The liberty of worship is tolerated. Art. 52—The State makes no provision for the support of either worship or minister. Constitution of 1806, Republic of Hayti, Art. 35—The Roman Catholic Religion being the religion of all the Haytiens, is the religion of State. It shall be especially protected, as also its ministers. Art. 36—The law allows each minister the extent of his spiritual administration. These ministers cannot under any pretext form a body of State. Art. 37—If hereafter other religions are introduced, no person shall be restrained in the exercise of the religion of his choice, provided he conforms to the laws. Constitution of 1816, Art. 49—All religious worship is permitted in the Republic conformably with the law. Constitution of 1843—All religions are equally free; each one has the right to profess his religion and worship in freedom, provided he does not disturb public order. The Constitutions of 1846 and '49, articles 33 and 32, (the last being under the Empire,) are expressed in the same language as that of '43.

A respectful notice, on this occasion, is due the servants of the Lord who have hitherto and are still laboring for the conversion of our countrymen. The Rev. J. F. Hartwell has been among us nearly fourteen years. He undertook the building of the Wesleyan Chapel in this city, and since his removal to the Cape, has built one there. He has also a school there whose progress is very satisfactory. His preaching has been abundantly blessed in the conversion of sinners. The Rev. M. B. Bird, president of the Wesleyan Haytien District, completed the meeting-house commenced by Mr. Hartwell in this place—has built a large school-house in which he has a school in successful operation. The labors of Mr. Bird are very constant, and have been fruitful in gathering in many a wanderer from the error of his ways. The Rev. Mr. Bishop has succeeded in the erection of a chapel at Jeremie, and in opening a school. Mr. Bayard, a native Haytien, is preacher and teacher at Gonaïves. Mr. Towles has a large field of labor at Port au Platt, in the Spanish part of the island. The Rev. Mr. Bauduy is preacher and school-teacher at Aux Cayes.

Honorable mention should be made of the laborers among us of the Baptist communion. The Rev. E. J. Francis labored with great fervor and success, but in the brief space of six months fell a prey to the yellow fever. He was succeeded (at Jacmel) by Rev. Mr. Webley, who feels that he has reason to thank God and take courage for the tokens of mercy already manifested. Rev. Wm. M. Jones labored at Port au Prince over two years, and afterward at Port du Paix and St. Louis du North. He has now left for his native land, much to the regret of the people among whom he labored. Rev. Wm. L. Judd is an active and successful laborer among us. We would also mention the visits and preaching of Messrs. Treadwell, Tyndall, Cushman, Niel, Cardy, and others, who for a brief space have lent a helping hand in this work of righteousness. The Rev. J. W. Morton labored as a preacher and school-teacher in this city during eighteen months.

We cannot conclude without referring to those young sisters in Christ who have dared to brave the waves of the ocean, that they might lead souls to heaven. Would that I could speak of them as I wish. We think of them as those who have left home and loved ones, to bring to our people, carelessly asleep in the darkness of death, the awakening and cheering power of the gospel. Sister Young lived among us two years or more, a lovely example of the power of the love of Christ. She possessed a noble and generous heart, but she was a flower harvested in the spring-time of life. While we lament her absence, we trust she is with Jesus. The pious efforts of Sister Howard have been apparent here, at Port du Paix, and at Jacmel. Her example and exhortation will ever be remembered by us. I would also instance the indefatigable labors of Sisters Harris and Clarke of the English Mission at Jacmel, and of Miss Lake at Port au Prince. These sisters have all been more or less engaged in teaching. Many a youth will doubtless rise up in the judgment and call them blessed. We say it to their praise, that their labors, in season and out of season, have been characterized with great patience and faithfulness.

To the glory of the gospel be it said, several Haytiens have been called into the ministry, and give us reason to hope much of them in the future. Bauduy is at Aux Cayes; Lilavois at Port au Prince; Faure at St. Marc; Warren at Dondon; Clairville was at the Cape, then here, and at Jeremie. His eloquence in preaching was most masterly, triumphant; but the yellow fever and death have taken him from us. Our loss is his gain. At this date we reckon ten missionary stations: Port au Platt, Wesleyan, 190 communicants; Cape Haytien, 42; Gonaives, 12; Aux-Cayes, 22; Jeremie, 22; Port au Prince, 176; (also Am. Methodist, 50;) Baptist church, 30; Dondon, 00; Saint Marc, 25; Jacmel, 25. The Haytien, raised amid the dangers which threaten his liberty, is naturally of a proud and independent spirit; jealous of his rights to respect, he feels keenly the first intimations of prejudice against him on account of his color—a prejudice which weighs heavily upon his race in some parts of the world; yet in his relations with his fellow men, he is approachable, free and affable, and of a marked hospitality to strangers. It is our hope, yea, our prayer, that the hearts of our people will ever be open to welcome the foreigner, and especially the missionary of the cross. We also love to think of our youth, that from among them will be found those whose intelligence and labors will abound in this vine yard of the Lord, to His praise and glory in the salvation of souls. DORVELAS DORVAL.

(The *American Baptist* will please copy.)

THE FUGITIVE BURNS, &C.

While confined in jail for safe keeping at Norfolk, Va., after his arrival there from Boston, Burns was called upon by a gentleman from this city, who writes to the Boston *Traveler* giving an account of the interview:

Yesterday a gentleman called on me, and when alluding to the case of Burns, inquired if I would like to see him. On my answering in the affirmative, he said he would walk over to the Jail, and as he was well acquainted with the jailer, he presumed we might be admitted to his cell. I was introduced as "a Boston Merchant," and was politely conducted to the private apartment of the fugitive, where, in the presence of four other gentlemen, I conversed with him for half an hour relative to his early history, his escape, his trial at Boston, and his return.

His history is too familiar to our readers to require additional statement. He said he joined a Baptist church about seven years ago, and has felt it his duty since, as opportunities have occurred, to exhort in their meetings, and try to lead his fellow servants to a knowledge of the Redeemer. His master, he told me, was not a member of any church.

He can read and write, and is quite intelligent for one of such limited education. He has a nobleness of carriage and truthfulness of manner, indicative of a mind of more than ordinary capacity.

Although he conversed with an air of cheerfulness, and even of humor, it was easy to discover that a dark foreboding for the future was preying upon his spirits.

When allusion was made to his accommodations in the Boston Court House, his good fare, and his smoking cigars with the officers, he said laughingly, that "he needed the cigars to keep his spirits up;" and when asked if he wanted to go back to Boston, he said "he should like just to let them see that he was alive yet."

To the question what he thought his master would now do with him, he said that "he expected to be sold, and made a lion of." When asked if he would like to go back, and live with Col. Suttle, he hesitated and replied, "not without he could be treated just as if he had not been away." He was sensible that he had lost caste, where he had always lived, and knew not how to hold up his head again there; and yet greatly dreaded the alternative of being sold to the South. Poor fellow! He reminded me of Christian, in the Pilgrim's Progress, when he met Apolyon, and had neither the power to flee, nor the heart to go forward to the encounter.

I have conversed very freely about his case with many persons here; indeed, it is quite impossible to do otherwise, as it is *the* topic of the day. There is a general exultation at the result, for George R. Latimer escaped from Norfolk in 1843, and a great effort was made to recover him from Boston, which failed; as did also the more recent effort to bring back Shadrach, who belonged to a Norfolk gentleman. But now that the law has been sustained, I think there is a strong feeling here, in favor of sending him North, or of dealing kindly with him.

One of the gentlemen who was present during my interview with Burns, and whom I did not know, was severely censuring the course of the Abolitionists, when I said to him, "All New England, sir, is anti-slavery now." "And so is all Virginia," was his reply. "We hate slavery, and want to get rid of it as fast as possible, but what can we do with it?"

After leaving the jail, my friend informed me, that there was a congregation of colored people just assembling for worship, where they were having a revival, and offered to go with me, and attend the service. It was a Baptist church, and some ten to twelve hundred negroes, mostly slaves, were present. A short discourse was first delivered by a white preacher, as they are required by law, since the Southampton insurrection, to have none but white ministers, and to close all their meetings at sunset. After the sermon, the minister gave up the services to the brethren, and a more lively or exciting scene I have seldom witnessed than that which followed for the space of two hours.

A large number of "mourners" surrounded the altar, and the brethren kneeling among them, offered repeated prayers for their conversion, which were responded to audibly throughout the house. Between the prayers a hymn was *lined off*, and sung in a manner which ought to satisfy the most strenuous advocate for congregational singing, at least so far as a union of *all the voices* is concerned.

About half an hour before they broke up they suspended prayer and the singing of hymns, and commenced on what they term "spiritual songs," these are merely the repetition of some thrilling religious sentiments, in a lively air, rising, and keeping time with the motion of the body, not unlike the dance, without a change of position. Thus, for more than half an hour, the whole audience continued standing on the seats of the pews, filling the aisles, pressing around the altar, singing in a quick movement, with the shrill African voice, their song of victory. The convert was borne along in his experience, from the submission of heart at the cross, to his final crown of glory. Occasionally one of the "mourners" would be *brought out*, on the announcement of which, new bursts of song would fill the house.

Whatever the fastidious may think of such worship, wild as it is, it is more true to nature, more in sympathy with man's moral wants, and recognizes with more clearness and simplicity the ground of the Christian's hope than the most exact and impressive service of the cathedral.

I was particularly touched with the appropriateness of one of Watt's old hymns to their condition, which was lined off, and sung, early in the service, wherein the reign of Christ is anticipated. In the good old tune of Mear, every voice rolled out in hearty tones,

"His own kind hand shall wipe the tears,
  From every weeping eye,
And pains, and groans, and griefs, and fears,
  And death itself, shall die.

How long, dear Savior! oh, how long
  Shall this bright hour delay?
Fly swifter round, ye wheels of time,
  And bring the welcome day!"

It was the utterance of hope, and of faith. It was the sanguine expectation of the African heart, finding expression for its confidence that "Jesus the master," as they termed him in their prayers, would at length give them glorious deliverance from slavery, and from sin, and bestow on them the liberty of the sons of God.

PREACHING ON CHARITY.

"Why can't you do as our fathers used to do?" said a good old deacon to the pastor of one of our country churches. The pastor had been preaching for the church through the year, once a month, for which they agreed to give about seventy dollars. His year was out, and the church was about to call him for another year. "How do you mean?" said the preacher. "Why, preach on charity; just let nothing be said about salary or money, any way; let each one give what he feels like giving, without letting the right hand know what the left hand doeth. That's what I call preaching on charity; it's the way our fathers did, and the preachers were supported well." The pastor agreed to it. The year passed on. At the close he found he had received one dollar and seventy-five cents for his year's labor, to perform which he had to ride five hundred miles. This was what he called preaching on charity; and the members' right hands never knew what their left hands did.

THOUGHTS ON ORDINATION—AGAIN.

We have no great objection to the practice of laying hands on newly-ordained ministers, *provided* it be well understood, that it is not done for the sake of ratifying a divine institution, and that the essence of ordination does not consist in it. As a mere form, not interfering with, nor making void, any commandment of heaven, it would not be worth while to pass any strictures upon it. The only thing we are anxious about, is that ideas perfectly scriptural shall prevail. Were we called on to make one of an Ordaining Council, we might possibly comply with the general practice; but we should do so, under the presumption that our views were well understood, and that neither candidate nor witnesses would regard our compliance as any admission of the necessity of the thing.

But the essence of ordination lies in the vote of the church, of which the candidate is, at the time, a member. His election by the church to the work of the ministry is his ordination. If a church be destitute of a pastor, and by its vote call one of its members to discharge the office, that vote, or election, is his ordination to the work, and his voluntary acceptance of the trust consummates the relation. The Sermon, Charge, Ordaining Prayer, and Imposition of Hands of a Presbytery, may be super-added, but his ordination is complete, and valid, without them. For the satisfaction of other churches in fellowship, and the community at large, some public ceremony is proper enough; but that which is particularly called for, on such an occasion, and far more necessary than the Imposition of Hands, or any of the other formalities above mentioned, is the recognition, on the part of the members of the church, of their choice and call of their pastor, and his renewal of his acceptance of the trust.

The idea that a man must pass under the hands of a Presbytery, before he is properly authorized to preach the Gospel to the world, is not only destitute of scriptural sanction, but is at war with the spirit of Christianity. The Word of God describes the disciples of old as attending to this thing without asking the consent of any man, or set of men; and speaks of the practice as being the duty of every disciple, wherever situated. Shortly after the ascension of Christ, we find some who were indeed church officers, but the duties of whose office did not embrace this work, zealously engaged in preaching the Gospel; for instance, Stephen, the wisdom and the spirit of whose speech none were able to resist. Acts 6: 10. Stephen was a deacon, but every well informed person knows, that it is no part or parcel of a deacon's work to preach. He acted, not as a deacon, but as a disciple, and seemed to feel it his privilege, as such, to hold forth the Word of Life. After Stephen's martyrdom, a great persecution arose against the church at Jerusalem. The consequence was, that they who were scattered abroad went every where preaching the word. Acts 8: 4. Who were they that were thus scattered, and that preached the word? Not the Apostles, for they abode still at Jerusalem. Acts 8: 1. Nor is there any thing in the record, which shows that they were ordained elders. Some of them were deacons, it is true, and had received the imposition of the Apostles' hands; but "some of them were men of Cypress and Cyrene, who, when they were come to Antioch, spake unto the Grecians, preaching the Lord Jesus." And, as if to honor lay preaching rather than that of titled men, "the hand of the Lord was with them; and a great number believed, and turned to the Lord." Acts 11: 19—21.

We hope that our remarks on this point will not be misunderstood. When we say, that the primitive disciples held forth the word of life without asking the consent of any man, or set of men, we speak of *preaching*, in the strict and scriptural sense of the term. The term merely denotes a *proclamation*, like that which a herald, or public crier, makes when sent out to announce some piece of intelligence to the community. Applied to the gospel, it means a proclamation of the good news, that Jesus Christ is risen from the dead, with power to save; and it is expected, that the love which burns in the hearts of all true disciples will prompt them to haste in publishing this good news, simply *because* it is too good to be kept shut up in their own breasts. The conventional restrictions which would shut it up there, till they can go forth with gown and certificate, is not in accordance with that free and overflowing goodness, which says, 'Publish my grace to every creature.' *Teaching*, in that sense in which it is devolved upon pastors or elders, is not what we now speak of. And we do suppose, that those early disciples, "who went every where preaching the word," were content simply to publish the fact of Jesus' resurrection, together with such first principles of religion as were necessary to bring their hearers to an acknowledgment of Christ's sufficiency, without attempting to impart instruction in the higher branches of Christianity. To be qualified for such work, needs no other training than what every new-born soul has received.

But this kind of preaching supposes nothing more than the practice of it to such an extent as is consistent with due attention to other lawful callings. It does not suppose an exclusive consecration to the work. Is it not the duty of some, however, to devote themselves wholly to the work? Are they not called to do so by the Head of the Church? And are they not called to it antecedently to, and irrespective of, any election of them by particular churches as their pastors? And if so, is not some ceremonial of ordination necessary, which shall designate them as an order of persons set apart to the work of the ministry? These are important questions, and it becomes us to be careful how we answer them. We shall make them the subject of discussion in a future article. T. B. B.

PALESTINE MISSION.

A few days since, letters from brethren Saunders and Jones were received, bearing date May 23d. These letters give an account of their stay in Smyrna, their passage therefrom to Jaffa, their safe arrival and kind reception in the land of their future labors. Our last intelligence from them left them in Smyrna, where they had arrived in fifty days from Boston. They remained one week there, and then took passage for Jaffa. They arrived in Jaffa in about ten days. The next day after their arrival, they went ashore and took lodgings at the American Consul's house. The day after, they went to Mrs. Minor's, who lives about two miles from the town. They immediately set about securing a temporary home, and looking out for a place for permanent location. Bro. Saunders remains for the present at Mrs. Minor's, and Bro. Jones at the American Consul's. Bro. Jones has secured a teacher of the Hebrew and Arabic, for five piastres or twenty-two cents per day. Some small pieces of land had been offered them for a small price. They have, however, made no purchases, and intend traveling somewhat to select an eligible place before purchasing. They are obliged to pay in advance for all they purchase. Those who have set their hands to this mission would do well to remember this.

Our brethren see before them a wide field for usefulness, and enough to do. The first Sabbath spent by them was at Mrs. Minor's. There were fifteen Sabbath-keepers present. How very different from the first Sabbath spent by our missionaries in China. Bro. Saunders speaks in high praise of the country and its fertility, and thinks money invested in land would constantly increase in value. On account of the war, provisions are now very high, and thefts and robberies by runaway soldiers are frequent. The health of the missionaries was good, with the exception of Sister Saunders, who was somewhat debilitated, from the unpleasant accommodations on the passage from Smyrna to Jaffa.

Our missionaries are now in Palestine. What has long been a problem is now solved. The mission is commenced. Many in the denomination have looked to this event as one of greatest interest to us as a people, and have regarded the establishment of a Christian mission in the Holy Land as the great mission of Sabbath-keepers. But it remains yet to be seen whether God will own and bless such labors as ours. If God does not go with them, it is in vain that they have gone. And yet

"They have gone to the land where the patriarchs rest."

May God bless them in the labor, or return them again to us.

A more detailed account of their voyage, &c., will be received and published soon.

J. BAILEY, Cor. Secretary.

THE SCRIPTURES REVISED.

We are indebted to the Secretary of the American Bible Union for a quarto volume of 254 pages, entitled "REVISED ENGLISH SCRIPTURES, WITH NOTES." This volume contains the 2d Epistle of Peter, the Epistles of John and Jude, and the Revelation. A note accompanying it informs us that the revision is not final, but "is circulated in the expectation that it will be subjected to a thorough criticism, in order that its imperfections, whatever they may be, may be disclosed and corrected." About half of each page is occupied with King James' version, the Greek text, and the revised version, in parallel columns; the remainder with notes stating in brief the translator's reasons for varying from the common version. The time necessary to give this work a thorough examination—such an examination as would enable us to speak confidently of its value—is not now at our command, and may not be for some weeks to come. Meanwhile we give the translation of a familiar passage, which will enable our readers to judge something of the character of the changes made.

THE SECOND EPISTLE OF PETER. CHAP. I.

King James' Version	*Revised Version.*
3. According as his divine power hath given unto us all things that *pertain* unto life and godliness, through the knowledge of him that hath called us to glory and virtue:	3. Forasmuch as his divine power hath given unto us all things that *pertain* unto life and godliness, through the knowledge of him who called us by glory and might.
4. Whereby are given unto us exceeding great and precious promises; that by these ye might be partakers of the divine nature, having escaped the corruption that is in the world through lust.	4. Whereby he hath given unto us the exceeding great and precious promises, that by these ye might become partakers of the divine nature having escaped from the corruption that is in the world through lust.
5. And besides this, giving all diligence, add to your faith, virtue; and to virtue, knowledge;	5. But for this very reason also do ye, contributing all diligence, furnish in your faith fortitude; and in fortitude knowledge;
6. And to knowledge, temperance; and to temperance, patience; and to patience, godliness;	6. And in knowledge, self-control; and in self-control, patience; and in patience, godliness;
7. And to godliness, brotherly kindness; and to brotherly kindness, charity.	7. And in godliness, brotherly kindness; and in brotherly kindness, love.
8. For if these things be in you, and abound, they make *you that ye shall* neither *be* barren nor unfruitful in the knowledge of our Lord Jesus Christ.	8. For these things being yours, and increasing, render *you* not idle nor unfruitful as to the knowledge of our Lord Jesus Christ.

SECRET SOCIETIES.

I trust "*A Layman*" will take no offense when I say, that his communication in the *Recorder* of June 22d, addressed to me, indicates that he did not thoroughly read my article on "Secret Societies," on which he offers his criticism. I have two reasons for saying this. *First*, He is too conscientious to purposely fail of giving me a fair representation, which he has done by quoting only a *part* of a sentence, the *whole* of which is necessary in order to understand my position. *Second*, He is too capable to have read the article *carefully*, and then to have supposed his scripture quotations, of which he asks an exposition, to have been at all in point. I ask, therefore, the attention of "*A Layman*" to the following points.

1. My objection was not to secrecy, simply or by itself.

2. My objection was not to secrecy, as enjoined by the divine government, whether as found in the laws of nature, or as revealed and enjoined for any purpose by the Redeemer.

3. My objection is to secrecy *out of place*—secrecy unnecessitated by any law of *nature* or *revelation*, but where it, by its position, necessarily increases the power of temptation to evil. And this I affirm of "Secret Societies." Does any sane man doubt, that the establishing of societies over the country, sympathizing with each other, containing in them, by a large majority of cases, men of unsanctified hearts, and these shielded by the law of secrecy, does expose them in an imminent degree to the overwhelming power of the tempter? I go further, and assert, that it would be cause of instant alarm, should even the Christian church, in her several branches, add as a necessary law of her character and existence, the law of secrecy. It would excite against her the suspicion and distrust of the civilized world.

While, then, I respectfully decline the exegesis asked, I do it only on the ground of inapplicability in the passages presented to meet the case. But that I may not discourage the pious labor of "*A Layman*," in "searching the scriptures" for his edification, I will say, that should he find any thing in his reading requiring the foundation of secret societies, such as "Free Masons," "Odd Fellows," "Sons of Temperance," &c., I hope he will not fail of calling my attention to it. N. V. H.

SECRET SOCIETIES.

To the Editors of the Sabbath Recorder:—

Since writing my former article, I have read some extracts from the Minutes of the Eastern Association, and an article from the pen of N. V. H., who seems to think that no person can employ that part of our Saviour's prayer, which says lead us not into temptation, and then attend a meeting of a Secret Temperance Society. I cannot see the force of his argument. I cannot see any temptations in the meetings of this Society, that do not exist in any meeting that can be got up.

I have also attended the session of the Central Association. A resolution on Secret Societies was offered by the Committee on Resolutions. I listened to the discussion of this resolution, and must say, that there was no argument adduced that would not apply with equal force against all organizations, not excepting the church. They professed fear that some injury might be done, but did not attempt to show that any had been done, except that a brother thought that he had lost an office by his opposition to Secret Societies, although he admitted it was contrary to their rules to interfere with the political opinions of others. It was contended, by some, that their advantages for doing evil were greater, if they felt disposed; but no offense was charged upon us.

We are accused of holding our meetings in the night. So do most of the societies hold evening meetings. Our meetings always commence as soon after sun-set as consistent—say within an hour—and close at nine o'clock, unless some important business prolongs the session, but always close before ten o'clock. Our meetings are opened by singing and prayer, or reading a chapter from the Bible, at the option of the chaplain, and closed by prayer. It has been stated, that nothing can be said on the subject of religion, or that the person leading in prayer must not pray for sinners. This is not so. Sectarian and party subjects only are excluded.

We are charged with controlling the votes of our members. This is not so, for last fall the candidates for Senator and Assembly in this district were members of the Sons of Temperance—the first a member of our Division—but I did not vote for either, and no complaint was ever made, for all these societies pledge themselves to every member, not to interfere with his political or religious opinions, be they what they may. These societies are made up of members of all the different denominations of Christians, and those who do not belong to any; so from all the political parties.

But it is claimed by some, that there is no necessity for any organization but the church for any purpose. But Societies have been formed for the spread of the Bible, and to advance the cause of missions, and all the benevolent operations of the day, and have proved efficient aids to the church. We fully believe the temperance cause needs such helps, and no person need deny that much good has been done where such societies have existed for any considerable time. Homer and Cortland give good proof of this.

But some say, It is the unfruitful works of darkness, and must be put down. If this refers to secrecy, we ask in all candor, have we not a right to adopt some test to know who are the true friends of temperance? In former organizations, we often found ourselves betrayed and imposed upon by wolves in sheep's clothing. Many attended the meetings to hear something to report to the enemies of temperance. Others attended who were not willing to bear any of the expenses. These are both kept out; for every person must pay his dues in order to get the password, which is all the secret of the order, and without it he cannot be admitted. All organizations have suffered by these intruders, whose only object is to hinder the advancement of the cause.

In regard to our right to unite with these societies, I say in the language of Paul, "Why is my liberty judged by another man's conscience?" We are often told, You have no right to do any thing that will injure my feelings. So said the Scribes and Pharisees; but the Apostle says, "Whether it be right in the sight of God to hearken unto you more than to God, judge ye." If the feelings of others are thus to be our criterion, where will it end; for there is an endless variety of feelings, and the spirit of dictation has not appeared now for the first time. That Secret Societies have been formed for objects that were not commendable, we admit. But should this hinder us from forming societies for good objects? Certainly not. These temperance organizations boldly publish to the world their object, and all their members are at liberty to withdraw at any time, and can have a card if they choose. No improper influence is used to retain them. I have now been a member for nearly four years, and have not seen any reason to regret my connection with them. I have been a member of every temperance organization that has existed in the vicinity where I have resided for the last twenty-three years. I feel this to be my duty, both for my own safety and for the benefit of the human family; and I am ready to unite with any society that may arise promising more good than those now existing.

LUKE P. BABCOCK.

HOMER, N. Y., June 18th, 1854.

THE SUNDAY IN PERU.

In Peru, as in most Catholic countries, the Sunday is a holiday, given up to shows, fairs, and follies. This has generally been considered a natural consequence of the low ground taken by Romanists, who for the most part discard the strictness of the Fourth Commandment, and treat the Sabbatic Institution as a mere church festival. But it seems that a reform is proposed by Catholic priests in Peru. Long ago the public markets of the city of Santander were held on Saturday, the seventh day of the week; but it was thought more convenient to have them held on Sunday, and accordingly they were transferred to that day. Lately the priests have come out against this custom, and have addressed a petition to the "Paroquial Cabildo" for the restoration of the old custom of holding the markets on Saturday—the Sabbath. The ground which they take in advocating this change is remarkable for Catholics. Indeed, the manner of stating the Old Testament argument, and the confidence with which, without a shadow of scriptural proof, they say that "the Lord's day was substituted for the Sabbath, by institution of the Apostles," would not discredit a Protestant of the Sabbath-Manual school. We copy a couple of paragraphs on these points:—

"All may know, that the Sabbath (which in the sacred language means rest, because on that day the Almighty ceased from creating his wonderful works) was instituted by God himself, in order that man, after six days of labor and sweat, might rest on it; not, assuredly, that they should abandon themselves to idleness, to gain, and to criminal pleasures; but that, recognizing his supreme dominion, they should adore him in spirit and truth, and perform works of beneficence and charity toward their species. It would be very easy for us, if we were not addressing a Christian cabildo, to cite here all the texts in the Old Testament in which it is proved that the Lord sanctified that day, that he reserved it for himself, and that under the heaviest penalties he prohibited servile works; and finally, that he offered the most precious and magnificent rewards to those who keep it. Thus it was that the patriarchs, the prophets, and all the just, celebrated the Sabbath in honor and memory of the creation, consecrating to its divine Author the most appropriate and agreeable homage of their piety and gratitude, and teaching the people to sanctify it, as a most important duty of religion.

"It is also well known, that the Lord's day was substituted for the Sabbath, by institution of the Apostles, as an eternal memorial of the resurrection of our Lord Jesus Christ; and, in observance of its sanctification, it forms, in the entire course of the year, a solemn and perpetual octave of that most sacred mystery! a day on which so many miracles have been wrought, and which deserves to be incomparably more respected than the Sabbath of the Jews, as it goes from the form to the reality of things, from the shadows to the light, and from the creation of material things to the regeneration of souls by means of the blood of the immaculate Lamb; a day which not only has been consecrated by the councils, by the sovereign pontiffs, and by the fathers of the Church, but which also has been, in a certain manner, canonized by Christian legislators; a day, in short, of which certain true philosophers have said that, if it had not been ordered by the powers of the Church to sanctify it, it doubtless would have been by those of the age, inasmuch as it is absolutely indispensable to give a day of rest to weary bodies, in order to repair equally the powers of the mind, and thus to attend to the mutual duties of society."

"AND THEIR WORKS DO FOLLOW THEM."—And so it seemed to us, (says a correspondant of the *Christian Advocate and Journal*,) in handling the clothing and bedding of a deceased sister in the Lord. She had, with great care, caused her wardrobe to be inventoried before she went hence, and gave special directions as to the mission to which she would have it sent. It was like a sacred work to put up and send abroad this expression of the pious love of Christ's members for his poor friends, and those for whom his missionary servants are toiling. May the time speedily come when all hearts shall be taken up with the one only work for which we were created and have been redeemed—to glorify God on the earth, and find our way to heaven.

AN ACT FOR THE DEFENSE OF LIBERTY.

Such is the title of an Act just passed by the Legislature of Connecticut. If it does not effectually stop kidnapping, and even slave-catching, in that State, we shall be mistaken. Five thousand dollar fines and five-year imprisonments are rather formidable penalties for kidnapping. Here is the Act—a model for all the Free States:

SECTION 1. Every person who shall falsely and maliciously declare, represent, or pretend, that any free person entitled to freedom is a slave, or owes service or labor to any person or persons, with intent to procure, or to aid or assist in procuring, the forcible removal of such free person from this State as a slave, shall pay a fine of $5,000, and be imprisoned five years in the Connecticut State Prison.

SEC. 2. In all cases arising under this act, the truth of any declaration, representation, or pretense that any person, being or having been in this State as a slave, or owes or did owe service or labor to any other person, shall not be deemed proved except by the testimony of at least two credible witnesses testifying to facts directly tending to establish the truth of such declaration, pretense, or representation, or by legal evidence equivalent thereto.

SEC. 3. Every person that shall willfully and maliciously seize or procure to be seized any free person entitled to freedom, with intent to have such free person sold into Slavery, shall pay a fine of $5,000, and be imprisoned five years in the Connecticut State Prison.

SEC. 4. Upon the trial of any prosecution arising under this act, no deposition shall be admitted as evidence of the truth of any statement in such deposition contained.

SEC. 5. Upon the trial of any prosecution arising under this act, any witness who shall, in behalf of the party accused, and intending to aid him in his defense, falsely and willfully, in testifying, represent or pretend that any person is or ever was a slave, or does or ever did owe service or labor to any person or persons, such witness shall pay a fine of $5,000, and be imprisoned five years in the Connecticut State Prison.

SEC. 6. Whenever complaint or information shall be made against any person, for any offense described in any section of this act, and upon such complaint or information a warrant shall have been duly issued for the arrest of such person; any person who shall hinder or obstruct a sheriff, deputy sheriff or constable in the service of such warrant, or shall aid such accused person in escaping from the pursuit of such officer, shall be imprisoned one year in the Connecticut State Prison.

A CATHOLIC CHURCH QUESTION.—By rule, the Bishops of the Catholic Church hold the title to all church property in their respective dioceses. A church in Buffalo, however, declined to make over its valuable real estate to the Bishop. Hence a long controversy; to settle which, in part, Archbishop Bedini visited this country from Rome. The Archbishop's decision was in favor of the Bishop, and in rendering it he addressed the people of the Church, urging them to yield. But they still held their ground, contending that while they were ready to pay all due respect to the Bishop in spiritual matters, they were convinced that in temporal affairs there was no duty of religion that could require them to obey his directions; and, above all, they were not ready to give him the control of the lands belonging to their particular society. The matter has remained in this state until week before last, when the Trustees took occasion publicly to state anew their determination; whereupon the Bishop proceeded to put them under the ban of the Church, by imposing the extreme penalty of excommunication.

MAIL MATTERS.—A business letter says: "I am requested to ask you to answer, through the *Recorder*, whether the papers for Potter Hill and Ashaway are sent at the same time and in the same mail-bag with those for Hopkinton; the latter are received one day before the former." All we know about the matter is, that our paper goes to press on the morning of Third-day, and that everything for the mail is sent to the post-office before three o'clock in the afternoon of that day, in time for the evening mails. As this arrangement has not been interrupted a dozen times in five years, we presume that the delay spoken of is chargeable upon the post-office department.

EASTERN ASSOCIATION FINANCES.—We are requested to say, that at the recent meeting of the Eastern Association, the Financial Committee apportioned among the churches the amount necessary to pay for printing the minutes, and to meet a deficiency in the receipts of last year for missionary labor, &c. Most of the churches paid their apportionments at the time; but some, probably from oversight or the absence of delegates, have not yet paid. The following are behind: Berlin $2 92 for Minutes, $4 08 for deficiency; Petersburg 97c for Minutes, $1 35 for deficiency; 3d Hopkinton $2 09 for Minutes, $2 92 for deficiency; Shiloh $3 50, and Marlboro $1 65, for deficiency. These sums should be forwarded at once to the Treasurer, A. M. Babcock, Westerly, R. I., or, if more convenient, may be sent to this office.

BOARD MEETINGS.—The regular quarterly meetings of the Executive Boards of the Seventh-day Baptist Missionary, Tract, and Publishing Societies, will be held in the meeting-house at Plainfield, N. J., on First-day, July 9th, commencing at 9 o'clock A. M.

SUICIDE OF A BOY.—The Louisville *Journal* relates the facts concerning the suicide of a lad of thirteen years, named Henry Merriman, ten miles from that city.

"This is one of the most mysterious as well as one of the most extraordinary cases of suicide ever committed in this country. Henry was a devout Christian. He had lost a little sister who belonged to the church. This sister had given him a prayer-book on her death-bed, and desired him to use it. He had become so interested in the book, and on the subject of meeting with a dear sister, that it was a subject of daily conversation and prayer with him. He appeared desirous to be with her. His mother had told him that he would meet his sister in heaven after death. He prayed nightly and daily to see her, and in his fit of religious insanity, he, upon his knees, cut his throat from ear to ear, severing both jugular veins. This was truly a sorry sight to look upon—a heart-broken mother, afflicted father, and distressed relatives—it was a scene to dissolve a heart of stone. Every one present was in tears; every man became as it were a child. The verdict of the jury was, that the child came to his death from the influence of the above facts, causing religious insanity."

RECEIPTS OF THE AMERICAN BOARD.—The Journal of Missions states that the contributions to the Board for the first nine months of the present fiscal year, were $3,847 32 beyond those of the corresponding months of last year. With this increase, those of the remaining months should have averaged $40,000 a month, to equal the anticipated expenditures of the year. The contributions for May, however, fall short of this by more than $9,000; and short of those of the corresponding month of the previous year, by nearly $7,000. This has brought down the receipts of the first ten months of the year to almost $3,000 less than those of the same months of last year.

MISSIONARY AID.—Rev. Cuthbert Young, of North Shields, has devoted himself with admirable diligence to raising a feeling of sympathy in England with American and other missionaries, laboring for the conversion of the Armenian, Greek, and Latin Christians within the limits of the Turkish Empire. A succession of meetings have been held by the friends of these missions, for the purpose of establishing a "Turkish Missions Aid Association."

RELIGIOUS INTELLIGENCE.

The Rev. Dr. Raffles, of Liverpool, one of a party traveling in Italy, was arrested there for wearing a white hat, and having in his desk a pen-wiper, which assumed the shape and color of a cockade. His books and papers were all seized, and submitted to examination; but after three days' detention he was liberated, and his papers restored, upon the payment of the expenses of his imprisonment, and the keeping and charges of his military guard.

The Roman Catholic bishop of Albany said in a recent discourse, that in a church extending through centuries, it was to be expected there should be found bad men and bad women, bad monks, bad friars, bad nuns, bad priests, bad bishops, *bad popes*, and acknowledged that there had been *five popes* who had been proved beyond dispute to be bad men; thus destroying by his confession the boasted infallibility of the Romish church.

Among the many charitable societies in England is a new one, formed in London on the 4th of May last, called the "Clergy Provident Society." Its object is to enable clergymen to insure a weekly allowance, not exceeding two guineas, in time of sickness, or when incapacitated for the discharge of their public duties, and for assisting the clergy whose net incomes are below $1500 per annum in the payment of the premiums necessary for such an insurance.

The Boston Vigilance Committee having transmitted to Messrs. R. H. Dana, Jr., and C. M. Ellis, through Wendell Phillips, checks for $200 each, "not as a compensation, but as a grateful acknowledgment" of their services as counsel for the fugitive Burns, those gentlemen, while expressing their thanks for such an evidence that their labors were appreciated by the friends of freedom, respectfully but firmly refused to receive the money.

It is said that there are thirty thousand of the Chinese in California. They have not yet erected any idol temples—but some "ancestral or spirit-tablets" are to be seen. A Chinese Mission-house has been erected, in which there is a school, a library, dispensary, chapel, study, parsonage, and all under the control of the Presbyterian Board of Foreign Missions. There are four Chinese members of the mission church.

The University of New York City, which has been greatly embarrassed in its finances, is announced *free from debt*. The Chancellor, Dr. Ferris, states that upwards of $70,000 have been raised, which, with some conditional subscriptions secured by this sum, makes the amount about $87,000. This completely relieves the Institution from all debt, and gives promise of a new era of prosperity.

The missionaries in Germany of the American Baptist Missionary Union were much blessed in their labors last year. At Memel, fifty-two members were added by baptism; at Elbin, fifty-six; at Rozengath, five; at Stettin, eighteen; at Heilbroun, twenty-nine; at Wettingen, ten; at Halsbeck, six; at Jever, twenty; at Oldenburg, three.

The Missions of the American Board in Turkey have awakened a deep interest among many Christians in England, who propose to give them their assistance. Their attention has been called to the subject, perhaps, by the war, and their hearts have been cheered by the report of the work of God among the Armenians.

The Connecticut Colonization Society recently held its annual meeting at New Haven. Its receipts during last year were $4,515. Over $1,000 more have been subscribed. In contributions for this object, Connecticut ranks the fourth State in the Union.

The work of organizing the tract enterprise throughout the conferences of the M. E. Church in the United States, is at last complete. All the conferences on the continent now have conference auxiliaries. The Liberia Conference in Africa is the only one where the cause has not been formally organized.

General Intelligence.

Abstract of Proceedings in Congress.

SECOND-DAY, JUNE 26.

In the SENATE, Mr. Clayton introduced his bill for the prevention of the African slave trade by American ships. The Boston petition against the Fugitive Slave law was then taken up. Mr. Jones of Tennessee vehemently denounced it, as he did the Anti-Nebraska address lately published by members of Congress. Mr. Rockwell and Mr. Sumner replied to him, the latter comparing the Fugitive Slave law with the Stamp Act of 1766. Mr. Butler retorted upon Mr. Sumner in a personal and undignified manner. Mr. Mason followed with a defense of the Fugitive law. Mr. Petitt also indulged in a tilt at Mr. Sumner.

In the HOUSE OF REPRESENTATIVES, the day was devoted to the discussion of the Gadsden treaty. Mr. Benton proposed a series of resolutions to the effect that the treaty was a violation of the privileges of the House. He made an elaborate speech against the treaty, on the ground of its violating the prerogative of the House by giving to the Executive the control of the national purse as well as of the sword, and also on the ground that the land ceded by Mexico is utterly valueless for any use to which we can put it, and that the abandonment of the obnoxious article of the Gaudelupe Hidalgo treaty is worth no such sum as that we propose to pay for it. Mr. Bayly replied.

THIRD-DAY, JUNE 27.

In the SENATE, the claims of the State of Maryland for interest on money advanced during the last war with England occupied some portion of the time. The principal was paid long ago, and the bill to pay the interest was adopted by a vote of 36 to 7. The bill from the House, changing the time of the meeting of Congress from the first Monday in December to November, was taken up and rejected.

In the HOUSE, the Gadsden Treaty came up. Mr. Jones of Pa., spoke in favor of the treaty. A dry debate followed. Mr. Peckham made a strong speech against voting the money asked for the Mexican Treaty without having a look at the correspondence upon which the treaty is based. Without coming to a question, the House, at a late hour, adjourned.

FOURTH-DAY, JUNE 28.

In the SENATE, the bill to aid Minnesota in constructing a railroad, was taken up and passed. The motion to refer the Boston petition for repeal of the Fugitive Slave Law, was taken up. Mr. Sumner made an able speech against the Fugitive Slave Law. After a warm debate, which lasted until 5 o'clock, the motion to refer the petition was agreed to, and the Senate adjourned.

The HOUSE resumed the consideration of the bill providing for the establishment of a weekly line of steamers between the Atlantic States and San Francisco, which was tabled by a vote of 84 to 70. The bill appropriating $10,000,000 to carry into effect the Gadsden Treaty, was then taken up. After considerable debate, and under the operation of the previous question, the bill passed by a vote of 103 to 62.

FIFTH-DAY, JUNE 29.

In the SENATE, Mr. Fessenden presented a petition, signed by over 300 voters of the town of Milton, N. H., the birthplace of President Pierce, praying for the repeal of the Fugitive Slave Law—referred. The bill to establish a line of steamers between the ports of San Francisco and Shanghae, in China, was then taken up, when Mr. Seward supported the bill in an earnest and forcible speech, and when he concluded, the bill was laid aside to take up the bill appropriating $10,000,000 for the ratification of the Mexican Treaty, which was received from the House. The bill was immediately passed by a vote of 34 to 6.

The HOUSE at an early hour resumed the consideration of the bill to increase the rates of postage. After a brief debate, the bill passed by a vote of 105 to 55. The House then proceeded to consider the resolution fixing the time for the adjournment of Congress. Mr. Orr proposed to strike out the Senate's amendment, which provides for a recess from the 17th July till the 16th October, and substitute a *sine die* adjournment on the 31st July, which was agreed to, and also refused to concur in the Senate's amendment—so the House still adheres to its original design to adjourn on the 14th August.

SIXTH-DAY, JUNE 30.

In the SENATE, very little business of public interest was transacted, the day being devoted to the consideration of the private calendar. The resolution for adjournment on the 14th August was returned by the House, they having disagreed to the Senate's amendment for a recess from July 17 to Oct. 15. The Senate agreed to insist on its amendment, and asked for a Committee of Conference. Six private bills were then passed, and at 3 o'clock the Senate adjourned.

In the HOUSE, various reports were made from Committees—among them was one from the Committee on Judiciary, authorizing the President of the United States to purchase a site for a prison and procure estimates for building the same in the City of New York. This prison is intended for United States prisoners, and sailors and others held as witnesses, for persons detained under the Extradition Treaties, fugitives from service, &c. A Committee was appointed to confer with the Senate Committee on disagreeing to the amendment to the resolution fixing a day for the adjournment of Congress.

SABBATH-DAY, JULY 1.

In the SENATE, Mr. Sumner presented a memorial, numerously signed, praying that the Fugitive Slave bill be repealed; and gave notice of his intention at the same time to urge its passage. The bill allowing exchanges of school lands in certain cases was taken up and passed. Mr. Bright reported back the Texas creditors bill, with a substitute therefor. The report of the Conference Committee on adjournment—in favor of adjourning on the 4th August—was agreed to. The House bill, establishing the offices of Surveyor-General of New Mexico, Kansas, and Nebraska, and granting donations of land to actual settlers therein, was passed. A bill to vest in the several States and Territories the title in fee of the lands which have been, or may be, certified to them, was also passed. Mr. Houston occupied three hours in personal explanation of long-pending difficulties between himself and Commodore Moore, late of the Texas Navy, but before he had concluded, the Senate went into Executive Session, and then adjourned till Fourth-day.

The HOUSE agreed to adjourn on the 4th August, at noon, and then went into Committee on a private bill and debated it only. Adjourned till Fourth-day.

European News.

By the steamer Europa, we have European dates to June 17th.

Advices from the seat of war in Turkey brought by the Europa, contain no report of any decisive event either at Silistria or elsewhere. Up to the 9th of June—ten days later than our previous intelligence—the Russians had not yet taken the subordinate forts of Arab, Tabiassi or Abdul Medjid, or at least had carried only the former, after repeated defeats, and with very heavy loss.

The *Times* contains a most important editorial, which gives some hints about the ultimate aim of the present war. This is the taking of Sebastopol and the occupation of the Crimea, as the only means to prevent Russia from recommencing the war at her pleasure.

From Montenegro we are informed that since the proclamation of Prince Danilo the chivalrous robbers have made different raids and inroads into the Herzegovina, carried off 700 head of sheep and goats, 100 bulls and 15 horses, having killed 22 Turks and Albanians, whose heads have been presented to the great Prince Danilo.

The transport-ship Europa, on her way to Turkey, was burned on the 31st, on the Atlantic, about 200 miles from the English coast. At the time she had on board 62 dragoons and 57 horses. The loss of life by the burning of the transport Europa was Col. Moore, Dr. Kelly, four sergeants, twelve private men, and one woman, of the 6th Dragoons.

Sir Charles Napier has destroyed some gunboats in the Bothnian Gulf at Brahestadt, but has hitherto had no luck.

Heavy rains had much damaged the prospects of the crops throughout France.

Distressing Case.

Frederic Douglass' Paper, of Rochester, tells a story of a colored woman named Adaline Peterson, representing herself to be a freeborn native of Norwich Landing, Conn., who lately came to Rochester, representing herself to be a fugitive from slavery from the West, and appearing to be a truthful person, and as such obtaining aid from friends in Rochester. Her story is as follows:—

"Six years ago, she, in company with an other girl, was employed by a family in Norwich Landing, as a traveling maid. They proceeded with the family to New York, where they remained six months, at the expiration of which time they went with the same family to New Orleans. Here they remained till Mrs. Dodsworth became sick, and died. Mr. D. then turned out a miserable, degraded fellow, and under the pretense of taking them home to Connecticut, he went to St. Louis, Missouri, where he sold them. They both protested against being sold, and asserted their freedom, but were only laughed at, as the inhuman villain declared he had purchased them in Virginia. The younger of the two was purchased by a wealthy gentleman for his paramour; but one day the keys of the money-drawer being accidentally left on the table, she helped herself to $1,300, the amount she brought under the hammer, and decamped to parts unknown. She and her companion were then in Louisville, Kentucky. She was fortunate enough to secure the aid of an abolitionist in Kentucky, who shipped her to Norwich. After her arrival, she had a letter written to her benefactor, who informed the remaining woman, offering her at the same time aid and comfort, which she gladly accepted. She arrived safe in Cincinnati, whence she was forwarded to Buffalo, then to Rochester. The woman has but one arm, having lost the other while employed in a carding-mill. She suffers greatly, owing to the cruel manner in which her arm was amputated. She states that after the loss of her arm, she was whipped most unmercifully, being kicked about, and, to use her own language, 'treated a great deal worse than the dogs she had to feed every day.' She is now on her way to her brother and sister in Norwich."

Gerrit Smith's Resignation.

Letter to His Constituents.

—WASHINGTON, June 27, 1854.

TO MY CONSTITUENTS: My nomination to Congress alarmed me greatly, because I believed that it would result in my election. To separate myself from my large private business for so long a time, and to war for so long a time against the strong habits formed in my deeply secluded life, seemed to me well-nigh impossible.

My election having taken place, I concluded that I must serve you during the first session of my term. Not to speak of other reasons for such service, there was at least so much due to you in requital for your generous forgetfulness of party obligations in electing me. I could not do less, and yet make a decent return for the respect and partiality you had shown me.

I did not until within a few weeks *fully* decide not to return to Congress at the next session. I could not know but that something unforseen might demand such return. I now feel at liberty to announce my purpose to resign my seat in Congress at the close of the present session. Why I make the annunciation so early, is that you may have ample time to look around you for my successor.

I resign my seat the more freely, because I do not thereby impose any tax upon your time. You will fill the vacancy at the general election. Indeed, I should have been entirely unwilling to put you to the pains of holding a special election.

GERRIT SMITH.

A HORSE'S FOOT.—The foot of a horse, says Macculloch, is one of the most ingenious and singular pieces of mechanism in the animal structure, and scarcely yielding to any in regularity, and in complexity of parts, and simplicity of design. The hoof contains series of vertical and thin laminæ of horn, so numerous as to amount to about 500, and forming a complete lining to it. Into this are fitted as many laminæ belonging to the coffin bone; which sets are elastic and adherent. The edge of a quire of paper, inserted leaf by leaf into another, will convey a sufficient idea of this arrangement. Thus the weight of the animal is supported by as many elastic springs as there are laminæ in all the feet, amounting to about four thousand, distributed in the most secure manner, since every spring is acted upon in an oblique direction. Such is the contrivance for the safety of an animal destined to carry greater weights than that of its own body, and to carry those, also, under the hazard of heavy shocks.

SAD ACCIDENT.—A most singular, sad and fatal accident occurred at New Boston Village on the 25th of June. Just as the people were coming home from church, which is situated on a high steep hill, the forward axletree of Mr. Samuel Marden's wagon broke, at the top of the hill, throwing him and his daughter out, hurting her badly. The horse started on a full run with the carriage thus twisted over, and as he attempted to pass the horse and wagon of Mr. Jonathan Marden hit his carriage and tipped it over, throwing him and his wife into the street, badly bruising her. That horse started on the run too, and both rushed with a terrible velocity down the hill; the first horse running against Mr. Stephen Wilson and throwing him head foremost against the wall, smashing his head all up, so that he lived but three hours. Mr. Wilson was a lame man, 39 years old, and on account of his lameness was a pauper. In a moment after, the same horse ran against a boy, about six years old, son of Mr. Mark Todd, the forward wheel hitting him with immense power, so that he was picked up senseless. The other horse ran against the carriage of John H. Gregg, throwing a lady with him out, bruising her much, but not seriously. Several other persons were hurt more or less, but the death of Wilson and the sad condition of the poor little boy, however, have given to the other injuries less prominence.

[Manchester (N. H.) Mirror.

A FIENDISH ACT.—A dispatch dated Cincinnati, June 27th, says: "Last evening a box was sent to the Marine Hospital, corner of Longworth-st. and Western-row, and deposited in the room of the Steward, G. H. Allison. About 10 o'clock the Steward and his wife being alone in the room, opened the box, when it exploded with terrific force, mangling the bodies of both in a horrible manner. Mrs Allison had both her arms blown off and her skull fractured, while Mr. A. was dreadfully mangled. The furniture, windows, ceiling of the room, &c., were shattered to atoms. The indications are that the box contained a bomb-shell of about six inches in diameter." A second dispatch says: "The Allisons are both dead. Mr. A. made a statement before his death, which will probably lead to the detection of the guilty parties. It is said that a fellow named Conwell committed a murder some time since, and that Allison was acquainted with the facts; consequently it is supposed that Conwell desired to take Allison's life. The description given by the latter of Conwell answers that given by the boy who delivered the box of the person from whom he received it."

MASTER AND SLAVE.—At the Spring Term of the Circuit Court, Sumter Co., Ala., Hon. Alex. B. Clitherall presiding, Richard M. Eskridge, a planter of Sumter County, was indicted for *mayhem*, in disabling a leg of a negro woman slave in his possession. The defendant was intoxicated, and about to whip the slave; she retreated with an axe in her hand; he seized his gun, shot her in the leg just below the knee, rendering amputation necessary. The Court charged the jury, that if they believed from the evidence, that the defendant intended, unlawfully and maliciously, to disable the leg of the slave, he was guilty of the charge; that the master had not absolute dominion over the slave, and to authorize a resort to such extreme force he must show that he acted in self-defense, or that the slave was in a state of rebellion, and the means used absolutely necessary to reduce her to subjection. After the retirement of some five or ten minutes, the jury returned a verdict of guilty. The defendant was sentenced by the Court to eleven years imprisonment in the Penitentiary.

MORE DESTRUCTION OF LIQUOR BY WOMEN.—The *Niles* (Mich.) *Republican* furnishes the particulars of the destruction of a whisky establishment at Berrien, in that State. It seems that James Green recently opened a grocery store in that village, and to complete his stock in trade, rolled in a barrel of whisky and a quantity of bad brandy. The women of the place held a meeting privately, organized and passed resolutions, selected their leaders, and marched, armed with axes and hammers, to the grocery, which they entered. Miss Peck read the resolutions to Mr. Green, and then asked him what he would take for his barrel of whisky. His reply was $100. This they refused to give, but would give him a fair price for it. The leaders then took possession of the whisky barrel, rolled it out, cut off the hoops, and the earth drank it. Mr. Green seized one or two jugs and left. The women numbered 41, girls 8, and comprised nearly all in town. They gave Mr. Green notice, that if he persisted in selling liquor there, the next time they visited him they would give him a coat of tar. The boys then obtained the bier, gathered up the fragments of the barrel and broken bottles, placed them on it, marched round the town, tolling a cow-bell, and finally down to the river and deposited them in the water.

The New York Central Railroad contracted, last winter, for the manufacture of seventy pleasure-cars, to be made after a model and delivered before the first of August. About twenty are now on the track, supplying several of the express trains. These cars are twelve inches for each seat wider than the old cars; there is more room between the seats, and a cushion for the arm beneath the window—a necessary item for the comfort of the sleeper—while the window is so far in front of the seat that whoever cares to sit by open window may have the air to himself, and not discommode those who sit behind him.

The culture of rice in Louisiana appears to be increasing. There are immense tracts of swamp land in that State well adapted to the growth of this crop. There is land enough along the Lafourche to grow more than all the rice plantations of South Carolina, which can be easily watered from that branch of the Mississippi. Good rice land will produce from 60 to 112 bushels of paddy (rough rice) to the acre, and a bushel will yield on an average twenty-nine pounds of clean rice, worth one dollar, while the broken rice and meal will pay for hulling.

SUMMARY.

A terrible and fatal accident occurred June 28th on the Michigan Central Railroad, about three miles from Wayne, in consequence of the locomotive running against a carriage, in which was a gentleman, his wife and child, who were all instantly killed. The locomotive and several cars were thrown off the track and smashed. No one in the train was killed, but the engineer, fireman, and ten or twelve passengers, were more or less injured.

A dispatch dated Buffalo, Wednesday, June 28, 1854, says: A terrible accident occurred this morning at Niagara Falls. A little girl five years of age, who was playing on the top of the precipice known as the Devil's Hole, approached too near the edge and overbalanced; for an instant she clung to the bushes, but losing her hold before assistance could reach her, fell into the gulf, a distance of 150 feet. She still survives, but her recovery is impossible.

A Convention of those who propose themselves to emigrate to Kansas and Nebraska, as well as of those who are desirous of encouraging the emigration of freemen, is to be held at Worcester, Mass., on Thursday, July 6, for the purpose of forming complete organizations, and providing means and measures to aid in the work of preventing the establishment of Slavery in either of the Territories.

A dispatch dated Stamford, Thursday, June 25, 1854, says: A lad about 12 years of age, attending school at Mamaroneck, and whose parents reside in New York, was killed by a train this afternoon a little below Mamaroneck. He was trying to see how near the engine he could cross while the train was in motion, when he was struck by it, thrown a distance of several rods, and instantly killed. The engineer had no time to stop the engine.

In Wayne Co., Penn., in a circle of seven miles, there live thirteen families, which boast the aggregate number of 195 children. They are distributed as follows: Jonathan Adams, 18; Jacob Kellum, 14; John Kellum, 10; David Eaton, 15; Eben Brown, 15; James Adams, 14; Josiah Cole, 13; Thomas Todd, 29; John Phillips, 12; Oliver Bullings, 13; James Brown, 10; William Tyler, 10; Amos Tyler, 22. Total, 195.

On the 12th ult., Purnell Jackson, of Worcester County, Md., was bitten on the end of his fingers by a copper-head snake, from the effects of which he died the next day. Immediately after being bit he drank a large quantity of whisky, thinking it would counteract the effect of the poison, but, unfortunately, it had no such effect. When he died, the whole of his arm, and a portion of his body, the *Shield* says, were perfectly green.

Hayward's Massachusetts Gazeteer gives the following, as copied from the ancient Town Records of South Reading Mass.: "1667—This year the town contained 59 dwelling houses. It was ordered that every dog that comes into the meeting-house in time of service shall pay sixpence for every time he comes."

The number of females at present holding the office of Postmaster (or rather mistress) in the United States, is 128. They are appointed, give bonds, are commissioned, and receive the same compensation for their services as other Postmasters. Unmarried females *only* can hold the office of Postmaster.

The Rochester *Advertiser* states that there were five deaths from cholera at Lewiston, Niagara County, on Monday, the 26th. They were all immigrants who came up the Lake on some of the steamboats. No cases were reported among the citizens.

The Easton (Pa.) *Argus* says the cholera has made its appearance among the workmen at the Glendon Iron Works, and that five deaths occurred there last week, four of which were in one family, and several more are reported since Monday morning.

John Mitchel has been invited to address the students of the University of Virginia at the approaching commencement, and has accepted the invitation. The *Richmond Enquirer* says this is a distinction never conferred on any but the most eminent men of the country.

A Presbytery of the Cumberland Presbyterians, in Tennessee, have declared it a breach of Christian morality for members of the church to play cards, drink ardent spirits in public, or to engage in buying or selling negro slaves for gain.

The packet-ship Joseph Webster, Capt. Lawrence, arrived at New York the other day from Liverpool, with *nine hundred and forty-five* immigrants. This, we believe, is the largest number that has yet been brought to New York in one vessel.

The loss by the Engineers' strike, to the Erie Railroad Company, has been much over-estimated. It will not, we understand, exceed $25,000. The earnings of the month will be about $400,000 against $325,000 last year.

The Receivers of the New Hope Delaware Bridge Company give notice that they will pay the preferred claims and 50 per cent. on the certificates issued by them, at the Mechanics' and Manufacturers' Bank of Trenton, N. J., on the 12th of July.

During a late thunder-storm at Washington, the house of Senator Douglas was struck by lightning in half a dozen places, doing much damage. The proprietor was not at home.

It is ruled by the Post Office Department, that postmasters, on returning papers to publishers not taken from the office, must frank them as "on Post Office business."

In 1850, the number of post letters delivered in Great Britain was 347,500,000; in 1851, 360,500,000; in 1852, 379,500,000; in 1853, 411,000,000.

A western paper says, "About thirty years ago, Gen. Cass owned a farm in what is now the heart of Detroit, and, by simply 'holding on,' he has become the possessor of a fortune estimated at three millions of dollars."

The Washington correspondent of the N. Y. *Times* says it is stated there that Senator Douglas has procured a press and other material for a newspaper office, with which he is about to send a young man out to establish a pro-slavery paper in Kansas.

Clarissa Smith, widow of the great prophet, Joseph Smith, died at her residence, Great Salt Lake, on the 14th of February last, aged 62 years.

In a cloudy morning, it is a matter of importance to a farmer to know whether it will be sunshiny or showery in the afternoon. If the ants have cleared their holes nicely, and piled the dirt up high, it seldom fails to bring a clear day to the farmer, though it may be cloudy till ten or eleven o'clock in the forenoon. Spider-webs will be very numerous about the top of the grass and grain some cloudy mornings, and fifty years' observation has shown the writer of this that these little weather-guessers seldom fail in their predictions of a fair day.

The train of cars that left Detroit on Tuesday morning, June 27, at 9 o'clock, within nine miles of Paris ran off the track on a high grade. The engine was broken to pieces, four passenger cars were demolished, and the baggage cars broken to pieces, and many trunks broken open. One passenger standing on the *platform* was *instantly* killed. About seven others were injured, some fatally.

The whole amount of gold and silver dug from the earth the past ten years can not be less than $500,000,000. Of this amount California alone has produced about one half, Australia one fifth, and the remainder in smaller quantities has come from almost every other nation on the globe. During this short space of time, the whole previous stock of precious metals has been augmented about one quarter. The production of the whole earth up to the present time is, therefore, estimated at $2,500,000,000.

S. T. Bailey, of Macon, Georgia, wrote to the *Telegraph* last week, that one of his negro boys was badly bitten by that most poisonous reptile, the copperhead moccasin snake. Says he, "I immediately made him drink raw whiskey, and soaked the wound with hartshorn. He has suffered no inconvenience except a bad sore upon his leg."

A number of Boston ladies have presented Mr. Joseph K. Hayes, the captain of the Police, who resigned his office rather than assist in the rendition of the fugitive slave Burns, a purse containing $153 as a token of respect for his course in the matter. A gold watch and chain has also been presented to the same gentleman, by citizens of Plymouth, Mass.

Russia is the greatest unbroken empire for extent that ever existed. It occupies vast regions of Europe and Asia, and forms nearly one-sixth of the habitable globe. It is forty-one times the size of France, and one hundred and thirty-eight times that of England.

Cassius M. Clay is to address the people of Chicago, Alton, Quincy, Springfield, and other places in Illinois, in the course of July. His subject is Slavery and its Aggressions.

Two boys of Mr. John Bass, of Scituate, were drowned the other day by the upsetting of a boat, while catching lobsters off that harbor.

The cholera has made its appearance on several plantations in Louisiana. A Mr. Samden lost twenty-three slaves by the disease.

New York Markets—July 3, 1854.

Ashes—Pearls $5 50; Pots 5 81.

Flour and Meal—Flour, 6 87 a 7 12 for Western mixed, 7 00 a 7 50 for common to straight State, 8 25 a 9 25 for fancy Genesee. Rye Flour 5 50 for fine. Corn Meal 3 87 for Jersey.

Grain—Wheat, 1 70 a 1 81 for Western mixed, 1 95 a 2 10 for Ohio. 2 20 a 2 35 for white Genesee. Rye 1 18 a 1 20. Barley 1 00. Corn 78 a 80c. for Western mixed, 81 a 84c. for round white, 86 a 87c. for yellow. Oats 54 a 56c. for Jersey, 57 a 59c. for River and Canal. White Beans 1 25 a 1 56.

Provisions—Pork 11 00 for prime, 12 50 for mess Beef 12 00 a 13 00 for country mess. Lard 9¾ a 10c. Butter 13 a 17c. for Ohio, 19 a 21c. for Orange County. Cheese 6 a 9¼c.

Hay—65 a 70c. per 100 lbs. for old; 94c. a 1 00 for new.

Lumber—16 00 for Eastern Spruce and Pine.

Potatoes—2 00 a 2 25 per bushel for new Long Island; 7 00 per bbl. for Bermuda.

Seeds—Clover 8c. Timothy 13 00 a 21 00 per tierce for mowed and reaped.

Wool—33 a 36c. for native American, 42 a 45c. for Merino, 49 a 53c. for American Saxony Fleece.

MARRIED.

At Berlin Center, N. Y., May 5th, by Eld. Wm. O. Cushing, Mr. REUBEN MAIN to Miss ESTHER DAVIS, both of Berlin.

Near New Milton, Va., June 21st, by Eld. Ezekiel Bee, Mr. THOMAS D. LEESON to Miss ROSETTA DAVIS, all of the above-named place.

DIED.

June 22d, 1854, at the residence of his father, of nervous fever, after an illness of about six weeks, EZRA, son of Wm. F Randolph, aged 24 years. The deceased professed faith in Christ and united with the Seventh-day Baptist Church at Lost Creek when about thirteen years old. He was to some extent a Bible reading, praying youth, and remained a member of the church to the time of his death; yet it seems he was sometimes led in a degree to partake of the light, vain manners ever too common amongst his youthful associates. This caused feelings of regret in his sick chamber. He seemed not to have anticipated death at so early a period in manhood. Witnessing the departure of his mother, (whose death was noticed in the *Recorder* of 15th June,) under the influence of the disease that was now rapidly destroying his own powers, it seemed indeed next to certain that he too was dropping into the grave, and his mind became anxious and prayerful. "I have lived too regardless; I have sinned; I have need of prayer; I want my evidences brightened, that I may die in the full triumphs of faith," was his language. It was his delight to hear religious reading, prayer and praise in his room up to the hour of his decease. In the latter he participated about as long as he had strength of voice sufficient to be heard, which was up to near the expiring moment. Many friends were present to hear his dying words, and witness his peaceful end.

LETTERS.

F F Randolph, Geo Brown, C A Burdick, C M Lewis, E G Champlin, T R Green, J M Allen, J B Wells, Jos Goodrich, S S Griswold, J P Livermore, P L Berry, H W Babcock, Clarke Coon, John Parmalee I H Dunn, A G Coon, C R Burdick, S S Griswold, N V Hull, Elias Burdick, J R Cleveland (rec'd July 3d, via London.)

RECEIPTS.

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Rhoda Drake, Plainfield, N J, vol 3 $1 00

WILLIAM M. ROGERS, Treasurer.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Bound Volumes.

ON hand, and for sale, at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A M, 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7 30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6 30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare.

GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c.

D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A. M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

To Printers.

A NEW EDITION OF THE SPECIMEN BOOK OF BRUCE'S NEW YORK TYPE FOUNDRY, was published in September, 1853, and will be given to those proprietors of Printing Offices who will send for it, or it will be forwarded to them by mail on receipt, in advance, of fifty cents for the postage.

In it are exhibited many articles never before shown; there have been added to the Foundry new varieties of Roman Types from Nine-line Pica to Pearl, various imitations of Writing, a great number of fancy founts, borders, both plain and illuminated, labor-saving rules, and a complete foundry of German.

The types now manufactured are cast from a new combination of great durability, and are usually kept on hand in large quantities. Every fancy fount is sold by weight, and at the printed prices, which are from ten to twenty-five per cent. less than those of some other foundries. All other printing materials are furnished at manufacturers' prices, either for cash or credit.

Printers wishing to open accounts with me, or whose dealings have been long suspended, are requested to accompany their orders with city references to prevent delay.

Printers of newspapers who choose to publish this advertisement, including this note, three times before the 1st of August, 1854, and send me one of the papers, will be paid for it in type when they purchase five times the amount of their bill from me, of my own manufactures, selected from my specimens.

51—3

GEORGE BRUCE,
13 Chambers-st., New York.

Miscellaneous.

Iron Suspension Bridges.

The *Buffalo Democracy* has no faith in iron bridges, and for the following, among other reasons:—

"There is an inherent and latent defect in iron that will forever make it an unreliable material for Bridge Structures of the Suspension form. It suffers a gradual loss of tenacity under use. The very best brands of iron, and the most carefully made, are not exempt from this defect. When constantly subjected to concussion, tension and vibration, the metal granulates. It loses in a greater or less degree that peculiar relation and arrangement of its constituent particles, which gave to it the quality of tenacity. So that an iron suspension bridge which, when new, would sustain an almost unlimited weight, will at length probably become unsafe—though not a trace of weakness would be discovered in any of its piers or ground fastenings.

It is within the recollection of most of our readers that the vibration produced by the marching of a part of a regiment of infantry under arms across a French suspension bridge in the neighborhood of Paris caused it to break down at one end. The soldiers sank in the river by platoons—a monster calamity! So of the suspension bridge at Broughton, near Manchester, in the year 1831. It was broken down by the march of a single company of sixty soldiers. The whole of them were precipitated into the river. More than one-third of the suspension rods of the celebrated Menai Bridge were broken by a storm of the 7th January, 1839. Both of its carriage-ways were rendered impassable—some 200 feet of them being torn out. The chain bridge in Morpeth, Northumberland, fell down in 1830, under the vibration produced by the crossing, in a dense body, of a crowd, returning from the exhibition of mountebanks. The well-known chain pier in Brighton, England, had several of its suspending rods broken in a storm in October, 1853, and a considerable portion of its roadway in two of the divisions carried away. Last week, May 18, during a storm of wind and rain, the suspension bridge across the Ohio River at Wheeling was completely blown down and flung a wreck into the water, bottom side upward. Its massive cables were twisted off and its abutments injured. The bridge was considered in this country to be a model of architecture, and among the very best of the suspension class in the world.

The Great Western Railroad is to be connected with the New York Central line by an iron suspension bridge at Lewiston, now nearly completed under the direction of Mr. Roebling.

The City of San Salvador.

The night of the 16th of April, 1854, will ever be one of sad and bitter memory for the people of Salvador. On that unfortunate night our happy and beautiful capital was made a heap of ruins. Movements of the earth were felt on the morning of 'Holy Thursday,' preceded by sounds like the rolling of heavy artillery over the pavements, and like distant thunder. The people were a little alarmed in consequence of this phenomenon, but it did not prevent them from meeting in the churches to celebrate the solemnities of the day. On Saturday all was quiet, and confidence was restored. The people of the neighborhood assembled, as usual, to celebrate the Passover. The night of Saturday was tranquil, as was also the whole of Sunday. The heat, it is true, was considerable, but the atmosphere was calm and serene. For the first three hours of the evening nothing unusual occurred; but at half-past nine a severe shock of an earthquake, occurring without the usual preliminary noises, alarmed the whole city. Many families left their houses and made encampments in the public squares, while others prepared to pass the night in their respective court yards.

Finally, ten minutes to eleven, without premonition of any kind, the earth began to heave and tremble with such fearful force that in ten seconds the entire city was prostrated. The crashing of houses and churches stunned the ears of the terrified inhabitants, while a cloud of dust from the falling ruins enveloped them in a pall of impenetrable darkness. Not a drop of water could be got to relieve the half choked and suffocating, for the wells or fountains were filled up or made dry. The clock tower of the Cathedral carried a great part of the edifice with it in its fall. The towers of the church of San Francisco crushed the Episcopal Oratory and part of the palace. The church of Santo Domingo was buried beneath its towers, and the college of the Assumption was entirely ruined. The new and beautiful edifice of the University was demolished. The church of the Merced separated in the center, and its walls fell outward to the ground. Of the private houses a few were left standing, but all were rendered uninhabitable. It is worthy of remark, that the walls left standing are old ones; all those of modern construction have fallen. The public edifices of the government and city shared the common destruction.

The devastation was effected, as we have said, in the first ten seconds; for although the succeeding shocks were tremendous and accompanied by fearful rumblings beneath our feet, they had comparatively trifling results, for the reason that the first had left but little for their ravages.

Solemn and terrible was the picture presented on that dark, funeral night, of a whole people clustering in the plazas, and on their knees crying with loud voices to Heaven for mercy, or in agonizing accents calling for their children and friends, whom they believed to be buried beneath the ruins! A heaven opaque and ominous; a movement of the earth rapid and unequal, causing a terror indescribable; an intense sulphurous odor filling the atmosphere, and indicating an approaching eruption of the volcano; streets filled with ruins or overhung with threatening walls; a suffocating cloud of dust almost rendering respiration impossible. Such was the spectacle presented by the unhappy city on that memorable and awful night.

A hundred boys were shut up in the college, many invalids crowded the hospitals, and the barracks were full of soldiers. The sense of the catastrophe which must have befallen them gave poignancy to the first moments of reflection after the earthquake was over. It was believed at least that one-fourth part of the inhabitants had been buried beneath the ruins. The members of the government, however, hastened to ascertain, as far as practicable, the extent of the catastrophe, and to quiet the public mind. It was found that the loss of life had been much less than it was supposed, and it now appears probable that the number of the killed will not exceed one hundred and of the wounded fifty. Among the latter is the Bishop, who received a severe blow in the head; the late President Senor Duenas; a daughter of the President, and the wife of the Secretary of the Legislative Chambers—the latter severely.

"The movements of the earth still continue, with strong shocks, and the people fearing a general swallowing up of the site of the city, or that it may be buried under some sudden eruption of a volcano, are hastening away."

Oxen vs. Horses for Farm Work.

Hugh T. Brooks, of Pearl Creek, N. Y., is writing for the *Rural New Yorker* a series of interesting articles under the heading, "Conversations on Agriculture," from which we extract the following:—

Speaking of Oxen: "When I commenced farming, I bought two good yoke of oxen; they performed well. The next winter I stabled them, fed plenty of good hay, and worked them very little. My father, who was somewhat older than I, said 'they were too fat.' I was disposed to risk it. In the spring I began to work them; *they laughed me out of countenance*." (The writer will *explain* for the benefit of *city* readers—the oxen opened their mouths, breathed short, quick and hard, protruded their *tongues*—not venomous at all—perspired freely and looked anxiously for some "deep, umbrageous wood.") "Subsequent experience," continued my friend, who is one of the best and most successful farmers in Wyoming Co., "has taught me that there is little danger of oxen becoming too fat if the flesh is *worked* on. An ox may be uniformly kept so as to make good beef (if a sudden emergency should require him to be slaughtered) without detriment to his working qualities. *Be sure and find business during the winter for your oxen*, even if you have to drive them to mill and meeting, as people did when I was young. No animal can suddenly change its habits without detriment; this should be a warning against idleness to all oxen, and to all *asses*. Regular habits, some labor and some rest, should go through the year. Long intervals of repose for man or beast, interspersed with great and unusual efforts, are in the highest degree injurious. Leave nothing to be done in the spring which can be done in the winter, and nothing for the summer that can be accomplished in the spring.

"My own opinion is, that horses are constitutionally adapted to warm weather in a greater degree than oxen, but one reason why they are prefered for 'standing the heat,' is that, being admitted to a wider range of duties, they are more regularly employed, and better fed and groomed than oxen. Much has been said of the comparative value of horses and oxen. One man, in my opinion, with *three* good horses, will plow more, and with less expense, than two men can with *two yoke* of oxen, even though one man is a boy. My friend Tyrrel, of Wyoming, very properly remarked, that 'grain growing districts require the most work in hot weather; whereas, in New England, teams can have more rest in dog-days.' This may bring horses more in requisition here than there. If men must have horses for all *road* purposes, small farmers will not keep oxen. It is said, that ox teams are driven at the west, twenty miles, with a load, and back again the same day, without inconvenience. It must be conceded that horses can not do much better.

Fruit—its Preservation.

As some, who are indifferent to measures for saving the Union, may yet feel an interest in the preservation of fruits, we will let the public know what Messrs. Mapes, Solon Robinson, and Pardee thought and said upon that subject at one of the useful meetings of the American Institute. Farmers should not only handle their winter apples as gingerly as they do hot potatoes or cold eggs, but should sweat before heading them up in barrels. Burying fruit in ashes, charcoal, or cotton, is not the thing; the good flavor is extracted, together with the moisture. Earthern pots, unless the glazing is very perfect, will absorb the peculiar odor of the fruit. None but the best double refined sugar, from which the gum, that causes fermentation and decay, is extracted, should be used in the process of preserving fruit. Fruits are generally destroyed by moisture, while gooseberries and cranberries may be kept a long while in pure cold water. In making currant and other jellies, boiling is an error. The syrup should be heated to a simmer only, then poured upon the sugar, till it is all dissolved.

Fruit may be dried in a chimney, say 30 feet in height, equipped at its lower end with drawers, and cloth of latticed bottoms for the reception of the substance to be dried, whether fruit or corn. A small fire is built at the bottom, and the moisture of the articles is expelled through the chimney. A fan-blower may be added to increase the strength of the current.

They have a coarse, and careless way of drying peaches at the West. In the first place, the fruit is taken unripe and unpeeled, then halved and stoned. Unripe fruit is frequently preferred, on account of its whiteness. They are then put into a rough sort of kiln, and there smoked, and befouled, and burnt; then these acrid, tough, and bitter strips of singed leather are taken away, and packed up for the New York and Newark markets. Arrived in these cities, the good housewives seize upon them as choice condiments, simmer the burnt sole-leather five minutes in a pot, when, after sprinkling the mass with sugar, it is considered ready for the tea-table. All this is a stupendous mistake from the beginning to the end; but the greatest mistake of all is, that anybody should be hired to eat it.

Dried peaches—would that good ones were oftener prepared!—should be gently stewed twelve hours. It would be a blessing to the nation, could it be prevailed on to eat more fruit. Such is the desire of many a well-wisher to his race. But don't you perceive, friend, that fruit worth eating must be grown first, and in such abundance as to bring it within the financial reach of the people? Would you have them devour, for example, such dried and preserved peaches as have been just described? Or would you have a man in summer, or in autumn, pay down for the ordinary consumption of himself and family one dollar a half peck (containing three quarts, perhaps,) for pears, and a proportional price for other fruit of sufficient excellence, to recommend it for the table? This cannot be expected. So that, unless enormous prices shall be paid, the crabs and runts of nature abandoned entirely to herself, must be corrected and improved by a very expensive addition of Stewart's best.

Dueling in Kordafan.

Would it not be a good plan to substitute for the modern custom of dueling (under the miscalled "code of *honor*") with pistols, rifles or swords, the plan adopted in Kordafan? It is as follows:—

When a gentleman of that nation considers himself aggrieved, he sends the offender a formal challenge, which, it is presumed, is always accepted. The duel takes place on some open plain, and all the friends of the combatants assemble as spectators.

An agareb, or couch, is then brought forth, and the two combatants place a foot close to the edge of the couch, the breadth of which alone divides them. A formidable whip, made of Hippopotamus leather, is then placed in the hands of each, and renewed attempts are made by their friends to reconcile them. If, however, they are bent on carrying out their 'affair of honor,' the signal for battle is at last given. He who is entitled to the first blow, then inflicts as hard a lash as he can on his opponent, who stands perfectly still to receive the compliment, and then prepares to return it.

They thus continue, 'turn and turn about,' to flog each other's backs and shoulder, (the head must on no account be struck,) while the blood flows copiously at every stroke. Not an acknowledgment of pain escapes the lips of either, and all the spectators remain equally mute. This continues until one of the combatants, generally from sheer exhaustion, drops his instrument of torture, whereupon the victor immediately does the same.

The rivals now shake hands, declaring that they have received sufficient 'satisfaction;' their friends congratulate them on the reconciliation; their wounds are washed, and sundry jugs of '*merissa*,' the national beverage, provided beforehand, are produced, and emptied by the spectators in honor of the gallant opponents.

This seems to be administering "equal and exact justice;" and the "style" is like the play of "*cutting jackets*," by which country boys sometimes test each other's prowess.

Effects of Education on the Robin.

The most remarkable instance that I ever remember to have met with of a young pupil not only imitating, but far surpassing his tutor, was about nine years ago, in Jermyn-st., Haymarket. At that period I revelled in the undisturbed enjoyment of a large aviary, numbering no less than three hundred and sixty-six inhabitants, all first rate songsters; and my fame as an amateur had spread widely. Among the multitude of my visitors was a gentleman, who informed me that a friend of his was possessed of a most wonderful bird, that he should much like me to see and hear. I took the address, and went at an early day to view the prodigy. On entering the house referred to, and on presenting my card, I was at once ushered into a drawing-room. I there saw two cages—nightingale cages—suspended on the wall. One of them, with a nightingale in it, had an open front; the other had a green curtain drawn down over the front, concealing the inmate. After a little conversation on ornithology, my host asked me if I should like to hear one of his nightingales sing. Of course, I was all expectation. Placing me beneath the cage, and drawing up the curtain before alluded to, the bird above, at a whistle from his master, broke out in a succession of strains that I never heard surpassed by any nightingale. They were indeed surprisingly eloquent. "*What* a nightingale!" ejaculated I. The rapid utterance of the bird, his perfect *abandon* to the inspiration of his music, and his indifference to all around him, caused me to involuntarily exclaim with Coleridge,—

> "——That strain again!
> Full fain it would delay me."

And so it did. I stood riveted to the spot, knowing how seldom nightingales in a cage so deported themselves. After listening some time, and expressing my astonishment at the long repeated efforts of the performer, so unusual, I asked to be allowed a sight of him. Permission was granted; the curtain was raised, and I saw before me—a *robin!* This bird had been brought up under the nightingale from its very earliest infancy, and not only equalled, but very far surpassed its master in song. Indeed, he put him down and silenced him altogether. In this case, the robin retained no one single note of his own, whereby the finest ear could detect him.

Martyrdom at Rome.

A correspondent of the New York *Crusader* writing from Rome, says:—

The prisons of Diocletian are deep, narrow, and damp. No daylight shines into these caves; no pure air is breathed by the unfortunate inmates. The food is of the worst kind, and better victuals cannot be obtained even with money. The prisoners are not allowed a spoon, fork, or knife; they are compelled to eat like brutes, and are not permitted to see any friend or relative. These jails may be compared to hell on earth; the keepers are cruel, and without any feeling. Here are chained hundreds of political criminals.

A young man from Bologna, full of genius, and of promising success, called Gavazzi, and a nephew to the illustrious Crusader of Italy, had been imprisoned in the Baths of Diocletian for five years. Being reduced by tortures and privations almost to a skeleton, the physician applied to the Cardinal-Vicar to grant him a more healthy abode, asserting that the poor youth could not live longer in his present prison.

The favor was refused. At last, on the night of February 1st, the patient grew worse; the doctor was called for, who, on examining the languishing patriot, exclaimed that all was lost, and there was no more hope of saving his life.

The poor victim smiled at the idea of his physician, and said, '*if the body is lost, the soul will be saved!*' The chaplain, a Cupuchin friar, came to administer the sacraments and to read the prayers. But Gavazzi refused to confess, and would not listen to any advice or threatenings of eternal damnation. This mournful news reached the ears of the Holy Father, who, professing to desire that 'one Gavazzi' at least should die in the bosom of the Catholic Church, dispatched to the living tomb my Lord Matteucci, who enjoys a wide reputation of being able to convert the most firm unbelievers. But even this prelate proved of no avail. When he spoke to the young man of Christ, the patient answered that he believed in Him, but Christ never persecuted or taught his ministers to persecute his fellow-creatures. Young Gavazzi died on the night of the 2d of February last. His body was burned, as that of a heretic, outside of the graveyard, and buried with lime!

I am informed that the principal charge brought by the Tribunal of the Sacred Consulta against this young man, is that of having, during the Republic of Rome, stormed, at the head of his soldiers, the beautiful Villa Patrizi, which was the earthly paradise of the ferocious Patrizi. For this he was sentenced to twenty years' imprisonment in the Baths of Diocletian.

Wild Man of Africa.

There is another inhabitant of the woods by the Gaboon river, more to be feared than the African boa; it is the wild man of the woods—not the orang outang, though an immense ape—always acting on the offensive, and ready to attack man. The bones of his extremities are longer than those of an ordinary sized, full-grown man. I have examined them here, and whilst contemplating the skull, the jaws, and their terrible apparatus, really experienced a sort of shuddering. The canine teeth are upwards of two inches long, and of proportionate bulk. There is a ridge running from the top of the nose backwards over the crown of the head; to this is affixed a muscle, by which the living animal draws backwards and forwards a most frightful crest of stiff hairs; when enraged, or purposing to inflict injury, he erects them and draws the crest forwards over his large eyes, and utters most hideous yells at the same time.

Nothing seems to intimidate him. Sometimes he advances with boughs of trees broken off for the purpose of concealing his approach and attack, and suddenly grasps the legs of the human being, brings him instantly to the ground, breaks his bones by blows of his mighty arms and hands, and tears the flesh by his monstrous teeth. The native huntsman who goes in search or meets with him, whilst pursuing less formidable animals, has learned that the safest way to engage is to act quite on the defensive; to let the monster draw near, when he will immediately seize the end of the muzzle of the gun, (ready cocked and presented,) between his teeth. Instantly it must be discharged; if the man either delays till the ape has compressed the barrel so as to close it, or fails to give a mortal wound, woe be to him; his doom is sealed.

[Doctor Prince.

Opening of the Ganges Canal, in India.

The Ganges Canal, the greatest public work as yet constructed by the English in India, was opened by the Lieutenant-Governor of Agra on the 8th of April. The scene at the opening, as described by the local papers—English clergymen reading a form of prayers for the occasion, Brahmins throwing flowers into the stream, an imposing display of troops, a general distribution of sweetmeats, missionaries preaching to the crowd, racing in sacks, and the like—formed a *melange* that could only have been presented in British India. Though the great trunk of the canal has been thus formally opned, the branches required for the distribution of the water will not be fully complete for some years. By the time they are so, the work will have cost a million and a half; and it is thought that the direct net return will be at the rate of about 7 per cent. on the outlay, and the indirect return arising from the increase of cultivation and land revenue is estimated at about the same sum. The results of the canal, in preventing the recurrence of the famines that have invariably followed the failure of the monsoons in the districts it traverses, and in creating numerous lines of easy and economical transit connected with the great rivers of the Doab, are incalculable. The total length of channel navigable throughout, including the trunk and terminal lines into the great branches, is very nearly 800 miles. The principal engineering work is an aqueduct over the Solani river, having a water way of 750 feet. This work cost £300,000, or about nine times as much as Telford's aqueduct over the Dee, at Pont-y-Cysyllt, which is half as long again, and nearly three times as high, but with a much narrower channel.

Witchcraft of Women.

I want to tell you a secret. The way to make yourself pleasing to others is to show that you care for them. The whole world is like the Miller at Mansfield, "who cared for nobody—no, not he—because nobody cared for him." And the whole world will serve you so, if you give them the same cause. Let every one, therefore, see that you do care for them, by showing them what Sterne so happily calls "the small, sweet courtesies in which there is no parade, whose voice is still to tease, and which manifest by tender looks and little acts and attention—giving others the preference in every little enjoyment at the table, in the field, walking, sitting, or standing." This is the spirit that gives to your time of life and to your sex their sweetest charms. It constitutes the sum total of all the witchcraft of women. Let the world see that your first care is for yourself, and you will reap the solitude of the Upas tree around you, in the same way, by the emanation of a poison which kills all the juice of affection in its neighborhood. Such a girl may be admired for her understanding and accomplishments, but she can never be beloved. The seed of love can never grow but under the warm and genial influence of kind feelings and affectionate manners. Vivacity goes a great way in young persons. It calls attention to her who displays it, and if it then be found associated with a generous sensibility, its execution is irresistible. On the contrary, if it be found in alliance with a cold, selfish heart, it produces no further effect, except an adverse one. Attend to this, my daughter. It flows from a heart that feels for you all that a parent can feel, and not without the hope which constitutes the parent's highest happiness. May God protect and bless you.

[Wm. Wirt to his daughter.

A Mr. Brooks, writing from Olympia, Oregon, says: "A strange and beautiful tree has lately been found here, which is from one to seven feet high, with a leaf resembling that of a pear, and the trunk and branches those of the orange. The upper side of the leaf is coated with gum, of the consistence of oil, and it is highly fragrant, the odor resembling that of bergamot or ripe fruit. It will be highly ornamental and a desirable addition to our gardens, as it is an evergreen."

Death by Chloroform.—Mrs. Harriet N. Richardson, of North Adams, Mass., died a few days since from inhaling chloroform, administered to her by Dr. C. E. Streeter, who makes the following statement concerning the case:—

"The amount of chloroform inhaled was about two-thirds the usual quantity, and the time of inhaling it was much less than usual, the breathing easy and the pulse regular, with no unpleasant sensations except the prickling of the hands, which is no uncommon thing. As soon as insensibility was produced, I commenced the operation. I extracted four teeth, and was about to remove the fifth, when suddenly the breathing ceased, the pulse could not be felt, the face became deadly pale, the eyes vacant, the lips livid. Instant dissolution appeared inevitable. The face was wet, fresh air admitted by raising the windows, artificial respiration was immediately commenced, when she gave two or three short respirations; then to all appearance life was extinct without a struggle or motion of any part of the body, and all within two or three minutes from the first symptoms of alarm. Still artificial respiration was continued. The physicians were called in, but all to no effect. Dr. Babbits, the first one in, had no hesitation in pronouncing her dead at first sight, and no power on earth could raise her in about five minutes after the alarming symptoms came. Still, for the gratification of the friends and the people present, a battery and other means were resorted to, but without any possible hope of raising her. Signs of death were too apparent to be mistaken."

Educational Convention in England.—The N. Y. *Tribune* has received from Chas. F. Stansbury, an American resident in London, a letter to this effect: The Society of Arts, Manufactures and Commerce of London, of which Prince Albert is President, and which reckons among its prominent members the most zealous and active social reformers of England, will hold this summer, commencing on the 20th June, an Exhibition illustrative of the state of popular education in the various civilized countries in the world. Mr. Stansbury has been appealed to by the Secretary of the Society to aid in carrying out its views with reference to the American portion of the Exhibition, and accordingly has undertaken the task of a correspondence calling the attention of his countrymen to it. His wish is that our Common School system should be worthily illustrated at the Exhibition in question, both for our national repute and the weal of the various States of Europe. The Exhibition will embrace plans and models of school buildings and rooms, and examples of school furniture of every description, together with the books, apparatus, maps, &c., used in imparting instruction to the young. Along with these the Society will be glad to receive written memoirs upon the Common School system of the United States, its moral, social and political results, together with descriptions of any new and successful methods of teaching.

VARIETY.

The sea is the largest of the cemeteries, and its slumberers sleep without a monument. All grave-yards in other lands show some symbol of distinction between the great and small, the rich and the poor; but in that ocean cemetery the king and the clown, the prince and the peasant, are all alike undistinguished. The waves roll over all—the same requiem song by the minstrelsy of the ocean sung to their honor. Over their remains the same storm beats, and the same sun shines; and there, unmarked, the weak and the powerful, the plumed and the unhonored, will sleep on until awakened by the same trump, when the sea will give up its dead.

Laffitte said that he had never been a worshiper of Napoleon; but then he had an opportunity of convincing himself that the Emperor possessed, in the highest degree, the art of popularity. "He was very confidential with me," said Laffitte, "spoke without reserve, and once made a striking remark concerning our nation. To govern the French," said he, "one must have arms of iron and gloves of velvet."

The mortality in London for the week ending April 1, was 1487, which was 167 above the average. Of this number 237 died of tubercular diseases, 175 of diseases of the brain, nerves and senses, 61 of diseases of the heart and blood vessels, 236 of diseases of the lungs and other organs of respiration, 49 were sudden, and 175 of *violence, privation, cold, and intemperance.*

The longer we live in this world of roses and thorns, the more we learn to revere those philanthropic axioms: "Bear and forbear;" "Live and let live;" and to reverence a faith whose Christian founder has made it a condition of having our trespasses forgiven that we should forgive the trespasses against us.

The *Democratic Press*, of Chicago, says there is a western boy in that city who is sixteen years of age, and measures six feet eight inches. He is as straight as a tall Lake Superior pine, intelligent, and proud of being a western product. His father and mother are both larger and taller than himself.

In New York, the number of deaths for the week ending April 24, was 428. The population of London is 2,362,236; of New York about 650,000; the former city, even in the increased mortality of the week mentioned, is healthier than the latter.

A subscriber writes to the editor of a Western paper:—"I don't want your little paper any longer." To which the editor replies, "I wouldn't make it any longer if you did; its present length suits me very well."

Habit has a wonderful rule in human affairs; it consecrates and preserves all our acquisitions, whether moral or intellectual—and memory itself is little more than habitual knowledge.

Happiness is a butterfly, which, when pursued, is always just beyond your grasp, but which, if you will sit down quietly, may alight upon you.

There would be few enterprises of great labor or hazard undertaken, if we had not power of magnifying the advantages which we persuade ourselves to expect from them.

A person who undertakes to raise himself by scandalizing others, might as well sit down upon a wheelbarrow and undertake to wheel himself.

Under the head of "Pretty Good," the Cincinnati *Columbian* says that Miss Eliza Pretty was married to Mr. John Good, on Friday last.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial* bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P. M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

The Sabbath Recorder.

BEST METHOD OF CONDUCTING SABBATH-SCHOOLS.

An Essay read before the Seventh-day Baptist Eastern Association, May 25, 1854,

BY H. H. BAKER.

The fact that impressions made upon the minds of the young are lasting, though their existence is sometimes concealed for years, furnishes strong inducements to early impart religious instruction. It should be *early*, for then it can be communicated successfully. The observance of the Sabbath, and the bringing of our children weekly within the stated means of grace, vitally connects the Sabbath-School with the welfare of our churches, and the interests of our denomination. A system of religious instruction, adapted to the wants of children, and entrusted to careful instructors, will ever exhibit a majority of faithful and intelligent Christians, who had thus early become familiar with the doctrines and principles of the Bible.

The great object of every Sabbath-School should be, to present truth to the mind, and bring it to bear upon the consciences of those who may be early affected by its heavenly teachings. To accomplish this, a goodly number of faithful brethren and sisters must labor steadily from Sabbath to Sabbath, and thus by overcoming every discouragement sustain and build up this noble institution. In a word, a well-regulated Sabbath-School goes very far towards preventing the violation of the Sabbath; it also inspires a love for biblical study, and elevates intellectually and morally the great mass of the people.

Advantages.

It is no uncommon event, that persons are led to reflect seriously upon their wayward course, and turn to the Lord, and embrace salvation, through the influence brought to bear upon them in the Sabbath-School, by there beholding the anxiety of many to sow the good seed of the kingdom, and bring forth the fruits of peace, love, and obedience. The influence of children over each other is also a consideration of no small magnitude, which can here be rendered effectual; here they form habits which will affect them in all the relations of life.

Duties of the Church.

Let us for a moment inquire what are the duties of the church in sustaining the Sabbath-School? That the members of the churches generally are much less engaged in the Sabbath-School than they ought to be, there can be no doubt; yet would they but give the School their presence, and thus practically show that they have an interest in its welfare, they would produce a salutary influence; it would encourage both teachers and scholars, and stimulate them to greater diligence. In short, we regard it as peculiarly fortunate, that in every Sabbath-School a place may be found, where the services of all may be employed in promoting the cause of our blessed Redeemer.

Duties of Parents.

Parents should not think that upon the Superintendent and teachers, alone, rests the responsibility of the attendance of their children. Very far from this; they are as parents bound to see that their children attend punctually and regularly. It must indeed be very mortifying to children, where any little inattention on the part of their parents is the cause of their coming late, or remaining at home. Parents should manage the duties in their families on the Sabbath, so that their children can be punctual; and if any good cause exists why they should be absent, the Superintendent should be made acquainted with the cause, that the children may not be censured, or considered negligent. "Remember the Sabbath day, to keep it holy," is the language of the fourth command; therefore accompany your children to the Sabbath-School; for how as parents can you expect God to bless you, if you neglect to train up your little ones "in the nurture and admonition of the Lord?" Let your children see that you love the Bible, and that you regard it as a precious gift, and are anxious for them to reap its advantages. As you prize your children, strive to secure for them the benefits of the Sabbath-School.

Organization.

It has been found necessary, in every well-regulated School, to have a Superintendent, who shall take the general supervision of affairs; a Secretary, who shall have charge of the records; and a Librarian; also a complement of Teachers to instruct the several classes. In fulfilling the duties assigned me, I trust it will not be deemed out of order to briefly advert to the duties and responsibilities of these several officers.

Superintendent.

The importance of this officer, I fear, is but seldom felt. I have known Superintendents who did but little more than simply to open the School, and perhaps give some little direction to its exercises. The Superintendent must be regarded as the principal of the School, and once having the control, on him rests the responsibility of improving and promoting its interests. He has an influence paramount to any other individual, and this influence is necessary for its benefit and support. The Superintendent should of course be a young man possessed of good natural abilities, of irreproachable character, as the School, in the estimation of the public, will be understood to partake somewhat of the standing of its presiding officer; his standing therefore in society should be good, and his Christian character fully establishad. Any injudicious appointment of a Superintendent is most severely felt by the teachers, and therefore to them should be intrusted the selection, rather than to those who merely compose the congregation. And allow me here to say, that the pastor should be exempt from this service, for I am of the opinion, that in nine cases out of ten, the prosperity of the School would be better secured in other hands. The term of office, I am inclined to think, should be annual, the Superintendent being subject to reëlection. It is to be expected, that the Superintendent will lead in the devotional exercises, and the more interest he takes in the School, the more his influence will be felt, and the stronger will be the bond which unites the teachers and scholars to himself and each other.

What an interest it should awaken in the church, to see the superintendent and teachers laboring to bring within its pales those little ones of whom the Saviour said, Suffer them "to come unto me, and forbid them not, for of such is the kingdom of heaven."

Teachers.

All Sabbath-School teachers should feel, that their labors are designed not only to improve the habits of the children, and store their minds with truth, but to persuade them early to embrace the Saviour, that in the end they may have everlasting life. The teacher should never be weary in well doing, for the influence which they exert, under God, may be the means of saving a soul from death, and hiding a multitude of sins. The duties and obligations of a Sabbath-School teacher are of no ordinary character, and it is to be feared, that teachers may think lightly of their station. Perhaps some take no time through the week to prepare, and leave all for the Sabbath, while others may come before their classes without any preparation at all, feeling satisfied with simply coming to the church at the appointed time, hearing their classes recite what they had learned, and returning when the school was dismissed. No, dear teacher, if you think this all, you entirely mistake your duty; it is your business to induce children to love and serve God. Teachers should be punctual, always in their places, and they are not at liberty to attend or not, as their convenience or comfort may suggest, as no apology will atone for neglect; for what is seen in the teacher is felt at once by all the scholars in the class. Should the recitations close before the school is dismissed, the teacher ought to fill up the time with the class with some comments of a practical nature, for a teacher truly must be indifferent, who can find nothing with which to interest children for a few minutes.

Before I dismiss the teachers, I wish to say, that the display of gold chains, or numerous finger rings, or superfluities of any kind, in my humble opinion, must prove detrimental to the spiritual interests of children; and above all, the use of tobacco is greatly to be deplored. With what care should we regulate our conduct as teachers, so as not to cast a stumbling block in the way of others, or offend one of these little ones.

Classification.

In arranging the classes, inequality in age and size, as far as practicable, should be avoided, for where any great difference exists, the larger are very likely to feel disaffected. The number in each class must vary, of course, according to circumstances, but there ought not to be more than eight in any one class where there are a number of classes, and, circumstances permitting, I would never allow more than five. To avoid everything like giving precedence, I would suggest, that the youngest class be called the first, and be seated in front; the next older the second, and so on; and also that when a scholar is transferred from one class to another, it should be done by the superintendent, and the reasons for so doing stated.

Bible Class.

During the eventful period of from fourteen to eighteen, we find it very difficult to enlist young ladies and gentlemen in the Sabbath-School unless as teachers; therefore, in every church there should be a Bible Class in which they can become interested, for during this period, their characters generally become fixed for life, and in many cases for the spirit world.

Religious Exercises.

As every moment of the time is precious, the opening exercises should be conducted by the Superintendent in a short and impressive manner. The usual exercises are singing and prayer. At this time every teacher and scholar should be in his or her seat. In singing, the tunes selected should be plain and easy to be understood, that with them every child may soon become familiar; and in no case should tunes be introduced and sung when only a few can participate.

It would be well, we think, in teaching music as a science, that the school should frequently convene for that purpose, as prudence would dictate, that learning music should not be allowed to conflict with the teaching of the great truths of the Bible.

During prayer, each teacher should see that every member of his class is in a suitable posture, and observes perfect silence. The prayer should be short, and in such language as children can comprehend; for if the prayer is tedious, the consequences are always injurious.

Instruction.

The teacher's duty consists mostly in explaining and enforcing the lesson, as every lesson contains truths which should be carefully presented; and yet I have known schools, in which the whole exercises consisted in simply reciting portions of the Scriptures. The scholar should be taught to reflect and apply, as well as to commit to memory the language of the Bible. The asking of questions, properly arranged, is probably more profitable to children than any other mode of instruction. The teacher, in most cases, can intersperse questions of his own with those that are printed, and thereby increase the interest of the exercise.

Teachers should not let any subject pass without being fully understood, for every precept, example, or promise, should be used to communicate useful instruction. The teacher should lend all his energies to make the lesson interesting and useful, and the interest will grow as the knowledge increases.

I would here suggest the propriety of having the scholars in each class sufficiently advanced, present and read an essay on some Bible subject selected by the teacher; this would aid them materially in remembering those portions of scripture about which they write.

Discipline.

Each teacher, as well as others, must aid in the observance of good order by strictly obeying the rules themselves, as they can materially assist by setting a good example. The teacher should strive to keep every one of the class interested in the subject of the lesson during the time of school, and no scholar should be permitted to leave his seat, without liberty from the superintendent.

Time of Attendance.

From an hour and a half to two hours may be profitably spent on each Sabbath; and where schools can consistently meet in the [illegible] to the exclusion of an afternoon service.

In many places the Sabbath-School is discontinued in the fall of the year, at the very season generally considered best for instruction. I know that it is said, "the days are short, and traveling unpleasant," but if our common and other schools are better attended at this season of the year, then why should it not be so with the Sabbath-School? Would not the same reason that would suspend a Sabbath-School, hold good in suspending public worship during the same time?

Records.

The records of every school are of great importance, and should be kept by the Secretary with great care. The *name, age, residence,* &c., and also the names of the parents, should be made a subject of record. The general transactions of each Sabbath, embracing the exercises, the number present and absent, names of visitors, with any other incidents worthy of note, should be recorded. If such a record had been kept in all of our schools, and continued to future generations, it evidently would be very interesting to look back and see in what school and by whom our fathers and mothers were early instructed in the truths of the Bible.

Books.

Those books which bring the scholar in direct contact with the Bible, I should think the most valuable, and there ought to be in every school a system in teaching the scriptures, which should be thoroughly attended to by all. It is very desirable that the scriptures should be studied systematically, and no doubt the use of references will open new channels for thought and reflection. I find by experience, that requiring the scholars to examine the references, and perhaps repeat some of them, is well calculated to interest and give them enlarged views of revelation. Much labor is evidently lost, by presenting before the mind at one time a variety of subjects, differing widely from each other in their import. How valuable then must be a series of definite subjects, which gradually, yet clearly, lead the mind through all that relates to its faith and practice. In Sabbath-School literature, as a denomination, we are remarkably deficient; yet it is believed that the "*Pearls*" will supply the deficiency on one hand, while we hope at an early day to see the biographies of such a Joseph Titsworth, with works on history and various topics, to supply the other.

Library.

The Librarian should devote particular attention to the library, and carefully examine all the books proposed to be added; also see that they are of a religious and appropriate character.

Funds.

There are expenses necessarily incurred in sustaining every Sabbath-School; such, for instance, as furnishing text or class books, books for records, replenishing the library, &c. &c. It therefore should be among the first duties of the church and congregation, to provide promptly and cheerfully for the expenses of the school.

Rewards.

It is generally conceded, at the present day, that rewards should be dispensed with, because they foster the spirit of pride in children, and because no rules can be adopted to govern their distribution without engendering dissatisfaction.

Addresses.

It is customary in many of our schools to have a short address at the close; and especially should a distinguished stranger happen to be present, the teachers are requested to be as expeditious as possible, and give him an opportunity. I am of the opinion, that there is not sufficient advantage in these addresses to justify the suspension of the regular recitations.

Anniversaries.

It is evident, that much good must result from officers, teachers, and scholars of various schools, collecting on some appointed day, and with the patrons engaging in those festivities suited to the occasion.

Conclusion.

In conclusion, your Committee would say, that if these suggestions should commend themselves to those engaged in this great and noble work, we shall hope to see their fruit in after days. Our labor, brethren and sisters, should be to extend the influence of that religion which we profess and love, and for us as a denomination who claim to hold forth the *whole* truth, "there is enough to do; this is the time to do it; we are the persons to do it; and wo be to us if we *refuse, neglect,* or *delay* to do it."

For the Sabbath Recorder.

COMMUNION—BY S. S. G.

Before entering directly upon the subject of Communion in the Lord's Supper, I wish to make some remarks upon the subject of Christian unity, or union, as the true basis of Christian communion.

The unity of the church was of such importance as to draw forth the most earnest prayer of Jesus for its accomplishment. The prophetic eye of Christ evidently saw the divisions which would arise among his followers, and what sharp and bitter contentions would ensue. The heart of Jesus must have been wrung with anguish as he wept over the acrimony of the coming future, and he prayed that it might be averted. In that prayer, every true disciple sympathizes. Many have been and still are sighing over the divided state of God's people, and distracted because divided. Prayers from a thousand hearts are daily ascending for the full answer of the prayer of Jesus. Such have encouraged themselves with the promise, that the watchmen will yet see eye to eye, and, that the Lord will yet bring Zion into union and harmony. But while such have been the feelings and desires of many, yet to this day, divisions and subdivisions continue, yea, even increase and multiply. It therefore becomes a serious question, how can this wide spread evil be checked, if not rooted out? How can Christians manifest that unity for which their Redeemer, in his last hours, prayed so intensely, and which he died to accomplish? Christian unity seems to me to be a question of the first importance among the momentous ones which are agitating the world at the present day.

Christian union, like every other truth, must rise on a right foundation. In the shaking of the heavens and earth during the last days, everything that could be was to be removed. The day was to try every man's works, and if any build wood, hay, or stubble, all such combustibles will be consumed, for the day is to be revealed by fire, viz: the fire of truth. Every doctrine or practice is therefore to be tried—is to be tested. Let us then inquire after a true basis of Christian union.

First, Negatively, mere matters of opinion can never be the true basis of Christian unity. Such is the construction of mind, that unanimity of opinion is impossible. The field over which opinion ranges is world-wide, universe-wide. As the finite is but a scintillation of the infinite, the whole of finity during eternal existence can never equal infinity. There must, therefore, exist an infinite mental variety, an infinite number of opinions, dogmas, in order that finity even approximate infinity. To illustrate, take the opinions that have obtained, and do still obtain, concerning sin. A correct absolute opinion of sin would involve the "personal history of every man, his acts, temptations, wants—his opinion of God, of law, of personal freedom—his theory of virtue, his decisions whether sin is an act or state of mind, of the will or of the heart," &c. Now, as no man can ever know all this, and as every man will have his own knowledge for himself, and not for another, and will form his opinion what sin is according to his own experience, reason, conscience, light, &c., it follows, that no two persons will ever form exactly the same opinion of sin. Nearly the same may be said concerning every other subject. To require anything like uniformity of opinion as the basis of Christian union, is therefore impracticable. And yet, for ages the experiment has been tried. The hydraulic power of theology has aimed at forcing the human intellect into one mold. The iron bedstead has been erected, and by decapitating some, and stretching the muscles of others, it was thought a dead level of opinion could be obtained. And perhaps that infernal machine did once make some advances towards it outwardly, during the reign of ignorance and terror. But since light has shined on the human mind, and awoke the inspirations of living souls, the thing is impossible. There is scarcely any one subject that even two honest persons have the same opinion concerning. Opinions are the judgment formed by the mind concerning a subject under consideration. Now, however honest the seekers after truth may be, all can see, that of necessity there must exist almost an infinite variety of judgments formed relative to various subjects investigated. The highest conceptions which any one has of truth, at any period of his existence, must be the rule of duty for him at that time. If he be honest in his search after truth, he may approximate more towards pure abstract trut . Two or more such persons may therefore be gradually converging towards pure truth, and a unity of opinion or of judgment concerning that truth. There is reason to think that the Christian world is thus approximating towards a greater unity of opinion concerning God, Christ, redemption, heaven, hell, &c. Although Christians have always had the same Bible, yet even honest opinions have been formed concerning what are usually termed the fundamental doctrines of religion, which were the very antipodes and antagonisms of each other. How different were the opinions of Calvin and Servetus concerning God, Christ, and the plan of salvation. Once the opinion obtained, that non-elect infants were damned, even though they died previous to their natural births. Turtullian was of the opinion, that such a sense of justice would fill the minds of the saints in heaven, that they would exult and rejoice as they contemplated the agony of the damned in hell. The great Origen was of the opinion, that the plan of salvation necessarily involved the ultimate redemption of all intelligences, while comparatively few hold that opinion in modern times. Many Christians hold that God has elected to everlasting life one portion of mankind, and reprobated to everlasting death the other. Some maintain the certain perseverance of every true Christian in holiness; others, that even the best of them may be lost. Some are of the opinion, that man's will is free; others, that it is necessitated. Some, that conversion precedes regeneration; others, that regeneration precedes conversion. Some are of the opinion, that the Bible teaches the personal reign of Christ on earth; others think it teaches the contrary. Some are of the opinion that Christ's second advent is near; others, that it is remote. Some hold to a literal resurrection of the body; others do not. Some, that there are two distinct resurrections; others, that there is only one. Some, that the resurrection immediately succeeds death; others connect it with the final destruction of the earth. Some, that the day of judgment is a distant, specified day; others, that it is continually transpiring. We might extend these remarks almost ad infinitum. Is it not plain, that any effort to bring about Christian unity based upon a uniformity of opinion must prove abortive? (Remainder next week.

DANGERS OF TEMPTATION.

A minister called on a poor woman not long since, at her request, to whom she gave the following effecting narrative of herself and her husband:—

She had been married, she said, about twenty years. At that time she was a teacher in the Sunday-School. There she became acquainted with her future husband. He, also, was a teacher in the same school, and a young man of piety and talents. He became the superintendent of the school, and was accustomed to take an active part in all the social services of the church. Having the gift of prayer and exhortation, some of his Christian friends urged him to study for the ministry. He declined, however, and entered into business. Several years passed away.

At length he began to frequent the society of gay and worldly young men, went with them to the theater, and gradually formed the habit of drinking liquor. A neglect of his religious duties was a natural consequence. At length he became an habitual drunkard. The result was the loss of his employment, which was the sole support of his family, and a separation from his wife. For two years she heard nothing of him. After much anxious inquiry, she learned that he had been taken up in the streets as a vagrant, and put into the Tombs. There she was told that, having given every evidence of insanity, he had been removed to one of the institutions for the poor near the city. Further inquiry showed her that he died soon after, a miserable maniac, in the poor-house.

The minister who called on the widow of this once happy young man, as above stated, found her living in a room of a small house, where she kept a little candy-shop, by which she supported herself and a daughter of about thirteen years.

The narrative, as it was told with emotion and sorrow, deeply affected his heart, and awakened many reflections. He could not but think especially of the Apostle's admonition: "Let him that thinketh he standeth, take heed lest he fall." And he is induced to give publicity to the narrative, because it teaches an impressive lesson of human weakness, and illustrates forcibly the power of temptation, and the blighting, blasting influence of intoxicating drink.

Facts such as this stand as beacon-lights, to warn others of the ruin which is sure to overtake them if they pursue a life of irreligion and profligacy. They show us what miserable creatures we are without the grace of God, and especially they solemnly warn the young to ponder well their steps, and take heed to the first incoming of temptation.

BEGINNING FAMILY PRAYER.

The commencement of this sacred and delightful duty must be attended by difficulties, where the head of the family has for years neglected it. A middle aged man of great respectability says:—

I have never done anything since I became a Christian which required so much self-denial, and which was so truly a bearing of the cross, as beginning family worship. I felt that it was a duty, from the time I devoted myself to the service of Christ; but I shrunk from its performance so painfully, that day after day, and week after week passed away without my attempting it. At length conscience remonstrated so loudly, and my conviction that it was a sin to neglect it was so strong, I determined to make the effort to perform it the next morning, cost what it would. It occasioned me a wakeful night; again and again I implored strength from on high. I was constitutionally timid, and when the morning came was much agitated.

Before breakfast I said to my wife, "I feel, C——, as if we ought to have prayer in the family. We have all souls to be saved, and need God's blessing. I am sure you will not object to it." "No," she replied; but the tone in which she said it was not encouraging. When we arose from the breakfast table, it seemed to me the children had never been so noisy before, and it required an effort to request them to keep silence and be seated. They did so, but I felt that their eyes were fixed wonderingly upon me. I took the large Bible from the shelf and sat down. I wished to preface the service with some remarks, but I could not trust my voice, and I opened the book and read the first chapter that presented itself. I then knelt, and with faltering voice began to address the Creator. But my hesitation soon passed off. I knew not why it was, but during the performance of this service, my soul was filled with thoughts of God's great goodness in permitting me to approach him, and to place myself and those dear to me under the shelter of his protecting love, that I forgot the presence of others, and poured out my heart in supplications for his blessing with as much freedom and fervor as I had ever done in secret. When I arose, I perceived my wife's eyes were moistened with tears.

The conflict was over—the duty was entered on—and the peace which follows the consciousness of having done right, came into my heart. Prayer with my beloved ones was no longer a burden, but a delightful privilege; and ere long I had the satisfaction of knowing that the heart of my companion ascended in full unison with my own to the throne of grace. I can now speak freely in my family of the value and sweetness of this service; and to many of them, I believe, the hour of prayer has become one of the most highly prized of all the day brings us. [Messenger.

THE MEMORY.

OF A WOOL CLEANER.

A minister in Wiltshire, walking near a brook, observed a woman washing wool in a stream. This was done by putting it in a sieve, and then dipping the sieve in the water repeatedly, until the wool became white and clean. He engaged in conversation with her, and from some expressions she dropped, asked her if she knew him.

"O, yes, sir," she replied, "and I hope I shall have reason to bless God to eternity for having heard you preach at W——, some years ago; your sermon was the means of doing me great good."

"I rejoice to hear it; pray what was the subject?"

"Ah! sir, I can't recollect that, my memory is so bad."

"How, then, can the sermon have done you so much good, if you don't remember even what it was about?"

"Sir, my poor mind is like *this sieve;* the sieve, does not hold the water, but as the water runs through, it cleanses the wool; so my memory does not retain the words I hear, but as they pass through my heart, by God's mercy, they cleanse it. Now I no longer love sin, and every day I entreat my Saviour to wash me in his own blood, and to cleanse me from all sin."

Truly, a *practical* memory is the best memory.

OF A TRADESWOMAN.

A woman went to hear a sermon, wherein, among other evil practices, the use of dishonest weights and measures was exposed. With this discourse she was much affected. The next day, when the minister, according to his custom, went among his hearers, and called upon the woman, he took occasion to ask her what she remembered of his sermon. The poor woman complained much of her bad memory, and said she had forgotten almost all that he delivered. "But one thing," said she, "I remembered; *I remembered to burn my bushel.*" A doer of the word cannot be a forgetful hearer.

MORE THOUGHTS ON ORDINATION.

We are well persuaded, that the Christian Ministry is not an institution of man's devising. And though it be the duty of *all* Christians to proclaim their Master risen from the dead with power to save; and the privilege of every one, who chooses, to appoint meetings, here and there, for the purpose of exhorting sinners to be reconciled to God, and indeed, to avail himself of the opportunity, whenever and wherever he can find an assembly willing to listen; we are, nevertheless, persuaded, that some are designed by the Head of the Church to be exclusively dedicated to the work of both preaching and teaching. We believe, too, that their designation to this work takes place previous to any choice made of them by the churches to fill the pastoral office.

But on this point we need not enlarge, as we had occasion, some months ago, to express ourselves upon it with sufficient fullness. The only question we care about discussing now, has respect to the formality of ordination. Is it necessary that those persons whom the Head of the Church designates to the work of the ministry, be formally set apart to their work by some ceremony of a public kind, previous to any choice made of them by churches, respectively, to fill pastoral stations?

Our answer to this is, first, that the fact of their being furnished with suitable gifts is evidence of their designation by Jesus Christ to the work. And being thus designated, are they not already *ordained?* The Head of the Church ordains his own ministers. (John 15:16, Jer. 1: 5.) As with the Apostles, so with all others to whom "a dispensation of the gospel" is committed, (1 Cor. 9: 17;) the power of the Holy Spirit coming upon them (Acts 1: 8) to furnish them with gifts for the work, is their *ordination*—their authority to go out and preach, baptize, and teach. It is, therefore, simply a question of fact, whether the Holy Spirit has, or has not, thus designated and fitted them for the work. If He has, no man has a right to forbid them.

But, in the second place, it is the duty of the church, or churches, of which the persons so designated are members, to give their concurrence. To refuse it is rebellion against the Supreme Authority. Churches have no power of legislation in matters of this kind. Their duty is merely to *ascertain* what is the will of Christ, and then to take out of the way every thing that might prove a hindrance to the execution of it. Seeing in any of their members the evidence of their ordination to the ministry, it is their duty to encourage them, to urge them forward, indeed to do all in their power to induce them to commit themselves wholly to the work.

In the third place, it is not necessary, that *persons thus ordained* by Christ to the ministry pass under the hands of a Presbytery. We have shown, already, that there is no scriptural authority for the Imposition of Hands upon those who are about being inducted into the pastoral office; and there is just as little for the practice of it upon those who are about entering upon the ministry, simply, without reference to the pastoral office.

But is not ceremony of some kind requisite? Should there not be some formality, by which it shall be signified to the public, that a brother, having separated himself from common business, is about devoting his whole attention to the ministry? We think there should. Not only should the concurrence of the church in what Christ has already done be given, but that concurrence should be manifested, in some way, to the public. Not but what the brother's right to exercise the ministry is sufficiently authenticated by the gifts with which he is furnished; only it is necessary, that he be fully assured that he *is* thus furnished. Whether he is, or not, it is the right and province of the church to determine. The brother may very much err in the judgment which he passes upon himself. He may suppose himself to be gifted for the ministry, when he is not; and in order to settle the question, it is proper that the judgment of his brethren be taken. But the brethren being satisfied, some formality by way of signifying their satisfaction to the public is suitable and becoming.

But what shall this formality be? We answer, any formality which is not inconsistent with the nature and spirit of the Christian Religion. If the church chooses to call in the aid of a council of ministers, have a sermon preached, a charge given to the candidate, together with the other ceremonies usually practiced among us, it has a right to do so. But we repeat, what we have said already, that the essence of ordination does not lie in these things, and that the candidate is, scripturally and validly, ordained without any of them. The *vote* of the *church*, approving his undertaking the ministry, is in reality his ordination, as far as the work of men is concerned; and if the other ceremonies are super-added, it ought to be distinctly understood, that they are brought into requisition merely for the purpose of signifying the act of the church to all others concerned.

Above all things, it ought to be understood, that the only authority, under the great Head of the Church himself, by which a minister holds his office, is that of the church to which he belongs. He does not receive it from a Presbytery. It was not conferred upon him by the Imposition of Hands. He does not hold it at the discretion, and will, of a council of Ministers, Association, Conference, or any thing of the kind. He holds it as a gift from the church. And on this account, we have some fault to find with the usual form in which ordination certificates are made out. They are usually got up by the council of ministers employed on the occasion, and signed by them only, insinuating that the ordination had come from them rather than the church. We think the certificate should be given by the church, signed by its own proper officers; and if the ministers in council sign it, they should sign it simply as servants, or agents, called in by the church.

We may, possibly, have more to say at a future time. T. B. B.

MISSIONARY CIRCULAR.

DEAR BRETHREN:—

The Board of the Seventh-day Baptist Missionary Society now have under their direction two foreign missions, with four missionaries and their families dependent upon the churches through them for their support, and for the means of prosecuting their labors.

The mission at Shanghae in China has been in successful operation for several years, and has been fully and well sustained. For years there has been no lack of funds, when they were wanted, for the support of the missionaries, or to build a chapel and dwellings for the missionaries. The Board now pay to each of the missionaries there seven hundred and fifty dollars a year. The expense of transmitting this amount is many dollars more. The Board are entirely satisfied with the missionaries, and hope to continue and sustain them in that mission so long as God shall in his mercy permit them to live. This we have no doubt is the wish of the churches.

Acting under the supposed wish of the churches, the Board have projected and established a mission in the land of Palestine, and have appointed two brethren and their families to take care of and conduct the mission. Within a few days, the Board have received intelligence of their safe arrival at Jaffa, in the land to which they have been sent to preach the Gospel. The expense attending this mission is thus given to the Board by the Committee on Outfit: Total of goods purchased for outfit, freight, passage, &c., fourteen hundred sixty-nine dollars and fifty-two cents; money advanced, and supposed to be in hand on arriving at Smyrna, five hundred eighty-seven dollars thirteen cents; goods donated by friends of the mission, five hundred forty dollars forty-two cents; amounting in all to twenty-five hundred ninety-seven dollars seven cents. Our missionaries would expend nearly all of their funds by the first of the present month. The funds obtained specifically for the Palestine Mission were nearly all expended in the outfit. Our missionaries have signified that they shall need five hundred dollars each for a year's salary; and the Board voted, at a meeting held on the 9th inst., to pay them that sum. They also voted to send them a remittance of two hundred and fifty dollars each immediately. To do this, the Treasurer will have to send some funds which were not contributed for this mission particularly.

From these statements it will be seen, that the Board have become responsible to our brethren sent far away, to furnish them twenty-five hundred dollars annually, for their support. Beside this, there are other necessary expenses and wants of these missions, that will considerably increase this sum. All this responsibility the Board has assumed to carry out the wishes of the churches in establishing these missions. The Board act as the almoners of your generosity, and have done what they have in the confidence that the churches and brethren would furnish the necessary means to sustain the missions.

Hitherto there has been much want of uniformity in stating the object for which funds were contributed. It is the wish of the Board to carry out the wish of donors. We therefore *request*, that all who contribute shall state specifically the direction which *they wish* their contributions to take. If for *Palestine* or *China, say so distinctly*. All funds sent without a particular designation, will be used for either mission as they may be needed. The Board can have no wish where donors have none, as to which mission shall receive their funds. It would suit us best to have a full Treasury to use in our discretion for either or both as they may need.

Now, brethren, the missions are before you. The missionaries can not labor without support. The Board can not support them without funds. Hitherto the funds have been furnished. We rely upon your increased zeal and liberality to meet and sustain our extending operations.

In behalf of the Board,
J. BAILEY, Cor. Sec.

DR. NOTT'S JUBILEE.—The annual commencement of Union College is to be signalized this year by a special commemoration of the fiftieth anniversary of the venerable Dr. Nott's accession to the presidency of the institution.

"The celebration, which will doubtless be worthy of the college and the men, will take place on the 25th day of July—the day preceding the annual commencement—when a historical discourse will be pronounced by Mr. Justice Campbell, of the Superior Court of New York, to be followed by an address by Rev. Dr. Wayland, of Brown University. In the evening, the President, Trustees, and Faculty, will receive the Alumni in the West College.

SHIPWRECK AND SUFFERING.

To the Editors of the Sabbath Recorder:

The wreck of the ship Winchester, on her passage from Liverpool to New York, and the rescue of her passengers and crew by the United States Mail Steamer Washington, has been pretty extensively noticed in the periodicals of the day, and a deep interest has been universally felt by our fellow citizens in that sad disaster. But from what I have seen in those publications, only a faint idea can be formed of the inboard misery endured by the unfortunate emigrants on board of the Washington after their rescue. The following narrative is extracted from a letter from H. C. Maxson, an assistant engineer on board the Washington. The letter is mostly made up of passages from his journal from day to day, and was sent to a friend, without any expectation of seeing it in print. Believing it would be perused with interest by the readers of the *Sabbath Recorder*, I forward it to you for insertion, taking upon myself the responsibility of its publication, should you deem it expedient to give it publicity.

W. B. MAXSON.

STEAMER WASHINGTON, at sea,
lat. 47. 30, long. 30. 19, May 1.

A gale from the north-west; obliged to reduce the steam, and slow the ship, in consequence of a very heavy head beat sea. Continued blowing throughout the day and night following; sea increasing.

Tuesday, May 2d. The day broke clear, and the sun came out bright. The gale still continues, blowing and piping fearfully. The white crests of the waves, shining in the sunlight, give a grand and sublime view from our noble ship, as she ploughs her way through and over the liquid mountains. At 8 o'clock A. M., saw a vessel on our starboard bow, to all appearance dismasted. Headed the ship for her; and as we neared the strange ship, saw our national flag, so dear to every Yankee, hoisted to the stump of the mizzen-mast, union down—the well known signal of distress. We ran down close to her, and hailed the ship, but could not hear an answer, owing to the roar of the tempest. The next thing to be done was, to find a boat's crew that would dare to trust themselves in a small boat to go off to the wreck. Our first officer, Mr. King, volunteered, and half a dozen sailors ran aft to accompany him. One old man-of-war's-man, made this reply, when asked if he would go in the boat with the mate: "Yes, I would go to hell with him, if he requested it; I'll be one of the crew." The frail bark was launched with much difficulty, and manned by brave men. It slowly neared the distressed stranger. Our decks were filled with the passengers and crew of our ship, each one watching with anxious eyes the boat as it rose on the top of some huge white-capped swell, that threatened to engulf the party. The boat went near enough to the wreck to catch a letter, sealed up in a bottle, addressed to our captain, and then returned. But it was impossible to come along side of the ship. A ball of twine was thrown to the boat, the bottle was made fast to it, and then drawn on board the ship. The letter stated that it was the ship Winchester, of Boston, from Liverpool, with four hundred and fifty passengers; had been sixteen days dismasted, and had lost six of her crew; she sailed with 750 passengers, on the 8th of April; had been spoken by five or six ships, which had taken a portion of them. He requested us to lie by him, as his ship was in a sinking condition, kept afloat by incessant pumping. At times the sea would dash completely over her, and it was impossible to stand on her deck, she rolled about so much. Our poor boat's crew had to remain in the open boat until nearly dark, waiting for the wind to lull, and were obliged to go to the sinking ship at last. They could not get along side, but were hauled on board by ropes, while the boat was dashed to pieces against the ship's side. Each ship set lights, and we laid by her all night, the wind gradually decreasing, leaving a very rough sea.

Wednesday, May 3d. All hands were up before day-light, making preparations to relieve the sufferers. At 7 o'clock began hoisting them on board, one at a time, four boats bringing them off. Continued without intermission until five o'clock P. M., the last boat's trip bringing off the captain, officers, and crew, and some meal, bread, and rice, as we would not have enough for such a large increase of our number. In twenty minutes from the time that our boats were hoisted up, the ill-fated Winchester went down, carrying with her a very valuable cargo, and all the stores and clothing belonging to her passengers. The poor, helpless beings are now on our decks, with no shelter or beds, wet from being in the boats. Many are sick, and all are half starved, having subsisted for the last week on raw oat meal and water. We gave them hard bread for supper, and no water. We could not use our condensers when the ship was lying to, and we had no water on board, depending entirely upon condensing steam, thus making fresh water out of the ocean.

During the night I saw more misery than I ever dreamed of; four hundred and fifty human beings lying on our decks, without as much as a blanket to cover them, and nothing but a sail thrown over them to protect them from the cold night air; old men and women, and little children, exposed and shivering with cold, and a general cry among all of them for water. One man had a broken leg, and was unable to help himself at all. He told me he was almost perished for want of something to eat and drink. I gave him a piece of bread and a bottle of water, and there was no end to the blessings the poor man showered on me. An elderly woman, surrounded by four children, attracted my notice, and I inquired if I could do any thing for her? She said she was from Glasgow, going to America, with her husband and children. They had suffered a great deal on board the wrecked ship. She said, "We had six children when we started; but two of them died, and my poor little Alice, I am afraid, is going;" and she threw her shawl aside, and I saw a sweet little curly-headed girl of three years old, looking as pale as marble. I could not believe that it was living until I placed my hand on its pale brow, and felt it warm with life. She said God had heard her prayer, and sent this ship to their relief. "It is very hard," she continued, "the loss of my little ones, but He has done it for the best. But for His mercy and goodness, we might all have gone down in the Winchester." I called the doctor, and requested him to do all that he could for her and the child. I then retired to my room and wept. I was taught a lesson of reliance and submission to the Divine will. This poor woman suffering from the cold, her clothes all wet, her children crying for bread and water, and shivering in the cold, two of them taken away, and another with the hand of death upon it, all their worldly goods in the bottom of the ocean, none to look to for aid and protection, soon to arrive on a foreign shore among strangers—this poor woman thanking God for his goodness and mercy towards her, and that it was no worse than it was—He had suffered it to be so! I saw a little boy five years old, pale and sick; his father and mother had been carried off in another ship, bound to Quebec, and he was left behind with none to look after him. I tried to find out where he was going, but all he could tell me was that he was going to America. I asked him where he lived before he came on board, but all he would say was, "*to home.*" I told some of the firemen to take care of him, and see that he had plenty to eat and drink. The doctor came to see him and gave him some medicine.

Thursday, May 4th. This morning found four of the emigrants dead—two women, one man, and a child. They had perished during the night. The captain had the cooks up all night, cooking for the emigrants, which is no small job in our little galley. Gave all the people water this morning, and bread and meat at eight o'clock. Weather fine, but rather cold. All hands at work breaking out cargo and taking it aft to make room for the passengers between decks. At seven o'clock P. M., began to lower them down in a boatswain's chair by a watch tackle. Their quarters are on the boiler deck, directly over the boilers, the greater portion of which is used for coal; consequently, it was very dirty and warm. Had them all lowered down by a quarter to ten. They sleep on the naked deck, without beds or pillows, and are so crowded that they have to sit packed away *spoon-fashion* and no room to move about.

Friday, May 5th. I have been among the poor and destitute emigrants for five hours, and have retired to my room sick at heart. I cannot remain on deck without being an eye-witness to scenes that unnerve me. How little do those who read of scenes of suffering and privation, imagine the reality! I sought out the woman from Glasgow, and found her in tears. Little Alice is dying. I brought the doctor, and he could do nothing for her. The poor woman was prepared for the sad tidings. Last night her husband was taken sick, and she wished me to take him to the doctor. She told me her children had been taken one by one, and now he was sick; she could not live to see him die. Here she went into a fit of weeping; and I was obliged to leave to conceal my weakness. I took the man to the doctor, and he gave me hopes of his recovery. I found the little forsaken boy. He too was crying. He told me he was sick, and had no mother. His pale face told the fact more plainly than words. The doctor told me that there were two nuns on board, who promised to do all in their power to aid him in taking care of the sick; and he requested them to take him into their room. I offered to have him washed, and furnish him with clean clothes; but they concluded that they could not take the charge of him. The doctor said that with proper nursing the boy would live; but if left with the rest, he would die. These nuns are persons who have renounced the world, and taken a most solemn vow to live an unselfish life; yet they turn away a poor little sufferer to die. To-day the doctor took the man with the broken leg down in the hold, and set it. He endured the operation without a groan. It has been broken ten days. He was glad to get below, having been on deck, without shelter, ever since he came on board.

I have just been to supper; but had no appetite. There are many on deck who would give all they possess to sit down to a good warm meal of victuals. Many of them are in good health; the hardships endured since leaving Ireland have not made much impression upon them. One of them was complaining about being fed once a day, and wanted to know which meal it was? Some one told him that it was the fashion in America to eat but once in a day, and sleep only on Sunday. He replied, 'I'll never be a fashionable man.'

Seven o'clock P. M. They are preparing another body for the fishes. An old man has died since supper, and in fifteen minutes from the time he breathed his last, he will be buried. He has been feeble ever since he came on board the steamer. I think his wife will follow him before we arrive in New York. It is astonishing how hardened some people become from witnessing such scenes of distress. An officer of the Winchester told an old sick man that he had better jump overboard now, while he could do it himself, and not wait for the sailors to have to do it for him.

Sabbath, May 6th. Weather quite pleasant; the people more comfortable. To-day inquired for the Scotch woman, and was told her child was dead and buried. The doctor has been at work all day, and is getting discouraged. The emigrants appear to have no sympathy for each other; one may die in their midst, their dying words begging for water, and they will refuse to give him a mouthful, for fear of being thirsty before it is served to them again. This afternoon I saw the little boy I have spoken of crying for water, and a little girl sitting by him with a bottle half full. I asked her to give him a drink, but she grasped the bottle with both hands, and held it as tightly as if I had asked for her life. I gave the boy a bottle of ice-water, but suppose some one stole it from him the moment my back was turned. At 7 P. M. buried another man.

Sunday, May 7th. Cold, damp air, and foggy. Found two dead this morning, and another at 12 o'clock. The doctor says they die of starvation. They have become so weak from hunger, thirst, and cold, that medicine cannot help them. They require nursing, which they cannot get here. The water is very cold, and every indication of ice in the vicinity. Made to-day 237 miles.

May 8th. Fog still continues; wind fresh from S. W., and quite cold. Early this morning slowed the ship to clear an iceberg. Sounded in forty fathoms of water. To-day Capt. Fitch gave orders to put all hands on allowance of bread, not having enough to last us home. We begin to feel the bad effects of having the ship so full. After having a four-hours watch in the hot engine room, it would be very pleasant to find a clean spot to sit, and breathe the pure air; but no such place can be found; and below decks, a very sickening odor arises. With favorable weather, we hope to be in New York in four days. Our decks are too small for eight hundred people. My little room has to accommodate four of us engineers, one room having been given up to the passengers.

Tuesday, May 9th. Fog cleared away, and quite cold, more like December than May. I went with one of the mates below, and found six of the emigrants dead. The doctor said they died of suffocation in their close quarters; but there is no other place for them. The forecastle is full, having to take all the sailors from the wreck. Many of the emigrants have been taken into the cabin. The doctor has turned his room into a hospital. He is nearly worn out, and can do but little for them. I saw the Scotch family this morning. The man is very sick and weak. I fear his days are numbered. An Irish woman called my attention to her children lying sick. She told me that one of her children died last night. She said, 'Sure it was a sad day we all left old Ireland.' I tried to comfort her the best way I could, telling her we would soon be in New York, where they would all be taken care of. If I could annihilate time and space, how soon would the Washington be reported in New York, with her cargo of misery and poverty!

Four P. M. Just buried a woman. She was alone, going to New York to meet her husband. This afternoon, took the names of all the passengers and crew of the Winchester, and found them to number four hundred and eighty souls. But death will soon reduce their number.

Twelve o'clock, midnight. I have just been down among the emigrants, and found some of them very sick. I took a bottle of ice-water with me to give to those who needed it most. It was as a drop in the bucket, but it was all I had to give. Since four o'clock there have been three deaths, making nine to-day. I admire the conduct of Mr. King, our first officer. He is continually using his utmost endeavors to alleviate their sufferings. He is a regular visitor at all the tables, gathering up the fragments to bestow on some sick person. The emigrants all consider him as their preserver, and many of them will burst into tears when he is speaking to them.

Wednesday, May 10th. This is the day we should have arrived in New York; but we are a long way off. The weather is pleasant, and the sea smooth. This afternoon gave all the emigrants a glass of rum. The little children would drink it down clear, and not make a face about it either. I went with the doctor to see the man with a broken leg—he is doing very well. Many of the poor people are too sick and weak to go on deck, and are obliged to stay below in the sickly atmosphere. On making particular inquiry, I learned that the forsaken boy I have mentioned had a little sister on board. His father is in America, and sent home for his children. They were in charge of their uncle, who went to Quebec in another ship, after the Winchester was wrecked. The little girl is not more than seven years old.

Thursday, May 11th. I went with the first officer (Mr. King) among the emigrants, to see if we could do anything for them. Hoisted up two or three sick women on deck, where they could breathe fresh air. Poor things! I hardly think they will go back again. I pointed out the little boy and his sister to Mr. K. I found them both on the boiler deck, so dirty that I hardly knew them. Mr. K.'s sympathies were at once enlisted in their behalf. We had them taken on deck and washed, and both of us went among the passengers to beg clothes for them. Mr. K. will put them both in his own room. The boy has the measles, and quite a number of the children are sick with the same disease. Death is busy among us, silently doing his work. This morning buried one of his victims. At 12 o'clock were 510 miles from Sandy Hook. At midnight another was consigned to a watery grave.

Friday, May 12th. The sea continues smooth; the ship is nearing her destination, and the emigrants are in good spirits. The prospect of soon finding relief encourages them. Three of their number were buried to-day. At noon were three hundred miles from Sandy Hook.

Sabbath day, May 20th. Weather quite warm and pleasant. Our decks are crowded with passengers and emigrants, each one gazing with anxious eyes to catch a glimpse of the "promised land." A 5 P. M. spoke the steamer Pacific, and requested her to report the loss of the Winchester at Liverpool. All the officers are on deck, looking out for a pilot. There have been four deaths to-day. At 6.30 made the Highlands, and at 9.30 came to anchor at Quarantine. The doctor came off, and would not let us go up to town.

Sunday, May 14th. Thick, foggy weather; ship lying at anchor. Three of the emigrants died since we anchored, and one of the sailors. The latter was down in the hold yesterday, watching the cargo, and asked me for some rum, and told me he was sick. I thought it was a sailor's excuse, and told him to ask the doctor. Poor fellow, he died last night. At 12 o'clock hove up our anchor and went to New York, after putting about thirty sick ones on shore, the poor Scotchman among the number.

This long and tedious passage is over, and I am once more at home. I have witnessed scenes that I would like to forget, and I am almost sick of a "life on the ocean wave."

THE MISSIONARY SHIP "WILLIAMS."—A letter from the captain of the missionary ship "John Williams," received at the London mission-house recently reports a visit to Erromanga, in the New Hebrides. During the stay of the vessel off the island, the very man who leveled the fatal blow at the martyred missionary Williams came on board. He is now a learner of Christianity. The question was put to him why he killed the missionary. His reply was, "White man had been to the island, and had slain his brother and sister. He feared this white man would do likewise, and so he killed him." The island is now to a great extent reclaimed from heathenism by the labors of native evangelists.

ONE WAY TO CELEBRATE THE FOURTH.—A gathering of five or six hundred abolitionists took place in Framingham, Mass., on the 4th of July. Speeches were made by Messrs. Garrison, Phillips, Remon, and others. Mr. Garrison concluded his speech by burning the Constitution of the United States; also copies of the Fugitive Slave Law, the decision of Judge Loring, and Judge Curtis's charge to the United States Grand Jury! The act was followed by applause and cries of shame, &c.

THE NEW MARKET SEMINARY.

The Seminary at New Market, N. J., under the care of Mrs. R. H. Whitford, held its first anniversary on the afternoon of the 4th inst. The exercises took place in a neighboring grove, and were of a very satisfactory character. Some of the pieces showed independence of thought, refined taste, and thorough training. As a whole, they reflected great credit on the teacher and the pupils. The following is the programme:—

My Country's Shame, Thomas B. Titsworth.
War a Curse; Peace a Blessing, Daniel S. Pound.
The Sabbath Morning, Mary S. Titsworth.
Happiness, Emily F. Randolph.
Act and be Happy, Walter G. Ayres.
The Students' Offering, Sarah J. Ross, K. D. Titsworth.
In Hope I am Happy, Elizabeth S. Dunn.
The Treasures of the Deep, E. F. Ross.
Things that cost Nothing, Ellis J. Dunn.
There is Room Enough for All, William H. Smalley.
Spring, Amanda P. Titsworth.
Summer, Rebecca J. Titsworth.
Autumn, Elizabeth F. Ross.
Winter, Elizabeth S. Dunn.
What a Miracle is Man! Allen W. Dunn.
The Charms of the Past, Sarah J. Ross.
Bright Hopes of the Future, Kezzie D. Titsworth.
More Action; Better Men, Sylvester W. Randolph.
Music in Nature, Rebecca J. Titsworth.
A Smile can rainbow a Cloud of Grief, Amanda P. Titsworth.
The Mission of Life, Abel S. Titsworth.

STARTLING DEVELOPMENTS.—The financial circles were startled last week by some developments connected with the New-Haven Railroad Company. It seems that the President, Robert Schuyler, as Transfer Agent in New York, had, by means of false entries, erasures, and other similar practices, issued illegal and fraudulent stock within a few months past to the amount of nearly twenty thousand shares, or two millions of dollars. This stock had been transferred by the President to himself and brother, under the firm of R. & G. L. Schuyler, and by them hypothecated for loans. The firm has been largely engaged in railroad operations, and in consequence of the depression in money affairs, was obliged to suspend payment some two weeks ago. Thereupon the above facts came to light. Of course they have not only startled financiers, but have done much to shake the foundations of public confidence in present financial and stock operations generally.

—Since the above was written, it has come to light, that Alex. Kyle, Jr., Secretary of the Harlem Railroad Company, has been issuing extra stock of that corporation. His transactions are spoken of as small, amounting to only about $100,000, three quarters of which has been swallowed up in stock speculations, and the balance loaned to Mr. Schuyler. The effect of these developments has been to depress stock transactions, and indeed all kinds of business, and cause several heavy failures in New York. Among the failures are Messrs. Blatchford and Rainsford, and Messrs. Barrowe & Son.

FOUR MORE "CHATTELS" SAFE.—The *Detroit Inquirer* of the 20th states that a medical gentleman of that city, while returning to his home at a very early hour a few mornings ago, from a visit to a sick patient, was accosted by a colored man direct from his "old Kentucky home," who urgently requested his advice about some means of getting over the river. He had a wife and two children, one nine and the other eleven years of age, in the outskirts of the city, and the family had walked all the way from Kentucky in night-journeys, lying still during the day-time. They were hungry, destitute of money, and very weary, and the fear of being overtaken after all their wanderings and escapes, and while fairly in sight of their "promised land," made them nervous and agitated. They had fallen into good hands, however, and after a hearty breakfast—the first food they had eaten in twenty-four hours—they were put on board the ferry, and safely landed in Canada.

MISS DELIA WEBSTER.—This lady, as most of our readers know, was indicted some years ago in Fayette Co., Ky., for stealing or abducting a number of slaves. She was convicted and sentenced to the penitentiary of that State for a term of years, and was pardoned out by Gov. Crittenden after she had served the State but a small portion of the time she was sentenced for. Recently some of those old indictments have been revived, and a warrant was issued for the apprehension of Miss Webster, which was served, but the lady being very sick, could not be removed. Under these circumstances a guard of three men was appointed to remain, tend, and watch her. The guard slept at their posts, or were careless, or were seduced, as the keeper of the penitentiary, Craig, it is said, was; anyhow, Miss Webster escaped on the "underground railroad."

FIRE IN THE CITY OF SHANGHAE.—The North China *Herald* of April 6 says: *A fire* was observed to break out at 2 o'clock *yesterday* morning. It originated in a pork shop near the house of the Rev. S. Carpenter, and traversed the street called the Chai-e-ka from the bridge called Ng-haung-jau, destroying the shops on both sides almost to the bridge called Mai-le-jau. Mr. C.'s front gate was burned, but his house being a few roods back from the street, barely escaped. It is said that this outrage was committed by a body of spies, one of whom was caught and was to be decapitated yesterday.

☞ B. F. CHESTER's post-office address is Mystic River, Ct.

The salaries paid to Baptist pastors in Massachusetts, is said to average $372 among 20 pastors in Berkshire, about $300 in Hampden, $650 in Essex, and in Plymouth $500. In other counties no average is stated; individual cases cited show incomes ranging from $1,500 to $300.

General Intelligence.

Abstract of Proceedings in Congress.

FOURTH-DAY, JULY 5.

In the SENATE, the bill to establish a line of steamships between San Francisco and Shanghae, China, was passed by a vote of 22 to 13. The bill for the Suppression of the Slave Trade was passed. The remainder of the day was taken up in a discussion of the vetoed Insane Bill.

In the HOUSE OF REPRESENTATIVES, Gilbert Dean's resignation, as representative of the XIIth Congressional District of New York, was presented. Bennett's Land Bill and the General Appropriation Bill were each discussed for a while, but no action was taken.

FIFTH-DAY, JULY 6.

In the SENATE, Mr. Gillette of Connecticut presented the resolutions passed at the recent session of the Legislature of that State, against the passage of the Nebraska bill, and censuring Mr. Toucey for voting in favor of it. The Pacific Telegraph Line bill was then taken up, some amendments made, and its further consideration was postponed. The consideration of the Veto Message of the Indigent Insane bill was then resumed, when Mr. Williams of New Hampshire spoke in favor of the Veto Message, and fully sustained the course of the President in regard to the matter. The question was then put whether the bill should pass notwithstanding the objections of the President, and decided in the negative—Yeas, 21; Nays 26. Several House bills were then passed, and the Senate adjourned.

The HOUSE, almost immediately after meeting, proceeded to vote on the amendments of the Committee of the Whole to the Civil and Diplomatic Appropriation bill. Most of the amendments were agreed to, and the bill was then rejected by a vote of 82 nays to 75 yeas. Pending a motion to reconsider the vote, the House adjourned.

SIXTH-DAY, JULY 7.

In the SENATE, Mr. Allen of Rhode Island submitted a series of resolutions, passed by the Legislature of that State, denouncing the passage of the Nebraska bill, the Fugitive Slave Law, and against the acquisition of new territory. The bill making appropriations for the construction of military roads in Washington and Nebraska Territories was passed. The private calendar was then taken up, and twenty Senate and six House bills were passed. The Senate adjourned till Second-day.

In the HOUSE, the vote of Thursday evening, rejecting the Civil and Diplomatic bill, was reconsidered. The appropriations of $482,500 for completing Custom-Houses and Marine Hospitals, and $530,000 for the purchase of the Assay building in New York, were agreed to, and the bill was then passed by a vote of 92 to 67.

SABBATH-DAY, JULY 8.

The HOUSE only was in session, and spent the day mostly on private bills. The bill authorizing the Commissioner of Patents to grant an extension patent to Samuel Colt, for improvement in fire arms, of seven years, came up and a debate ensued. Charges of attempts to bribe, and of an extraordinary amount of corruption in connection with the progress of the bill, were made, and a committee of investigation was appointed.

California News.

The steamship George Law, with California news to June 16th, and over one million dollars in gold dust, arrived at New York on the 9th inst.

There had been considerable disturbance at San Francisco, resulting from the uncertain tenure of land titles. Headstrong and desperate men, incited by cupidity, entered upon the lands of owners under alcalde titles, and, where forcible measures were taken to eject them, force was met by force. Several lives were lost.

Capt. Adams, U. S. N., arrived at San Francisco on the 8th, bearing the treaty negotiated between Commodore Perry and the Emperor of Japan. Of course we can know nothing of the details of the treaty, except from rumor, which gives to the United States two ports, where her citizens can reside and engage in commerce, and where Consuls may be stationed. Americans are also permitted to visit any part of the Empire to the distance of twelve miles from the coast.

The accounts of the recent gold discoveries read like a romance. At Iowa Hill we are told that upwards of three hundred tunnels have been commenced, and that some of them will involve an outlay of thousands of dollars. Remuneration is to be obtained when they get into the hill. Some of these tunnels have iron doors, and are locked and barred lest some rogue should steal the "dust" in the dirt.

The harvest has commenced, and already samples of new barley are exhibited in the market. All appearances indicate the harvest will be abundant.

Fatal Railroad Accident.

An extra from the office of the *Baltimore Clipper*, gives the particulars of a terrible accident which took place on the afternoon of July 4th, on the Baltimore and Susquehanna Railroad, by which about thirty persons were killed, and a much larger number more or less wounded, some of them but slightly, while the extent and the nature of the injuries of others are of a character to render it likely that they also will be called upon to swell the fearful catalogue of mortality. The scene of the accident was a curve of the road about midway between the Relay House and Rider's Grove, at which latter spot the Grand American Celebration took place.

Three trains, full of ladies and gentlemen, with children, left Baltimore during the day to participate in the celebration. Returning, one of the trains left for Baltimore at two o'clock, another started at five, and the third, to which the accident occurred, at about fifteen minutes later. It seems that the accommodation train for York, with four passenger cars attached, under the direction of Wm. Scott, Conductor, started on its way up shortly before 5 o'clock, instructed to lay off at Green Spring switch until one of the excursion trains should pass. This he did, and the second return train passed as directed. The accommodation train then started, and, dreadful to relate, an excursion train from the Grove had also started. They met about three-quarters of a mile above the Relay House, at the turn of an abrupt switch, and came together with a fearful crash. The locomotive attached to the excursion train was behind, pushing the cars; that attached to the other train was in front, and literally plowed its way into the cars, loaded with passengers.

About half a dozen cars were crushed and shivered to atoms, and a large number of their unhappy inmates either killed upon the spot or dreadfully injured. The scene is described as harrowing to the last degree. Several of those killed and wounded were so caught in the wreck of the broken cars that they could not be released for a considerable time.

A dispatch dated Baltimore, Friday, July 7, 1854, says: Up to the present time, there have been 32 deaths from the late disaster on the Susquehanna Railroad, and there are three or four more persons in a doubtful condition. A warrant has been issued for the arrest of Mr. Parks Winchester, the Superintendent of the road. The accident is now attributed mainly to the recent removal of the former competent and experienced President and Superintendent by political proscription, and the appointment of inefficient and inexperienced successors of the right political stripe.

European News.

European news to June 4th has been received.

The most important item is, that the siege of Silistria has been raised—the Russians defeated by the Turks and driven across the Danube. The order of events was as follows:

Siege operations were commenced on the 17th May, and continued until 15th June, the attack and defense being carried on incessantly, and with equal bravery on both sides. Repeated storming parties were directed against the intrenchments—mines and counter mines were exploded, causing immense slaughter to both besiegers and besieged. Mussa Pasha, the brave Turkish commander, was killed by a shell; after which Prince Pashkiewitch, the Russian commander, was struck and disabled by a spent ball, and will probably die.

On the 13th June, a tremendous attack was ordered under Generals Gorchakoff and Schilders, but after severe fighting the Russians were repulsed, and a Turkish brigade sent from Shumla by Omer Pasha, succeeded in entering the fortress. Thus reënforced, the garrison on the 15th made a sortie. A desperate hand to hand contest ensued, and ended in the complete discomfiture of the Russians. Prince Gorchakoff was severely wounded. General Schilders had his leg shot off, and two other Generals were killed. The carnage among the Russian Troops was dreadful, and they retired, fighting, across the river. Pursuing their advantage, the Turks crossed an arm of the river, seized the Isle of Hopa, and blew up the Russian siege works thereon. The Turks then brought out their guns and erected temporary batteries on the Bulgarian bank of the river, before the north face of the fortress. The Russian battalions east and west of Silistria immediately retreated, in good order across the river and destroyed their bridges.

From the Baltic, we hear that the English ships Odin and Vulture landed 150 men at Kalva Karlemy, but they were attacked by the Russians and driven back to their ships with the loss of three officers and three seamen killed, two officers and fourteen seamen wounded, and 25 taken prisoners. Admiral Napier had sent four ships against the place.

A private telegraphic dispatch, received by a Greek firm in London, states that a military insurrection, sympathized with by the fleet, had taken place at Sevastapol, and was with difficulty suppressed.

A conspiracy to assassinate the Emperor of France, during his visit to the baths of the Pyrinese, had been discovered in the Departments of Larn and Garonne, and 150 arrests were made. The prefect was dismissed, and M. Ledetsreur, the friend of Lafayette, appointed his successor.

According to advices from Turin of the 15th, it is stated that the Judge Gabbri, who had been charged with the preliminary inquiry into the guilt of the persons charged with the assassination of the Duke of Parma, was mortally wounded with three strokes of a poignard in the streets of Parma on the 12th ult., at 5 o'clock in the evening.

Four Days Later.

The steamer Baltic arrived at New York last Sabbath morning, in 9 days, 16 hours, and 53 minutes from Liverpool, being the shortest passage on record. There is no fresh intelligence from the East. The Russian squadron is supposed to have taken refuge on the coast of Kamschatka. From China, the dates are to April 22d, but nothing important had transpired.

Emigration to Kansas.

The details of this great enterprise (says a Boston paper) begin to come before the eye. The trustees, Messrs. A. A. Lawrence, Moses H. Grinnell, and E. Thayer, have advertised for proposals for carrying their emigrants West—at least 20,000, and at most 50,000, to be provided for by the transportation companies who make their offers. The first convoy is to start on the 17th of July, embodying a sufficient number of mechanics, engineers, &c., to take practical measures for the reception of after parties.

It may not be generally understood, that the journey to Kansas is a very short one. The mail passes from New York to St. Louis in about 50 hours, and the line of Kansas is northward from the Mississippi River, only 280 miles by the Missouri, up which steamboats go with emigrants.

The interest taken in this enterprize all through the northern, middle and western States, is a most satisfactory evidence of the eagerness with which men have been looking for something which they could do to gratify their attachment to free institutions. The spirit which sent Brewster and Bradford and their associates to Plymouth, and Winthrop and his to our Massachusetts Bay, proves to be alive, after all that has been said of modern degeneracy, and eager to show itself exactly as it showed itself with them. We have heard fears expressed that this State of Kansas would be merely an undisciplined mass of newly arrived foreigners. With some opportunity to see the proposals constantly arriving from Americans who intend to go, we have a right to say that these fears are wholly unfounded. Every form of emigration party is now clustering, from the widow at Lowell—the first woman who signified her intent to go, because she had a son two years old, whom she meant to bring up as a Kansas farmer—round to the party of fifty families from one village in Pennsylvania, who take with them their printing press, their tools and their money, to establish at once in a new home a town even more thriving than they leave behind.

Chivalry.

We learn from the Savannah *Morning News*, that a duel was fought on Monday, the 19th ultimo, between Claudius C. Stewart, Esq., and Joseph B. Coker, Esq., both young lawyers, resident at Newmansville, East Florida. The quarrel is said to have had its origin in Coker's intimating to a young lady, that Stewart had invited him to be one of his groomsmen on the occasion of his approaching nuptials with that lady. It appears that Mr. Stewart had requested Mr. Coker to attend him on the occasion referred to, but at the same time enjoined secrecy in the matter. Mr. S. construed the disclosure into a breach of confidence, and an offense requiring of Mr. Coker his signature and his acknowledgment of his having been guilty of a libel, or the alternative of a fight with deadly weapons. After the interference of the friends of both proved unavailing in settling the quarrel, the parties left Newmansville, and proceeded to a ferry some thirty miles distant, where they crossed to the appointed side. Both were armed with double barreled shot guns. Mr. Stewart's gun was loaded with thirty buck shot. Mr. Coker's gun, which chambers three balls, was loaded with twelve bullets. After firing the first shots at the distance of seventy-five yards, in case neither fell, they were to advance ten paces and fire a second time, when, if neither was yet hit, they were to advance ten paces more for a third shot. At the first fire Mr. Stewart received three balls, two of them in his left arm and shoulder, rendering, it is said, amputation of that limb necessary. The other ball entered his right breast, and passing upward, lodged in his right shoulder, in front. Two buckshot passed through the breast of the loose garment worn by Mr. Coker.

FATAL ACCIDENT.—The Albany *Journal* of July 5th says: A party of the students belonging to the Carlisle (Schoharie Co.) Seminary, accompanied by Prof. Alfred McFail and others, proceeded on Saturday last to explore the celebrated Cave, located a few miles from the Seminary. They had closed their explorations, and were returning, when the accident occurred which resulted in the death of the Professor. It happened in this wise: The party had been in a pit of some hundred feet deep, and all had ascended by means of pully-ropes, except Mr. McF. He was ascending, and had nearly reached the platform, when by some means he slipped from the rope seat and fell to the bottom of the cave. On being approached, he was found senseless, and died in a few minutes. He was a gentleman of rare endowments, well beloved by the students, and highly respected by all. He leaves a stricken wife to mourn his sudden departure.

WOOL.—There is no notable change in the market; the demand continues light, and the sales are small. In the wool-growing districts some purchases have been made by manufacturers and country speculators at a general reduction of 12 to 15 cents per lb. from last year's prices at shearing time. The large dealers in the principal cities have made no movement to lay in stocks at present rates, arguing that the excessive clip, the depression existing in nearly all manufactures of wool, stringency in the money-market, disturbed state of Europe, and other causes, will effect a further decline in prices. Foreign wool is held with more firmness than domestic—50 bales washed Buenos Ayres sold at 14½ to 15½ cents 6 mos.; and 150 do. Mestizo, on private terms. [Ship. List.

SUMMARY.

A dispatch dated Bath, Me., Friday, July 7, 1854, says: The "Angel Gabriel" lectured here on Wednesday and Thursday evenings against Popery. On the last occasion the crowd was large and a disturbance occurred. A mob of men and boys proceeded to the old South Church, used by the Catholics as a place of worship, broke open the doors, rang the bell and displayed the American ensign from the belfry. They afterward set the church on fire and it was burnt to the ground.

The California Conference, at its late session, unanimously requested Bishop Simpson to "fix his residence" in California; and promised to present him with a "suitable residence," should he conclude to accept this invitation. The Conference also voted to request the Missionary Committee to appropriate *fifteen thousand dollars* for domestic missions in the State, in addition to the expenses of the men sent out to their Conference.

Sir Henry Young, in his report on the navigation of the River Murray, in South Australia, just issued, says: "As regards soil, climate, and other natural advantages, there can be no doubt that the vast basin of the Murray, equal in area to seven Great Britains, is well adapted to sustain a large population; while in no part of the world can the extent and facility of internal communication by water be surpassed."

A sad accident occurred at New Haven, Ct., last Sabbath (Saturday) afternoon. The scaffold in the tower of St. Thomas Church gave way, precipitating six men fifteen feet below, among a lot of large stones, some wheelbarrows and stones also falling upon them. Patrick Mack had his thigh crushed and head cut open, and was carried off insensible; his recovery is doubtful. John Lyons and the four others were also badly hurt.

We learn that Merrill, the alledged kidnapper of Solomon Northrup, a free colored citizen of this State, who was thereby subjected to twelve years of inhuman bondage and suffering as a slave in Louisiana, was yesterday morning arrested near Gloversville in Fulton County, and fully identified by Northrup as the villain who stole and sold him into Slavery.

A dispatch dated Albany, Friday July 7, 1854, says: The Canal Board this afternoon resolved to enlarge the Erie Canal between Lockport and Rochester, in conformity with the plan adopted September 16, 1850. The vote stood 8 to 1, the State Engineer voting in the negative.

A sad catastrophe, resulting in the death of a minister, occurred at Susquehanna on the morning of the 4th inst. The Rev. Horace R. Clark, appointed at the recent annual session of the Wyoming Conference to the Susquehanna and Lanesboro' Mission, was crossing the street, unaware of the proximity of the cannon, and not hearing the warnings of the by-standers. A premature discharge of the ordnance happened exactly as he came within its range, stunning, scorching, and bruising him in such a horrible manner that he died almost immediately.

On the morning of the 4th inst., a son of J. C. Cooper, Esq., of Adams, Jefferson County, an intelligent lad, aged about 14 years, with three other boys, went into the woods for the purpose of shooting game. After a little time out, young Cooper said to his companions, "How easy it would be for one to kill himself!" at the same time placing his gun by his side, with the muzzle pointing under his ear. At this moment, by some accidental motion, the gun went off and he was instantly killed.

The steamer Erie, the melancholy fate of which will be remembered by all, was raised from her watery bed in Lake Erie, June 30th. Her hull was towed into Buffalo, and taken to the dry dock for the purpose of examination. It will be a fearful sight to look into her desolate hold, which probably contains many treasures, and perhaps the remains of some of the unfortunate persons who were on board when the vessel was destroyed by fire.

Madame Meszlenyi, one of the sisters of Kossuth, died recently at her residence, No. 130 Ninth-st. in this City, in the 34th of her age. Her disease was consumption, the seeds of which were planted in her constitution in the winter of 1851, on that awful night when all the female members of Kossuth's family, including herself, were arrested by Austrian *gens-d'armes*, and dragged through the streets of Pesth to a place of confinement, previous to their expulsion from the country.

The experiment of a semi-weekly Roman Catholic newspaper in this City (*The Freeman's Journal)* has proved a failure, and is abandoned. The Editor assigns as a reason for going back to weekly issues, that the great mental effort necessary to get out two papers per week did not permit that thought and carefulness which should characterize the columns of a paper devoted to Roman Catholic interests.

The price of paperhaving risen in England, as it has in this country, to a rate seriously diminishing if not altogether destroying the profits of some of the provincial journals, they have resolved to increase their rates of sale and subscription. In Glasgow a movement is now going on to raise the price of all the papers two cents on a copy. In England, the Birmingham *Journal* has just taken the lead with a similar enhancement.

On Wednesday evening, 21st, Wm. T. Merrill was bathing in the Merrimac, and dove a distance of nine feet, where the water was less than four feet deep, and by taking a more perpendicular direction than he intended, struck the bottom with such force as to paralyze his entire body below the heart, by the concussion or fracture of the spine. He died in the course of the day.

From developments recently made, and evidence lately obtained, there remains no doubt that the heir to the immense Jenning's estate of $40,000,000 is Hector Jennings, of Ohio, and measures are now being taken to substantiate his claim, and put him in possession of the money. His agents on both sides of the Atlantic have been untiring in their efforts to obtain the requisite proof of his heirship.

A dispatch dated Albany, Saturday, July 8, says: A fire occurred at Cohoes this morning, by which Strong's mill was entirely consumed. After the fire the south wall of the mill fell in, and several persons were caught in the falling mass. The body of a lad was found in the ruins, and it is supposed other lives are lost. Several escaped, more or less injured.

The American bark Grey Eagle succeeded in landing six hundred slaves near Havana, on the 25th of June. The Eagle was subsequently captured by the British brig of war *L'Esperegle*, but was finally surrendered to a Spanish man of war. Only a small number of the negroes were rescued.

The Connecticut House of Representatives, by a vote of 116 to 78, passed a resolution to amend the State Constitution so as to allow negroes to vote on the same terms as white men. Also (106 to 80,) an amendment to prohibit any person from voting who cannot read. These proposed amendments were then ordered to be continued to the next Legislature, and published with the laws.

A dispatch from St. Catharines, Friday, July 7, 1854, states that the night Express train on the Great Western Railroad, which left the Suspension Bridge Thursday night, run over a horse, whereby the two emigrant cars were thrown off the track, killing seven passengers and severely wounding ten others, some of whom will not recover.

An arrival from Barbadoes brings us intelligence to the 15th of June. The cholera was still on the increase, the number of deaths reaching 400 per day. The whole number of deaths from the disease amounted to 5,000. The shipping in the port was entirely free from the scourge.

News from the Cape of Good Hope to May 13 gives an account of the legislative doings of the new Republic, entirely independent of Europe, there established, bearing the name of the Orana River Free State. The first session of the Legislature closed on the 17th of April.

A dispatch dated Albany, Friday, July 7, 1854, says: In the heavy gale which swept over Lake Ontario on Tuesday last, the schr. Duke of Darlington foundered about twenty miles from Toronto, and six hands, including the captain, perished. A boy named Bailey was the only person saved.

We learn from the *Boston Atlas*, that several professional gentlemen have signified their intention of joining the Kansas party, to leave on the 17th of July, and to return in four weeks. Thus they will see the finest part of this country, besides going along the borders of Nebraska and Kansas.

A slave belonging to Mr. Harris of Union County, Ky., who, some years since, was stolen from his master by the father of the boy, was taken into custody recently at Vincennes, Ind., and returned home.

The Dublin *Freeman* says: "Owen Duffy, of Monaghan Co., is 122 years old. When 116 he lost his second wife, and subsequently married a third, by whom he had a son and daughter. His youngest son is two years old, his oldest ninety. He still retains in much vigor his mental and corporeal faculties, and frequently walks to the country town, a distance of eight miles."

In Darbyville, Pickaway county, Ohio, Miss Fuller, a victim of misplaced affection, drowned herself because her lover sent her a note stating his intention not to marry her. She threw her arms around the neck of the faithless one, kissed him, and in a few minutes after plunged into some water fifteen feet deep, and was a corpse.

The Scioto *Gazette* names sixty-four farmers of Ross County who are extensively engaged in the business of feeding cattle, and who average one hundred head a year, making 6,400 for that county, without counting any of the small fish. These cattle will average them $50 per head, making $320,000.

A dispatch dated Boston, Saturday, July 8, says: Recent developments in New York are exercising an unfavorable influence on money affairs in this city. Stocks have considerably declined to-day, and State street is greatly excited by the failure of a firm of extensive and well-known brokers and stock dealers.

There was a violent hurricane in Springfield and Swanton townships, Lucas County, Ohio, on Thursday afternoon, 29th ult. Along the track of the hurricane the trees were all uprooted and blown down, and laid in immense winrows, as if they had been lifted and piled together, by the action of the wind.

A dispatch dated Philadelphia, Friday, July 7, 1854, says: The lightning train which left Philadelphia for Baltimore at 12.45 P. M., to-day, ran off the track at Broad Creek, Maryland, killing Benjamin R. Benson, the engineer, and Joseph Robinett, fireman.

A recent advertisement in a London paper (appearing anonymously, but attributed to the *Times)* offers a reward of $5,000 for a material which shall be found so cheap and serviceable as to supplant Rags in the manufacture of paper.

An extensive fire occurred in Philadelphia July 5th, which destroyed the National Theater, the Girard House, and the Chinese Museum. The fire originated in the Theater during the performance, but it is supposed there were no lives lost.

A dispatch dated Cincinnati, Wednesday, July 5, 1854, says: An Irishman attacked an American wearing a Know Nothing hat. The American killed him with pistol and bowie-knife. He has not yet been arrested.

Madame Sontag is dead. She was attacked by cholera while on the road from Mexico to Vera Cruz, where she was to embark for the United States, and died on the 16th of June.

B. P. Cahoon, of Kenosha, Wisconsin, has sent the N. Y. *Tribune* three pie-plant leaf stalks that weigh ELEVEN AND A QUARTER POUNDS.

In Ross County, Ohio, a Kansas Emigration Society has been formed, of which Cadwallader Wallace is President. A large emigration is going from that part of Ohio.

Thomas Ritchie, the venerable editor, is dead. He was born during the American Revolution, about 1778, and accordingly was nearly eighty years of age.

Col. Suttle has written to a gentleman in Boston, that he will sell Burns for $1,500, and some measures have been taken to raise the money.

The number of deaths in New York last week was 761, of which 98 were from cholera.

The New York and Erie Railroad Company have resumed the carrying of mails for *way stations* on their through express trains.

For the week ending the 3d inst., there were the unusually large number of 470 burials in St. Louis.

New York Markets—July 10, 1854.

Ashes—Pearls $5 50; Pots 5 81.

Flour and Meal—Flour, 6 75 a 7 25 for common to good State, 7 50 a 8 00 for common to good Ohio and Michigan, 7 12 a 7 75 for mixed to good Wisconsin. Rye Flour 5 50. Corn Meal 3 75 for Jersey.

Grain—Wheat 1 40 for red Upper Lake, 1 80 for white Canadian, 2 00 a 2 05 for good white Michigan. Rye 1 08. Barley 95c a 1 00. Oats 54 a 58c for State and Western. Corn, 68 a 70c for western mixed.

Provisions—Pork, 10 00 a 10 50 for prime, 11 37 a 11 50 for mess. Beef, 15 50 for city mess. Lard 9 a 9½c. Butter, 13 a 17c for Ohio, 17 a 21c for State. Cheese 6 a 9½c.

Hay—70 a 75c for old, 97 a 98c for new.

Lumber—15 00 a 15 50 for Eastern Spruce and Pine, which is a decline.

Potatoes—1 25 a 1 50 for new Long Island.

Seeds—Clover 8c. Timothy 18 00 a 21 00. Flaxseed 1 70.

Tallow—11½c for city rendered.

Wool—33 a 36c for native and half Merino, 42 a 45c for full-blood Merino, 49 a 53c for American Saxony Fleece.

MARRIED.

In Hopkinton, R. I., June 3d, by Eld. D. Coon, Mr. JOHN M. BURDICK to Miss ADALINE W. BURDICK, all of Hopkinton.

DIED.

In Verona, N. Y., June 28th, 1854, Mr. HIRAM EDES, in the 53d year of his age.

In Verona, July 3d, 1854, SARAH ANN, wife of Joshua Williams, and daughter of Hiram and Desire Edes, aged 20 years. D. P. C.

LETTERS.

WILLIAM M. ROGERS, Treasurer.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commencing Monday, April 10, 1854:—

Leave New York at 8 A. M., 12 M., and 4 and 6 P.M.

Leave Plainfield for New York, at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6 30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations.

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

Supreme Court.

IN the matter of laying out a public place between 59th and 106th-sts. and the 5th and 8th-avs., in the city of New York—CENTRAL PARK.—To all owners, mortgagees, lessees, occupants, and other persons, in any manner, by judgment, decree, or otherwise, entitled unto or interested in the land and premises above-mentioned, or any part thereof. Notice is hereby given, that you are required to appear before the Commissioners of Estimate and Assessment in the above-entitled proceeding, at their office, No. 110 Broadway, over the Metropolitan Bank, at 11 o'clock A. M., on any day (Sunday excepted) on or prior to the 15th day of July next, and to produce the evidences of your title or interest therein. In default whereof, and in case the persons entitled or interested as aforesaid shall not be ascertained by or be known or fully known, the same will be reported to the Supreme Court as belonging to unknown owners. It being the desire to consummate this great improvement, and to present the report at the earliest day, consistent with a proper examination and due regard to the rights and interests affected, it is earnestly requested that all parties note and comply with the preceding notice, as no other or further notice will be issued. ROBERT J. DILLON, Counsel to the Corporation.

New York June 1, 1854.

N. B.—All papers published in the city of New York are requested to publish the preceding notice until the 15th day of July next, once in each week, and to send their bills (with affidavits of publication) to the office of the Counsel to the Corporation to be paid on the final taxation of the proceedings.

Miscellaneous.

The Trouble at Shanghae.

A private letter published in the *Boston Advertiser*, gives the most intelligible account we have seen of the origin of the difficulty between the imperialists and foreign residents at Shanghae and the consequent battle. It seems that the foreign settlement is situated on the west bank of the Shanghae river, between two parallel creeks, running west from the river—the one south of the settlement turns at a right-angle to the north, and reaches nearly to the other, so as to enclose the space occupied by the settlement, somewhat in the form of a square. Outside the creek, parallel to the river, the Chinese camps were stationed. Three forts built of mud and turf stood on the bank, the covered encampment reaching behind them. The race course, which was laid out by foreigners, (Chinese roads are mere pathways,) passes through the center of the settlement, from the river to the creek, before the encampments, making a wide circuit in front of the forts. The graves alluded to are made of earth about ten feet high, and form a very good cover. They are scattered in the rice-fields, outside the settlement, where the English deployed to attack the Chinese in flank. With this explanation, the reader will easily understand the account given below, under date of Shanghae, April 12, 1854:

We have had rather exciting times here since I last wrote you, as perhaps you have heard by report, or read in the newspapers, before opening this. Now that it is all over, I can safely tell you all about it. I suppose you would have been rather anxious about me, if you had known what was passing at the time. A kind Providence, however, watched over and protected me, as it has ever done.

I have often told you the position which the two contending factions of Chinese occupied at Shanghae, the Rebels in the city, to the number of five or six thousand, and the Imperialists encamped outside, about an eighth of a mile from the walls, and the same distance from the houses in the foreign settlement, though bordering on the new race course. In the neighborhood of the last mentioned locality, the soldiers from the Imperialist camp were in the habit of assembling in the afternoon (at the time when most of the foreigners take their daily exercise) for the purpose of firing at a target, so placed that many of the shot fired passed over the course in no very pleasant proximity to the persons of the aforesaid ladies and gentlemen. Latterly too the Imperialist soldiery, not content with annoying those on the course by their dangerous proximity while engaged in target practice, had the impudence to insult inoffensive individuals (foreigners) by throwing mud and stones at them, and occasionally even discharging their fire-arms at them, when they thought themselves unperceived. Complaints had often been made by the Consular authorities in consequence of these outrages, but although many promises were made, no redress was ever obtained from them—neither was the annoyance discontinued.

Nine days ago five or six Imperialist soldiers went into the compound of a foreigner and set to work deliberately stealing some wood which happened to be on the premises, belonging to an Englishman. The latter came out of the house with a friend, and endeavored to make them desist. The Imperialists drew their swords upon them and commenced an attack, whereupon one of the foreigners shot two of the Chinamen with his revolver, severely wounding them, but not so much so as to prevent their escape. That same afternoon, it is supposed out of revenge, several Imperialist soldiers attacked a lady and gentleman (English) on the race course, wounding the gentleman quite severely. He managed, notwithstanding, to defend the retreat of the lady, until several foreigners came to his assistance. A small guard of marines, from one of the men-of-war in port, also came up at this moment and drove the Imperialists back. The latter, however, were reinforced, and some smart skirmishing ensued, the marines protecting themselves as well as they could behind the graves, which are scattered all over the country. By this time the alarm was given to the men-of-war in port, from the church tower, and in a few minutes a strong force of marines and sailors were landed from the two English men-of-war, and from the United States sloop Plymouth. These soon sufficed to drive the Imperialists back, and we went so far as to enter one of the smaller camps, which was soon destroyed, but night coming on, we were obliged to defer further operations till the next day.

The main body of the sailors and marines were sent back on board ship, but a strong guard was kept on the race course and at the boundary of the foreign settlement. The succeeding day all the foreign Consuls made complaint of the outrage so recently perpetrated, and demanded of the Chinese authorities that the Imperialist forces should evacuate all the camps in the neighborhood of the foreign settlement, threatening to use force if they did not remove by 4 o'clock, P. M., the next day. As no especial movement was apparent in the camps on the following morning, a force of about 250 men from the two English men-of-war, and the U. S. ship Plymouth, was drawn up on the land about two o'clock, and the English volunteer Infantry corps and the American volunteer Artillery corps, the former consisting of some 60 men, and the latter about 15, of which number your humble servant with rifle and revolver was one, joined the regular force at the church, from which point we marched together to the new race course and separated to take up our respective positions. We Americans, regulars and volunteers, marched up to within about 50 yards of the first camp, the guns of which raked the road we were advancing upon. We then halted, and at four o'clock commenced shelling the camp in front of us, the English from their position which was much less exposed than ours opening their fire at the same time. We fired for about ten minutes without being fired upon, and then the order was given to charge, and charge we did right up within fifteen yards of a battery, which, if properly managed, might have sent us all to eternity. As it was, at their first discharge poor Gray (a relative of Mr. Griswolds, in Russell & Co.'s,) and a Capt. Pearson commanding an American ship then in port, both attached to the same gun that I was, fell severely wounded, the Capt. within a few feet of me. A blue jacket was also shot at the same time. After this our men were filed off the road under cover of some graves, where, although the shot whizzed unpleasantly near, we were comparatively protected. From this point we kept up a very sharp fire, until finally the Chinese fled from the camp, which was now on fire in many places. About the same time the English entered the camps which they had attacked, and which were in like manner deserted. Our loss was two killed and about a dozen wounded, some of the latter very severely—poor Gray has since had his leg amputated.

The Chinese loss is estimated from 200 to 500 killed and wounded. Every thing is quiet now. The Chinese have had a lesson taught them by which it is hoped they may profit. I think they will be more circumspect for the future in their behavior to foreigners.

The routed Imperialists have all removed to the limits prescribed by the foreign consuls, a mile or two distant from the settlement, and their officers have sued for peace. No apprehension is now felt by foreigners.

Collision at Sea.

The ships Trade Wind and Olympus came in collision at 11 o'clock on the night of June 26, in lat. 41° 50', lon, 57° 20', which resulted in the loss of both ships and twenty-four lives.

The Olympus, Capt. Wilson, sailed from Liverpool on the 23d of May for Boston, with forty passengers and a crew numbering thirteen. She was freighted with nine hundred tuns of iron and general hardware.

The Trade Wind, Capt. Smith, cleared at Mobile on the 3d ult. for Liverpool, with seventeen passengers and a crew of thirty-four.

The following account was furnished to the *Commercial Advertiser*, being the narrative of Capt. Smith.

When the collision occurred, the wind was blowing fresh from southwest by south, with squally weather. Night cloudy and excessively dark. The Trade Wind was under easy sail, steering east by south. We had a pure bowsprit light burning, and were keeping a good look-out fore and aft. A few minutes before striking we saw the Olympus's light, one point on the weather-bow, or S.S.E. from us, having the wind three points abaft the beam, with yards squared and spanker furled; mizen top-sail on the cap. We put the helm up, and swung the ship off to E.N.E., bringing the Olympus's light broad off on the weather bow, but before we could discover whether the ships were approaching each other, the Olympus's light disappeared. Yet in the darkness, we thought we could make out the sail, passing along to windward of us, standing to westward. After an interval of five minutes, her light again suddenly appeared close to us on our weather-bow, and almost at the same instant we could make the ship out with her head to northward, standing square across our course. Our helm was put hard up promptly, but we could not get our long ship off fast enough, both ships being too far off to deaden way by bracing yards. Our halyards and sheets, &c., were let go as soon as possible, but in vain. The Trade Wind was going at an immense speed, and the Olympus was under a press of canvas, forging ahead directly across our bow. She was struck between her main and foremast, with an effect that can only be conceived. Our starboard bow was stove in, the cut-water and stern were crushed, bowsprit and foremast were broken, and the ship was wrecked from stem to stern with the shock. The wood-ends opened, as I suppose, from keel to deck. The main and mizenmast of the Olympus were struck with such force as to knock them clear of the ship altogether. She then swung round fore and aft along our port-side, swinging her bow over our quarter boat, crushing it to atoms, after which she dropped astern clear of us, when I found the captain, officers and crew, and some of the passengers, on board the Trade Wind, having jumped on board at the collision.

Finding the Trade Wind full of water in a short time, with foremast hanging to the rigging, we cut away to clear the wreck forward, and hove the anchors off the bow to lighten her forward. The launch, and the two small boats we had left, were now got aft, ready for launching over the stern. Provisions and water were also prepared, so as to be conveniently removed if we found it needful to leave the ship. But as our cargo was composed of 4,657 bales of cotton, we hoped she would float for some time. The sea was running very heavy, though the wind moderated fast. The ship gradually settled as the cotton became soaked, so that we waited anxiously for day-light.

When the day broke we found the Olympus still afloat, four or five miles to eastward, and as she showed a side high out of water, Capt. Wilson was permitted to take our small gig, with as many of his men as would accompany him, to ascertain the condition of his ship and endeavor to save his passengers with his own boats, if the vessel was likely to go down.

About 4 o'clock A. M. we launched our large boat, and placed our passengers in her with the first and second officers in charge, and dropped her astern out of the vortex around the ship, which threatened her destruction every moment. This was done with the view of loading from the ship by means of the quarter-boat, but unfortunately, just as the quarter-boat was launched, three or four frightened creatures leaped into her and capsized her. We found it impossible to right her in the heavy sea around the water-logged ship. In this state of affairs it became evident that if the launch was permitted to return to the ship, she would become swamped and founder alongside by the efforts of the frightened crew to be first into her, and all hands would inevitably perish. I was therefore compelled to order her off and leave us to our fate. It was a melancholy command, but one I deemed of imperious necessity.

At this time the boatswain and many good swimmers plunged overboard and swam to the boat, where they were gladly received The rest followed the captain to the mizzen-top, as the sea had taken possession of the upper deck.

The launch, with twenty-eight of the crew and five or six of that of the Olympus, pulled off in the direction of the Olympus. Before reaching her, however, she went down, but not until Capt. Wilson had succeeded in getting every one from on board. She sank at 6 A. M.

The launch then turned toward our ship, but while on her way discovered a sail to the south, and gave chase, in hopes of saving themselves and obtaining assistance for those left behind. At 6:30 they lost sight of the Trade Wind.

After the boat had left, about twenty-five men with myself had taken refuge in the mizzen-top. Soon afterward we discovered a sail to the southward, standing by the wind to the northward. The colors were set at the mizzen-sky-sail masthead, union down, to attract attention. In the mean time the work of destruction went rapidly on in the ship's hull. The upper deck burst and commenced breaking up, permitting the cotton to float; the spare spars, skylights, hatches, companion ways, &c., were carried off, whirling and turning over. The ship settled with every sea that swept her, till about 6.30 A. M., while I was on the mizzen top-sail yard, and most of my companions were on the top, she made her final plunge, sinking very fast, carrying all down with her to some depth, when we immediately rose again to the surface, surrounded by the planking of the deck and a few bales of cotton.

The expert swimmers immediately united with me, and under my orders collected all the floating planks and spars at hand and formed rafts on which we divided ourselves to the number of sixteen men, while others took to the fore-mast which had remained by the ship until she sank, and was still afloat. The rest sank to rise no more. The fore-mast must have proved but a temporary refuge, as the descending ship must have drawn it down as she settled, as some of the rigging was attached to it.

After recovering our strength, (much exhausted by our almost superhuman efforts in forming our rafts in the very heavy sea running at the time,) we took occasion to improve and add to them from time to time, out of the mass of wrecked stuff around us, until, about 4.30 P. M., or after ten hours exposure to our perilous and exposed situation, we were mercifully rescued by the boats of the Belgian bark Stadt Antwerpen, Capt. Wytenhoven, the sail before mentioned.

When we arrived on board we found that our boat, and those of the Olympus, had reached the bark about 9 A. M., and had since been making praiseworthy efforts to reach and rescue us, but with no sanguine hopes of finding survivors among the floating wreck stuff.

Upon mustering, we found 44 of 62 from the Trade Wind, and 52 of 58 from the Olympus, making 96 saved of 120.

On Tuesday, July 4th, being close into Block Island, with light westerly winds, and the bark becoming short of provisions, we met a whale boat fishing, which we chartered to take us to Newport, (Capt. Wilson and myself,) so as to reach New York, and send a steamer to the bark for assistance.

The Trade Wind was one of the finest clippers built in this City. She was 2,018 tuns burden, about three years old, valued at $100,000, and is largely insured in Wall-st. Her freight is valued at $50,000 and the cargo at about $250,000, the latter being principally insured in England. She was owned by W. Platt & Son of Philadelphia, and Booth and Edgar and others of New York.

The Olympus was built in Kennebunk, in 1850, and was 744 tuns register; was worth about $50,000, the cargo $200,000, and the freight $15,000. The Olympus was insured at the eastward, where it is presumed the cargo or a portion of it is also insured.

European and Yankee Life.

From a Lecture by Wendell Phillips.

A striking characteristic of the people of Europe, is a want of enterprise. Here every thing contributes to progress, and every man is striving to rise. And he has a motive; for he knows that if he succeeds in accumulating, he will have more influence and a higher social position. But abroad the poor man has no motive to strive—the main-spring is taken away. Property will not change his condition. The mountain weight of conservatism keeps all classes as they were. We are heads, ever subjecting the elements to our uses, and saving labor. There is nothing of this abroad. The reason is, we have much to do, and but a few to do it, while they have but little to do, and many to do it. Consequently we invent labor-saving machinery, while they do as their fathers did, without seeking to improve it. For instance, in Italy, you will see the farmer breaking up his land with two cows, and the root of a tree for a plough, while he is dressed in skin with the hair on. In Rome, Vienna, or Dresden, if you hire a man to saw your wood, he does not bring a saw-horse. He never had one, nor his father before him. But he places one end of the saw upon the ground, and the other against his breast, and taking the wood in his hands, rubs it against the saw. And he will be all day doing two hours work. It is a solemn fact, that in Florence, a city filled with the triumphs of art, there is not a single auger, and if a carpenter would bore a hole, he does it with a red-hot poker! This results not from a want of industry, but of sagacity, of thought. The people are by no means idle. They toil early and late, men, women, and children, with an industry that shames the labor-saving Yankee.

The Pope does not allow the steamboats to come up to his wharves, but anchors them a mile off; so that his ragged boatmen may make a few pennies by rowing passengers ashore. Thus he makes labor, that the poor may live. In Rome, charcoal is principally used for fuel, and you see a string of twenty mules bringing little sacks of it upon their backs, when one mule would draw it in a cart. But the charcoal vender never had a cart, and so he keeps his twenty mules and feeds them. There is no want of industry, but there is also no competition. A Yankee always looks haggard and nervous, as though he was chasing a dollar. With us, money is everything, and when we go abroad we are surprised to find that the dollar has ceased to be almighty. If a Yankee refuses to do a job for fifty cents, he will probably do it for a dollar, and will certainly do it for five. But one of the lazzaroni of Naples, who has earned two cents, and eaten them, will work no more that day, if you offer him ever so large a sum. He has earned enough for the day, and he wants no more. So there is no eagerness for money, no motive for it, and every body moves slowly.

Another phase of European life is to be seen in the modes of traveling. Here every body travels, and consequently our means of traveling are the best in the world. But abroad government does not encourage traveling. It knows that there is a mysterious connection between hurrying to and fro, and dangerous knowledge on the part of the people. So the modes of traveling are very poor. In Lyons, one of the largest cities of France, we have known a traveler to wait a week to obtain a seat in a stage coach, and in Marseilles two weeks. This explains why Paris is France. The people of that city can demolish one government and construct another, before the people of the other cities can hear of it.

Another characteristic of the people abroad is, that they are economical, and are not ashamed of it. If a Yankee tries to save a dollar, there are nine chances in ten that he will tell a lie to conceal it. A Frenchman would not be ashamed to own he was trying to save a dollar. Coaches on the continent travel in the night, because it saves time, meals, and a bed. When a Frenchman enters a coach, he puts on a night cap and goes to sleep. He resigns himself to government—shuts his eyes and opens his mouth to receive whatever may be put into it. Thus, if the stage stops on the way an hour, he never asks the cause, but sleeps on, with the door locked upon him. A Yankee would be out, asking fifty questions.

A marked distinction abroad, is the culture and courtesy of the masses, with one exception. This relates to the stage coach. The English praise us for our attention to women and sick persons traveling, and we deserve it, compared with them. On the continent, the seats of the stages are numbered, you take a particular one, and are not expected to move to oblige any body.

Death of a Sub-Marine Diver.

From the Buffalo Republic.

Mr. John Tope, one of the divers employed by Messrs. Wells, Gowan & Green, in their operations on the Lake, lost his life while experimenting with a sub-marine armor, a few days since. The circumstances attending this lamentable causality, are substantially as follows: It appears that Mr. Tope was desirous of testing a sub-marine armor preparatory to commencing operations on the wrecks which the company design raising this summer, and in company with three others, started from Cattaraugus Creek in a small vessel of about twenty tuns burden, and proceeded some distance from the shore, where the water was about forty feet deep. Mr. Tope descended into the water three times. The first and second time he went down some fifteen or twenty feet, each time signalizing to those above to raise him. In both instances he remarked that the foul air did not escape fast enough to allow him to breath freely. Previous to going down the third time he detached the spring from the valve which allows the impure air to escape from the helmet, and desired the man who held the signal line to observe carefully when he should reach the bottom (some 40 feet) and be prepared to answer his signals. He then entered the water, and had descended about thirty feet, when those above thought the armor felt unusually heavy. The signal line was immediately jerked to ascertain whether any thing was wrong, but receiving no answering signal, the diver was immediately raised from the water.

On opening the helmet, the unfortunate occupant of the armor was found to be quite dead, presenting a horrid spectacle, blood oozing from his eyes, ears, nose and mouth. Detaching the spring from the escape-valve prevented the air from inflating the armor below the neck of the diver; and when it is recollected that at the depth of thirty feet the pressure of the water is equal to fifteen pounds to the square inch, and hence there must have been a pressure of at least ten tuns upon the lower extremities of the diver; and this tremendous pressure forced the vital fluid to the head, bursting the blood-vessels, and thus causing immediate death. Not more than a minute and a half elapsed from the time he entered the water to the time he was hoisted upon the deck of the vessel. The pressure of the water upon the lower part of the armor, on his two previous trials, caused a slight rush of blood to the diver's head, causing a dizziness, which he imagined was produced by foul air, and he insisted upon descending again with the spring detached from the escape-valve, which he said would allow a free current of air to pass in and out of the armor; but a moment's reflection will convince any one that this alone was the cause of the melancholy casualty. The apparatus he used on this occasion was in complete working order, and one of the most perfect ever manufactured.

The New Postage Law.

The following is the first section of the New Postage Law adopted by Congress.

"That in lieu of the rates of postage now established by law, there shall be charged the following rates, to wit:

"For every single letter in manuscript, or paper of any kind in which information shall be asked for or communicated in writing, or by marks or signs, conveyed in the mail for any distance between places in the United States not exceeding three thousand miles, ten cents. For every such letter or paper when conveyed wholly or in part by sea, and to or from a foreign country, for any distance not exceeding three thousand miles, the ocean postage shall be five cents; and for any distance exceeding three thousand miles, such ocean postage shall be 10 cents, (excepting, however, all cases where such postages have been, or shall be, adjusted at different rates by postal treaty or convention already concluded or hereafter to be made. And for a double letter there shall be charged double the rates above specified; and for a treble letter, treble those rates; and for a quadruple letter, quadruple those rates; and every letter or parcel not exceeding half an ounce in weight shall be deemed a single letter; and every additional weight of half an ounce, or additional weight of less than half an ounce, shall be charged with an additional single postage; and upon all letters passing through or in the mail of the United States, excepting such as are from a foreign country, the postage as above specified shall be prepaid; and from and after the first of January, 1855, such prepayment shall be by stamps. And all dropped letters placed in any Post Office, not for transmission through the mail, but for delivery only, shall be charged with postage at the rate of one cent each; and all letters which shall hereafter be advertised as remaining over or uncalled for in any Post Office shall be charged with one cent each, in addition to the regular postage; both to be accounted for as other postages now are."

The second section provides that the bill shall take effect from and after the commencement of the next fiscal quarter.

Nebraska and Kansas.

Dr. Bascom, late editor of the *Ohio State Journal*, is now traveling through Nebraska and Kansas, and is writing a series of interesting letters to the *Journal*. We clip the following from one of them:—

Before we passed the Kansas, we came upon an encampment that attracted attention. It turned out to be a grand hunting company from the plains. Sir George Gore, an English Baronet, has taken it into his head that it will be fine sport to hunt buffalo, &c., on our great western plains. So he packed up his trunks, &c., and started for a regular summer campaign. He brought the most magnificent pack of dogs that were ever seen in this country. Between forty and fifty dogs, mostly greyhounds and staghounds, of the most beautiful breeds, compose this part of the expedition. He had a large carriage, and probably a dozen large wagons to transport provisions, &c. These require five yoke of oxen to each wagon. These, with the horses, men, &c., made up quite an imposing company. Sir George is a fine-built, stout, light-haired, and resolute-looking man. But there are other things besides fun in such a trip, and it will try the manner of stuff of which he is made before he returns.

Between Kansas and Westport we passed an encampment of 3,000 Mormons, who were on their way to the great Salt Lake. They were waiting for the balance of their company, and had been encamped there for several days. They were in a fine forest. Some were sleeping in their wagons, but the most of them had tents, and the woods and fields adjoining, in all directions, were covered with these white and fragile dwellings. Oxen are used for teams. Men, women, and children were scattered about on all sides. Blacksmiths' hammers were heard, and the hum of preparation came up from all parts of the camp. It was a singular sight, and fraught with many suggestions and reflections upon this strange and deluded people. These emigrants are generally from Europe, and the most of them do not speak a word of English. They have a long journey before them.

A New Railroad Brake.

M. Andraud has invented a new railroad brake, which consists in a strong metallic reservoir, holding about 150 to 180 quarts. This reservoir is filled with compressed air, of eight or ten atmospheres, by means of proper pumps, which are worked by the locomotive. The reservoir is provided with a manometer, safety-valve, and a proper stop-cock, and so arranged and situated that the engineer can easily manage and observe any part of it. When a special person is employed to superintend the apparatus, it can be placed upon the tender. Every car is to be provided with a tube of an inch or more in diameter, each tube having on both ends elastic tubes, by means of which the tubes of each car can be connected with those of the other cars, so as to form a continuous communication with the air reservoir. Each car is furnished with two cylinders of five inches diameter, which are placed below and on each side of the car body. Each cylinder has a piston, to the ends of which the brakes are attached; the cylinders are connected with the long conducting tubes, and when the air is let into the cylinders, their pistons are pushed out and force the brake against the wheels. When the air is stopped off, a spring or some elastic fixture withdraws again the brake from the wheels. The chief brakeman at the reservoir, who manages the apparatus, can by a single turn of the stop-cock act at once upon all the brakes at any moment's warning, which may be given by the means of an electro-magnetic signal from any car in the train. The brakeman has only to keep his reservoir always properly charged as the manometer indicates.

The Mad-Stone.

The reference of the *Washington Union* to the mad-stone (one of which is now in the possession of the family of the late Mr. John King Churchill, in Richmond, Va.,) has drawn articles upon the subject from several cotemporaries.

The *Petersburg Intelligencer* has been shown one, in the possession of Mr. Oliver, who resides in Petersburg, and, it is said, has several certificates of cases in which it has been successfully used for the bite of the mad dog. It is rectangular in shape, with parallel sides, and polished surfaces, traversed by dark-grey and brown streaks, and about a size larger than half a Tonqua bean, except that it is not near so thick. Upon being applied to the wound of the patient, (says the *Intelligencer*,) it soon extracts the virus, which, it is said, may be distinctly seen in the water into which it is repeatedly dipped during the operation.

The *Portsmouth Globe* says: "We were raised—'brought up' is, perhaps, the word—in Petersburg, Va., and among our very earliest recollections is one concerning a cure from hydrophobia, made through the agency of a mad-stone. The person, whoever it was, that was bit by a rabid dog, went to Williamsburg, in this State, where it was said a mad-stone was located, and came back well, and was never troubled either with madness or its symptoms.

Our next notice of the subject was when two individuals in Petersburg were bitten by mad dogs, one, we think, lived in Halifax-st., and his father believing the mad-stone a humbug, refused to let his son go and try it. He was seized with the fits, after the usual medicinal agents had failed, and died in great agony. The other visited the mad-stone—still then at Williamsburg—and entirely recovered.

The next case was this: "We were traveling from Paineville, Amelia County, to Farmville, Prince Edward County, Va., and stopped at a blacksmith's house to get dinner. In the course of conversation, he said he had been bit by a mad dog, that had destroyed by its bite a number of cattle, sheep, and hogs, and that he hastened at once to Williamsburg; that, on the way, he had suffered much from the bite, but after the application of the stone, he had got relief, and suffered none since. 'That bite,' said he, laying much emphasis on the cost, '*cost* me nearly a *hundred* dollars.'"

James M. Pratt, of Lyndon, Ill., encloses to the editor of the *Boston Investigator*, a Liberal or Infidel paper, the sum of $5, which he says is a portion of the profits from corn planted and tilled on Sunday, and which he tenders as a free-will offering. He further states, that he intends to keep on raising Sunday corn, and every year that he has luck he promises to send the *Investigator* man a V.

Bound Volumes.

On hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester. Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any *other* cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

COMMUNION—BY S. S. G.

(Concluded.)

In the language of a celebrated living orthodox writer and preacher:—

"There needs to be a revision of our current impressions in reference to the value of doctrinal platforms, and articles of scientific divinity, taken as bonds of unity and defenses of purity. Christ and his apostles manifestly had no such conception of unity as that any external ligament of opinion or science may compass it and foster it. Christian unity, in their view, is not a fascicle, but a tree, vitalized by a common life. 'I in them, and thou in me, that they may be made perfect in one.' It is holding the head, and under it being fitly joined together. It is moral, not logical; of the heart, not of the head. It is precisely what an apostle means when he speaks of the *unity of the Spirit*, under which there is of course one body or embodiment, as there is one Spirit; one Lord above, one faith in the heart to embrace Him, one baptism as the outward profession of that faith, and then, as the soul, the internal, vivifying principle of all, 'one God and father of all, who is above all, and through all, and in all.' Discarding this magnificent view of internal brotherhood in the life, dogma early undertook to build an external, scientific unity; and exactly that followed which only could follow, viz.. that as the heads which propagate dogma are many, not one, so the church, ceasing to be one, became, externally viewed, as many as the heads. Manifestly, no human opinion could have scope or force to unify all thought or belief under it, and the more stringently it insists on containing the world in its human measures, the more certain is it that dissent, disruption, and all manner of discord, will follow. So it has been—so it ever will be. These attempts to settle the world into unity under the external bonds of opinion, continually defeated, have been continually insisted on, and so the divisions and subdivisions have been constantly growing finer, till now, at last, the imposture is discovered—the articles of opinion that were to be the bonds and bases of a unity externally constructed in place of the vital unity of the spirit, have fretted away at last even the appearance of unity.

"Nothing is plainer, whether as a matter of theory, or of fact, than that dogmatism is and should be the most fruitful of all causes of divisions. If faith has to do with the infinite; if life is the presence in the soul of the infinite; how clear is it, that opinions can compass no such matter. And then, how evident is the reason why opinions divide, and sects arise, and wars wage. O this wretched babble of opinions, this mutual barricading of opinion, by which Christian souls are fenced away from each other, and, if possible, from the life of God; as if the known, acknowledged fact, that God is manifested in the world, and wants the world's love, were nothing; to receive it nothing; to meet in receiving it nothing; no unity. Therefore we must bring this astounding, untheorizable fact into theory, install it in consequence, under the name of some school, or in some articles of theology, and then, to unite in it, we fancy makes a brotherhood. And thus we go on to talk, debate, measure, and judge one another, and quarrel religion from age to age, without so much, it may be, as one spiritual apprehension of God or of Christ as the life of the world; opinions, deductions of mere logic, dogmas, impotent and dry, discussed, debated, stood for by some, rejected by others, yielding to none the true food of life: these, with such intermixture of strife and fire as are naturally to be expected, constitute the history of religion.

"The manner in which dogmatism necessitated division, may be well enough illustrated by the mournful separation which has taken place in the New England churches.* Had we been embodied in the simple love of God, under some such badge, for example, as the Apostle's creed, it is very probable to me that causes of division would never have existed. But we had an article which asserted a metaphysical trinity, and this made the assertion of a metaphysical unity inevitable; nay more, even desirable. So we had a theory of atonement, another of depravity, another of regeneration, ingeneration of character, which required the appearance, so to speak, of antagonistic theories. Our theologic culture, meantime, was so limited, on one side, that we took *what was really our own opinion only, to be the unalterable truth of God;* on the other, the side of the revolt, too limited to perceive the insufficiency of dogma as a fruit of the mere understanding, too limited not to take the opposite with the same seriousness and totality of conviction—they even fell to the work of constructing a religion wholly within the molds of natural reason itself, admitting nothing transcendant in the reach of faith, or the manifestation of the life of God. They asserted liberty, as they must to vindicate their revolt, producing, however, in the mean time, the most intensely human, and in that sense, the most intensely opinionative religion ever invented, under the name of Christianity.

"One limit, I rejoice to believe, is already reached, as regards this process of division, and a consequent reaction may be hoped for. No longer is it possible for any man to think it a matter of ambition to become the founder of a sect. For this business of sect-making is already quite overdone, and the products turned out in later times, are so indifferently small, because of the number, that when the busy leader gets his name stuck upon a small platoon of adherents, it seems to be a judgment of God upon him, thus to expose himself to ridicule. Henceforth, the once powerful motives of ambition are taken away from the activities of dogmatism, and now there is nothing left us, in fact, but to strive after the Head—to draw the bleeding members, if we may, of Christ's lacerated body together, and have it for our most blessed and pure reward, to see them coälesce and live. And to hasten such a result, we must disallow, as unchristian, all human schools and names of men."

The same writer says in another place:

"It is not in the highest, truest state of spiritual life, and union to God, that the gospel finds us. Our faith is imperfect, only initiated, possibly not even that; and since the world we live in, too, is full of false learning, corrupt opinions, and deceitful pretenses of knowledge, we must be allowed to cultivate theology, with what measures of grace we have, and struggle up through our imperfect mixtures of natural judgment and spiritual discernment, into the full day of light and love."

He continues:

"Manifestly, we preserve no true semblance of purity now, by our former standard; for the worst kind of impurity is practical, no theoretic—the impurity of a selfish, unspiritual, undevout life; and this will shelter itself as quietly under the platform of orthodoxy, as if it were even acceptable to God. How often, indeed, is it the shame of religion, that a confessedly true disciple is hunted out of the church for some gentle aberration of opinion, when many are endured in it, who neglect every duty, are known to live in a manner that disavows every spiritual relation, whether to God or to man, simply because there are so many persons assuming to be pillars in the churches, who make a religion of orthodoxy, and find it so much easier to be exceedingly mad for this, than to be humble, gentle, and patient for Christ's sake."

Perhaps I ought to beg pardon for so lengthy a quotation; but it seemed so much to the purpose, that I could not refrain. It all goes to show, most conclusively, the utter impossibility of opinion, as the basis of Christian union. And I am not certain but that the almost infinite variety of opinions that obtain, is necessitated by the law of language and mentality. For, is it not a fact, that every one's opinion of the Bible, as well as any other book or subject, is just what he understands the Bible or the book to teach. One understands the Bible to teach Trinitarianism; another, Arminianism; another Unitarianism; and who dare say that each is not honest in his opinion, and that each arrived at his own opinion according to the best of his understanding of the rules of language? One understands the Bible to teach the annihilation of the wicked, while another denies, and each one aims honestly to arrive at the true meaning of the record as suggested by the Holy Spirit. One is a literalist, another a spiritualist, when reading the Bible. One believes God has bodily parts and form; another, the contrary. One believes temporal death the consequence of Adamic sin; another, that it inheres in man's original nature. What a variety of opinions have obtained among the best, the most pious, and those most desirous of ascertaining the divine will concerning inspiration, the Sabbath, baptism, the Lord's Supper, creation, the account of man's first sin, the deluge, the atonement, and almost every Bible question of importance; and all this by the most firm believers in God, the Bible, Christ, and his redemption. Surely, then, where such diversity of opinion seems almost necessarily to obtain, ought we to expect, that the Christian world will ever harmonize in opinion? For one, I do not expect such a miracle of miracles to take place. And yet I do expect the Christian world one day to be unified, to be fused into unity—that the church will yet stand forth clear as the sun, fair as the moon—that the prayer of the Redeemer will one day be answered—that the unity for which he prayed will be realized—that the kingdom of heaven will be realized on earth—that God's will will be done here as in heaven. Nor do I expect that it will be brought about by any personal coming of Christ to destroy the wicked, and burn the earth, but that it will be the result of an application of those principles which ever can be the only true basis of union, on earth or in heaven, among intelligent beings, principles that, if not recognized, there will ever be wars, contention, discord, and hell. The examination of them will be considered when I argue the affirmative of my subject.

* The author of this extract is a New England clergyman.

GIVE HIM ALL.

An Indian, who heard a sermon in a Christian settlement, was much moved by the claim that he should *give up all to God.* The duty pressed upon his heart; he returned to his wigwam; he meditated much upon it; and at length solemnly resolved to do what God required. First, he took his rifle and set it apart for the Lord; then his fishing apparatus; then his scanty furniture; then his blanket—repeating as he set apart each article, "Here, Lord, take that." Finding himself utterly destitute, having given up all, he yet felt that he was forsaken of God, and was in great distress. The darkness of despair came over him. In this last extremity, he laid *himself* upon the altar, saying, "*Here, Lord, take a poor Indian.*" The offering was accepted; and there, alone, bereft of human help or hope, this poor despised savage was delivered from the power of sin, and made an heir of glory. He soon learned to read, and was supplied with a Bible, which he made his daily companion; he was happy in solitude, or with Christian friends, to whom he often remarked, that when he gave *himself* to the Lord, the Lord gave him "all things," for the life that now is, and that which is to come.

[American Messenger.

THE BIBLE.

Father! that book
With whose worn leaves the careless infant plays
Must be the Bible. Therein thy dim eyes
Will meet a cheering light; and silent words
Of mercy, breathed from Heaven, will be exhaled
From the blest page into thy withered heart.
John Wilson.

There wilt thou learn what to thy ardent mind
Will make this world but as a thorny pass
To regions of delight; man's natural life,
With all its varied turmoil of ambition,
But as the training of a wayard child
To manly exercises; yea, death itself
But as a painful birth to life unending.
Joanna Bailie.

Whence but from Heaven could men unskilled in arts,
In several ages born, in several parts,
Weave such agreeing truths? or how, or why,
Should all conspire to cheat us with a lie?
Unasked their pains, ungrateful their advice,
Starving their gain, and martyrdom their price.
Dryden.

So has this Book entitled us to Heaven,
And rules to guide us to that mansion given;
Tells the conditions, how our peace was made,
And is our pledge for the great Author's aid.
His power in nature's ample book we find,
But the less volume doth express his mind.
Waller.

A critic on the sacred Book should be
Candid and learned, dispassionate and free;
Free from the wayward bias bigots feel,
From fancy's influence, and intemperate zeal.
Cowper.

TIME OF COMMENCING THE SABBATH.

An Essay read before the Seventh-day Baptist Western Association, at its meeting on the 23d of June, 1854,

BY NATHAN V. HULL.

The question as to the time of commencing the Sabbath was originally one of a very simple and incomplex character. The present difficulties about it, whatever they may be, have arisen out of circumstances that have occurred one after another in the world's history, suited to the development of new and diverse theories. As it was not contemplated by the Association, that a history of the circumstances and opinions connected with this question should be given by their Committee, he will confine himself to the question as it was "at the beginning," supposing that to be the design of the appointment.

In the first chapter of Genesis, we find the term *day* employed in two different senses. In the fifth verse it is said, "And God called the light day, and the darkness he called night; and the evening and the morning were the first day." It will at once be seen, that the term "day" in this place has two significations—the first limited to the time in which light prevails, and the second extended so as to embrace both the light and the darkness, or a day of twenty-four hours instead of a day of twelve hours. It is, however, well known to the Bible student, that the term *day* is used in a variety of significations, many of which are not pertinent to this question, for the reason that they were not only introduced a long time *after* the institution of the Sabbath, but because it is used to describe widely different portions of time. To attempt to apply all the various uses of the term to this discussion, is manifestly absurd. The question, when stripped of its foreign and illegitimate characters, is, In what sense is it used in the *institution* of the Sabbath? To answer this, we must go to the institution itself, and study with care the record revealing the divine mind concerning it. Go we then to the "law and the testimony."

We will now state two propositions, and attempt their proof.

1. That the term day, in Genesis 2: 2, 3, embraces a period of twenty-four hours.

2. That this day of twenty-four hours commences on the evening previous, so that the darkness preceding the light is reckoned with the day.

In proof of the first proposition I remark—1. That the six days preceding the one under consideration are expressly so defined. 2. Though the six preceding days are so defined, and the seventh in its *terms* is not, yet, as it is embraced in the narrative, without the introduction of any such terms as necessarily changes its meaning, we are required by all sober rules of interpretation to employ it in consonance with the foregoing part of the history. 3. But if we were to change our reckoning at this point, it would involve us in a most serious difficulty, namely, that of producing a chasm between the end of the sixth day and the beginning of the seventh day; for it is manifest, that the darkness preceding the light of each of the six days of the week was reckoned as a part of the day, so that the day ended with the disappearing of the light. If, then, this rule is not applied to the seventh day, the darkness following the sixth day is a period of time by itself, not belonging to any day, and therefore not a portion of the *week;* for a week is a period of time consisting of seven days. We conclude, that the idea that the seventh day is a period of twenty-four hours, equally with the other six days of the week, will not be seriously disputed.

We come now to our second proposition, which is, that this day of twenty-four hours commences with the commencement of darkness on the preceding evening. In Genesis, 1st chapter, 2d verse, we are told that "darkness was upon the face of the deep." In the third verse, God said, "Let there be light, and there was light." In the fourth verse, it says, "God divided the light from the darkness." And in the fifth verse it is said, "He called the light day, and the darkness night." And now mark, the "evening" (the darkness) and the "morning" (the light) were the first day. How then is the first portion of *time* described? Is it not called "darkness," "evening," "night?" *Time, then, commenced with darkness.* Hence, by an iron necessity, in reckoning time from "the beginning," we must commence with the darkness with which time began, and joining that with the first succeeding portion of light, we have in scripture phrase "the first day." And if we begin the first day of time so, we must commence the second in like manner; for the rule of one civil day is the rule of all other civil days, and as the seventh day is a civil day, the same rule must be applied to this also.

But let us for one moment look at the *design* of the Sabbath, and see if we may not in this way get something to strengthen our position. In the commandment of the Sabbath, we are expressly told that the institution commemorates the work of creation. Now, the night is as much a part of creation as day. If then the time set apart to commemorate the event of creation does not embrace in itself the whole work of creation, there would be a manifest impropriety in the appointment. As then the day before the Sabbath ends with the setting of the sun, the day of the Sabbath must commence at the same time, so that both light and darkness, as works of the Creator's might, have their representatives, and have them in the order in which they were made.

We next ask your attention to the falling of the manna and its attendant circumstances. In feeding the children of Israel in the wilderness, the Lord sent them quails in the evening, dew in the night, and manna in the morning. This order prevailed on the night before and morning of the Sabbath, on each of the days except the night before and morning of the Sabbath. Does not this favor the opinion, that the night *previous* to the day is attached to it? See the whole account in the sixteenth chapter of Exodus.

We now come to the commandment—Ex. 20: 8—11, "Remember the Sabbath day, to keep it holy. Six days shalt thou labor and do all thy work; but the seventh day is the Sabbath of the Lord thy God; in it thou shalt not do any work; thou, nor thy son, nor thy daughter, nor thy man servant, nor thy maid servant, nor thy cattle, nor thy stranger that is within thy gates. For in six days the Lord made heaven and earth, the sea and all that in them is, and rested the seventh day; wherefore the Lord blessed the Sabbath day, and hallowed it." It will be seen, that the commandment refers to the six creation days. These have been shown to be days of twenty-four hours, and to commence in the evening. The rule governing their reckoning in Genesis, must govern the mhere, and the rule governing the reckoning of the six days must be applied to the Sabbath. If the Sabbath commences, as some say, at midnight, and as others say, at the break of day, what is to be done in our reckoning with that portion of time passing between the close of the sixth day and the commencement of the Sabbath?

Again, in Leviticus 23: 32, we have a statement that seems to be as much in point as it well could be. "From even unto even shall ye celebrate your Sabbath." Were this statement made concerning the weekly Sabbath, it would settle the question at once; but because it refers to a ceremonial Sabbath, its force in this argument may be denied. But why? What is there in a ceremonial Sabbath that should make this law peculiar to it? Can there be any reason why this expression should be found here, except as a general regulation requiring the keeping of the *whole* day? I think this is all there is of it, and just what there is of it; consequently, the principle here laid down applies equally to other ceremonial Sabbaths and to the weekly Sabbath.

We are now prepared to call your attention to Nehemiah 13: 19—"And it came to pass, that when the gates of Jerusalem began to be dark before the Sabbath, I commanded that the gates should be shut, and charged that they should not be opened till after the Sabbath," &c. Who, we ask, unless he had an interest to serve, would draw any other conclusion from this, than that it favored the opinion that the time to cease our labor is as it "begins to be dark?" If it be replied, that Nehemiah pursued this course that he might the more effectually prevent their Sabbath desecration, I answer, that that statement contains an important concession to our principles, which is, that if there was an advantage gained by commencing the evening previous, then there would be a perpetual advantage gained by commencing in the evening. Of this Jehovah must have been aware; and to suppose that he would establish the Sabbath upon such principles as to expose it to almost necessary violation, and to cumber it in its provisions with absolute weakness, is to charge him with folly. Besides, if Nehemiah had taken from the people a portion of time justly belonging to them, would it not have weakened his influence, and exposed him to the charge of having exercised a tyrannical power, and that in the name of justice and religion? We think that Nehemiah simply took the time properly belonging to the Sabbath, and exercised his just authority for its observance.

In further proof of our position, that the Sabbath commences and ends with the setting of the sun, we ask your attention to the fourth chapter of Luke's gospel, where it will be seen that Christ, at Nazareth, went into the synagogue on the Sabbath, and gave a discourse; and, pursuing the narrative, when you come to the fortieth verse, you find that at the setting of the sun those that had any sick came and presented them to be healed. Now, why did they not bring them *before* sunset? Is there any other reason than that they regarded healing on the Sabbath a breach of the Sabbath law? If it be said, that this was a Jewish superstition, my reply is, that does not reach the point. The question is, how came the Jews to believe that the Sabbath closed at sunset? If it be said that this was according to Jewish *tradition*, we demand the proof. The truth is, the Jews affirm that this is according to Scripture. One thing, then, is established by this, and that is, that the Jews interpret the Sabbath law in this respect according to the positions taken in this argument; and who will deny to them, that they have the means, if any have, of forming a correct opinion? Remember, that to them were given the "oracles of God," and the prophets were sent to expound them; also, miracles were wrought in their behalf; and, as it regards the Sabbath, it stands in the lead of all the institutions of religion, as representing the fundamental ideas of religion, the creation and the Creator, and as, therefore, in some instances in the Old Testament, representing the great idea of religion itself. To suppose, then, that under these circumstances the Jews were not well instructed upon this point, is to take issue against all the probabilities in the case.

Let us now briefly state the matter as we have so far found it, and see where we are.

1. The first we know of time is, that "*darkness* was upon the face of the deep."

2. The light he called "day," and the darkness he called "night." Here we have the *first* definition of the term "day."

3. And the evening (or darkness) and morning (or light) here are the "first day." Here we have the *second* definition of the term day; and bear it in mind, that the first week of time was composed of seven such days as the last mentioned, the last of which is the Sabbath, which we are commanded to observe.

4. One of the regulations concerning a ceremonial Sabbath, is that it be observed from "even to even," and this not because there was anything peculiar in the Sabbath itself, or any of its attending and modifying circumstances, requiring it to be observed from even; but because from even to even is a whole or natural day; therefore, as the Sabbath is a whole day, extending from "even to even," the same law of observance should be attached to it.

5. Nehemiah, in a case of Sabbath reform, commences at evening, or when it "began to be dark." In this case we have shown that the probabilities are against the supposition that Nehemiah commanded cessation from labor before the divinely appointed time.

6. When the Saviour was preaching at Nazareth, and the Jews had any sick they wished to have healed, they delayed to bring them until the sun was setting, because it was Sabbath day.

To the foregoing collection of scripture proofs upon this subject, I will add two or three reliable statements of history.

1. KITTO, in his *Cyclopedia of Biblical Literature*, article Day, says: "The earliest measure of time on record is the day. 'The evening and the morning were the first day,' Gen. 1: 5. Here the word day denotes the civil or calendar day of twenty-four hours, including the evening, or natural night, and the morning, or natural day. It is remarkable, that in this record the evening, or natural night, precedes the morning, or natural day. Hence the Hebrew compound evening-morning, which is used by Daniel (8: 14) to denote a civil day. In fact, the Jewish civil day began as it now does, not with the morning, but with the evening. Thus the Sabbath commences with the setting of the sun on Friday, and ends with the sunset of Saturday. Indications of this primeval order exist among many nations, and even we have sevennight and fortnight, to signify seven days and fourteen days. Under this arrangement, the night seems to have been regarded, not as belonging to and terminating the preceding day, but as belonging to and terminating the day that follows. Nox ducere diem videtur, (Tacit. *Germ.*)"

2. The *Encyclopedia of Religious Knowledge*, article Day, says: "The Hebrews began their day in the evening."

3. *Wood's Dictionary*, article Day, says, that the "Hebrews began their sacred, if not their civil day, from the evening, Lev. 23: 32. The ancient Austrians, Bohemians, Marcomans, Silecians, modern Italians, and Chinese, do the same."

I firmly believe that the positions here taken will bear the test of fair and candid criticism.

A CHRISTIAN MOTHER.

Rev. Dr. Hawks recently delivered a lecture before a Historical Society, when he related the following story, illustrative of female heroism:—

"Among those, he observed, who formed a part of the settlement during the Revolutionary struggle, was a poor widow, who, having buried her husband, was left in poverty, with the task upon her hands of raising three sons. Of these the two eldest, ere long, fell in the cause of their country, and she struggled on with the youngest as best she could. After the fall of Charleston, and the disastrous defeat of Colonel Buford, of the State of Virginia, by Tarlton, permission was given to some four or five American females to carry necessaries and provisions, and administer some relief to the prisoners on board the prison-ship and in the jails at Charleston. This widow was one of the volunteers upon this errand of mercy. She was admitted within the city, and braving the horrors of pestilence, employed herself to the extent of her humble means in alleviating the deplorable sufferings of her countrymen. She knew what she had to encounter; but notwithstanding, went bravely on. Her mission of humanity having been fulfilled, she left Charleston on her return—but, alas! her exposure to the pestilential atmosphere she had been obliged to breathe, had planted in her system the seeds of fatal disease; and ere she reached her home she sank under an attack of prison fever, a brave martyr to the cause of humanity and patriotism. The dying mother, who now rests in an unknown grave, thus left her only son, the sole survivor of his family, to the world's charity; but little did she dream, as death closed her eyes, the future of that orphan boy. The son became President of this free republic—for that widow was the mother of *Andrew Jackson!*"

INDIAN MOTHER'S AFFECTION.

The following incident is related by the Rev. A. Stevens, in the National Magazine, in his Editorial Jottings in the West:—

"A chief and his two wives were converted, and wished to join the mission church. He was a truer man and had a warmer heart than was usual among his race. It was necessary that one of his wives should be put away; they themselves, as Christian converts, saw and conceded the necessity, but the process of effecting their separation was heart-rending. The details of the process could not be determined in the wretched family, and the missionary was sent for. He found them in the deepest grief. One of the wives was young and beautiful, both in person and character; the other one was aged and infirm, but equally esteemed for her virtues. It was settled that the latter should be retained; the other bowed her head and consented; it was struggle remained; the young wife was a mother; she had an only child, an infant. The chief loved it; it was, perhaps, to be the inheritor of his authority and honors; he could never part with it.

"'Never,' said the missionary, 'did I witness a more affecting scene than now followed. No possible terms could be agreed upon between the contending affection of the two parents. The mother sat upon the ground heart-broken; her tears dropping on the child in her arms; the chief stood off, agonizing and weeping, and the elder wife shrunk away from the scene.' The missionary proposed at last, I think, that it should be decided by lot, and the child fell to the chief, but the mother clung to it. The missionary urged her to carry it to the arms of the chief, but she could not; her sobs were her only reply. He then directed the chief to take it; but the latter overcome at the grief of its heart-broken mother could not step forward to do so. What was to be done? The agreement was binding. In Indian life the father was the only sure protector of the child; the mother's own future marriage and protection would be affected too, by the result.

"It was a painful, heart-rending case, but had no alternative. The missionary had to advance to the prostrate woman, and take the child himself. She reverenced his office; she believed the act necessary, and with irrepressible tears and sobs yielded the child; but no sooner had he taken it from her bosom, and placed it in the arms of the father, than the woman leaped towards it, and with outstretched hands, struggled to regain it, crying frantically, 'Give me my child! Oh! give me my child! Do what you will with me, but give me my child!'

"I saw the retained wife of the chief at the camp; she bears the highest Christian character, and her husband has, I understand, maintained his Christian integrity. The young heart-broken mother has found a refuge in the grave."

PAUL AT SEA.

1. He did not go for pleasure, or for his health, or to make money. He went because he was sent. He appealed from an unjust condemnation to Cæsar, and was sent a prisoner ocean-wise to Rome.

2. Heathenism paid his expenses. It is not often that a godly preacher gets transferred from one part of the field to another, and a Pagan treasury foots the bill.

3. Satan himself did a bad job by driving Paul into this voyage. He had a hand in it. He blew the bellows by which the first fires of persecution raged, and drove Paul from Palestine. But this, so far from stopping the preacher's voice, as Satan designed, only gave him a new and nobler field. Instead of blowing the Gospel trumpet in the outskirts, he now went to blow it in the capital. And Satan's friends carried him for nothing.

4. Paul did good service at sea. He did not coil himself up in his berth and snooze away the voyage. Nor did he, as one in bonds, go fretting in discontent at his lot, setting everybody else grumbling. He was cheerful and full of animation, as a good man ought to be anywhere. He was handy as Jack himself when the sea called for him. Now he helps pitch the cargo of the laboring vessel into the sea—and now he makes all ring fore and aft with a voice that roused and encouraged the dispirited sailor—and now gives the captain a hint that saved the lives of all on board.

5. Paul took his religion with him to sea. Some leave theirs behind; and it is not heard of off soundings. But our voyager was not ashamed to have all know who was the God he served, giving thanks for the food provided, and praying for the welfare of all on board.

6. Paul had a taste of shipwreck. But he went through its perils like a man of sense, and a Christian man, and did more for the safety of all his shipmates, than any and all others on board.

Paul on the land, or Paul on the sea, a most noble specimen of a Christian man. Happy for land and sea, when upon both the number of such men shall have been multiplied ten thousand fold. [Puritan Recorder.

The Bible presented by George Fox to the Swarthmore meeting-house, near Ulverston, and long chained to the reading-desk, is about to be restored to its place, after having for some time been in private hands. The Swarthmore meeting-house was the first place of worship erected by the Friends.

THOUGHTS ON ORDINATION.

(Concluded.)

What is the end, or design, of that thing which we call ordination? Simply to show, that a body of persons, competent to decide, judges the subjects of the ceremony qualified to be public teachers of religion.

But what body is it, that is competent to decide this question? A council of ministers —a presbytery—say some. But, in our humble opinion, a company of ministers is no more competent for it than a church. To whom are the ordained ones to be sent?—to ministers, or to men and women at large? Who are to be edified, from time to time, by their instructions?—ministers, or the people of God in general? Who are, from year to year, to sit in judgment upon their gifts?—ministers, or the communities where their labors are performed? There is but one answer to such questions. And if the common people —the laity, as they are sometimes called— are chiefly concerned in the ministrations of religious teachers, reason suggests that with the common people, principally, the decision of their competency should be left. For it may be reasonably inferred, that those gifts are best suited for the ministry, with which the common people are, on the whole, best satisfied.

When a man goes abroad to preach, and to give doctrinal instruction to such assemblies as he can gather here and there, it is of very little consequence to his hearers whether he holds a regular certificate of his ordination, or not. If he shows himself apt to teach, and by his skillful handling of the Word of God promotes the benefit of the people, that is certificate enough for them. If he lack this ability, the best certificate which an ordaining council can give him is of but little use. He preaches; and the eagerness of the people to hear him, together with the good which they receive, is the best evidence of his right to engage in such work. If it should afterwards be discovered, that he is a wicked man, notwithstanding his gifts, some would probably make considerable ado, and say that he had no right to preach, because he was not "regularly ordained." But if he be really a wicked man, we do not see how his having been "regularly ordained" would help the matter any. If, on the other hand, he is a good man, his gifts will recommend him to all people of good common sense, without the adventitious aid of an ordination certificate.

But suppose this preacher attempt to organize a church, after having taught the people a while—how then? We answer, that we know of nothing in scripture to forbid him. If the people are disposed to associate themselves as a church, and to have the ordinances of the gospel, why should they not do so? If they make choice of him as their pastor, and he accept the trust, and proceed to administer Baptism and the Lord's Supper, why should he not do so, whether he has been 'regularly ordained,' or not? In what respect would ordination by Imposition of Hands improve his qualification for such work. He has proceeded to organize the church, and now performs all the functions of a pastor, simply because there is an agreement between him and the people, and for aught that any body can see, it is all well done. In what respect would the work have been better done, had he been ordained in the usual manner?

It is true, that a church got up in such a way *might not* be organized exactly according to the Seventh-day Baptist standard; yet we see not why it would be more likely to differ from it, than if it were organized with the usual ceremonies. So far as the order of the denomination is concerned, however, it matters not; for if it be found to differ from the general character of Seventh-day Baptist churches, so much that they cannot recognize it as belonging to the denomination, they are not under any obligation to do so. We believe, however, that no fear need be entertained on this ground. If the *unordained* minister is a Seventh-day Baptist from principle, he will organize nothing but a Seventh-day Baptist church.

Let an ordaining council make what decision it pleases with regard to the qualifications of a man for the ministry, the people will judge for themselves. It is with them, indeed, that the decision finally rests. If they decide that a man is gifted for the work, it is pretty good proof that he *ought* to preach —that he is *called* to the ministry. If they decide that he is not gifted, he may as well find other business; the ceremonials of an ordination will be a futility. And if the decision must ultimately rest with the people, that is, with those not in the ministry, why not rest it with them in the first place?

We grant, that in a matter of such importance, the advice of ministers, especially of old ministers, is worthy to be had. So also is the advice of experienced members of other churches, who are not in the ministry. In this, as in every other undertaking, there is safety in the multitude of counsellors. But let it be understood, that it is *advice*, nor *authority*, that is sought. As we have said already, we say again, that there is no authority in this, nor in any other ecclesiastical matter, above that of the church, except it be that of the Head of the Church himself. And holding this view, we maintain that, so far from there being any thing disorderly, or unscriptural, in an ordination which rests upon the vote of the church *only*, it is rather the reverse. It is the most regular, scriptural, and gospel-wise of all ordinations. T. B. B.

SMYRNA.

Extract of a letter from Bro. Charles Saunders, bearing date Bark Adolar, May 15, 1854.

While at Smyrna, we called on Mr. Ladd, a missionary to the Armenians, sent out by the American Board. I had a card of introduction to him. He seemed very reserved, and I thought did not feel much interest in our mission. Perhaps it was on account of our Sabbath principles. He made but few inquiries, seemed to be in a hurry, and so we tarried but a short time. He has been in Smyrna a number of years. Mr. Morgan and wife called on us at our boarding place, and invited us to call on them the next day; we did so; and found there Mr. Parsons and an English missionary, a Mr. Walter, an Episcopalian. Mr. W. has been a missionary to the Jews in Smyrna twelve years. He said there had not been a single conversion of a Jew under his labors during that time. We had a very pleasant interview with them, and especially with Messrs. Morgan and Parsons, who are missionaries to the Jews, and were sent out by the American Board. Mr. Morgan has been at Salonica, I think he said two years; left that place on account of ill health; spent last summer in Constantinople; has been in Smyrna about eight months. Mr. P. has been in Smyrna eight months also. They are not able to preach yet, as they have not obtained sufficient knowledge of the language. The Jews in Smyrna are Spanish, and speak that language. Before leaving S[illegible] donation for our mission, several books, and some pamphlets, written with the Rabbinical Hebrew characters, in the Spanish language. They seemed very willing to render us any assistance in their power, and were anxious that we should write them after we get located.

I went into many of the Jews' places of business, and found more Jews who could speak some English, than I did of any other class. They were ready to converse about business, and very solicitous to have us trade with them, and would follow us from place to place, urging us to trade, the same as in their own shops. I suppose they assist each other in this way.

They were very cautious about giving much information in relation to their worship. I asked several if I could visit their synagogues, before I found one who would take us to one, although they had plenty of time to take us to any other place we wished to go. It was after a good deal of inquiry, on the Sabbath, that we found a synagogue. They keep their time as they did anciently; 6 P. M. is 12 o'clock; so that when they told me their hour of worship was at 3½, I supposed it was in the afternoon; hence we missed of the forenoon service. The synagogue that we went to was about 75 or 80 feet square, and on the east side was the holy place, where they keep the law, written on parchment. On the north side was a gallery for the women, reaching about two-thirds across the house, with a fine lattice work reaching to the upper ceiling, almost hiding them from the male portion of the congregation. The floor is marble, with the altar in the center; it looked plain and neat. I should think there were from 500 to 700 persons present. They commenced their service by the congregation's reading aloud, in concert. After the reading was over, the priest, or rabbi, read a discourse, in Hebrew, and then he went with two others and took the law from the altar; the congregation rose up; he read it, and at the end of every sentence they all said amen. They then returned it by the same hands; and as many as could crowd around kissed it as they passed slowly along through the congregation. Then they all stood up, turning their faces towards Jerusalem, with their heads inclined, and prayed silently; there was a slight motion of their lips; it was solemn and impressive. I looked at them with deep interest, as the descendants of Abraham, but now a dispersed and despised people. They have an intelligent, but rather a downcast look. An intelligent Jew told me that there is at the present time from 30,000 to 40,000 Jews in Smyrna. Mr. Morgan, the missionary, thinks there are between 15,000 and 30,000. They have the privilege of doing any business they please, but whether they are allowed to hold office in the government I cannot say. I was informed that many of them had joined the army, in the present war with Russia. Most of them are Spanish Jews, and speak the Spanish language. I did not learn much about the war. They have had one or two slight rebellions by the Greek population in Smyrna, but all was quiet when we were there. There are Greek pirates in the Archipelago. The consul at Athens, Mr. King, wrote to the consul in Smyrna, that a vessel had been found drifting about, April 12th, with much blood on her deck, with her papers all on board, with her log kept up to the 11th at noon. It was the brig Harriet from London, bound to Constantinople; had the name of one American seaman on her papers. There are rumors that two or three other vessels have been plundered by the pirates.

We visited the Turkish Hospital. It is a new establishment, and it does credit to the Government. I do not know the exact size, but it is quite extensive. It forms a square, and in the center there is an open space, perhaps 200 feet square. In the center of this square, there is a fountain of water, with a broad walk around it. Around the edge of this walk are trees and flowers. Adjoining the building they have another garden of considerable extent, but not in the best order. We thought it not best to go into the sick rooms. We were passing the military quarters, (or barracks, as they call them,) and were invited in. It is a large building, three stories high, surrounded by a heavy wall about 15 feet high. We were escorted through the various apartments by an officer; saw their arms, equipage, lodging rooms, &c. Every thing apparently was in good order. There were 150 or 200 soldiers taking their supper when we were in. They sat upon the floor, with their legs crossed, eight or ten in a group, with a large dish of thick soup in the center; each one had a piece of bread and a spoon, and all dipped out of the same dish. They were dressed in European style, and looked clean, as did every thing about the establishment. From this apartment we were taken to the officers' room, introduced to them as Americans, treated with coffee, and offered the long pipe, from which we got excused. From this room we were taken to a private room, richly furnished and carpeted, were seated, and left to ourselves for a short time, when the chief officer was aided in, to whom we were introduced as above, and he gave us a hearty welcome. We understood him to say, that he had received a letter from Constantinople, stating that his Government had received a letter from the United States, sympathizing with them in their struggle with Russia. We spoke a few words through an interpreter to him, stating that American citizens generally sympathized with Turkey. Just after we passed out of the enclosure, we saw the governor or pacha of Smyrna. He was on a fine horse, richly trimmed. He was in plain citizen's dress, and had a small guard with him. He made a low bow to us, which we returned, and passed on. He has [illegible] to England and France at school, and it is said that he speaks the languages very well; he is a man perhaps 35 years of age.

We went into several Catholic churches, one Armenian, and two Mohammedan mosques. The Catholic churches were much the same as they are in Catholic countries; decorated with images and paintings, with stone floors, rather rough. They have five or six priests at some of the larger ones, and are open at nearly all hours of the day. The Armenian church has some images and paintings, but not near as many as the Catholic. We did not attend their regular worship. They were having service at the time we were in. The one we visited has been twenty years in building, and probably will be a number more before it is completed; they were at work upon it. It is about 150 feet long and 120 broad, and probably will, when finished, be the most splendid church in Smyrna. I said we went into the mosques; we went into the hall, and looked into the door, but were not allowed to go farther without taking off our shoes. As we could see the most that was to be seen from where we stood, we concluded to keep on our shoes and stand without. The building was quite large, with many pillars reaching from the floor to the small arches above, standing in squares, with the arches meeting them at the top, at a distance of about ten feet, and extending down from the great circular arch above, which spans the whole building from the four sides about five or six feet. These small arches within, and extending down from the great circular arch above, with its gilding and paintings, looked very fine, and on the whole I think it was the handsomest inside of any place of worship that we saw in Smyrna.

PEOPLE'S COLLEGE.

The first annual meeting of the stock-holders of the People's College was held at Binghamton, Wednesday, the 12th inst. The meeting was well attended, harmonious and spirited. D. C. McCallum, Superintendent of the N. Y. & E. R. R., was chosen President, and G. H. Stebbins, of Brooklyn, Secretary.

According to the provisions of the charter, the stockholders proceeded to the election of 24 trustees for the ensuing year. The following gentlemen were unanimously elected:

D. C. McCallum,
W. R. Judson,
J. H. Snell,
T. R. Morgan,
C. A. Wheaton,
A. W. Jackson,
D. S. Dickinson,
Smith Robertson,
Wash. Hunt,
Geo. Hall,
Horace Greeley,
W H. Ranks,
D. Reese,
J. J. Deforest,
T. I. Chatfield,
Charles Lee,
S. S. Post,
G. J. Pumpelly,
A. I. Wynkoop,
John Magee,
Gurdon Evans,
H. S. Randall,
T. C. Peters,
H. Howard.

Mr. Greeley, in consequence of the present pressure of money matters, moved to suspend for the present all operations requiring expenditure, but the general sentiment was in favor of prosecuting the work, and after an animated discussion, the following resolution was adopted nearly unanimously:

Resolved, That we, the stock-holders and trustees of the People's College, hereby pledge our best and continued efforts, until the People's College shall be established.

The reports of the general agent and treasurer showed that about $10,000 had been unconditionally subscribed, and about $50,000 more conditional on the location. The fifty thousand was generally considered rather as a bid for the location, than a subscription, whereupon the following resolution was adopted:

Resolved, That all persons who have subscribed for stock on condition that a particular location be chosen, be requested to make such subscriptions unconditional, so that the College may be located in the manner provided by the charter.

In the evening, Horace Greeley gave an address, deprecating the present college system, and setting forth wherein it was proposed to improve upon that system. He was followed by C. B. Lines, of New Haven, in continuation of the same subject, and by Prof. W. H. Russell, of the same place, who was strongly denunciatory in respect to the defects of our present collegiate education, but failed to show wherein the proposed People's College would remedy the evils denounced. After a short address from Ex-Governor Hunt, the meeting adjourned. *

ALFRED ACADEMY.

The Seventeenth Anniversary of Alfred Academy took place on the 5th inst. The week previous to the close was devoted to the examination of classes and to literary exercises of societies of the Institution, and to a common-school celebration, which was held one day during the time, by the schools of the town. The afternoon and evening of the 3d were occupied by the Ladies' Literary Society, with addresses and essays from the ladies, and an address from Mrs. E. Oakes Smith, of Brooklyn. The afternoon of the 4th was devoted to the anniversary of the Alleganian Lyceum, and the evening to musical exercises from the class in music.

Below we give a list of those who took part in the Anniversary exercises of the Academy.

Salutatory—Mr J H Van Allen, Oakland.
Salutatory Essay—Miss H E Clarke, Friendship.
Origin and Progress of America—Mr S G Nye, Westfield, Pa.
Energy of Purpose—Mr J H Walbridge, Wellsborough.
March of Intellect—Miss M J Power, Pen Yan.
The Kingdom of the Mind—Miss S A Dickinson, Cuba.
The Power of Exertion—Mr D F Stillman, Pawcatuck, R I.
Principles of American Confederacy—Mr J W McNeil, Centerville, Miss.
Peasantry of Europe—Mr J B Cassidy, Middleburg, Pa.
Elements of Character—Mr A W Crandall, Millport.
The Maine Law—Mr E Burdick, Alfred.
Life's Heavenly Artist—Miss C A Vincent, New York.
The Age of Grecian Philosophy—Greek—Mr C A Thompson, Dansville.
The Rights and Wrongs of the Medical Profession—Miss C A Babcock, Wayland.
Advantages of a Love of Literature in Early Life—Mr A M Dunn, Plainfield, N J.
Duty of American Youth—Mr T E Stillman, N York.
Keys—What they Unlock—Miss L M McQueen, Friend-
Influence of Nature on Man—Miss V J Brimmer, Berlin.
Commencement Associations—Mr A W Titsworth, Plainfield, N J.

Graduating Class.

The Demand of the Present Age—Mr F Babcock, Clarence.
Theory of Life—Mr J N Davidson, Genesee Falls.
The Bible—Miss E B Stelle, Crossingville, Pa.
Commerce—Miss L H Pettingill, Hornellsville.
Anniversary Life Scenes—Mr J H Titsworth, Plainfield, N J.
Let the Heart be Beautiful—Miss M J Langworthy, Alfred.
A Glimpse through Time's Telescope—Miss J A Porter, Syracuse.
Conscience and Civil Law—Mr D A Langworthy, Genesee.
Spirit Longings—Miss E E Kenyon, Wirt.
La Jerusalem, Francaise—Miss P K Havens, Sparta.
Mythology—Miss H Canfield, Ossian.
Eloquentia Ciceronis Dum rexit—Mr James Black, Seneca.
The Harp of a Thousand Strings—Miss S A Weed, New York.
Little Children, the Flowers and Poetry of Earth—Miss H E Stillman, Alfred.
The Fine Arts—Mr G W Maxson, Albion, Wis.
Memorials—Miss C A Alward, Nunda.
Valedictory Essay—Miss A Campbell, Cuba.
Valedictory—Mr T Dwight Thacher, Hornellsville.
Address to the Graduating Class—Prof D Ford.

Mr W A Rogers, of Waterford, Conn., and Mr J D Clark, of Brookfield, were also members of the graduating class, but were not present.

SECRET SOCIETES.

To the Editors of the Sabbath Recorder:

In the *Recorder* of the 6th inst., "N. V. H." has an article addressed to a "Layman," which I suppose was intended as a reply to my request, that he would elucidate certain passages of Scripture, and which was over the signature of "Lay *Brother*." Now I do not suppose that the substitution of Lay-*man* for *Brother* was intentional, but that it "*indicates*" that "N. V. H." did not "*thoroughly read my communication to the end.*"

"N. V. H." certainly does me no more than justice in supposing, that I would not intentionally misrepresent him in anything in his article; nor do I conceive that I did, unless viewed in the light of his explanation, and new "points" made in his second article. To those several points he calls my attention; the third of which, only, have I time to notice. As I have before said, I did not design to enter into a defense of "Secret Societies." In N. V. H.'s third point, he says, "my objection is to secrecy out of place, &c.," and "when by its position it necessarily increases the power of temptation to evil; and such is the case, he assumes, in Secret Societies. Now, if secrecy is out of place in a Secret Society, will N. V. H. be so good as to tell us where it *would* be in place, and *not* "necessarily increase the power of temptation to evil?"

It is certainly N. V. H.'s right to refuse an "exegesis" of the passages referred to, on any ground he pleases, yet I must confess, I do not see the "*inapplicability*" of which he speaks. On the contrary, in view of the weakness of human nature, and the "power of temptation," which "secrecy out of place exerts," there was equal danger of the principles of secrecy leading to evil *then* as *now*, and the object of secrecy was as liable to be misunderstood and misrepresented then as now, and individuals were as willing to do it. But to *know* when "secrecy is out of place," is a question which I should hardly be willing to leave to the decision of "N. V. H.," as there may be an honest difference of opinion among men of equal knowledge and ability on that subject.

In regard to the church making secrecy a necessary Law in its organization, I do not believe it is necessary; and yet, does not the church virtually inculcate the "principles of secrecy," when it teaches and enforces the doctrine of the scripture, "If thy brother trespass against thee, tell him his fault between *thee* and *him alone*?" And should he gain his brother, would it be expected or justified in him to tell it to the church—much less the world? And again, when a candidate for ordination is presented, do the Committee or Presbytery make a public examination, or publish to the world the questions asked and answers given? Do not the committee take a private room, and if the door is not locked and a "sentinel" placed at it, is it not because there is no temptation to the cupidity of the worldling there, or that the good sense of those who have no business there would keep them out? I should not dare to ask "N. V. H." to reveal all that may have transpired in the private sessions of the presbytery, not because there may have been anything very bad, but because I do not consider it any of my business.

In regard to the scriptures affording any special command for the organization of Secret Societies, I do not expect to find any; but the command to found such a society as the Sons of Temperance, is based on the same ground as the command to form such societies as the Bible, Tract, Missionary, and Publishing Societies, or Sabbath-School. N. V. H. will not certainly condemn these societies because he cannot find a special "*thus saith the Lord*" for their organization; but I presume he gives them his countenance and support on the broad principles of the Gospel, in which Gospel the principles of "temperance, benevolence, and brotherly love" are taught.

In conclusion, allow me to say to N. V. H., that in my humble opinion, in order to sustain his position in regard to Secret Societies, he must either show the *principle* of secrecy *(of itself)* to be wrong, or that the *very secret* of these societies is in and of itself wrong. To do this, he must know what *that secret* is; and when he knows *that*, then it is no longer a secret, and he must found his opposition on other grounds than secrecy. If N. V. H., and others who fight so valiantly against these societies, would make themselves acquainted with these *dreadful secrets*, they would not fight as "one who beats the air," but might enter into the merits of the cause, and take [illegible] by the horns, and thus destroy the fell monster at one blow. If the churches would confine themselves to the object of their organization, and lay no unnecessary commands on their members, and the ministers of the Gospel would imitate the apostle Paul, and "become all things to all men, that they might save some," bearing in mind that they are the servants of the church, and that they should not "lord it over God's heritage," in my opinion the church would grow in grace, the temperance cause be advanced, and both clergy and laymen would have more time to search the scriptures and be benefited thereby.

With sentiments of friendship and esteem, I remain, N. V. H.'s LAY BROTHER.

THE SHANGHAE STEAMSHIPS.—A bill has passed the Senate of the United States, to establish a line of steamships between San Francisco and Shanghae, China. The importance of this measure can scarcely be over-stated. Probably the success of our ocean steamers has done more than any other one thing to make the United States respected in Europe and throughout the world. The establishment of a line across the Pacific ocean to China would no doubt increase this respect, and furnish facilities for commerce which were not dreamed of fifty years ago. For some time it has been seen, that the opening of relations with Japan was all that was wanting to reverse the existing order of things in intercommunication between Europe and the far East; and that the entire travel and transportation between London, Paris, Berlin, Madrid, Vienna, St. Petersburg, and Southern China, might cross this continent and be conveyed in less time, by ten or fifteen days, than by the overland route. Shanghae dates are, upon the average, sixty-five days old when they reach England. This speed is not likely to be considerably accelerated. But by the new route they will be, from Shanghae to San Francisco, *viâ* Jeddo and Honolulu, twenty days; from San Francisco to New Orleans, *viâ* the Isthmus of Tehuantepec, eleven days; from New Orleans to New York by railway, five days; from New York to London, ten days—total, forty-six days. We believe that in ten years this result will be witnessed, and when there shall be continuous rail lines from one ocean to the other, the time will be reduced at least six days.

VANDALISM.—The English Consul at Jerusalem writes to the London *Athenaeum*, in denunciation of a practice which all who respect Art, History, and sacred things, must read of with indignation. He says: "Permit me to recommend to the utmost degree of reprobation that you are able to inflict, the conduct of a man named Jones, a citizen of the United States, lately in Jerusalem, but who has now left us. He has been for some time residing alternately in Beyroot and in Jaffa. At a visitation of his a few months ago, he carried away with him chips of porphyry columns, ancient capitals, &c., which he sold to travelers for £60 sterling. On the 5th inst., accompanying some travelers to the 'Tombs of the Kings,' it was with surprise as well as grief that I observed a considerable mutilation of the sculptured entablature along the facade to have been made since a visit of but a few days previous; and within the sepulchral chambers, not one of the sharp edges of the receptacles for the dead had escaped the hammer, though spared by the lapse of centuries. And some large pieces of sculptured stone doors, whose tenons for insertion into mortices had remained to these days, had likewise been deprived of those tenons."

ROGUERY AND ARSON.—Two brothers, named Peverelly, were arrested in New York last week for arson. It seems that a watchman heard a noise in their storehouse at an unreasonable hour of the night, and broke in to see what was the trouble. He found the proprietor and his brother there, and on examination saw that they had scattered cotton about the building and saturated it with camphene all ready for firing. The reason of the proceeding was, that they had sold goods left there in store, and hoped by this means to conceal their roguery.

THE HONOR DECLINED.—A proposition having been made in one of the papers, that Henry Ward Beecher should be sent to Congress, he declines the honor through the *Independent* after this fashion:—

"It may not be modest for us to decline before we are really asked. But such efforts will certainly be love's labor lost. If the people wish us to be the President of these United States, we should be disposed to accept that. And we fancy that the will be new times in Washington City after our inaugural shall have been pronounced. Had the proposal to go to Congress proceeded from the American Board of Missions, there would have been grave reasons for considering it. We doubt whether they have a harder field in all Heathendom; nor yet a field where the Gospel is more needed. But, for mere political reasons, to backslide from the pulpit into Congress, is a little too long a slide for the first venture. We beg to decline in advance."

CHILDREN OF DR. JUDSON.—The New York *Recorder* says: "For the surviving children, of whom there are six, suitable provision has been made Five of these are the children of Sarah B. Judson, the youngest of whom, a son of eight years, has been adopted by Professor Dodge, of Madison University. The sixth only, a little daughter born in Maulmain in 1847, is the child of Emily Judson, and has been taken home by Miss Anable, of Philadelphia, to whom she was long ago given." The *Recorder* adds: "We are also informed, that abundant materials are left for a life of Mrs. Judson herself, and suitable precautions have been used to secure a complete and authentic memoir, the avails of which shall be secured to the surviving children. The public will look for its appearance, therefore, with great interest."

THE CHINESE IN CALIFORNIA.—Rev. J. L. Shuck, formerly a missionary at Canton and Shanghae, is now laboring among the Chinese in California. In a letter to the Corresponding Secretary of the Board of Domestic Missions, he says:—

"I have been looking up the Chinese, and find there are several Baptists among them here, and at the city of Sacramento. I have already met a number of Chinese who knew me in China. About two thousand Chinese have arrived here within the last ten days, and three thousand more are on their way. Very few of them now remain in this city, but proceed to the interior. There are about fifteen hundred in San Francisco, and nearly as many in Sacramento, a growing city, seven hours' distance per steamboat from San Francisco."

ACCIDENT ON THE SABBATH.—The New Haven *Register* of July 10th says, that on the previous Saturday [Sabbath-day] the staging about the tower of St. Thomas Church broke, precipitating to the ground, a distance of about 30 feet, six of the masons at work upon it, of whom Patrick Mack was so injured that he died in two hours. The others were severely bruised, but it is thought not fatally. "It is a singular fatality attending church-building in this city, that a person has been killed by falling from most of them while in process of erection."

The "fatality," in this instance, would have been averted, if the workmen had kept the Sabbath "according to the commandment."

THE CONNECTICUT FREEDOM LAW.—The Louisville *Journal* thus comments on the law for the Defense of Liberty just passed in Connecticut:—

"If any southern man were to be sentenced under this Connecticut law, we have no doubt that the U. S. Judiciary would pronounce the law unconstitutional, and that, unless the Executive Department of the Government should be in the hands of the abolitionists, the victim would be set free, and the wrong-doers punished, even though the whole military force of the United States should be required for the accomplishment of the work."

SETTLING IN KANSAS.—The project of sending a large number of freemen to settle in Kansas, with a view of making it a free State, is very unpalatable to the slave-holders, and pro-slavery men residing in the vicinity. Several Conventions of such have been held in Missouri and in Kansas, at which resolutions of hostility to free settlers have been passed. The speeches at these conventions abound in threats, and indicate a disposition to use deadly weapons, if necessary, to prevent the settlement of the Territory by real freemen. Meanwhile immigration increases, and the probability is that slave-holders will soon be in the minority, notwithstanding they are aided by the Government and its officials.

CONVENTION OF FREEMEN.—A State Convention of those who are opposed to the extension of Slavery, is called to meet at Saratoga Springs, N. Y., on the 16th of August. It is not, if we understand it, a party affair, but is designed to furnish the members of all parties with an opportunity to express their views in reference to the repeal of the Missouri Compromise, and to consult upon the best way to act politically against that measure. The subject of emigration to the new Territories, and the best way to promote it, will probably occupy the attention of the Convention to some extent.

THE CRYSTAL PALACE.—At a meeting of the Directors of the Crystal Palace Association, held on the 10th inst., P. T. Barnum resigned the presidency, giving as a reason, that his other numerous avocations peremptorily require his attention. The resignation was accepted, and John H. White, Esq., was elected President *pro tem.* A Committee was appointed to obtain the services of an efficient Superintendent for the rest of the season, and it was resolved to finally close the Exhibition on the 31st of October next. It was further resolved to appoint a Committee with power to dispose of the Crystal Palace and all other property of the Association, deliverable on or after the 1st day of November next.

EMIGRATION TO KANSAS.

Mr. S. N. Wood, a free-soiler now in Kansas, writes to a Cincinnati paper in the following strain, under date of Independence, Mo., June 7th. His statement is undoubtedly reliable, and it shows a state of things encouraging to emigrants:—

"We arrived here about a week ago, for the purpose of settling in Kansas, and contributing our mite to prevent Slavery cursing the fairest part of creation. We have made one short trip over into the Indian Country, and satisfied ourselves that a man can get almost just such a home as he pleases. I never saw richer land in my life, and it appears inexhaustible. We saw among the Shawnee Indians some of the best farms that we ever saw in our lives. The only drawback is this Slavery question. Missourians have already flocked to the Territory by hundreds; many slaves are already in the Territory. Even at the Methodist Mission they are heathenizing the black in order to Christianize the red man. A few missionaries thought in the start that they would regulate the settlement of this whole Territory. Northern men were ordered off; lynching was freely talked of, even by U. S. officers at Fort Leavenworth, merely because they happened to be born north of Mason and Dixon's line. Some northern men were actually driven off; others were frightened away. All manner of lies were told, and misrepresentations made, in order to keep northern men away. But now the charm is broken. A dozen families of Free Soilers drove ahead, and have commenced a settlement upon Kansas River. A meeting is called on July 8, of those friendly to making Kansas a free State. Emigrants from Iowa, Illinois and Indiana, are arriving daily. Ten days will not pass until the cabins of at least two hundred opponents of Slavery will be in progress of construction. A few more, and we shall be invincible. All we want is for every northern man—every northern family, who have their minds on this Territory, to come on at once. This Slavery question must be met and decided now. Let Slavery once get a foot-hold, and she will be hard to rout, while a proper demonstration now will scare all the slaveholders out of the Territory, and prevent more Slavery from being brought here. Let me, therefore, say to one and all, who ever design coming here, to come at once; no time to be lost; you will find every assistance to get good claims rendered to you that is possible."

RELIGIOUS INTELLIGENCE.

A society of ladies has been formed in Paris, for the purpose of coöperating with Mrs. Beecher Stowe, in her plan of procuring means for establishing a settlement of emancipated slaves in Liberia. The French ladies appeal to the sympathies of the Christian world, and especially to mothers and wives, for aid in their undertaking. As a practical measure, they propose to furnish articles of taste and elegance, and of utility as well, for the disposal of Mrs. Beecher Stowe, in the United States, where they justly believe such commodities will find a ready sale.

A prayer read in the churches of Hungary for the conversation of England, contains the following invocations: "Holy Maria, mother of God, pray for England! Holy Peter and Paul, pray for England! Holy George, patron saint of England, pray for that country! Holy Pope Gregory, father of England, pray for that country! Holy Augustin, apostle of England, pray for that country! Holy Bonifacius, O thou apostle of the Germans, who camest from England, pray for that country!"

Not long since, the will of a lady in Ohio, which gave more than two hundred thousand dollars to the Missionary Boards of the Old School Presbyterian Church, was successfully contested by the heirs at law. Certain informalities were alledged as the ground of the decision, but there can be but little doubt that the real reason was the fact that the entire estate was willed away to charity, while many relatives, some or all of whom were in needy circumstances, received nothing.

The N. Y. *Evangelist* says: "In addition to all the usual calls of benevolence, which we believe have been met to as liberal a degree as ever, the churches connected with the *three* Presbyteries of our Church, in this city and Brooklyn, have raised, within about a year past, for the purposes of church-extension, of building new edifices, repairing and enlarging old ones, removing incumbrances, and otherwise, a sum of money exceeding a quarter of a million of dollars."

A Southern Baptist paper thinks Mrs. Douglass, who was imprisoned in a Virginia jail, for teaching some small slaves to read, had the right thing done to her. "She knew," says the writer, "that the laws of slave States utterly prohibit the teaching, by any one, of the slaves to spell or read; and if she was fool enough to sin against light, she is entitled to no sympathy in her sufferings."

A committee for awarding the prize ($150) "to the author of the best essay upon prayer for Colleges," received and examined thirty-two manuscripts. Many of the essays are written with ability, and several appear well worthy of publication. The one best adapted, in the judgment of the committee, to accomplish the purpose of the donor, is found to have been written by Professor W. S. Tyler, of Amherst College.

At a recent Western Virginia Conference, a preacher became a slaveholder by marriage. To satisfy the Conference, the preacher and his wife gave their written obligation to set the slaves free at a fixed age; and the oldest, now twenty-eight years of age, had four years given him to employ for himself, solely in buying his wife, who was owned by another person.

By a recent act of the British Parliament, the proprietor of a cab must, on applying to the Excise-office for a license, state whether he wishes it to be employed on six or seven days of the week. For the former, he has to pay a duty of six shillings, and for the latter seven shillings weekly. About 700 of the London cabs have got the six-day licenses.

We learn with pleasure, says the *Semeur Canadien*, that fifty Roman Catholics of Geneva, Switzerland, have abandoned the doctrines of Papacy, and embraced those of the Gospel. It may be remembered that, during the last year, thirty-eight Catholics of the same city were received into the Protestant Church.

William Rankin, Esq., of Newark, N. J., has given $1,000 to the College of New Jersey, to found a scholarship in Nassau Hall, to be called the "Joseph Rankin Scholarship," in memory of his son of that name, whose early death at Florence, Italy, in November last, disappointed so many parental hopes.

The American Board of Missions and the Bible Society are "short." The American Board fears a deficit this year of not less than $15,000; the expenditures have been so much greater than usual. The Bible Society states, in a circular letter, that it has incurred a debt of $30,000; to which a further expenditure of $35,000 for July, and $40,000 for August, must be added.

The mortality among the London missionaries is as great as it is among those in foreign countries; and there are some districts of the metropolis so fatal to the missionaries that it has become a question with the Society whether it has the right to send men into them.

The following toast was the first sentiment offered at the celebration of the 4th inst., at Rockport:—The President and his Administration—May they "fear God and keep His commandments."

Abstract of Proceedings in Congress.

SECOND-DAY, JULY 10.

In the SENATE, a memorial was received from Illinois Icarians, asking a grant of land in Iowa for the settlement of their Society. Messrs. Chase and Sumner presented several memorials against the Fugitive Slave Law. A bill to graduate and reduce the price of the public lands was introduced. The Committee on Foreign Relations reported a bill to make compensation for negroes carried off by the British during the last war. The Civil and Diplomatic Appropriation bill was received from the House, and referred to the Committee on Finance. The Homestead bill was then taken up, when an amendment offered by Mr. Clayton—in substance giving to any mechanic, or other citizen of the United States of full age and accustomed to any business, trade or calling, other than the cultivation of land, the sum of $160 in lieu of 160 acres of land—was debated at considerable length, and the further consideration of the bill was postponed.

In the HOUSE OF REPRESENTATIVES, a resolution was adopted increasing the salaries of officers, clerks, &c., employed in the Legislative Department of the Government. The Senate bill appropriating $140,000 for the improvement of Cape Fear River was passed.

THIRD-DAY, JULY 11.

In the SENATE, Messrs. Rockwell and Sumner presented petitions for the repeal of the Fugitive Slave Law. The bill for the construction of a line of telegraph, connecting the Atlantic with the Pacific, was taken up and passed by a vote of 20 to 19. Mr. Brown laid on the table a substitute he intends offering for the Homestead bill. The bill granting the right way for a railroad through the Government grounds at Pensacola was passed.

The HOUSE at an early hour proceeded to the consideration of Mr. Bennett's Land bill, which, after a short discussion, was postponed until the third Third-day in December next. The bill making appropriations for the repair, preservation and completion of certain public works commenced under the River and Harbor bill was taken up. The amendments to the bill were discussed, and, without taking a vote, the committee rose and the House adjourned.

FOURTH-DAY, JULY 12.

In the SENATE, the House amendment to the bill removing obstructions to the navigation of Cape Fear River was postponed. Messrs. Seward, Sumner and Rockwell presented petitions in favor of the repeal of the Fugitive Slave Law. Mr. Houston of Texas, made a few remarks, commenting severely on the conduct of Commodore E. W. Moore, and charging him with withholding moneys from the widow and orphans of one Mr. Wilbur. A resolution ordering the printing of another edition of the Census Compendium, was passed. A bill making an appropriation of $600,000 toward the erection of a new building for the Executive Departments was discussed. The consideration of the Homestead bill was then resumed, the question pending being on Mr. Clayton's amendment giving money to the moneyless. Mr. Seward made a speech in favor of the bill, and against the discrimination against foreigners, when the further consideration of the bill was postponed.

The HOUSE considered the bill repealing a law allowing a discount of 50 per cent. on newspapers and periodicals when prepaid. After a brief discussion, and without taking any action on the bill, the House went into Committee on the River and Harbor bill. Various amendments were discussed, after which, the Committee rose and reported the bill to the House. Pending the question on an amendment, the House adjourned.

FIFTH-DAY, JULY 13.

In the SENATE, after the transaction of some unimportant business, the consideration of the Homestead bill was resumed. The question pending was on Mr. Chase's amendment to give the benefits of the bill to all foreigners now in or hereafter to come to the United States. After a long discussion, the further consideration the bill was postponed, and the Senate adjourned.

The HOUSE passed the River and Harbor, the Post Office, and the Light-House Appropriation bills. The Army Appropriation bill was taken up. An amendment abolishing the military superintendency of the National armories, and to reëstablish the civil supervision, was briefly discussed, when the further consideration of the bill was postponed.

SIXTH-DAY, JULY 14.

The SENATE passed a joint resolution to distribute among the members and others the works of Thomas Jefferson, now in course of publication for Congress. Bills were passed granting lands to aid in building railroads in Missouri and Alabama. Mr. Chase introduced a bill to prohibit Slavery in the territories, upon which no action will be asked till next Congress. The Homestead bill was taken up and amended by striking out of the sixth article "any individual," and interesting "any free white person."

The HOUSE spent the whole day on the private calendar, the principal point under discussion being the extension of Colt's patent. No action was taken.

SABBATH-DAY, JULY 15.

In the SENATE, the joint resolution from the House, presenting the thanks of Congress and a gold medal to Captain Ingraham, for his conduct in the Koszta affair, was amended by striking out the "thanks," and the resolution was then adopted. The River and Harbor, Post Office and Light House appropriation bills were all referred. The Homestead bill was then further discussed.

In the HOUSE, Mr. Davis of Rhode Island presented a resolution of the Legislature of that State, annulling the sentence rendered by the Supreme Court of Rhode Island against Thomas W. Dorr for treason, and also resolutions against the Nebraska and Fugitive Slave law. The House then went into Committee on private bills, twelve of which were favorably acted on, but not passed.

European News.

The steamer Asia, with European dates to July 1st, arrived at New York on the 12th.

From the seat of war there is no intelligence of special importance. We give the principal items.

The Russians are retreating from the Principalities, and the Austrians are about to enter. Lord John Russell said in the House of Commons, that if the Russians had not withdrawn, the Austrians were bound by the late treaty with the Porte, to march in and drive them out.

A pontoon bridge at Kalareish broke down, June 29, with 500 Russian artillerymen, most of whom were drowned, and their guns were lost.

Gen. Schilders is dead, after suffering amputation of both legs.

According to the Vienna *Lloyd*, the Russians have shut up the Sea of Azoff by sinking in the strait of Kertch thirty-two large barges laden with rocks.

On the 21st June the British ships Hecla, Valorous and Odin bombarded and destroyed the fort at Bomarsound.

A correspondent at Liverpool writes that the aspect of the war had undergone an entire change, so that it was difficult to foresee what new complication might arise. Austria, by a special treaty with the Porte, having undertaken to occupy the Danubian Principalities, interposes her army between the Turks and the Russians, thus preventing the advance of the former and covering the retreat of the latter. Indications are abundant that the actual seat of hostilities will be speedily transferred from the Danube to the Crimea.

In Circassia, the mountaineers actually have possession of the Gates of the Caucasus, and Woronzoff is cut off from communicating with Russia by that route. The Turks are about to advance of Tiflis in conjunction with Shamyl.

An interesting discussion has taken place in the House of Lords, on the bill allowing the Canadians to elect their Legislative Council or Senate. Lord Derby opposed it as an innovation on monarchical institutions, but it was passed nevertheless.

NEGRO BURNING.—They have been burning another negro in Kentucky. The details as presented are of a triple murder, with attendant circumstances of ferocious brutality, by a negro in Danbridge County. He killed his master and mistress, Mr. and Mrs. Moore, and Miss Lotspetch, a sister of Mrs. Moore. The cause of the murder was that he fell in love with Miss Lotspetch, and of course his advances were rejected as often as made. The young lady finally acquainted Mr. Moore with the circumstances, who threatened the black with a flogging for his conduct. Thereupon the slave resolved to murder his master and carry off Miss Lotspetch. Accordingly, in the night time he killed Mr. Moore with an ax while sleeping; but Mrs. Moore being aroused, she was also dispatched so as not to give the alarm. He then attacked Miss Lotspetch, who resisted his advances—broke her arm with a blow, stunned her, and then violated her. He then entered a canoe, and went to sleep in it as it floated down the river. He was suspected, pursued and overtaken; and now comes the most remarkable part of the incidents. He was put to the torture to confess "by screwing his fingers and then his hands in a vice until all the bones were mashed, (and other treatment which cannot be mentioned in print,) and he acknowledged he had committed the murders." Finally, he was tied to a tree in front of his late master's house, "a large pile of pitch pine built around him, and then set fire to and burned to ashes, in presence of 1,200 or 1,500 persons, who did not leave the spot until he was completely reduced to ashes."

NEW STEAMER ROUTE.—The arrival of the steamship Golden Age, a New York built vessel, under New York ownership, at Panama, from Sydney and Melbourne, is an event in the wonderful commercial progress of the times, that deserves a special record. This fine steamer had previously made the voyage around the Cape of Good Hope, from Liverpool to Melbourne, with a promptness which astonished the British public. The return trip to Panama is a still more important affair. The Golden Age takes her proper place as a connecting link between Australia and the United States and Great Britain by the way of the shortest and most practical route and the use of the Panama Railroad, the near completion of which is another American achievement abroad. The steamer brought $200,000 in Australian gold to the Isthmus, and a large number of American and English passengers. She was there met by the West India steamer Southampton, for London, and the George Law, for New York, part of the treasure and passengers having prompt dispatch by each route.

HEAVY BUSINESS IN POTATOES.—The Norfolk *Argus* states that the farmers and others in that city and vicinity are now doing a large business in potatoes. More than two thousand barrels are regularly sent by each steamer to New York. The average quantity sent per day to Baltimore, Philadelphia, and New York, is about one thousand six hundred barrels. The Baltimore boats can not take on board near as many barrels as are daily sent to the depot. They sell readily at Norfolk at $4 per barrel, and command a handsome profit in the Northern markets. The Norfolk *Beacon* says that Mr. Munden raised from twenty-five bushels of Irish potatoes, for which he gave $1 50 a bushel, a crop which sold for $806. After paying all expenses, the net profit amounted to $698. The same paper states that on Thursday, one farmer sent $1,130 worth of cucumbers to Philadelphia and Baltimore.

SALE OF HORSES.—On Tuesday, July 11th, a sale of valuable horses took place at the "New York Tattersall's." Nearly a thousand persons were in attendance, and the bidding was active. From twelve to fifteen horses were put up during the early part of the sale, and were bid off at prices varying from $200 to $550. The main interest that attached to the sale was the announcement that the trotters, Mac, Taconey, Frank Forrester, and Barnum, would be sold under the hammer. Mac was struck off at $4,100, to Mr. Mann of Baltimore; Taconey was sold for $3,700, to Mr. J. G. Bevins of New York; Frank Forrester was sold to Mr. Mann also, who paid $2,350. Barnum was withdrawn from the auction, having been sold at private sale during the morning for the sum of $2,850. Two mares—a bay and a black—were put up, each being warranted to trot a mile in 2.40, and together in 2.45. They were sold to Mr. Getson for $1,150. [Tribune.

SUMMARY.

A Mr. V. W. Roth, who arrived in Utica on Friday evening, July 7, communicates the following information in regard to the accident which occured on the Great Westen road on the morning of that day. The emigrant train ran over a horse, which threw it off the track, killing 17 Norwegian emigrants, and severely injuring many others. The train on which Mr. R. came, was delayed some time at the scene of this awful catastrophe, until the wreck was removed, and he tells us that he saw eight of the dead bodies, and was told that there were nine others near by. Of one family, consisting of the parents and three children, all were killed except the youngest daughter.

A young woman, whose maiden name was Davis, committed suicide in Cohoes on Wednesday last by swallowing 172 grains of corrosive sublimate! She died on the succeeding day at 4 o'clock P. M. The usual remedies were resorted to, but failed to relieve the unfortunate victim. She committed the rash act in consequence of a disturbance which originated in her marriage on Sunday of last week to a young man to whom her friends were opposed. It was said they bitterly upbraided her for marrying a Catholic, she being an Irish Protestant.

Several race horses were sold at auction in New York last week. Mac was struck off at $4,100, to Mr. Mann, of Baltimore, Tacony was sold for $3,700, to Mr. J. G. Bevens, of this City; Frank Forrester was sold to Mr. Mann also, who paid $2,350. Barnum was withdrawn from the auction, he having been sold at private sale during the morning, for the sum of $2,850. Two mares—a bay and a black—were put up, each being warranted to trot a mile in 2.40, and together in 2.45. They were sold to Mr. Getson for $1,150.

The remains of the mammoth clipper-ship Great Republic were sold at public auction July 12th, at the Merchant's Exchange, New York. The sale was made on account of the Insurance Companies. The first bid was $15,000. The price obtained was $28,250, the purchaser being N. B. Palmer, Esq., a well-known shipping merchant. The price realized was comparatively nothing. The ship, it will be recollected, was partially burned last winter, while lying at her dock at the foot of Dover-street. The hull, however, remained nearly free from serious injury.

The banking-house of August Belmont & Co., corner of Hanover and Beaver-sts., New York, was entered by means of false keys, on Tuesday night, July 11, and robbed of $14,000 in $1,000 bills on the Bank of the State of New York. A reward of $500 was offered for the arrest of the thieves. The next day the bills were all returned through the post-office, the thief probably considering his chances small of using them without discovery. He proved to be the cashier of the house, whose stock speculations had embarrassed him.

A dispatch dated Utica, Thursday, July 13, 1854, says: In the U. S. District Court today, Dr. Way was sentenced to the State Prison for 6 years, for counterfeiting; W. M. Voorhies, Truman Traverse, and Ezekiel Crunk for 2 years each. Samuel Bucksbee and George Palmer, charged with passing counterfeit coin, pleaded not guilty, and were held to answer at the August term in Auburn. The Grand Jury found true bills against thirteen persons for counterfeiting—all residing in one county.

The first company of emigrants for Kansas, under charge of the Emigrant Aid Company, was to start from Boston on the 17th inst. The train will stop at Worcester and the other principal stations between Boston and Buffalo, to receive the emigrants residing in the vicinities, respectively. The Company has provided one hundred tents, and ample provision will be made for the comfort of the emigrants. The expense of passage will probably not exceed half the usual rates.

A disastrous conflagration occurred at Coxsackie, July 11th, consuming nearly the entire business portion of the village. For hours the flames spread with great rapidity, and so wildly did the fire rage, that the light was distinctly visible from Albany. There were not less than forty buildings destroyed, all of which were wood, but they constituted the most valuable business portion of the village.

Mr. Silas Horton and wife, residing near Owego, who recently exerted themselves so nobly in warning the train on the New York and Erie Road of the danger before it—which was, that a large tree had fallen directly across the track—and thereby avoided the horrors of a collision, have been handsomely rewarded by the Railroad Company. The President has forwarded them each a life pass, a medal from the Company, and a silk dress for Mrs. Horton, accompanying the presents with a letter expressing the gratitude of the Company for their noble and humane conduct.

A letter to the *Tribune*, dated Milwaukee, July 7, says: "We had a heavy rain last night, followed to-day by a hot sun. I fear the wheat will suffer in consequence. Crops throughout our State never promised better, and if we can have fair harvest weather, our surplus will be enormous."

The *Clarksville Tobacco Plant* says tobacco has been declining for six weeks, and that some grades have fallen $2 to $3 per cwt. Other exchanges in Virginia and Tennessee speak of the same thing. The growing crop is good everywhere.

The N. Y. *Tribune* says: "We have lately made several visits to Monmouth County, N. J., that great peach producing region, and find the prospect very bad. We saw thousands of trees that will not produce a single peach. Some orchards have a few scattering ones upon the trees generally, with here and there a tree pretty full. Most all of the old orchards have got the jaundice badly. We hear of one man who has a fair crop for this year, who has contracted his peaches to a New York fruit-merchant at $1 per basket, the buyer paying freight."

Edward Milligan, the local Mail Agent at St. Louis, has been held to bail in $4,000 on a charge of purloining a letter from the mail. The letter in question was addressed to T. S. Arthur of Philadelphia, Pa., and is believed to contain a gold-piece of $2 50, remitted by some subscriber in Cass County, in payment of subscription for the Home *Gazette*.

The Associate General Reformed Synod reported at its late meeting in Xenia, Ohio, that it had a mission of much interest under its care at the oldest city in the world, Damascus; and another in one of the West India Islands; and that another is about to be established at Cairo, in the land of the Pharaohs. Beside these missions, others are sustained among the destitute in our own country and in Oregon.

Sad accounts reach us of the ravages of Cholera at Barbadoes. At one burial ground 244 corpses were buried in one day. Total of deaths in the city at last accounts, 2,107. Of the 150 prisoners confined in the jail, only 13 survived, whence the Governor very humanely ordered their release.

The *New York Journal of Commerce* states that there are five hundred thousand whites in Cuba, and seven hundred and thirty thousand blacks. Of the latter, 25,000 are slaves; and the remaining 480,000 either negroes already free, or those illegally held as slaves, and in the process of being made free under recent edict.

A letter from Santa Fé, dated May 20, says: "Indian hostilities continue. The Indians are combining against the whites, and a general Indian war is expected. The General has sent a force to Eagle Springs and is otherwise preparing to operate against the Indians."

A dispatch dated Albany, Monday, July 10, 1854, says: J. L. Russell, captain of the canal boat J. F. Crain, of the Rochester City line, was arrested here this morning, charged with being an accomplice of Murrill in kidnapping Solomon Northrup. He admitted that he was at the Inaugural in Washington in 1841. He was ironed and taken to Balston Spa for trial.

The establishment of a steam line from Australia to Panama will bring to New York a large increase of business with that distant portion of the globe. By the Golden Age, the first voyage of the line, we have received $160,000 in gold.

There are now at Southampton eighteen self-emancipated negroes, with five children belonging to them, from the island of Cuba. The adults were kidnapped from Lagos, and are now about to return there.

Mr. James Smith, of New York, is building an engine for Engine Company No. 4, Brooklyn, which will cost the Company when completed nearly or quite $7,500.

Edward Mulligan, the local Mail Agent at St. Louis, has been held to bail in $4,000, on a charge of purloining letters from the mail.

Passengers from Chicago, report that there were 130 deaths from cholera in that city on Sunday, July 9th.

The first peaches of the season were received in New York market last week. They were from Savannah, and cost $10 per basket.

New York Markets—July 17, 1854.

Ashes—Pots $5 81. Pearls 5 50.

Flour and Meal—Flour 6 00 a 7 50 for various brands of State, 7 75 a 7 94 for straight Michigan and Indiana, 8 25 a 9 25 for fancy Genesee. Rye Flour 3 50 for fine. Corn Meal 3 75 for Jersey.

Grain—Wheat 1 20 a 1 45 for Upper Lake, 1 70 for new red Southern, 2 20 a 2 40 for white Genesee. Rye 1 15 a 1 18. Barley 90 a 98c. Oats 50 a 52c. for Jersey, 55c. for Western. Corn 67 a 70c. for Western mixed, 72 a 74c. for round yellow.

Provisions—Pork 10 25 for prime, 11 25 for mess. Beef, 10 25 for new prime, 12 00 a 16 00 for mess. Lard 9 a 9½c. Butter 12 a 16c. for Ohio, 16 a 18c. for State, 19 a 22c, for Orange County.

Hay—65 a 70c. per 100 lbs.

Lumber—15 00 a 15 50 for Eastern Spruce and Pine.

Tallow—11½c. for city rendered.

Wool—30 a 33c. for native, 36 a 38c. for half Merino, 47 a 50c. for American Saxony Fleece.

MARRIED,

In Southampton, Ill., July 4th, by Rev. W. S. Bates, Mr. AARON Y. HAWLEY, of Mt. Hawley, to Miss ELECTA ELDRED, of Southampton, Peoria Co., Ill.

DIED,

In Almond, N. Y., July 8th, of a bronchial difficulty, Mrs. MARY E. TEFFT, wife of Christopher Tefft, in the 33d year of her age. She was a member of the 1st Seventh-day Baptist Church of Alfred, and died in hope of eternal life. N. V. H.

At Potter Hill, (Westerly,) R. I., July 10, Mr. THOMAS WELLS POTTER, in the 70th year of his age. He became a subject of the renewing grace of God in early life, but never made a public profession of his faith in Christ until some twelve or fourteen years ago, when he united with the first Seventh-day Baptist Church in Hopkinton, where he remained a witness for truth until removed to the church above. He has left a widow and two daughters, with a large connection, to mourn the loss of a kind husband, an indulgent father, a beloved brother and counsellor. We believe our loss is his gain.

LETTERS.

FOR THE SABBATH-SCHOOL VISITOR:

A A Crandall, Rockville, R I $3 40

WILLIAM M. ROGERS, Treasurer.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Agents Wanted.

THE services of a number of young men are wanted in selling the "Pearl or Scripture Library," containing sixteen volumes, 32 mo., bound in a neat style, and put up in a rich imitation rose-wood case. The "Pearls" sell readily among all denominations, and testimonials of their utility are beginning thus early to be received. These works, for cheapness, will compare favorably with those published by the American Sunday-School Union or the American Tract Society, and form a complete compendium of the Bible on those subjects that relate to the faith and practice of Christians.

A liberal compensation will be given to all who are willing to engage in their distribution. Address

6tf H. H. BAKER, New Market, N. J.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A M, 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

Supreme Court.

IN the matter of laying out a public place between 59th and 106th-sts, and the 5th and 8th-avs., in the city of New York—CENTRAL PARK.—To all owners, mortgagees, lessees, occupants, and other persons, in any manner, by judgment, decree, or otherwise, entitled unto or interested in the land and premises above-mentioned, or any part thereof. Notice is hereby given, that you are required to appear before the Commissioners of Estimate and Assessment in the above-entitled proceeding, at their office, No. 110 Broadway, over the Metropolitan Bank, at 11 o'clock A. M., on any day (Sunday excepted) on or prior to the 15th day of July next, and to produce the evidences of your title or interest therein. In default whereof, and in case the persons entitled or interested as aforesaid shall not be ascertained by or be known or fully known, the same will be reported to the Supreme Court as belonging to unknown owners. It being the desire to consummate this great improvement, and to present the report at the earliest day, consistent with a proper examination and due regard to the rights and interests affected, it is earnestly requested that all parties note and comply with the preceding notice, as no other or further notice will be issued. ROBERT J. DILLON,
Counsel to the Corporation.

New York June 1, 1854.

N. B.—All papers published in the city of New York are requested to publish the preceding notice until the 15th day of July next, once in each week, and to send their bills (with affidavits of publication) to the office of the Counsel to the Corporation to be paid on the final taxation of the proceedings.

Miscellaneous.

The Japan Expedition.

Under date of Bay of Yeddo, March 30, 1854, a correspondent of the N. Y. *Tribune* furnishes the following account of the doings of the Japan Expedition:—

On the 8th inst., the interview between Commodore Perry and the Imperial Commissioner, Hy-a-shi-no kami, took place in Yokohamma, a little village in the Bay about ten miles from the City of Yeddo. Here the Japanese had erected several spacious buildings on shore. At noon the Commodore landed with a body of 600 men in 28 boats. The Commodore's salute of 17 guns (in his capacity of Envoy Extraordinary) was fired from the Macedonian, and as soon as all the men were landed our first launch hoisted the Imperial flag of Japan, which was saluted with 21 guns from the boats, followed by 12 guns for the Commissioner Hy-a-shi-no-kami. The marines and sailors, under command of Major Zeilin, formed a hollow square before the house, after the Commodore, accompanied by an escort of 30 officers, had entered. The Commissioner received him in a large hall, but afterward retired into a smaller room at the extremity of the building, separated from the hall by a crape curtain. Refreshments were distributed among the guests, and oysters, both raw and stewed, constituted a portion of the repast. The Japanese had only a guard of honor present—probably not more than 200 men in all. The odius canvas fortifications with which they had at first surrounded the building had been removed, at the express request of the Commodore. The conference was a long one, and it was late in the afternoon before we returned on board the ships.

On the 13th, Capt. Abbott of the Macedonian superintended the landing of the presents, and the ensuing week was entirely devoted to unpacking and arranging them, and to putting the railroad, telegraph, and other machines, in motion. The Japanese observed every thing with a mixture of wonder and admiration, and some of the incidents excited their merriment not a little. It was indeed a curious sight, to see the little locomotive, tender, and passenger car, only a quarter the ordinary size, and, by the way, the neatest piece of work that ever went out of Norris' manufactory. It was driven by Mr. Gay, Chief Engineer of the Mississippi, and Mr. Danby, First Assistant, who occasionally took a company of Japenese in the car, and whizzed around with them, while crowds of the natives looked on with the utmost astonishment.

The electric telegraph excited the greatest wonder, especially as Mr. Draper sent messages in Dutch, and even in Japanese, which the interpreter wrote with English letters.

On the 24th, all the preparations were completed, and the Commodore again went ashore to deliver the presents formally to the Commissioner, who had prepared an entertainment for the occasion, and at the same time to receive the presents which the Emperor had sent in return. These consisted chiefly of silks, crapes, some very fine lackered ware, china, silver, arms, household utensils, coins, &c., and several hundred bags of rice, which were piled up in a heap outside of the house. After the presents had been given and received, and the Commodore was just leaving the house to show the railroad to the Commissioner, about thirty very large and powerfully built men made their appearance. They were naked, with the exception of a blue silk scarf, twisted about the loins. They seized the sacks, which weighed about 200 lbs. each, swung them at arm's length above their heads, and carried them in this manner a distance of a hundred and fifty yards, performing many antics and feats of strength by the way. The whole thing had evidently been arranged for our entertainment.

When the Commodore and Commissioners had returned to the house, all the windows on one side of the building were suddenly thrown open, showing a circular space outside, where the ground had been made smooth and free from stones. The thirty giants—for I may venture to call them such, since some of them were over six feet high and weighed more than two hundred pounds—then entered the ring in procession, while the judges and umpires of the sports took their seats opposite to us. The men then successfully engaged in wrestling matches, which consisted chiefly in taking hold of each other under the shoulders and trying to push the antagonist out of the ring, to effect which many of them violently dashed their heads against each other's breast, at the same time setting up an infernal howl.

On the 27th Commodore Perry entertained the Imperial Commissioners on board the Powhatan. The boat left Kunegawa at one o'clock, under a salute of 17 guns from the Mississippi, and first took them on board the Macedonian, where they were shown a general exercise of the crew. With the appearance and efficiency of the men, and the fine order of the ship, they were greatly delighted. The Powhatan had the Imperial Japanese flag hoisted at the foremast, and the banner of the Commissioner Hy-a-shi-no-kami at the mizzen. As the boats got under way again, a salute was fired from the Macedonian. The bulwarks of the Powhatan were decorated with flags, arms and flowers. In the cabin a table was set for the Commodore, four Commissioners, and the different Captains of the squadron, and another in horse-shoe form on the quarter-deck, in order to accommodate the followers of the Commmissioners (about 40 in number) and the officers of the squadron, who assembled in large numbers to do them honor. The guests were evidently greatly pleased with the entertainment. The toast: "The Ziogoon of Japan!" was responded to by the Japanese Commissioners with "The President of the United States!" and both were drunk with great enthusiasm. Other toasts followed—"Our Guests," "The Ladies," "Our Friends at Home," "Commodore Perry," "The Commissioners," &c., &c., until the hilarity was universal. A performance of some of our sailors, who blacked their faces and sang the classic negro melodies of America, excited the greatest merriment among the Japanese. It was dark before the guests left the ship, under a parting salute from the Saratoga.

Bay of Yeddo, April 2, 1854.

Japan is opened! On the 31st of March the treaty was signed. Ports in different parts of the islands of Niphon, Jesso, Kiusiu, and the Loo-Choo group are opened to American vessels. It is said that Chakodade, (near Matsmai,) on the Straits of Sangad, in the island of Jesso, Simodzi in Niphon, and Napa-Kiang in Loo-Choo, are three of the ports. The treary secures assistance for our vessels in case of distress; provides that they shall be furnished with wood, water, coal and provisions, at fixed and reasonable prices; establishes a scale of the value of coin, a standard of weights and measures; and provides for the carrying on of commerce with Japan by the citizens of the United States. In short, the Expedition has obtained every thing that could have been hoped for from it. We have established a much more intimate relationship with Japan than any other nation has ever been able to accomplish, and all without submitting to one of those degrading impositions on the part of the Japanese, as other nations have accepted without accomplishing their aims.

Opium Smoking in China.

In a letter from Canton, dated Sept. 8, 1853, Bayard Taylor gives the following account of what he saw and experienced in the way of opium smoking:—

In spite of the penalties attached to it by Chinese law, the smoking of opium is scarcely a concealed practice at present. I have seen it carried on in open shops in Shanghae, where there are some streets which are never free from the sickening smell. It had always been my intention to make a trial of the practice, in order to learn its effects by personal experience, and being now on the eve of leaving China, I applied to a gentleman residing here, to put me in the way of enjoying a pipe or two. He was well acquainted with a Chinaman who is addicted to the practice, and by an agreement with him, took me to his house last evening. We were ushered into a long room, with a divan, or platform about three feet high, at the further end. Several Chinaman were in the room, and one, stretched out on the platform, was preparing his pipe at a lamp. The host invited me to stretch myself opposite to him, and place my head upon one of those cane head-stools which serve the Chinese in lieu of pillows.

The opium-pipe is a bamboo stick, about two feet long, having a small drum inserted near the end, with an aperture in its center. A piece of opium, about twice the size of a pin's head, is taken up on a slender wire and held in the flame of the lamp until it boils or bubbles up, when it is rolled into a cylindrical shape on the drum, by the aid of the wire. It loses its dark color by the heating, and becomes pale and soft. Having been sufficiently rolled, it is placed over the aperture, and the wire, after being thrust through its center, to allow the air to pass into the pipe, is withdrawn. The pipe is then held to the flame, and as the opium burns, its fumes are drawn into the lungs by a strong and long-continued inspiration. In about half a minute the portion is exhausted, and the smoker is ready for a second pipe.

To my surprise I found the taste of the drug as delicious as its smell is disagreeable. It leaves a sweet, rich flavor, like the finest liquorice, upon the palate, and the gentle stimulus it communicates to the blood in the lungs, fills the whole body with a sensation of warmth and strength. The fumes of the opium are no more irritating to the windpipe or bronchial tubes, than common air, while they seem imbued with a richness of vitality far beyond our diluted oxygen. I had supposed that opium was smoked entirely for the purpose of mental exhilaration, and that to the smokers, as to many who intoxicate themselves with ardent spirits, there was no sensual gratification in the mere taste of the article. The reverse is undoubtedly the truth, and the practice, therefore, is doubly dangerous. Its victim becomes hopelessly involved in its fascinating illusions, and an awful death, such as I witnessed not long since, is sure, sooner or later, to overtake him who indulges to excess. I have a pretty strong confidence in my own power of resistance, but nothing could induce me to make the experiment a second time.

Beyond the feeling of warmth, vigor and increased vitality, softened by a happy consciousness of repose, there was no effect, until after finishing the sixth pipe. My spirits then became joyously excited, with a constant disposition to laugh; brilliant colors floated before my eyes, but in a confused and cloudy way, sometimes converging into spots like the eyes in a peacock's tail, but oftenest melting into and through each other, like the hues of changeable silk. Had the physical excitement been greater, they would have taken form and substance, but after smoking *nine* pipes I desisted, through fear of subjecting myself to some unpleasant after-effect. Our Chinese host informed me that he was obliged to take twenty pipes, in order to elevate his mind to the pitch of perfect happiness. I went home feeling rather giddy, and became so drowsy, with slight qualms of the stomach, that I went to bed at an early hour. After a deep and refreshing sleep, I arose at sunrise, feeling stronger and brighter than I had done for weeks past.

A Model Baby.

There was only one baby among the members of the late excursion party up the Mississippi to the Falls of St. Anthony. The baby was only six months old—a son of Henry Farnam, Esq., the engineer of the Chicago and Rock Island Railroad. When the baby was first brought on board the *Golden Era*, some of the company shrugged their shoulders, and other said "humph." One crusty old bachelor muttered, "We may look out for squalls now;" and a young man with moustaches, who passed for a wit, sighed for the days of good King Herod. The baby meanwhile looked about and crowed a little, and then quietly entertained himself with sucking his fist.

Well, from the time we left Rock Island, on Monday evening, till we returned, on the following Saturday, not a cry, nor the suspicion of a cry, was uttered by the baby. He was indeed, a charming little fellow—always bright and placid, and ready to meet half-way those who were disposed to be attentive. Of the sensation of fear, he seemed to be utterly ignorant. He would go to the arms of a rough old backwoodsman as readily as to the arms of the beautiful Miss W. or Miss J., and remain contented away from his mother or nurse till, fearful that he was giving trouble, they would come in search of him. But instead of giving trouble, he seemed to be doing more than any body else for the general entertainment. It was frequently proposed to pinch him, to see if he could cry, and in one instance the experiment was tried without success. The features of the gruff old bachelor, who had looked so austerely at first on this infant phenomenon, would now relax as he came in sight, and he at last ventured upon the experiment of taking him in his arms, and found in his delight, that the baby maintained his good character even in his inexperienced embrace.

The general satisfaction at the baby's unparalleled behavior at length manifested itself in a substantial form. It was resolved to get up a testimonial. A subscription was put in circulation for a gold cup, to be presented as a token of the admiration and esteem of the passengers, who when they reflected how much a crying baby might have detracted from their enjoyment, liberally opened their purses and subscribed the handsome sum of $260. A formal presentation of this offering was then made. Mr. Rockwell, late member of Congress from Connecticut, was deputed to address the baby. This he did in the presence of the assembled passengers, the baby meanwhile being held in his mother's arms, and always jumping and chuckling at the right place in Mr. Rockwell's speech.

The speech, which was a capital one, and enunciated with due gravity and dignity, was followed by a reply from Professor Twining, of New Haven, the baby's medium on the occasion, and who spoke in the little fellow's behalf in admirable style, now witty and now beautiful, for upwards of five minutes. Both speeches were much enjoyed and applauded. Ex-President Fillmore was appointed to prepare an inscription for the gold cup; a task which he accomplished with his accustomed good taste; and Mr. Rockwell was appointed to purchase the cup.

Thus ended one of the pleasantest little episodes of the great excursion—one that must be always remembered with pleasure by those who witnessed it, and especially by the parents of the child who so early in life won so solid a mark of the approbation of his seniors. [Boston Transcript.

Post Office Facts.

Ignorance and want of intercourse as certainly follow Slavery as suffering does crime. No relative test of the superiority of the free States over the slave States has appeared which seems to place in so striking a light the mental advance of the former and the mental retardation of the latter equally with the following table, exhibited by Mr. Haven in his recent speech on the Post Office:—

States and Territories.	Total Postages Collected.	Transport'n.
Maine	$125,194 94	$52,767 88
New Hampshire	81,703 53	31,999 45
Vermont	78,638 86	62,476 85
Massachusetts	453,966 80	130,117 13
Rhode Island	47,377 79	12,139 72
Connecticut	146,364 50	64,173 13

Utah Territory	959 60	3,269 70
Nebraska T.	520 10	
Washington T.	536 89	
Total	$5,084,464 97	$4,199,951 68

This shows that almost every free State (including every old free State) more than pays expenses of the Post Office within its borders, while every slave State (save two) is a charge on the Treasury for the transportation of its mails. The exceptional slave States are Louisiana—which is not bankrupt in its post office arrangements because New Orleans is an outlet for the western free States—and Delaware, which is hardly a slave State at all. The northern or western free States which do not pay the Post office expenses are the new States of Michigan and Illinois, all together exceeding their incomes by only forty-six thousand dollars. It is not to be expected that the Territories can pay their postal bills, nor yet California—but the latter only falls short fifty-one thousand, while Virginia is minus one hundred and thirty thousand dollars a year. Or to state the figures in the aggregate, in the States of Maine, New Hampshire Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Iowa, Wisconsin, Ohio, and Indiana, the receipts of the Post Office are in round numbers $3,313,000, and the expenses $1,668,000. In other words, there is a profit on these States of 1,645,000. In the States of Michigan, Illinois, and California, the expenditures exceed the receipts by $97,000; which reduces the profits of the free States to $1.548,000. In the slave States the receipts are $1,315,000; expenses $2,151,000; deficit $836,000; or in other words the difference between the receipts of the free and slave States is $238,400 in favor of the free. [N. Y. Tribune.

An Experiment.

A Paris correspondent of the Cincinnati *Gazette*, says that a curious experiment was made a few days ago in the basin of the fountain Palais Royal, and in the presence of an immence crowd. A glass globe, containing a certain liquid, was thrown in the water and then broken with a pole. The liquid immediately spread itself over the surface of the water, and taking fire spontaneously, continued to burn with an intense flame for a period of fifty-six seconds, throwing out a dense smoke. The basin had the appearance of being all on fire.

Three gentlemen, well-known to science in Paris, have invented this fluid, after long and patient study, with the design of making it available in the present war, in burning ships, and in protecting or attacking fortified places, where there may be a ditch. Thrown by means of a forcing pump on the head of a sap, into an intrenchment, or a ditch full of water, or on a breach at the moment of assault, or in a naval combat, this liquid would cause the most terrible ravages.

An experiment has since been tried on the river Seine, in which instance the fluid continued to burn with a flame sufficiently intense to set fire to the sides of a ship, for more than a minute. Suppose that a boat laden with this liquid, should be floated into the midst of an enemy's fleet, and should be so managed that it would take fire at the moment of arriving near or in the midst of the fleet, and that the liquid should then be distributed on the surface of the water, the whole fleet would take fire in spite of all the efforts that might be made to prevent it, and they would take fire exactly in the most dangerous place.

Potatoes.

As the partial or total failure of the potato for the last eight or ten years is one leading cause of the present scarcity of food and consequent suffering of the poor, it is very important that the causes of said failure, and the means of averting it hereafter, be discovered and made known. Mr. Martin Cleland, of Niles, Mich., sends the *Tribune* the following as his forty years' experience and conclusions in the premises:—

First—I believe it important that the tubers should grow as much as possible in pure earth, which should always be kept in mind, otherwise they will sooner or later become diseased. The soil should be sandy or gravelly, and of a dry nature.

My method is to haul about twenty wagon-loads of stable manure upon half an acre of sod ground of the above texture, and spread evenly. I then plow it from six to eight inches deep, about the middle of April, harrowing it immediately, so as to make it smooth. The last days of April, or the first days of May, I plow again, but not so deep as to disturb the soil. I then, by the 6th of May, furrow out and plant about 3 feet by 2½, one potato in a bill, of the long pink-eye kind. It takes between four and five bushels to half an acre. In this way, it is seen, the roots run down to the manure, and the tubers grow in pure earth. I have raised, for several years, from 180 to 200 bushels of potatoes from half an acre; and that, too, without the least appearance of rot or disease of any kind. I can send you now old potatoes as sound as when dug last fall.

It should be known that the pink-eyes are a hardy potato, and need early planting.

To this the editor of the *Tribune* says:

All this seems reasonable, and we doubt not its truth; but it is well to bear in mind the fact (established in our columns by Messrs. Richardson, Hogaboom and others) that *an insect* is the immediate cause of the potato-rot. We have seen the little villain on our own potatoes this season, and seen the first leaves all riddled by his devastations. He is a miniature flea, and rather leaps than flies, though he *can* fly, after his fashion, if he sees fit. He eats the leaves through and through, and finally (we think) attacks and bores the stalk; and when the summer rains come on, they rot and kill the top entirely, so that by the middle of August whole fields will be black and dead, and the immature tubes decaying of course. Now it is very possible that the treatment recommended by Mr. Cleland may repel the insect, by keeping the earth sweet and the plants thrifty and vigorous, or through some unexplained influence; or it may be that the insect has not visited his section; but if the creature does actually bore and riddle his potato-tops, as they did ours last year and are trying to do this year, his potatoes will rot, and he will have no 180 nor even 18 bushels to the acre.

Liability of Endorsers.

The New York *Journal of Commerce* reports a case of much importance to business men generally, being an action against the endorser of a note for $1,500, dated Feb. 7, 1851, and payable on demand. The maker failed in November, 1851, and a month before that, was known by the plaintiff to be in failing circumstances; and between two and four months before they had spoken to him about paying the note, and he told them he could not pay it then, but it was good, and that they should not be uneasy about it. Their agent who acted for them, said on his testimony—"I had no uneasiness about the note at all, because I was satisfied that the endorser was good, and therefore it was not a matter of much importance, and it lay; we could not get the money from Davis." It was decided that, after the note was six months old, and the holders were satisfied that they could not collect it from the maker, they were guilty of neglect in not making a formal demand of payment, and notifying the endorser of non-payment. It was held that they had no right after that to delay, "because they were satisfied the endorser was good." This was not good faith to the endorser, and the plaintiffs must bear the consequences of it. They delayed making a demand until January 15, 1852. That was too long, and the endorser was discharged. It was further decided that the reason of this rule applies as much to a note payable on demand, with interest, and on which the endorser puts his name for the accommodation of the maker, as to an ordinary note payable on demand. It cannot be inferred, in either case, that a delay is intended to be allowed under such circumstances as are stated above. Consequently, judgment was given for the defendant.

Remarkable Feat.—Some time since the point of the lightning rod on the steeple of the First Congregational Church in New London, Conn., got unscrewed and fell to the ground. It was such a dangerous piece of work to replace it, that the Committee were unwilling to employ any one to perform the task. A Mr. DeWolf, however, volunteered to make the attempt, which the Committee permitted after some hesitation, having promised him a handsome sum if he succeeded. He did succeed, accomplishing the task without any apparent consciousness of having done anything extraordinary. The New London *Chronicle* says the point to which he ascended is very near two hundred feet, and for the last fifty feet he had to climb up a stone surface, with nothing to hold on but a small iron rod, and when he reached the ball he was still some dozen feet from the end of his journey. This distance he had to shin up a single rod, a labor which he found so fatiguing that he became exhausted, and was obliged to return and seat himself on the ball and recover breath. This he soon did, and fearlessly resumed his travel towards the clouds, where he accomplished his object, and came down, as we have already stated.

Something Worth Knowing.—We find the following in an exchange paper, and as it is by no means the first time that we have heard of the cure of the croup by the same remedy we have little doubt of its efficacy:—

"My wife and I were aroused about two o'clock one morning, by the struggles of our little boy, about three years old, who was laboring under a violent attack of croup. His breathing was so difficult as to arouse persons who slept beyond the hall; hastily folded a towel, dipt it in cold water, and applied it to his throat and breast; I then folded a sheet to the proper size, wet it and rolled him up in it and wrapped a blanket over that. He went to sleep in three minutes and slept until five o'clock, when he got up. He was well and went to play, in three hours after the attack, and we rejoiced at the curative powers of cold water."

Thousands annually die of croup and fevers, who might be saved by wrapping them in sheets wrung in cold water.

Land Reform.—Man's right to a portion of the public lands of the country is thus beautifully asserted in a western paper, *The Allegan* (Mich.) *Record* of a late date:—

"God made the earth for man—for all men. They feed on its bounty while living, and sleep on its bosom when dead. Life has its ups and downs, its cares and sorrows, its reverses and its dire misfortunes—the wealth of yesterday is the poverty of to day—the palace of to day shall be ashes or a hovel ere to-morrow. Before the whole of this broad land shall be deeded over to heartless landlords and a curse, let us adopt some generous system under the kindly operation of which our children and our children's children, when need, or care, or woe is on them, may seek and find them out a blessed Alabama—a merciful resting place, a blazing hearth-stone, and a quiet grave."

Subterranean Discoveries in Switzerland.—The Swiss journals give the following details relative to the discoveries recently made in consequence of the extraordinary fall in the water in the Lake of Zurich. About one hundred feet from the right bank of the lake, opposite the village of Mellen, there have been found several rows of piles formed of trunks of trees. The piles are about a foot apart, with an interval of sixteen feet between the rows. These piles support enormous beams, which form a very large area. Between the piles there have been found the skeletons of animals which are no longer to be seen in Switzerland, but no trace of any domestic animals. On removing the mud, there have been found an immense number of heads of arrows and spears made of stone, carefully cut and very pointed; poignards made of flint, with buck horn handles, a battle-axe in stone; clay vases, evidently formed by the hand without the aid of any instrument, and afterwards baked in an oven; and several other articles in stone and baked clay. A human skull has also been found. These remains, which are considered to have belonged to the ancient Celts, are under examination by a commission of antiquarians.

VARIETY.

A letter from a Massachusetts farmer to the Pittsfield *Sun* says: "Old Virginia bids fair to be one of the first States, with northern enterprise. Three years ago, in the place where I now reside, there was but one northern man; now there are forty-eight northern families within three miles of my farm. Land has since risen from $2 to $25 per acre. I am seven miles from the Potomac River, twenty-five miles from the Blue Ridge, twenty south of Alexandria, twenty-five from Washington, and thirty from Fredericksburg."

It is reported that the historian Fuller, in 1697, had a most retentive memory; he could repeat 500 strange, uncommon words, after twice hearing them; and a sermon verbatim, after reading it once. He undertook, after passing from Temple Bar to the farthest part of Cheapside and back again, to mention all the signs over the shops on both sides of the streets, repeating them backwards, performing the task with great exactness.

A man who loses an hour of his time, worth one shilling, and wears his wagon and team equal to two shillings more, by going over a rough road, to avoid the plank road toll of a sixpence, loses just two and sixpence by the operation. The laborer who wastes half his strength in working all day with a dull saw, because he cannot give a shilling, or afford an hour to get it sharpened, will waste at least twenty-five cents per day, or six dollars per month.

The *Times and Transcript*, of San Francisco, estimates the weekly cost of a daily paper at San Francisco at $2,700, or $140,000 per annum. There are some twelve of these daily newspapers, and some ten weeklies; so that we may safely estimate San Francisco newspaper literature at $1,500,000 per annum.

There are now in Van Dieman's Land about 34,000 convicts, (male and female,) and 27,000 free persons, many of whom are emancipated convicts. The male convicts are distributed over the island in gangs of 250 or 300 each, and nearly the same system is pursued with the females.

"In every perfectly ripe apple," it is observed in an English publication about twenty years ago, "there will be found one or two perfectly *round* seeds, the others having one or more flatted sides. The round ones will produce the improved fruit, and the flat ones will produce the *crab*."

Creditors never annoy a man so long as he is getting up in the world. A man of wealth only pays his butcher once a year. Let bad luck overtake him, and his meat bill will come in every morning, as regularly as breakfast and hungry children. Never plead guilty of poverty.

A domestic, newly-engaged, presented to his master one morning a pair of boots. "How comes it, you rascal, that these boots of mine are not of the same length?" "I really don't know, sir; but what bothers me the most is that the pair down stairs are in the same fix!"

It is said that Dr. Benjamin Branderth, of pill notoriety, is devoting his entire time and energy to the cultivation of the osier or basket willow. It strikes us that pills and "weeping willows" would go first rate together.

Bound Volumes.

On hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and socond volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

Worcester, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P. M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

For *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order Chimes of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

Among the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,
J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.
Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me
Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.
J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,
D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.
Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.
I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.
Sold at wholesale in New York by A. B. & D. Sands; retail by Rushton, Clark & Co., and by all Druggists everywhere. 37-2

The Sabbath Recorder.

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to
Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion, $ 75
" " " each subsequent insertion, [illegible]
" " " six months, [illegible]
" " " one year, [illegible]
For each additional square, two-thirds the above rates.

WORK WHILE THE DAY LASTS.

The morning of life has dawned fresh and fair;
A balm-breathing fragrance is abroad on the air;
There is joy in existence; the life-pulse beats high;
We reck not of aught that can cause us a sigh.

But a broad field of labor is spread out to view,
And a message is heard, This is given to you;
Then work while the day lasts; let not idleness e'er
Bind thy soul in its thrall, its untried powers to sear.
While the fresh dews of morn lie on herb, tree, and flower,
Arouse thee to duty; think not that one power,
That was given thee by God, has been given for nought;
There is much to be done, and the hand that hath wrought
Most faithful in morning, in strength shall increase,
Till the day-star goes down and our life-labors cease.

In the mid-day of life, when the day-god doth gain
His meridian height, look abroad o'er the plain;
The harvest is ripening, the laborers are few;
Ye weary, faint-hearted, oh say, where are you?
For see, soon the sun will begin to decline;
Then work while the day lasts—fret not nor repine—
For when night draweth on, from thy labor thou'lt rest,
And receive thy reward in the home of the blest.

When old age cometh on, when but one hour remains
To gather the harvest still left on the plains,
Put forth a last effort; one sheaf thou mayest save
From the gathering storm, ere thou rest in the grave.

When the sun upon thee his last beam has shed,
Thy strong arm been palsied, thou named with the dead,
To existence more noble thy spirit shall rise;
With thy Saviour and King thou shalt reign in the skies;
Thy reward shall be great when from earth thou hast passed,
If thou'rt faithful while here to work while the day lasts.

E. C.

July 1, 1854.

For the Sabbath Recorder.

OPEN AND LIMITED COMMUNION.

"What fellowship hath righteousness with unrighteousness? and what communion hath light with darkness?"

Being now sixty-four years old, and having practiced for some time on both of the abovenamed principles, and considering that "an interchange of sentiment may do no harm," I would also respectfully "show mine opinion."

As to the advantage of open communion, so far as I have observed, I can see but very little; but, on the contrary, I have known a number of Sabbath-keeping churches, which have practiced on the principle of open communion, and have all gone down, scattered, and disappeared; while the most strict in their discipline, and the most limited in their communion, have prospered and increased in their numbers. I fully believe now, that if all Sabbath-keeping churches were to act on the *strict* principles of the New Testament, in their walk, their discipline, and their fellowship, their increase would be four fold, at least, greater than it now is.

The Apostle to the Gentiles says, (1 Cor. 5:11,) "But now I have written unto you not to *keep company*, if any man that is *called a brother* be a fornicator, or covetous, or an idolater, or a railer, or a drunkard, or an extortioner; with *such an one, no, not to eat.*"

We are not to keep *religious company*—to ask them to preach and unite with us in any acts of worship; we are not to *eat* with *such an one.* We know that the keeping of the first day of the week has nothing to do with keeping the fourth commandment of God. And why should we want to commune with such as would *fine* and *imprison*, not to say *kill*, us for keeping the fourth commandment?

Again, to be more plain, if possible, it is said, (2 Thess. 3:6,) "Now we command you, brethren, in the name of our Lord Jesus Christ, that ye withdraw yourselves from every brother that walketh disorderly, and not after the tradition which he received of us." Now, if a "first-day brother" calls the first day of the week "the Sabbath," contrary to any tradition of the apostles, then we are to withdraw fellowship from him; but still "admonish him as a brother."

We know that "sin is the transgression of the law," and that to "offend in one point," [or in one command,] makes a man "guilty of all," as a transgressor of the law of God, which is "holy, and just, and good." And it is said, (2 John 9:10,) "Whosoever transgresseth, and abideth not in the *doctrine of Christ*, hath not God. He that abideth in the *doctrine of Christ*, he hath both the Father and the Son. If there come any unto you, and bring not this doctrine, receive him not into your house, neither bid him God speed: for he that biddeth him God-speed is partaker of his evil deeds!" What, then, is the *doctrine of Christ* with regard to the Sabbath? In speaking of the seventh-day Sabbath, he says, "The Sabbath was made for man." Mark 2:27. Now, if any comes to us having ever so much love, and says, "The Sabbath was only made for the Jews, *and is now done away*, and there is now no Sabbath made for man—for the whole human race;" or if another comes to us and says, "The Sabbath was *changed* from the seventh to the first day of the week, and the seventh-day Sabbath *was not made for man*—for mankind of all nations and all ages;" thus, either way, contradicting the plain doctrine of Christ; if we receive such *religiously* into our house, or bid him God speed in any way, then we are *partaker* of his evil deeds. The Lord help all those who "keep the commandments of God and the faith of Jesus," to remember this doctrine of Christ.

We have no more right to receive a Protestant who tramples under foot the fourth commandment, than we have to receive a Catholic who tramples both the second and the fourth commandments under foot. See 2 Cor. 6:14, 18. "Wherefore, come out from among them, and be ye separate, saith the Lord, and touch not the unclean thing; and I will receive you; and will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty." B. CLARK.

WESTERN ASSOCIATION—REPORTS.

The following Reports of the Delegates to the Virginia, Ohio, and North-Western Associations, were presented at the recent meeting of the Western Association.

As delegate appointed to attend the last Anniversaries of the Virginia and Ohio Associations, the following is submitted.

When the appointment was made, it was understood that there would be merely time enough between them for conveniently passing from one to the other; but farther examination showed that the interim would be more than a month. As the expense of the delegation would be considerably increased by making a journey from home for each, your delegate determined to attend both, and occupy the intervening time on the field as Providence seemed to indicate.

The Virginia Association was held with the Middle Island Church, near New Milton, opening on Sixth-day, Sept. 2, 1853. There seemed to be no definite object before the Association beyond the annual communications of the churches, except the "investigation" of such subjects as they might deem interesting. To obviate the embarrassment which seemed to arise from the absence of any arrangement for approaching business, I suggested the submission of the matter to a special committee. The suggestion was adopted, and resulted in the adoption of a set of rules of order. When the Ohio Association was opened, the same embarrassment was observed, apparently arising from the same cause. The same suggestion resulted in the establishment of a regular order of business.

The Virginia Association consists of four churches, all of which were represented. A feeling of discouragement as to their prospects was quite prevalent and deep, to overcome which was a prominent object of my labor.

The Ohio Association consists of two churches. The principal points of interest in the anniversary were the report of the Executive Board, and the discussion of resolutions. Both Associations demonstrated their interest in the delegation, by taking collections for defraying its expense.

During the time between the two meetings, I visited all of the churches in both Associations; but my principal labor was with the church in Jackson, Ohio; during which they enjoyed a gracious revival, some more than twenty being added to the churches—sixteen by immersion, and three had presented themselves as candidates who had not had opportunity to go forward at the close of meeting.

The expense of the delegation was $40 46. The collection in Virginia was $22 47; that in Ohio was $18 03; total $40 50; besides which, I received from individuals, in both places, enough to increase the amount to $77 38.

The next anniversary of the Virginia Association is to be held with the church on South Fork of Hughes' River, Ritchie Co., opening on Fifth-day before the fourth Sabbath in September, and that of Ohio with the church in Jackson, Shelby Co., opening on Fifth-day before the second Sabbath in October, 1854.

T. E. BABCOCK.

June 20th, 1854.

Your delegate to the North-Western Association reports, that he attended to the appointment—that the Association met at Walworth, Walworth Co., Wis., Sept. 22d, and held its sessions Sept. 22d, 23d, and 25th. Most of the churches were represented by full delegations. The communications from the churches showed that harmony generally prevailed, that in some instances revivals had been enjoyed, and that there had been during the year an increase of numbers. One church had been organized within the year, and was received into the Association. Owing perhaps to the unsettled state of the rules of order, the business of the Association was not remarkably characterized by dispatch, but was attended by a good degree of unanimity and enthusiasm. Resolutions were passed, in favor of missionary enterprise, both home and foreign. A resolution was passed expressive of the idea that it was a sin to render political support to slavery, and consequently subject to the discipline of the church; also against the use of Tobacco, and in favor of Liquor Prohibition. The report of the Executive Committee showed that the Association had begun to appreciate the importance of assisting the smaller churches to support the Gospel. The report of the Committee on Education showed, that a building was in process of construction at Albion, Dane Co., Wis., for educational purposes. A delegate was appointed to attend the next session of the Eastern, Central, and Western Associations. Considerable interest was added to the occasion by the presence of Elder Wm. M. Jones, as Agent of the Seventh-day Baptist Missionary Society and appointee to the Palestine Mission. The expense of the delegation was $30 00.

H. W. BABCOCK, Delegate.

LIVE TO LEARN, AND LEARN TO LIVE.

Could we affirm with Swift, that all sublunary happiness consists in being well deceived, we should not have chosen as a subject for even a brief reflection, "Live to learn, and learn to live." But with however great a show of argument Swift or others may sustain the happiness of being well deceived, yet, in the light of reason, it must be admitted, that though it be true that the fool is happy that he knows no more, the chief happiness of every finite, *intelligent* being, consists in growing—that is, increasing, advancing in the knowledge of the truth, in constantly approaching the infinite; and though the endless ages of eternity be thus consumed, to find with each advancing step new glory, new mysteries revealed—for whatever is less than infinite, admits of advancement; and infinity of duration is alone sufficient to render the finite infinite.

The happiness of the fool is proportioned to his capability of enjoyment, and arises, as asserted in the passage above referred to, from the fact that he knows no more. Did he know more, he would not be satisfied with his present enjoyment, and consequently would not be happy in the sense he now is. But does that argue, that his happiness would necessarily be diminished, or, rather, that it might be increased in accordance with his *increased ability* of enjoyment. This last is so evident, that demonstration appears useless, if not altogether impracticable. All readily acknowledge the happiness of the natural foal to be of the lowest order—a kind of passive rather than active enjoyment. But what is a *dupe*, however well deceived, but a fool—an artificial one, 'tis true, yet a fool in the strongest sense of the term. Hence the happiness of such, instead of being the consummation of earthly bliss, is but its faintest shadow, a shadow which must be dispelled by every ray of light which may chance to fall upon this wilderness of mind. Admitting, then, the lowest order of happiness to be attendant upon ignorance, we must, as we at first intimated, rise in the degrees of happiness in proportion as we advance in knowledge. Therefore we say, Live to learn.

In urging a course of action as a duty, we have dwelt thus long upon its happifying tendency, because the benevolent Author of our existence has made nothing our duty which is not ultimately for our happiness. But the acquirement of useful knowledge is no less our duty than privilege. For, with the ability and means to know, "Ignorance is sin—not bliss." But why so? Why, if we prefer the fancied pleasures of ignorance and inglorious ease, may we not court them, and neglect the real joys of knowledge? If we choose to sleep beneath enchantment shade, why should we seek the dispelling rays of light and truth? Of light and truth! The echo of the inquiry suggests the reply; in as much as light exceeds darkness, and truth, that which is false. We are made for a nobler work—destined for a higher purpose. In the first place, God has given us minds capable of perceiving and grasping truth, and minds so constituted that this capability is increased with every new acquirement. These powers were not given us for naught. The mere fact that we possess them, plainly declares our obligation to improve them. Secondly, our all-wise Creator, who gave us the powers, has given us work to do which requires their full development. It is therefore our duty to *live to learn*, that we may go forth into the field of the world, not only *faithful*, but *able* laborers. It is true, that knowledge, like other gifts, may be perverted—may be turned from its original purpose, and made subservient to evil; but this is not its natural and legitimate effect, nor any reason why we should refuse to strive to obtain it, but rather an incentive for doing thus, that we may be prepared to withstand the *power* of the enemy; for *knowledge is power*, however employed. But when we say, *Live to learn*, we include not only living to obtain knowledge which shall render us powerful, but also knowledge which shall make us wise in the employment of such power; to do which, may it be the one great aim and purpose of our lives.

The second part of our subject, namely, *Learn to live*, though intimately connected, and, as it were, interwoven with the first, may perhaps admit of a separate reflection, and a single reflection is all which our present time will permit us to bestow upon it. 'Tis when the rose is wrapped in many a fold, that close to its heart the worm is wasting its life and beauty. This figure has been most aptly used in reference to the human soul, wrapped up as it were in self. 'Tis the expanded heart alone which has truly learned to live—the heart which beats in union with all that tends to refine and elevate the sensibilities, and call forth the sympathetic emotions of the soul; in short, the heart which glows with love to God and love to man. That we may learn thus to live, let us take as our guide the Word of God, which, in teaching us the way to live, will teach us how to die. C. A. A.

For the Sabbath Recorder.

THE GREETING.

TUNE—"We miss thee at home."

Soon we'll greet thee at home—yes, we'll greet thee,
For time swiftly passeth away;
Not long shall we sorrow to see thee,
Or pine at thy wearisome stay;
For we look to the future rejoicing,
Assured, as each day moves along,
'Tis bringing the time for reunion,
When we shall all greet thee at home.

Oft we place the arm-chair at the fireside,
Or list for a voice from thy room;
But Memory, wakened, entreats us,
"Be patient until thy return."
Then we sigh, but 'tis only a moment,
For Hope bids each fear quick be gone,
And whispers in accents of kindness,
"The *loved one* will soon be at home."

We miss thee each hour since thy absence—
With sadness regret thy long stay;
But the time when we miss thee *most*, dearest,
Is when we are *kneeling to pray.*
Then we'll trust in His word who hath ever
Protected the wanderer lone,
Believing that soon He'll permit thee
To join with the *loved ones* at home.

Answer to "The Greeting."

"Oft I hear voices calling me homeward,
And glad would the summons obey;
But instead of Time's clipping the hours,
They seem to be length'ning each day.
With joy might I look to the future,
If Hope would her pinions me lend,
Yet a while I must try and content me,
With writing a message to send."

Thus she spake—the *dear one* among strangers,
And prayed, "if God's will it should be,"
She might once again so recover,
The "*dear ones*" at home she could see;
But death with his icy arms clasped her,
And bore her away to the tomb,
Her last wish unanswered—for *lifeless*
They hastened her lovely form home.

Oh! ye who will list to no warnings,
That Sages or Prophets e'er gave,
Perchance had ye watched by the bed-side
Of her on the brink of the grave,
A voice might have larum'd thy slumbers,
As forth with faint accent it came,
"Prepare, my *dear friends, all*, to meet me,
In Heaven, my glorious Home."

ATTA.

KANSAS—NEBRASKA.

The following calm and able address from the members of Congress who voted against the Kansas-Nebraska Bill, should be read and re-read by every liberty-loving citizen of the United States.

At a meeting of members of Congress who opposed the passage of the bill to organize the territories of Nebraska and Kansas, held, pursuant to previous notice, in the city of Washington, on the 28th day of June, 1854, the Hon. Solomon Foot, of Vermont, was called to the chair, and Daniel Mace, of Indiana, and Reuben E. Fenton, of New York, were appointed Secretaries.

A committee, appointed for the purpose, reported an Address to the People of the United States, which, having been discussed and amended, was unanimously adopted, and ordered to be published. It is as follows:

TO THE PEOPLE OF THE UNITED STATES:

The eighth section of the act for the admission of Missouri into the Union, known as the Missouri Compromise law, by which the introduction of Slavery into the regions now known as Kansas and Nebraska was forever prohibited, has been repealed. That law, which in 1820 quieted a controversy which menaced the Union, and upon which you have so long reposed, is obliterated from the statute-book. We had no reason to expect any such proposition when we assembled here six months ago, nor did you expect it. No State, no citizen of any State, had demanded the repeal. It seems a duty we owe to the country to state the grounds upon which we have steadfastly, though ineffectually, opposed this alarming and dangerous act. You need not be told that the slavery question lies at the bottom of it. As it was the slave-holding power that demanded the enactment of the Missouri Compromise, so it is the same power that has now demanded its abrogation. African slavery was regarded and denounced as a great evil by the American colonies, even before the Revolution; and those colonies which are now slave-holding States were equally earnest in such remonstrances with those which are now free States. Colonial laws, framed to prevent the increase of slavery, were vetoed by the King of Great Britain. This exercise of arbitrary power, to enlarge and perpetuate a system universally regarded as equally wrongful in itself and injurious to the colonies, was one of the causes of the Revolution.

When the war was ended, there was an imperious necessity for the institution of government in the then unoccupied territories of the United States. In 1764, Jefferson proposed, and in 1757 the Continental Congress adopted, the ordinance for the government of the territory lying northwest of the Ohio, by which it was declared that "there shall be neither slavery nor involuntary servitude, except for the punishment of crime." The great and flourishing States since organized within that territory, on the basis of that ordinance, are enduring monuments of the wisdom of the statesmen of the Revolution. The foreign slave trade was regarded as the source of American slavery, which, it was believed, would be dried up when that fountain should be closed. In adopting the Constitution, it was so universally anticipated that the foreign slave trade would be promptly prohibited, that all parties acquiesced in a stipulation postponing that measure until 1808. In 1808, the foreign slave-trade was prohibited. Thus the source of slavery was understood to be dried up, while the introduction of slavery into the territories was prohibited. The slavery question, so far as it was a national one, was understood to be finally settled; and at the same time the States had already taken up, and were carrying forward, a system of gradual emancipation.

In 1803, Louisiana was acquired by purchase from France, and included what is now known as the States of Louisiana, Missouri, Arkansas, and Iowa, and the territories known as Kansas and Nebraska. Slavery existed at the time in New Orleans and at St. Louis, and so this purchase resulted in bringing the slavery question again before Congress.

In 1812, the region immediately surrounding New Orleans applied for admission into the Union, under the name of the State of Louisiana, with a constitution tolerating slavery. The new State was admitted, and the free States acquiesced. Eight years afterward, the region connected with St. Louis demanded admission, under the name of the State of Missouri, with a constitution tolerating slavery. The free States reverted to the principle of 1787, and opposed the admission of Missouri, unless she would incorporate into her constitution an inhibition of the further introduction of slavery into the State. The slaveholding States insisted upon her unqualified admission. A controversy arose, which was sectional and embittered, and which, we are assured by contemporaneous history, seriously imperiled the Union. The statesmen of that day, in Congress, settled this controversy by compromise. By the terms of this compromise, the free States assented to the admission of Missouri, with her slaveholding constitution, while the slaveholding States, on their part, yielded the exclusion of slavery in all the residue of the territory which lay north of 36° 30', constituting the present territories of Kansas and Nebraska. The slaveholding States accepted this compromise as a triumph, and the free States, after a little time, acquiesced, and have ever since left it undisturbed and unquestioned.

Arkansas, a part of the territory of Louisiana which lay south of 36° 30', in compliance with an implication which was contained in this compromise, was afterward admitted as a slaveholding State, and the free States acquiesced.

In 1819, Florida, a slaveholding province of Spain was acquired. This province was afterward admitted as a slaveholding State. The free States again acquiesced. In 1845, Texas, an independent slaveholding State, was annexed, with a provision in the article of annexation for the subdivision of her territory into five States. The free States, although they regarded the annexation, with the probable increase of the number of slave States, with very great disfavor, nevertheless acquiesced again.

New territories were acquired by the treaty of peace which closed the war with Mexico. The people of California formed a constitution inhibiting slavery, and applied for admission into the Union. Violent opposition was made by the slave States, in and out of Congress, threatening the dissolution of the Union if California should be admitted. Proceeding on the ground of these alarms, Congress adopted another compromise, the terms of which were, that ten millions of the people's money should be given to Texas, to induce her to relinquish a very doubtful claim upon an inconsiderable part of New Mexico; that New Mexico and Utah should be organized without an inhibition of slavery, and that they should be afterward admitted as slave or free States, as the people, when forming constitutions, should determine; that the public slave-trade in the District of Columbia should be abolished, without affecting the existence of slavery in the District; and that new and rigorous provisions for the recapture of fugitive slaves, of disputed constitutionality, should be adopted, and that on these conditions California should be admitted as a free State. Repugnant as this compromise was to the people of the free States, acquiescence was nevertheless practically obtained, by means of solemn assurances made on behalf of the slaveholding States, that the compromise was and should be forever regarded as a final adjustment of the slavery question, and of all the issues which could possibly arise out of it.

A new Congress convened in December, 1851. Representatives from the slave States demanded a renewed pledge of fidelity to this adjustment, and it was granted by the House of Representatives, in the following terms:—

"*Resolved*, That we recognize the binding efficacy of the compromises of the Constitution, and believe it to be the intention of the people generally, as we hereby declare it to be ours individually, to abide by such compromises, and to sustain the laws necessary to carry them out—the provisions for the delivery of fugitive slaves and the act of the last Congress for that purpose included; and that we deprecate all further agitation of questions embraced in the acts of the last Congress known as the Compromise, and of questions generally connected with the institution of slavery, as *unnecessary, useless, and dangerous.*"

A few months subsequently, the Democratic National Convention met at Baltimore, and assuming to speak the sentiments of the Democratic party, set forth in its platform—

"That the Democratic party will resist all attempts at renewing in Congress, or out of it, the agitation of the slavery question, under whatever shape or color the attempt may be made."

Soon afterward, another National Convention assembled in the same city, and assuming the right to declare the sentiments of the Whig party, said:

"We deprecate all further agitation of the questions thus settled, as dangerous to our peace, and will discountenance all efforts to continue or renew such agitation, whenever, wherever, or however made."

The present administration was elected on the principle of adherence to this compromise, and the President, referring to it in his inaugural speech, declared that the harmony which had been secured by it should not be disturbed during his term of office. The President, recurring to the same subject, renewed his pledge in his message to Congress at the beginning of the present session, in the following language:

"Notwithstanding differences of opinion and sentiment which then existed in relation to details and specific provisions, the acquiescence of distinguished citizens, whose devotion to the Union can never be doubted, has given renewed vigor to our institutions, and restored a sense of repose and security to the public mind throughout the Confederacy. That this repose is to suffer no shock during my official term, if I have the power to avert it, those who placed me here may be assured."

Under these circumstances, the proposition to repeal the Missouri Compromise was suddenly and unexpectedly made by the same Committee on Territories which, only ten days before, had affirmed the sanctity of the Missouri Compromise, and declared the end of agitation in the following explicit and unmistakable language:

"Your Committee do not feel themselves called upon to enter into a discussion of those controverted questions. They involve the same grave issues which produced the agitation, the sectional strife, and the fearful struggle of 1850. As Congress deemed it wise and prudent to refrain from deciding the matters in controversy *then*, either by affirming or repealing the Mexican laws, or by an act declaratory of the true intent of the Constitution, and the extent of the protection afforded by it to slave property in the territories, so your committee are not prepared *now* to recommend a departure from the course pursued upon *that memorable occasion*, either by *affirming* or *repealing* the eighth section of the Missouri act, or by any act declaratory of the meaning of the Constitution in respect to the legal points in dispute."

The abrogation has been effected in pursuance of the demands of the Administration, and by means of its influence on Congress.

In the House of Representatives, that body which is more immediately responsible to the people, the contest was more equal than in the Senate, though it is due to justice and candor that it should be stated, that it could not have been carried in either House without the votes of Representatives from the free States.

The minority resisted the attempt to arrest discussion upon this grave question, through a struggle of longer duration than any other known to Congressional history. An attempt was made to stigmatize that minority as "factionists;" yet, we fearlessly declare, that throughout the contest, they resorted solely to the powers *secured to them by the law and the rules of the House;* and the passage of the measure through the House was effected only through a subversion of its rules by the majority, and the exercise of a power unprecedented in the annals of Congressional legislation.

The deed is done. It is done with a clear proclamation, by the Administration and by Congress, that the principle which it contains extends not only to Kansas and Nebraska, but to all the other territories now belonging to the United States, and to all which may hereafter be acquired. It has been done unnecessarily and wantonly, because there was no pressure for the organization of governments in Kansas and Nebraska, neither of which territories contained one lawful inhabitant who was a citizen of the United States; and because there was not only no danger of disunion apprehended, but even no popular agitation of the question of slavery. By this reckless measure, the free States have lost all the guarantees for freedom in the territories contained in former compromises, while all the States, both slave and free, have lost the guarantees of harmony and union which those compromises afforded.

It seems plain to us that, fatal as the measure is in these aspects, it is only a cover for broader propagandism of slavery in the future. The object of the Administration, as we believe, and of many who represent the slave States, is to prepare the way for annexing Cuba, at whatever cost, and a like annexation of half a dozen of the States of Mexico, to be admitted also as slave States.

These acquisitions are to be made peaceably, if they can be purchased at the cost of hundreds of millions; if they cannot be made peacefully, then at the cost of war with Mexico, and war with Spain, with England, and with France, and at the cost of an alliance with Russia, scarcely less repugnant. Unmistakable indications appear, also, of a purpose to annex the eastern part of San Domingo, and so to subjugate the whole island, restoring it to the dominion of slavery. And this is to be followed up by an alliance with Brazil, and the extension of slavery in the valley of the Amazon. It is for you to judge whether, when slavery shall have made these additions to the United States, it will not demand unconditional submission on the part of the free States, and failing in that demand, attempt a withdrawal of the slave States, and the organization of a separate Empire in the central region of the continent. From an act so unjust and wrongful in itself, and fraught with consequences so fearful, we appeal to the people. We appeal equally to the North and to the South, to the free States and to the slaveholding States themselves.

It is no time for exaggeration or for passion, and we therefore speak calmly of the past, and warn you, in sober seriousness, of the future. It would not become us, nor is it necessary, to suggest the measures which ought to be adopted in this great exigency. For ourselves, we are ready to do all that shall be in our power to restore the Missouri Compromise, and to execute such further measures as you in your wisdom shall command, and as may be necessary for the recovery of the ground lost to freedom, and to prevent the further aggression of slavery.

SOLOMON FOOT, Chairman.

DANIEL MACE,
REUBEN E. FENTON, } Secretaries.

Do not begin to quarrel with the world too soon, for, bad as it may be, it is the best we have to live in here. If railing would have made it better, it would have been reformed long ago; but as this is not to be hoped for at present, the best way to slide through it is as contentedly and innocently as we may. The worst fault it has is want of charity; and calling it knave or fool at every turn will not cure this failing.

MINISTERS AND POLITICS.

It is a note-worthy circumstance, that the politics of our nation are interesting a large class of citizens, who have, hitherto, contented themselves with being mere observers of passing events. Ministers of the Gospel, who thought it sufficient to record their votes at the annual elections; and others, who did not concern themselves even to do that, but felt that it was of no great importance which political party was in the ascendancy; are at last aroused to the danger that threatens our free institutions. The time has come for every freeman to bestir himself. The battle between liberty and oppression is to be fought over again. The decision must be made, whether American soil is sacred to freedom, or whether it shall be the arena where man's rights are trampled in the dust.

Ministers are turning politicians. And why should they not? The idea that religion has no connection with the affairs of government, is one of the most abominable sophistries ever set forth; and we wonder how any man can so far insult the moral sense of community as to give utterance to it. Our political forefathers wisely decreed the disconnection of *church* and state, but that was a very different thing from the repudiation of the principles of religion as having nothing to do in settling the order of civil government. Religion does not necessarily imply the existence of a church; it may exist, and pervade the mind of the entire community, while no church whatever is supported. It is something which enters into the very nature of man, irrespective of any and all church organizations whatever; and it might as well be argued, that man's nature has nothing to do with government, is that his religion has nothing to do with it.

Is the business of ministers of the gospel solely with church matters? Or have they something to do with that religion, which the nature of every rational creature demands? It is admitted, that church organizations are necessary to bring man's religion to the highest perfection of which it is capable; but religion itself, and the institutions by which it is perfected, are two different things. The one has a rightful concern in the affairs of government; the others have not. Just as there may be no connection between government and institutions of learning; yet, to argue, hence, that there is no connection between government and a good, solid education, would be foolish. Institutions of learning may be wholly disconnected from government, while that education which it is the object of literary institutions to perfect, is necessary, both to establish government, and to carry on its operations. So church establishments may have no connection with government while the religion which it is the object of churches to perfect is necessary to confer upon government that just, equitable, and righteous character, without which it is only an engine of oppression.

Now, if it is the province of ministers to inculcate the practice of that religion which their church organizations are supposed to have brought to some sort of maturity—and who will deny that it is their province?—it is certainly their right, not to say their duty, to be employed sometimes in spheres extraneous to mere pulpit labors. It is their duty to enforce religion in its application to government; and that they may the better do this, it is their right to occupy situations, where they can make their influence bear more directly, and effectively, upon the questions in which government is concerned, than they can when standing in the pulpit. It is their right to fill governmental offices, to occupy seats in Congress; indeed, to labor wherever their influence will tell with the greatest power in bringing men to regard the God-given rights of their fellow men.

What is government? It is an institution for securing to man the rights that God has given him. When it does not secure these, but violates them, it is no government. An application of the principles of righteousness to the social system is, therefore, the end of all good politics. How ridiculous to argue, that a preacher of righteousness has no business in the place where he can advocate this application directly, and effectively! Still more ridiculous is it to say, that the remonstrance of ministers against political iniquity is an impertinent interference with state affairs, and a dragging down of religion into the mire of politics. May Heaven avert the day, when ministers shall be prohibited from remonstrating against wickedness in high places!

The crisis which our country seems to be approaching is an important one, and it is well that ministers, whose chosen calling is to preach righteousness, are turning their attention, in some good degree, to the affairs of the nation. "Bad manners beget good laws;" and bad doings in government, we may hope, will beget good statesmen; for they rouse, and alarm, the moral sense of the community, to such an extent that a terrible retribution is visited upon those unprincipled politicians who are the authors of such doings, while no effort is spared to supply their places with good men and true. T. B. B.

EDUCATION—THE AWAKENING.

Under the creative energy of an all-wise and beneficent Power, a soul awakes to the realities of life, and enters upon its immortal career. The outward world speaks to the mind, and it awakens as if from slumber. It perceives the realities of self and its surroundings. Thought springs up—the eternal activities of a new spirit have commenced. It is weak, ignorant, and dependent. It wants some kindred spirit to protect, to guide—revealing to it, itself, its relations, its destiny, its obligations, and assisting in its first developments. The Creator, ever mindful of the wants of His creatures, places guardian spirits as *parents*, having more knowledge and power and experience, to watch over its returning wants, to protect it from harm, to place its feet right early in the paths of rectitude, in that straight and narrow way that leads to eternal life. He gives unto these paternal spirits that affection which, welling up in their hearts like a perennial fountain, fills their souls with interest for the dependent spirit, and leads them to labor and sacrifice and suffer cheerfully for its good. On the other hand, the Creator leads the dependent spirit to reciprocate this affection and kindness, returning love and obedience, for love and labor.

The parent makes the first impressions, awakens the first beams of infantile thought. The parent touches the first chords of affection. The parent controls the influences that first affect the infantile character. The child is first innocent, then stands on the dividing line between guilt and innocence, then passes over. Thence every act of sin tends to lead it farther and farther from the right. The parent stands by when the child chooses between right and wrong, between life and death, and can exert almost omnipotent control over its infantile decisions. He has power to say to the infantile propensities and passions, "Thus far, and no farther, shall ye go." The child works or plays, goes or comes, weeps or laughs, is honest or dishonest, profane or devout, lazy or industrious, liberal or parsimonious, religious or irreligious, a blessing or a curse, pretty much at the bidding of the parent.

The truthfulness of these statements is corroborated by every day's observation. Look at the young men and women around us. Who are those that are growing up to be the promise of the future stability and prosperity of everything that is valuable in society—a blessing to humanity? They are, as a general thing, those who have been under salutary and proper moral and religious influence and instruction at home. Who are those who are growing up, their souls polluted with the virus of most flagrant sins—breathing, even in their youthful days, a perfect Simoon of impurities and death—who are the prospective curse of the world? They are, for the most part, those who have been neglected at home. They have not been sufficiently restrained. Their moral training has been neglected—not only neglected, but perhaps they have received positive instruction, either by example or precept, or both, in vileness, profanity, dishonesty, injustice, theft, Sabbath-breaking, and all manner of sin. In what kind of families have most of the great and good, of all ages and nations, been trained? Were they not nurtured in homes consecrated to truth and religion? Whence have sprung their opposites, but from opposite sources? The experience of the world affirms the truthfulness of the declaration of Inspiration, "*Train up a child in the way he should go, and when he is old he will not depart from it.*" True, the good may be changed to bad, or the bad to good, in after life; but this is not the natural tendency or order of nature. This is not according to the laws of mental development and progress. Such instances are exceptions—not the law.

If what we have said in regard to parental influence be true, how important, how responsible, the parental relations! What undying interests cluster around their power! To the parent desirous of blessing the world, his own family presents one of the most important and promising fields of labor—a field that Providence has designed for his immediate and especial occupation. Not that he is to confine himself to this particular field; but that he is to work outward from this his primary field. All other fields lie round about this his primary field—not in opposition, but in concentric relation.

The culture of this period, the parental training, is preparatory, is fundamental, to all special training in after life. It is laying the foundations of character. It is for awakening the latent energies of the new-born spirit. It is the period of first and strong impressions—the formative period. Now the first unfoldings of character take place. Without proper bias given now, the future trainings of school may prove nugatory or even hurtful. Unless the character receive the right bent here, sadful will be its tendencies in its future development. The innocency of infancy may be left to run into the waywardness of youth, and the degeneracies of age; or an earlier and deeper dye may be given, with a wider range of consequences. We have heard of the child whose first uttered word was an oath. Again we have heard of the child whose first articulated sentence was a prayer. What was the cause of this difference, but their infantile training? How vastly different must be the natural unfolding of such minds, under such diverse influences—and who is responsible for this early manifestation of sin? The *parent*.

The first influences, the first attempts at education, should be restraining, preventive. This should be accompanied by a free and generous leading out of the young spirit—awakening the purer feelings, the better powers and susceptibilities, and permitting the baser passions to slumber on, as far as possible, or, if unfortunately aroused, kindly and vigorously checking them and calling out their better being. The young spirit should not have its awakening powers cramped, and its newly kindled ardor, damped by cold, formal discipline, and the tasks of schools—but the genial influences of love and truth and goodness should furnish the light and warmth, in which the young spirit should grow. It should be led to seek goodness and greatness as its natural destiny. All of these influences—all of this training and developing, should center in, and cluster around religion. As in the impressible season of childhood and youth, the heart is more easily changed than at any other season of life, and the impressions made, the changes effected then, are more deep and enduring, and as the richest promises of the Bible, of religion, are unto the young; there is no field opening so many bright prospects, and offering such rich rewards to the zealous Christian laborer, as the youthful heart. And no individual has such power over it as the parent. Parents, under the blessing of Heaven, hold the keys of life and death in their own hands more emphatically than any other mortal being. It is the good pleasure of God, that the young should remember Him, should come unto Him, and He has arranged by His providence, so that it is the especial mission of the parent to lead his children unto the Lord. It is the desire of Christ, that little children might be suffered to come unto Him. Parents, hinder them not—but assist, entice, lead them to their Saviour. Is the Christian parent looking forward to the conversion of the world, trusting in the promises of God? His children are included in those promises. Is he laboring with this evangelization of the world constantly in view, and with the belief that every act of his is telling upon the destinies of man? His children stand foremost—ready to receive his labors and to be molded by his influence. Does he desire to work where he can do the most good? His family presents one of the most promising fields—a field that he has no right to neglect. God has placed him as guardian and husbandman here, and full returns of fruitage will be required at his hand.

If such are the privileges of parents, how important that they should rightly improve upon them. How weighty and imperative the responsibility. If, as the apostle declares, the Christian who neglects to provide for the temporal wants of his family, has denied the faith, and is worse than an infidel—what terms of reprobation can we employ, sufficiently strong and scathing to express the character of those that neglect the spiritual wants of their families? Wo to the parent who proves recreant to his trust. Neither riches, nor honor, nor long life, can compensate for this neglect. What must be the guilt of him, who sacrifices the spiritual good of his family, for their physical good—for the sake of giving them houses and lands and gold? How will that parent answer at the bar of God, who neglects the souls of his children for public business and calling and station? How will he who through sheer laziness or indifference neglects the spiritual culture of the immortal minds committed to his charge, meet those neglected spirits at the day of judgment? Verily, the blood of such lost souls will be required at the hands of such recreant parent.

The mother of the celebrated Increase Mather used to say to him, "If God make thee a good Christian and a good scholar, thou hast all that ever thy mother asked for thee." We trust that her prayer was answered, and answered because she seconded her prayers by earnest and persevering efforts for the fulfillment of her desires. So with all Christian parents who are praying that their children may become great and good—they must labor as well as pray, harmoniously blending their prayers and their labors; then, and not till then, may they expect the richest of heaven's blessings to crown their efforts. *

MODERN PIETY.

It appears evident, on studying the standard of Christian piety as set forth in the scriptures, that it bears a striking contrast with the piety of the present day. There are those now, we are thankful to believe, who ardently love the cause of their Master, and the souls of sinners—who prefer the advancement of Christ's kingdom to their own aggrandizement, and whose lives and fortunes, and all they are and hope to be, are consecrated to God. Yet how cold, how formal, how heartless, the love, the worship, and the service, of the great body of the church in our day!

This may seem a severe judgment in regard to Christians; but is it not well that we consider candidly whether it be not true? Where is that self-sacrificing spirit, that glowing ardor in the service of Christ, that unquenchable fire of devotion, which the ancient prophets and apostles exhibited in their lives, and enforced upon their brethren? Why are not sinners brought to Christ by scores in the vicinity of every Christian church, in room of now and then a few—a *very* few? Why such a deplorable want of faithful laborers in the gospel vineyard? Why such an endless wrangling among Christians upon contested and comparatively unimportant points of doctrine, to the neglect of the simple and fundamental principles of religion? Why do the children of so many professedly religious parents grow up in skepticism, or confirmed infidelity? And why does infidelity often grow up in the hearts of even church members? Are the principles of Christianity less efficient in establishing the hearts of those who have been converted, and in convicting sinners by thousands of their rebellion against God, now, than in the days of the primitive Christians? Does Christ refuse to impart that strength, support and consolation of spirit, which the Old and New Testament Christians so richly experienced?

If Christianity is not now the same that it was in those times, God must have changed. If the standard of piety which God now approves, is not precisely the same as that which Christ set up while here on the earth, what is the measure of consecration and service which is required of us? Does God require a less entire consecration of the heart to Him now, than in the early ages of Christianity? Is He now satisfied that a small portion of the affections be given Him, and the remainder centered upon the gratification of the lusts of the flesh?—that a few feeble aspirations be raised to Him morning and evening, and the thoughts and the heart be entirely absorbed in worldly matters through the day?

O, that Christians would show daily, by their conversation and their conduct, that they esteem everything of a worldly character of far less importance than the interests of religion; and that their hearts are imbued with the love of God. Thus would their conduct prove to the world the value of Christian experience, and convict sinners of their own sinfulness, and induce them to seek the same peace of mind in believing on the Saviour. But I fear it is far otherwise with the vast majority of professors of religion. God says by the mouth of one of His servants, "Son, give me thine heart;" but we give it to our occupations, our friends, or our reputation. Christ says, "Pray without ceasing;" but we sometimes find it a task to pray twice, or even once a day. It sometimes interferes with our business so much that we cannot afford to spend time in family or private devotion, and in self-examination. May God help the Christian church to awake from its slumber, before it is lost with the sinful world!

OBERLIN, June 25, 1854.

BRITISH CORRESPONDENCE.

GLASGOW, July 7th, 1854.

Domestic griefs, peculiarly trying, have so long disqualified me from referring much to public events, that, although smarting sore under God's bereaving stroke, that has recently taken to himself a pleasant child, I should wish to note the progress of events tending to restore the Sunday to its place among "the six working days." The Sunday trips of our Clyde steamer, Emperor, which were continued last season so late as November, were resumed early in the summer, and continue to be patronized to an extent that gives assurance that they will not readily be relinquished. The newspapers have ceased to chronicle the steamer's movements; but their secularizing influence is increased by the fact that a larger number of the coast towns are visited on successive Sundays, including places considerably farther down the Firth than last year.

A recent Act of the Legislature, intended to diminish intemperance in Scotland, seems likely to impair still farther the assumed sanctity of Sunday—although many of its promoters aimed at the opposite. By that Act, the sale of spirits on Sunday in licensed public houses is made illegal. But among the friends of the abstinence cause there are many who attach no sacredness to the day which the church prefers to sanctify. These are aware that men accustomed to have full opportunity of enjoyment of the kind they preferred on that day, will require the means of enjoyment of some other kind; and they are anxious that recreations be afforded to such by rail, by river, and at exhibitions. They begin to ask that parks, pleasure grounds, pictures, &c., be rendered more accessible on that day, as a means of weaning the intemperate from their cups through invitations to the contemplation of nature and the admiration of art. Notice has been given in the Town Council of Edinburgh of an intended motion by one of its members of the Sunday opening of the Botanic Gardens there. In the House of Commons, also, notice has been given again of an intended motion that the British Museum, the National Gallery, and other public places, be likewise opened on the same day. But that on which attention and expectation most rests, of a similar nature, is the Sunday opening of the Sydenham Crystal Palace. By the terms of their Charter, the Company are interdicted from opening the building on the first day of the week, unless they should receive the authority of Parliament so to do. The attempt to obtain that authority will doubtless be made; and the public press is preparing the people for a demand to that effect. It seems, however, to be thought unlikely that such a motion can be entertained there during the remainder of the present session; and the Directors seem indisposed to take any prominent part in suggesting the requisite alteration. But the *Times* has recently been suggesting that there is no law in existence which would prevent the shareholders of the Crystal Palace themselves from being in their own property any day they pleased; and that journal intimated, that at the first meeting of the Company they probably would assert their right in this respect. And already, accordingly, an advertisement calls a meeting for the 20th instant, which, though it abstains from introducing Sunday by name, seems plainly to intimate that it is intended to propose that without any money payment both those holding season tickets and all shareholders should be at liberty on Sunday to visit the Palace. It will not even prevent such from enjoying wine or ale while there; for already, on other days, both are sold in the Palace, although, in the first instance, it was designed that they should be excluded. It is well understood, by all parties, that if the Palace be opened on Sunday, the opening of even more exceptionable places will follow; and it may also be anticipated, that any partial opening of the Palace will issue in the privilege being extended to all who are willing to pay.

Scarcely any of the Railway Companies entered upon the subject of Sunday trains, at their last half yearly meetings—and in no case was anything ceded to the assumed claims in behalf of that day. The tendency is in the opposite direction; and it was stated last month, that all the lock keepers on the Caledonian Canal at Fortwilliam had received notice of dismissal, because they refused to agree to work on Sundays. The Canal is under the direction of the Government; and the circumstance indicates that relaxation is their principle on the subject. We do not, therefore, need to be surprised, that tidings from the seat of war have occasioned protracted Sunday meetings of the Cabinet Council in London. In looking at what indicates the more general state of public feeling in the metropolis in regard to Sunday labor, it will, however, surprise many to learn, that it is estimated by the late Census Tables, that the number of men engaged in London alone upon omnibuses on the Sunday is as many as 6,000. Surely, if all throughout the country were employed upon that day, it would detract not a little from the argument so often urged on the ground of the *universal* observance of Sunday. J. A. BEGG.

LETTERS FROM PALESTINE.

The following extract is from the letter of Bro. Chas. Saunders, a part of which was printed last week.

FIRST-DAY, May 21st, 1854.

To-day we went out to the President's garden, as it has been called, now occupied by Mrs. Miner, about three miles from Jaffa. From there we went out to a river two or three miles further, and five or six miles from Jaffa. This river is about two-thirds as large as Pawcatuck river at Potter's Hill. They have about twelve feet head, and eleven run of stone, about three feet in diameter, and from three to four inches thick. Each run of stone had a separate wheel to drive it. It was a perpendicular shaft, with floats from eight to twelve inches wide, and eighteen or twenty inches long, put in at the lower end, like an old-fashioned gig-wheel. They let on quite a large stream of water to each wheel, and still quite a sheet was running over the dam. They have plenty of business, and run night and day. I should think they would grind about one bushel an hour to each run of stone. The meal is very coarse, and they manage it in rather a coarse way. They would as soon put their feet in it as their hands, and by their looks it would not make much difference which were in. The land along this river is the best I have seen in this country. The Genesee flats in New York, or the valley of the Mississippi, cannot surpass it for richness or beauty. They have extensive mulberry groves, and carry on the silk business quite extensively. Although it was First-day, every thing was going on the same as on any other day of the week. The mills, I understand, belong to the Government; but the land can be bought around there, and perhaps the water power. It is my opinion, that it would be the best and safest investment, so far as I have seen, that we could make in this part of the country, if we had the funds, as it must eventually bring together a large population, being the only river of any size for a long distance. There should be at least five or six families to settle there at present for safety. All that are here, I think, would like to purchase land and settle there; so the means are only lacking on our part. I am going, if my health is spared, to make more inquiries, and examine the stream and land for some distance farther, as well as many other places. There is land for sale with houses and fruit trees on it, and land without either for sale, and some very good bargains, I should think. The house and garden where Mrs. M. lives has ten acres or more, with a fruit orchard, a beautiful prospect of the sea, one and a half miles from Jaffa, for about $1,700. The house could not be built for that sum. But we are here without means to do with. Every thing that we buy or hire in this country has to be paid for in advance. I cannot hire a garden, for we have not the money. One of the German Sabbath-keepers offers us a piece of his land, but we have got to furnish at least one good mule for raising water, which will cost $75, and then we have got to hire a man, which will be five or six dollars a month, as well as live ourselves. So you will see that our hands are completely tied. The land is before us, but we cannot go alone into the wild country, without shelter or protection. And then, getting here in the hot season of the year, we shall not be able to do much for the first year. The best that we can do with land this year will not more than meet the expense of rents, mules, &c. We shall need for each family at least $500 for the first year, as every thing is very high, with the exception of oranges and lemons, which are very cheap, five good oranges for one cent. Wheat is considerable over $2 00 a bushel, as near as I can get at it, (their measure is different from ours,) and other things are in proportion. The war has raised the price of almost every thing, though we hear but little about it here, except thefts and robberies committed by runaway soldiers. The opportunities for doing good are numerous, and the country is as good as I expected to find it. But in the present state of the country, it will necessarily take considerable means to get started. But what is laid out in property in this country will not be lost; the value must certainly be increasing. We have been very cordially received by all classes, and we want to be in a situation where we can employ them, and bring them under our influence.

PLAINS OF SHARON, June 18th, 1854,
1½ miles from Jaffa.

To the Seventh-Day Baptist Missionary Board:

DEAR BRETHREN—It is with pleasure that I again sit down to write a few lines to you, although we have heard nothing from you since we have been in this country. We all feel more or less the effects of the climate. Mrs. S. has had quite a severe attack of fever which lasted for a week, or a little more, but she is recovering her health slowly again, and is able to be about the house a part of the time. We have all had a bad humor, as all that have come to this country have had. I have slept but very little for the last two weeks, but am getting a very little better of the humor; which I think originates more or less from the bites of fleas and musketoes, which are very annoying in this country.

I have rented one-half the house with Mrs. Miner for 825 piastres; it being the best that I could do with what means I have on hand. It is not what we need. I have also hired half of a garden belonging to a German, for 600 piasters. There may be five acres of land in what I have hired, one acre and a fourth of which is covered with young orange and pomegranate trees. This we have to water, and this is where we expect to raise vegetables. Mr. Dickson, from Mass., has the other half of the garden. Watering is expensive business. We ought to have three good mules. Mr. Dickson has a mule, and I have for the present a horse that I hire, because I have not means to buy one. The well is seventy-five feet deep, and something about it is almost constantly out of repair, so that we have to attend very closely to it. We drive the animals about eighteen hours a day, nine hours each. Bro. Jones takes one quarter of my part to cultivate, for the fruit. I hire a German to work for me for one hundred and twenty-five piastres a month. He is a poor man, and I shall have to do something more for him. Although wages are low in this country, the labor costs nearly as much as it does in the States, because there is so much less work done in a day. If I can make the garden pay the expenses this year, I shall feel satisfied. I should be glad to employ several Jews, but have not the means; neither have we any place for them to live. I think it is bad policy for us to hire these old gardens. We have constantly to be expending money, and labor, and then the owners want to double, or nearly so, the rent every year; and after you have done all, it belongs to some one else. It seems to be a very favorable time to purchase land. The government of Turkey has recently issued a *Firman*, so that Christians can buy and hold land in this country. Land is constantly rising, and the best locations are being taken up. We shall lose nothing in laying out our money judiciously in land in this country, and I think the sooner we do it the better; for if we should not want the land, the price will no doubt double in a short time.

I wrote to you in my last communication, about a river, some five or six miles from Jaffa, and the land around it as being very good. Dr. Barclay and family are now in Jaffa, on their way to the United States. They expect to leave by steamer to-morrow. They are going through Italy, France, and England, and will not be in the States before some time next fall. He is looking out for land, here. He wants to purchase a large tract. He was going to Tyre and Cesarea, but says the land on this river is the best in Palestine, and he does not wish to look farther. This land can be bought, and I suppose reasonably. Much of the land, even on the Plains of Sharon, is light. It is the good land that we wish to settle upon. The difficulty in the way of our purchasing is, that we have to look out the land, find out the price, and then write to the States, and wait for the money to be raised and sent on, and by that time the land is sold for ready money, and we are left to go through another trial, for a less desirable location. There are men here, who, as soon as they find that Americans want to buy, step in and purchase, notwithstanding the bargain may have been completed, all but paying the money and getting the deed. It has been done a number of times, and will be repeated as often as an opportunity offers. And the only way that we can get a location worth having, is to have the means on hand, so that when we find a suitable place, we can pay the cash and take the deed. It will make a great difference in the price, to have the money on hand to pay down. They calculate to charge about twice or three times as much as it is worth. At the same time, if we offer, what we suppose is a fair price, cash in hand, we shall get it. If we talk of buying anything to-day, to-morrow it will be all over Jaffa. I gathered from what Dr. Barclay told me, that he calculates to lay out somewhere from $15,000 to $20,000 in land, and wants it on this river; and unless we can have the money soon to purchase, we shall lose all the important places for a colony near Jaffa. I hope, therefore, that you will let me know as soon as possible what our brethren will do. If we mean to maintain our standing, and have a leading influence in this important land, as the Sabbath-keepers already have at the present time, there must be a great effort made by our brethren at home. I should be exceeding glad if you could raise for the purpose of purchasing land from $3000 to $5000, for we shall not be able to get land the second time adjoining us, without paying an exorbitant price. Brethren, do not think that I am beside myself. What I say here, would be approved by every brother in our denomination, did he know the importance of securing an important location for Sabbath-keepers, before it passes into the hands of first-day people, as it will soon, if not secured by us. There is no place that I have ever seen, where there is so good a chance for Sabbath-keepers to build up a colony as here. Dr. Barclay says there are a number of families of their denomination that are ready, and waiting for an opportunity to come out here to live. You will see by what I have here written, that my anxiety is not groundless. The English and French will no doubt be making settlements here soon. I hope our brethren will not feel, that what is laid out here in land or in a house is money given away or lost; but, on the contrary, that they have so much capital well invested. There is a garden about half a mile from Jaffa, with a fine prospect of the sea, that can be bought at a very low price, and would make a beautiful residence, and a very healthy one.

You will excuse me for speaking so often of our personal wants, when I tell you that our contracts have already exceeded our means, and the money is due. The universal custom of this country is to pay in advance. It is only through friends that we have been able to do otherwise. It injures our influence to be under the necessity of doing so. When I wrote in my last letter, that I thought it would take $500 for my family for the first year, I included traveling expenses, &c., which will be more for the first year, as we are not settled. I will say, so far as economy is concerned, we shall be as economical as possible. We have had a good deal of company, and no doubt shall continue to have. It gives us an influence and standing in society that we otherwise could not have. Things are high now, but we hope they will soon be less, and it may be we shall not need so much as I had thought at first. As much less as can be got along with, we shall be glad to save for our Society's operations. You are aware that a work of this magnitude cannot be started on a permanent footing without money, and labor, and constant care and attention on our part, in which I wish to be found faithful. I should like to say many other things, but have not time. Bro. Jones and family are well, I believe. They are one mile or more from us. Write as soon as possible. We feel the need of your constant prayers, that the Lord will direct our steps, and keep us in the right way.

Your brother in Christ,

CHARLES SAUNDERS.

P. S.—We had 24 at our meeting on Sabbath last. The thermometer has averaged about 78 for the last two weeks; one day it was ten degrees hotter. Bro. J. and Dr. B. have had a short Sabbath discussion; the Doctor takes radical ground on the subject—no Sabbath. I should like to have a small set of carpenter's tools sent out as soon as a convenient opportunity offers, as I have none to use. Bro. J. had a few of his own, which he wants himself. I have no axe of any description. I should like to have some cast steel of the small sizes, and some borax, as we cannot get either here. I supposed that we were going to take these things with us, and some iron, but we did not have them. If we could have several bundles of half-inch round iron, (Ulster,) or something equal for strength, to make chains instead of the brush ropes of the Arabs, it would be an excellent thing; we cannot get any small iron here that is good. The wells are deep, and it will need long chains, with links 4½ or 5 inches broad, or nearly square. You will see by this that it will take considerable iron for one chain. It would want one not less than 175 feet long. When once made, of good iron, it would be durable.

Yours, &c., C. S.

CHRISTIANITY IN NEW ZEALAND.—The first night that the devoted missionary Samuel Marsden slept in New Zealand, the spears of warriors were planted around his head. In 1814 he carried missionaries there, and from that time till 1841, so effective had his labors been, that Christianity was spread over the whole newly-visited land. There is now scarcely a village there that has not its church-bell, its own ministrations and native teachers. When the first missionary went there, there was nothing but barbarism, and the heads of the unfortunate captives used to be rolled at the doors of the clergymen. Now, wherever they go there is religious worship. For twelve years the bishop has never locked a door or fastened a window, during his residence in New Zealand. In the late war, the number of natives who took up arms against our troops did not exceed 1,500, and from different places. English soldiers fought along with an equal number of natives, otherwise the war would not have been brought to such a speedy termination as was the case. The ringleader of that insurrection is now driving a gig presented to him by the Governor of the Colony, and giving orders for the construction of roads.

DERUYTER INSTITUTE.—We have received a Catalogue of the officers and students in DeRuyter Institute during the year ending June 27, 1854. The number of students was 178, of whom 101 were ladies, and 77 gentlemen. The Faculty consists of Rev. James R. Irish, A. M., J. Henry L. Jones, A. B., Miss Josephine Wilcox, Miss L. Eleanor Clarke, Miss Harriet W. Stillman, and Mrs. Sarah E. Jones. The Fall Term commences on the 30th of August and closes on the 5th of December, 1854; the Winter Term commences Dec. 13, 1854, and closes March 20, 1855; the Spring Term commences March 23, 1855, and closes June 26, 1855.

TIOGA AS A MISSION FIELD.—In the Report of the Executive Board of the Western Association, allusion is made to the mission field at Tioga, Pa., which is spoken of as "nothing very encouraging, although there is here and there a Sabbath-keeper who has some desire to maintain the same." Bro. R. L. Davis takes exceptions to this expression, and says:

"But permit me to state, that at this time there is in Westfield a small church of Sabbath-keepers, who hold meetings on the Sabbath once in two weeks. From five to ten Sabbath-keeping professors usually meet and read the Scriptures, pray, sing, and exhort one another; and we not only 'have some desires to maintain the same,' but, with God's assistance, can put to flight all *scriptural* opposition. May the times mentioned in Scripture soon return, when, among other blessings, 'the poor' shall 'have the gospel preached unto them.'"

SOUTHERN BAPTIST BOARD OF FOREIGN MISSIONS.—The newly-elected assistant secretary, Rev. A. M. Poindexter, has issued a circular to the Southern churches, informing them that the attempt will be made to raise $50,000 to meet the necessities of the present year. He adverts to the demand for a reinforcement of the China mission, especially should the revolution now in progress open wider doors for missionary operations in that empire. Recent intelligence from Central Africa is spoken of as most cheering, crowds listening attentively to the Gospel, and the missionaries asking for additions to their strength. The circular closes with the argument that a "vigorous and liberal effort for Foreign Missions would greatly bless ourselves. 'He that watereth, shall be watered also himself.' Those churches (as a general fact) are most prosperous that do most for the conversion of the heathen. Those Christians most joyful in Christ who make greatest sacrifices for Christ."

Abstract of Proceedings in Congress.

SECOND-DAY, JULY 17.

In the SENATE, the bill making provision for the better preservation of life and property, from shipwreck or other disasters on the coast of the United States, was passed. The joint resolutions fixing the compensation of the employés of the Senate, and the officers and messengers of both Houses of Congress, and prohibiting extra pay for services rendered, were also passed. The consideration of the Homestead bill was then resumed. Mr. Clayton's amendment, striking out the sixth section, which gives $160 in money in lieu of 160 acres of land, to any mechanic or other citizen of the United States, who is unable to comply with the conditions of the bill by reason of his want of knowledge, skill or experience to cultivate the land, was rejected by a vote of 19 yeas to 29 nays. Mr. Stuart of Michigan moved a substitute for the whole bill, graduating the price of public lands from one dollar to twenty-five cents per acre, and granting quarter sections to actual settlers, at twenty-five cents per acre, except where the lands have been long in market, when it shall be 12½ cents per acre; all classes of persons to be admitted to the privileges of the bill who are allowed to hold real estate in the United States; the States themselves to be entitled to take lands by a legislative enactment for railroad purposes, at a graduated price. Mr. Gwin moved to amend the original bill, so as to charge 25 cents per acre for homesteads. After considerable debate, and without taking a vote the Senate adjourned.

In the HOUSE OF REPRESENTATIVES, the Army Appropriation bill was taken up. The amendment pending was to repeal so much of the former act as authorizes military superintency at National Armories and providing for the appointment of civilians at those establishments, which was briefly discussed, when the Committee rose without coming to a conclusion, and the House adjourned.

THIRD-DAY, JULY 18.

In the SENATE, Mr. Sumner presented a memorial from a Society in Philadelphia for the promotion of the abolition of Slavery, and in favor of the repeal of the Fugitive Slave Law, and referring to the case of a free man of Philadelphia, who escaped from slavery in Georgia under the guards of a steamboat, was reärrested at Wilmington, Del., yet notwithstanding the positive evidence of his freedom, was heard under the Fugitive Slave Law and returned to Slavery. After considerable discussion, the memorial was laid on the table. The bill for the construction of a line of telegraph to the Pacific was again taken up and passed. The remainder of the day was occupied in discussing the Homestead bill.

The HOUSE, after the transaction of some unimportant business, took up the Army Appropriation bill. The amendment in favor abolishing the military and adopting a civil superintendence over the national armories, was adopted by a vote of 80 to 38.

FOURTH-DAY, JULY 19.

In the SENATE, the Committee on the Judiciary were discharged from the further consideration of the petitions for the repeal of the Fugitive Slave law, considering legislation on the subject inexpedient. The bill for the payment of the Texas debts was discussed, and without any definite action the further consideration of the bill was postponed. The Homestead bill was then taken up and discussed until 4 o'clock, when the Senate adjourned.

In the HOUSE, the Committee on the Judiciary reported the Senate bill to provide better accommodations for the United States Courts in the cities of New York, Boston and Philadelphia. The bill abolishing the 50 per cent. discount on prepaid newspaper postage was taken up, when Mr. Elliott of Massachusetts spoke against the measure, and on motion of Mr. Dickinson of Massachusetts the bill was laid on the table by a vote of 74 to 67. The House then went into Committee of the Whole on the Army Appropriation bill. A debate took place on various amendments, and without coming to a conclusion the Committee rose and the House adjourned.

FIFTH-DAY, JULY 20.

In the SENATE, the consideration of the Homestead bill was resumed. Mr. Hunter moved a substitute for the bill extending preëmption rights to actual settlers, the same to be paid for at prices graduating from $1 25 to 25 cents; also allowing the States in which the lands lie to take it at the graduated prices for the purposes of internal improvements when sanctioned by legislative enactment of the said States. Before a vote was taken on this substitute, Mr. Gwin moved to amend the substitute so that preëmption settlers may take lands in California at $1 per acre, and the motion was agreed to. Mr. Fitzpatrick moved to reduce the price of the lands which have been in market thirty years to 12 1-2 cents per acre—agreed to. Mr. Sebastine offered two amendments—one reserving the Indian lands, and the other extending the bill to present pre-emption settlers, both of which were agreed to. Mr. Hunter then modified his substitute by excepting from its operations the lands reserved along railroads, and the price of which has been fixed at $2 50 per acre. The question was then taken on Mr. Hunter's substitute, and agreed to by a vote of Yeas 34, Nays 13. The bill was then reported to the Senate, the amendments made in Committee of the Whole were concurred in, and the bill ordered to be engrossed for a third reading.

The HOUSE passed the Army Appropriation bill by a vote of 93 against 62. A message was then received from the President, accompanied by the correspondence of Mr. Marshall, late Commissioner to China, with the State Department, which was referred to the Committee on Foreign Relations.

SIXTH-DAY, JULY 21.

The SENATE spent the whole day on the Homestead Bill. A great many alterations were made, and the bill was finally passed. It differs much from the original bill; and there is so much uncertainty about some of its provisions, that we waive for the present all attempt to state them.

The HOUSE passed the Army Appropriation Bill, including the amendment to restore the superintendence of the national armories to civilians.

SABBATH-DAY, JULY 22.

In the SENATE, several private bills were passed, and a bill relative to United States Court's was discussed. At 3 o'clock the Senate adjourned to attend the funeral of General Towson.

The HOUSE passed eight private bills, and spent a long time in considering a report adverse to the petition of the Temperance Alliance, praying Congress so to amend the charter of Washington as to give the corporation power to prohibit the sale of intoxicating drinks.

European News.

We have European dates to July 8th. Below will be found the principal items of news.

The Czar replies to Prussia that he will consent to resign his exclusive protectorate over the Greek Christians of Turkey and will accede to the joint protectorate of the five powers. The Czar agrees to evacuate the Principalities when the Western Powers evacuate Turkey, but says he will retain a strong military position in Moldavia as a provisional security.

In the mean time hostilities continue, and fighting is reported from the Baltic, Black Sea, Danube, and Asia.

In the Black Sea, an engagement took place between eight Russian steamers and three of the allied ships, but there was not much damage done.

From Asia, the news is bad for the Turks. On the 9th of June they met with a severe check in attempting to storm two redoubts between Usurgnet and Kurtais, the Russians having attacked them in the flank during the assault, and killed between 1,500 and 2,000, captured 13 cannons, 35 standards, and the entire camp equipage.

On the 26th and 27th June, Boomarsund was again bombarded, and the fortifications entirely destroyed.

An engagement took place between the Turks and Russians near Silistria, which lasted two days, and 2,500 Russians were killed.

The Austrians have entered Wallachia. Sir Charles Napier's fleet was lying in line of battle before Cronstadt, but up to the 29th June, no attack had been made.

A military insurrection, headed by O'Donnell, has broken out in Spain, four thousand of the Madrid garrison having marched out in the direction of Toledo.

Four Days Later.

The steamer Pacific, with four days later news, arrived at New York on the 24th inst. The following paragraph contains the principal news from the East:—

"On the 8th, after a long struggle, the Turks got possession of the islands of Mokan and Oineika, and subsequently of Giurgevo. The Russians were totally defeated on the Wallachian territory."

California News.

Two weeks later news from California was received in New York on the 23d inst. It is not important. New diggins are reported in several localities, and mining was about as successful as ever.

Since the 1st of January, the population of the State has increased (including 6,500 Chinese) about 17,800, the greater part of whom have gone to the interior—being at the rate of 40,000 per annum against 12,000 for all 1853.

A woman named Mary Brady, a native of Ireland, committed suicide on the 24th, by drowning herself in a cistern. She had loaned $1,000 of her earnings to a person who had become unable to pay her; and she killed herself in consequence.

An Englishman named Wm. Hughes performed in San Francisco, for a wager of $1,000, the wonderful pedestrian feat of walking 80 consecutive hours without a moment's cessation.

TEMPERANCE AND CHOLERA.—In the Albany *State Register* recently appeared a communication from the pen of Edward C. Delavan, Esq., concerning the relationship of intemperance to the ravages of cholera. He mentions a number of facts within his personal knowledge, bearing upon the point he endeavors to enforce, that intemperate men are frequently the victims of the epidemic, while those who abstain entirely from intoxicating drinks, in almost every case escape. He states that during the cholera season of 1832 he had engaged at work for him over one hundred men. He prevailed upon them to abstain from all intoxicating drinks, and gave them a beverage of water, molasses, vinegar and ginger. The result of it was, that out of those hundred men not one died of cholera, while out of thirty laborers who worked directly opposite, and who used strong drinks, ten died with the disease. There are other facts related which will weigh equally heavy in the minds of thinking men. He makes his points good.

THE STEAMER FRANKLIN.—The U. S. Mail Steamship Franklin, from Havre, is ashore, and will probably prove a total loss. It seems that on Sunday, July 16th, as she approached our shores, the usual farewell dinner was given, and all were expecting to be in New York the next day. But the morning of Monday there was a fog impenetrably dense, and it was discovered that the vessel was considerably off her course. Between seven and eight o'clock she struck, and there ensued, of course, more or less alarm and confusion. It was impossible to tell where she was precisely, but it was discovered to be on sand and not rock she had stranded, in about fifteen feet of water; her draft being nineteen. The passengers were called to assist the crew in the emergency. It was immediately necessary to throw overboard her provisions and stores, coal included. Signal guns were fired; and soon, the fog clearing away, a fair, bright day revealed that the ship's party were not in danger, as she was about a thousand feet from shore, on Long Island Beach, off Moriches, about sixty miles from Sandy Hook and fifteen or twenty from Fire Island. The usual nautical procedures in such cases were resorted to, and by means of life-boats all the passengers were readily brought ashore. The baggage and freight has been saved, but the ship will probably prove a total loss.

THE TREATY WITH JAPAN.—The Japanese Treaty is published. It provides for two ports only where American ships can trade and procure supplies from the Empire. These are Simoda in Idzu, and Hakodade on the Straits of Matsmai. Vessels may put in elsewhere in distress, but if they wish to stay in Japan, they are to make their way to one of these ports as soon as possible. Thither, too, shipwrecked American sailors are to be forwarded at the expense of the Japanese Government, and the American Government is similarly to bear the expenses of Japanese shipwrecked on our shores. The treaty is dated on March 31 last, and the ratifications are to be exchanged in eighteen months from that time if practicable.

SUMMARY.

The Danville *Register* states that the dysentery has been prevailing to an alarming extent in the neighborhood of Leaksville, N. C., within the past few weeks. In one family three out of five children died of it. In another, its ravages were more fatal still, sweeping off some ten of its number in rapid succession. In Leaksville, a few Sabbaths ago, the cloth for 25 shrouds was sold in one day. In the upper edge of Pittsylvania the country has been scourged with this disease to an extent but little inferior.

The editor of the Ripon (Wisconsin) *Herald* furnishes a table of the amount of surplus products of the town of Ceresco, Fond du Lack County, in 1853. By this it appears that of wheat, corn, oats, barley, flax seed, beans, and wool, the surplus amounted to $131,550; and the surplus, beef, pork, butter, cheese, &c., are put down at $75,000 more. The estimated population of the township is 2,170. The estimates for 1854, at the present ruling prices of produce, are over $300,000.

A dispatch dated Washington, Wednesday, July 19, 1854, says: I have positive and undeniable information, from the highest sources at Honolulu, to the effect that a Treaty is about concluded between Mr. Gregg, the United States Commissioner, and the Government of the Islands, for their annexation to the United States forthwith. The only unsettled question in relation to the annexation is, whether the Islands shall come in as a Territory or a State.

The Conneaut *Reporter* says that a company of men interested in the iron and copper business of Lake Superior have purchased sixty acres of land at the mouth of the creek, for the purpose of erecting extensive establishments for manufacturing the iron and copper of the Lake region. This point, it is said, is nearest to the great coal fields of Pennsylvania, to which the manufactures must look for their fuel.

A singular circumstance connected with the cholera epidemic is stated in the Chicago papers. The body of a Mr. Ely had been prepared for the grave, and was lying in a room, the windows of which were thrown open. A violent thunder storm came up, and the supposed dead man revived. He was alive the next day, and will probably recover.

The Clay Monument, in Lexington Cemetery, Ky., is to cost from $50,000 to $100,000. The Committee, through its President, H. T. Duncan, offer a premium of $500 for the best plan and specifications for said Monument. Each competitor is to present three plans—to cost $50,000, $75,000, and $100,000 respectively. They must be in Lexington prior to Oct. 10th.

It is now clearly ascertained, that the burning of the Richmondville Seminary was the work of incendiaries. A young man who had been dismissed, and whose conduct subsequently, by threatening to be revenged, led to suspicions that he knew something of the fire, was apprehended, and in his examination facts were elicited, which authorized the arrest of several others.

The Livingston County *Republican* of the 29th ult. states that the house of Mr. Cushing, about a mile north of the village of Geneseo, in that county, was struck by lightning during a storm on Thursday, the 22d. What is singular in the case, the house was protected by three silver pointed lightning rods, of most approved construction, which rods, it seems, afforded no protection.

Charles A. Gibbs, Esq., and his wife, of Ovid, Seneca County, who were journeying at the West, both died of cholera on Tuesday of last week at Laporte, Ind. They left home about three weeks since in good health, and were returning when they were arrested by the dreadful scourge.

An inquest was recently held, at Templemore military barracks, on the body of Samuel Henfield, a private of the 41st depot, who died suddenly while on guard in that garrison. The jury returned the following verdict, that he "came by his death from effusion of blood into the pericardium, which proceeded from an aperture in the aorta, having been induced by the pressure of the stock around his neck, and not otherwise."

The act lately passed, to aid the territory of Minnesota in the construction of a railroad, gives every alternate section of land designated by odd numbers for six sections in width on each side of said road from the southern line of said territory, by way of St. Paul, to the eastern line of said territory in the direction of Lake Superior. The reserved sections not to be sold for less than double the minimum price.

The comparative rate of mortality of France, of England, and of Prussia, Austria, and Russia, shows that England has a lower rate of mortality than any of these other countries. In France, the mortality is one in forty-two individuals; in Prussia, one in thirty-eight; in Austria, one in thirty-three; in Russia, one in twenty-eight; in England, it is only one in fifty-six.

A most rigid surveillance is kept up in Paris, and in all parts of the country from whence the capital is supplied, over the milk which is forwarded for the consumption of its inhabitants. Thirteen farmers have just been condemned to fines of one hundred francs and under, and one to eight days' imprisonment, for sending mik mixed with water.

The *Semeur Canadien* mentions, as an instance of remarkable success in evangelization, the Flemish church at Brussels, in Belgium. This church was founded eleven years ago, with twenty members. It now has a membership of a thousand persons, nearly all of whom have gone out from the Romish Church. The work of evangelization is also making very encouraging progress in many other parts of Belgium.

A dispatch dated Boston, Saturday, July 15, 1854, says: Edward Crane, President of the Vermont Central Railroad, resigned his office to day. Previous to his resignation it was discovered that he had over-issued eight thousand shares of the Vermont Central Railroad. The affair caused considerable excitement in our money market, as it is the second like offense by him within about a month.

The *Christian Watchman* says that the Rev. S. Adlam is still much blest as a pastor of the church in Newport, R. I. Sixty-five converts have already professed the truth as it is in Jesus. The revival still progresses. The pastor is about publishing documents, containing the history of the Baptists for the first twenty-five years of their existence in Rhode Island.

Among the passengers in the packet ship "Devonshire" from London, were Rev. Ebenezer Burgess, missionary from Bombay, and the Misses Mary P. Burgess and Abby Burgess and servant, (Sarah, his infant daughter, died on the passage,) Mary Ann Johnson, Emily Fairbank, and John Fairbank.

At Danvers, July 17, as two young ladies, daughters of Frederick Howes, Esq., of Boston, were attempting to cross the railroad track in a wagon, the Manchester train came along and dashed the wagon to pieces, instantly killing one of the young ladies, and mangling the other so badly that she cannot survive.

A dispatch dated Boston, Monday, July 17, 1854, says: Matthew Matthews, John Gill, Wm. L. Mentzer and C. Saxton, hailing from Philadelphia, recently obtained $3,700 from the Rutland Bank, Vermont, by forged checks. Matthews and Gill have been taken at Montreal, and Mentzer at Rouse's Point, and $3,300 of the money was recovered.

During Commodore Perry's late visit to Japan, himself and suite were entertained at a feast by the natives. Cooked worms, fried snakes, and a variety of indigestible compounds were served up, of which they were obliged to partake through etiquette.

The very excellent lot of pure-bred short-horned Durham cattle, imported by the Clinton County Ohio Company, are advertised for sale on the 9th day of August, at Wilmington, on a short credit.

Dr Wm. H. Arrison, the supposed sender of the infernal machine to Mr. Allison, the steward of the Cincinnati Hospital, and which killed him and his wife, has been caught, it is reported, in Iowa.

A dispatch dated Schnectady, Wednesday, July 19, 1854, says: The thermometer, at 3 o'clock to-day, stood at 102 in the shade, being the hottest since 1836.

A petition for the repeal of the Fugitive Slave Act, signed by six hundred citizens of Worcester, has been forwarded to Washington. Governor Washburn's name heads the list.

DIED.

In Glasgow, Scotland, on Sabbath afternoon, July 1st, of scarlet fever, aged five years, WILLIAM HENDERSON, fourth son of James A. Begg.

In the Hartford (Ct.) Insane Asylum, on Sabbath, the 15th inst., ALFRED WELLS, of Hopkinton, R. I. He professed religion in his youth, and united with the 1st Seventh-day Baptist Church of Hopkinton, where he remained a member until death. For several years past he had suffered much from insanity, with only occasional times of serenity, when the powers of his mind were in full and regular activity. But death has at last released him from scenes of trial; and his relatives and friends entertain the comforting thought, that

"The sunshine of heaven beamed bright on his waking,
And the sound he did hear was the seraphim's song." C. M. L.

In Alfred, N. Y., July 17, WILLIAM BURDICK, in the seventy-ninth year of his age. The subject of this notice was born in Rhode Island, but at an early age was removed to Rensselaer county, N. Y. From Rensselaer county he removed to Otsego county, and from thence, some thirty-five years since, to Almond, Allegany county. A few years since he settled in the town of Alfred, where he remained until his death.

In North Brookfield, Madison Co., N. Y., July 17th, of apoplexy, Mr. JOHN TREAT, aged 86 years.

LETTERS.

N V Hull, C M Lewis, L Crandall, W M Fahnestock, H A Hull, J Whitford, S P Cottrell, Joshua Clarke.

RECEIPTS.

FOR THE SABBATH RECORDER:

C F Langworthy, Ashaway, R I	$2 00	to vol. 11	No. 52
Nancy Clarke "	2 00	11	52
Benj Vars, Berlin	2 00	12	5
Dorsey J Stillman, Poland	2 00	11	52

A H Maine "	2 00	11	52

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Edith N Ayres, Plainfield, N J $1 00

WILLIAM M. ROGERS, Treasurer.

New York Markets—July 24, 1854.

Ashes—Pots $5 81; Pearls 5 50.

Flour and Meal—Flour 6 25 a 7 00 for State brands, 7 50 a 8 00 for strait Michigan and Indiana, 8 25 a 9 25 for fancy Genesee. Rye Flour 5 50 a 7 50. Corn Meal 3 75 for Jersey.

Grain—Wheat 1 55 a 1 70 for red Wabash and Southern, 1 60 a 1 85 for Western mixed, 2 00 a 2 05 for Ohio, 2 20 a 2 40 for white Genesee. Rye 1 23. Barley 90 a 98c. Oats 47 a 48c. for Jersey, 49 a 59c. for Western. Corn 66 a 68c. for Western mixed, 70 a 72c. for round yellow. White Beans 1 25 a 1 56.

Provisions—Pork 10 50 for new prime, 12 00 for new mess. Beef 12 00 a 16 00 for mess. Lard 9½c. Smoked Beef 12½c. Butter 12 a 16c. for Ohio, 16 a 19c. for State, 19 a 22c. for Orange Co. Cheese 7 a 9½c.

Lumber—15 00 a 15 50 for Eastern Spruce and Pine.

Seeds—Clover 7¾ a 8c. Timothy 18 00 a 21 00. Flaxseed 1 65 a 1 70.

Tallow—11¾ a 12c.

Wool—30 a 33c. for native, 42 a 44c. full-blood Merino, 47 a 50c. for American Saxony Fleece.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Agents Wanted.

THE services of a number of young men are wanted in selling the "Pearl, or Scripture Library," containing sixteen volumes, 32 mo., bound in a neat style, and put up in a rich imitation rose-wood case.

The "Pearls" sell readily among all denominations, and testimonials of their utility are beginning thus early to be received. These works, for cheapness, will compare favorably with those published by the American Sunday-School Union or the American Tract Society, and form a complete compendium of the Bible on those subjects that relate to the faith and practice of Christians.

A liberal compensation will be given to all who are willing to engage in their distribution. Address

6tf H. H. BAKER, New Market, N. J.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust, convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A M, 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c. D. C. McCALLUM, General Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A. M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations.

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

Miscellaneous.

The Practice of Medicine in China.

L'Union Medicale copies from a Russian journal the following remarks on the teaching and practicing of medicine in China :—

In China, medicine is not taught in special establishments, and no examination is necessary in order to practice medicine. Whoever finds the vocation convenient, practices this art from interested motives.

It is true, that for two hundred years there has been a regulation concerning the practice of medicine, according to which the candidate for the degree of Doctor of Medicine must undergo an examination—that is to say, must write a thesis on some proposed subject. If, after two examinations, he received a favorable note, he was received as a physician to the court. But now, the examinations are a form, and honorable positions are obtained by favor.

From all time, medicine in the Celestial Empire has held a middle place between a trade and an art. In the villages and unimportant cities, the earliest inhabitant is the astrologer and doctor. Go into any street you please, on all sides signs are hung out at the windows and doors, with the name of the doctor, and gratuitous certificates of friends who boast of his talent.

In the street where the hotel and convent of the Russian Mission are situated, in a quarter of a mile, nine of these signs may be counted.

These out-door Esculapians are, for the most part, persons who have been obliged by circumstances to change their business; for example, dismissed functionaries, superannuated apothecary cubs, broken merchants, some tourists, chroniclers of marvelous events, &c., &c.

These fellows sell all sorts of secret remedies, plasters, pills, powders, &c. They expose their merchandize in public places, in the temples and streets, and endeavor by fine speeches to extort money from the passers-by. Some, inventors of a plaster that cures all evils, have large colored pictures, with which they demonstrate the anatomy of the human body. Others, practicing acupuncture, establish themselves at the crossings, blow in their instruments, arrange their *stalls*, and when a crowd collects they announce that they are from such and such a province, or of such a family, that they are descendants of the celebrated acupuncturer, Li, and that they have at last discovered that spot on the human body where bleeding can be practiced to the most advantage for the cure of all manner of diseases.

The oculists arrange before them a little table, where hang images of two enormous eyes, with the nomenclature of the diseases which may affect the organ of vision. Many of their brother oculists prefer to adopt the proceeding of the celebrated oculist of their country, who paraded at the fairs mounted on a black ass, the saddle of which served as a counter for displaying his drugs. The dentists are surrounded with trophies of their art; masses of extracted teeth, which are not always human. It is an odd thing that this latter class are noted for a complete taciturnity—the others are prodigiously loquacious.

The Japan Treaty.

Treaty between the United States of America and the Empire of Japan, done at Kanagawa, the 3d day of March, 1854, *and of Kayei the seventh year, third month, and 3d day.*

The United States of America and the Empire of Japan, desiring to establish firm, lasting and sincere friendship between the two nations, have resolved to fix in a manner clear and positive, by means of a Treaty, or General Convention of Peace and Amity, the rules which shall in future be mutually observed in the intercourse of their respective countries; for which most desirable object the President of the United States has conferred full powers upon the Commissioner, Matthew Calbraith Perry, Special Ambassador of the United States to Japan, and the august Sovereign of Japan has given similar full power to his Commissioners, Hayashi, Daigakau-no-kami, Ino, Prince of Tsus-Sima, Izawa, Prince of Mimasaki, and Udono, Member of the Board of Revenue. And the said Commissioners, after having exchanged their said full powers, and duly considered the premises, have agreed to the following articles :—

ARTICLE I.

There shall be a perfect, permanent, and universal peace, and a sincere and cordial amity, between the United States of America on the one part, and the Empire of Japan upon the other part, and between their people respectively, without exception of persons or places.

ARTICLE II.

The port of Simoda, in the Principality of Idzu, and the port of Hakodade, in the Principality of Matsmai, are granted by the Japanese as ports for the reception of American ships, where they can be supplied with wood, water, provisions, and coal, and other articles their necessities may require, as far as the Japanese have them. The time for opening the first-named port is immediately upon the signing of this treaty; the last-named port is to be opened immediately after the same day in the ensuing Japanese year. [NOTE.—A tariff of prices shall be given by the Japanese officers of the things which they can furnish, payment for which shall be made in gold and silver coin.]

ARTICLE III.

Whenever ships of the United States are thrown or wrecked upon the coast of Japan, the Japanese vessels will assist them, and convey their crews to Simod or Hakodade, and hand them over to their countrymen appointed to receive them; whatever articles the shipwrecked men may have preserved shall likewise be restored, and the expenses incurred in the rescue, and support of Americans and Japanese who may thus be thrown upon the shores of either nation, are not to be refunded.

ARTICLE IV.

Those shipwrecked persons, and other citizens of the United States, shall be free as in other countries, and not subject to confinement, but shall be amenable to just laws.

ARTICLE V.

Shipwrecked men, and other citizens of the United States, temporarily living at Simoda and Hakodade, shall not be subject to such restrictions and confinement as the Dutch and Chinese are in Na-ga-saki, but shall be free at Simoda to go where they please within the limits of seven Japanese miles (or *ri*) from a small island in the harbor of Simoda marked on the accompanying chart hereto appended; and shall, in like manner, be free to go where they please at Hakodade, within limits to be defined after the visit of the United States squadron to that place.

ARTICLE VI.

If there be any other sort of goods wanted, or any business which shall require to be arranged, there shall be careful deliberation between the parties, in order to settle such matters.

ARTICLE VII.

It is agreed that ships of the United States resorting to the ports open to them, shall be permitted to exchange gold and silver coin and articles of goods for other articles of goods, under such regulations as shall be temporarily established by the Japanese Government for that purpose. It is stipulated, however, that the ships of the United States shall be permitted to carry away whatever articles they are unwilling to exchange.

ARTICLE VIII.

Wood, water, provisions, coal, and goods required, shall only be procured through the agency of Japanese officers appointed for that purpose, and in no other manner.

ARTICLE IX.

It is agreed that if at any future day the Government of Japan shall grant to any other nation or nations, privileges or advantages which are not herein granted to the United States and the citizens thereof, that those same privileges and advantages shall be granted likewise to the United States and the citizens thereof, without any consultation or delay.

ARTICLE X.

Ships of the United States shall resort to no other ports in Japan but Simoda and Hakodade, unless in distress or forced by stress of weather.

ARTICLE XI.

There shall be appointed by the Government of the United States consuls [or agents, to reside at Simoda at any time after the expiration of eighteen months from the date of the signing of this treaty, provided that either of the two Governments deem such an arrangement necessary.

ARTICLE XII.

The present convention, having been concluded and duly signed, shall be obligatory and faithfully observed by the United States of America and Japan, and by the citizens and subjects of each respective power; and it is to be ratified and approved by the President of the United States, by and with the advice and consent of the Senate thereof, and by the august Sovereign of Japan, and the ratifications shall be exchanged within eighteen months from the date of the signature thereof, or sooner, if practicable.

In the faith whereof, we, the respective Plenipotentiaries of the United States of America and the Empire of Japan, aforesaid, have signed and sealed these presents.

Done at Kanagawa this 3d day of March, in the year of the Lord Jesus Christ 1854, and of Kayei the seventh year, third month, and third day.

[Signed by the Commissioners.]

The London Times.

A correspondent of the Providence *Journal* thus narrates a visit to the office of the great English newspaper :—

Among many other famous places in London, I have visited the office of the London *Times*. To view the establishment, application must be made by letter to the manager. This dispatched, a reply was promptly received by post, and on the card was named the hour when the presses could be seen in motion. Mr. Applegarth, a brother of the inventor of the press there used, and for many years superintendent of the machinery, a very amiable gentleman, conducted me through the various departments, freely answering inquiries, and explaining every thing as we went along. Some idea of the resources and extent of the *Times* office may be had from the single fact that upwards of $300,000 are paid to the Government annually for stamps, a penny, or two cents, being paid on each number of the paper issued. The daily circulation is 52,000 copies, each number, including the supplement, containing sixteen pages. Two hundred reams of paper are used every day, each weighing from 86 to 88 pounds, making in all from eight to nine tons. The quality of the paper every one knows who has read the *Times* Each sheet costs the publishers a penny and a half, or three cents, before it is printed. One of the presses was put in motion at 1 o'clock P. M. to print an edition to be sent off by mail an hour later. Twenty men were employed on the press, part of them above in a gallery to supply paper, and part below to receive the printed sheets as they came out. The noise of the machinery was so great that it was difficult in conversation to be heard. The number printed an hour is 12,000. By holding my watch and counting, I discovered that each man received from twenty-two to twenty-four a minute. Now and then a sheet with an imperfect impression would be hastily thrown out by one of the sharp-eyed men below, and once or twice at the stroke of a bell all the wheels stopped, and the great machine rested for a moment; then at another signal commenced the stunning clatter again. I was shown the vaults where the large stock of paper is kept. So much is now used that the supply is sometimes short of the demand, and the price is much advanced. For some time an advertisement has been standing in the columns of the *Times* offering a reward of $5,000 for the discovery of a substitute for rags in the manufacture of paper. This offer is made by the proprietor of the *Times*. I believe the man has never been met who has seen the editor of the *Times*, but I am convinced that there is such a personage, for I have heard his name pronounced, and been shown his room and chair. The editing of the paper is carried on within the publication building to a greater extent than has been stated. There are convenient rooms fitted up for the purpose, and also for the use of reporters. During the sessions of Parliament a large number of skillful reporters are employed. These are relieved every half hour, and are conveyed to and from the office to the legislative place in cabs, no one remaining on duty longer than the prescribed time. In viewing an establishment like that of the *Times*, and reflecting upon the vast influence it exerts, one cannot but be filled with wonder and awe.

Cows and their Milk.

No part of the business of the farmer requires more skill and attention than the dairy. If judiciously managed, it is profitable. If badly managed, worse than useless. To obtain the best cows for the dairy, subject the milk to the test of comparison, one with the other. Keep those which give the most and the richest milk for breeders and the dairy, and sell the rest to the drover or the butcher. It is not so much the amount of milk a cow gives per day, as the cream her milk produces, which constitutes her value as a milker.

Having thus ascertained the best cows, the next consideration is the keeping they are to receive. Much, very much, depends upon this. It is unreasonable to expect, from the very best of cows, either butter, or cheese, or beef, to any valuable extent, if fed merely on dry hay in the winter, or kept in a poor and sour pasture in the summer. Roots of various kinds should be raised in abundance, by every dairyman who hopes to profit by his vocation, and the food of cows should be varied, in the winter, from week to week; the cows should be kept clean and warm, and enjoy fresh air every day in the week, Sundays not excepted. It has been found, by experiment, that a cow fed on grass, in a good and sweet pasture, (hill pastures are the best,) will yield a greater quantity of milk than if fed upon any other food. We have thoroughly tried the experiment, and have no doubt of the fact. There is nothing like a clean pasture, free from brakes and filthy and sour weeds, upon the hill sides, to fill a milk-pail or a churn; and in the winter, for the same purpose, there is no better food than sweet meadow and mountain hay, and the stalks of sweet corn; and for roots, the carrot, rutabaga, mangelwurzel, the turnip, and sugar beet. Try this course of feeding—try it faithfully, brother farmers, and our word for it, you will have good cows, abundance of rich milk, good butter, and fat cheese, provided you do not skim the milk of which the latter is made.

And now a little about milk. Let us talk the matter over. Milk obtained from cows in the morning is generally richer than that obtained at evening, and usually less in quantity. It is equally true, that some pasture grounds are much better than others for the production of rich milk. Examine the kind of grass, and the nature of the soil in the pasture producing the best milk, and stock other pastures, of a similar soil, with the same kind of grass. The subject of sweet pastures, or good grazing grounds, has not received that attention which its importance demands. [Vermont Watchman.

Corn Hoeing and Top Dressing.

In looking over the mode of cultivation practiced by those most successful in growing the corn crop, and especially the statements of those who have taken premiums for large products of this cereal, we almost invariably find that clean culture and top dressing were practiced. The corn was hoed at the early stage of its growth, after first going through it several times with the cultivator, so as to mellow the soil as far as possible; and then to each hill some stimulant was given, such as plaster, ashes, (leached or unleached,) or a mixture of the two. In a few weeks the cultivator and hoe were used again, and the stalks thinned to four in the hill; nor did this suffice, for if time allowed, before the corn became too large to admit of the passage of the horse, the cultivator was again employed, and another dressing with the hoe given. At this stage in its growth the ground becomes so shaded by the luxuriant leaves of the grain, that little further attention is needed.

Experience confirms what reason teaches, that large crops of corn can only be grown on rich and well-cultivated soils. The structure and size, and the rapid growth of the plant, show that it requires to be well supplied with the necessary food for its growth and perfection. It possesses the power of elaborating healthy aliment from coarser food than almost any other cultivated plant; hence its great value as a preparatory crop when such manures are used. It draws largely upon the air, and hence needs that its large leaves be kept healthy and fresh, not parched and rolled by drouth, or discolored by the presence of stagnant water in the soil.

Plow deep, manure freely, plant early, hoe and top dress with ashes or plaster, keep the soil mellow and flat, and allow no weeds to grow, and your corn crop will repay well all your care and attention. Neglect it, and "nubbins" will be your reward.

[Rural New Yorker.

A Few Words on Butter-Making.

The production of butter involves so many intricate questions of organic chemistry—so many nice physiological considerations—is influenced so much by climate, by soil, by food, and the breed, age, and condition of the cows, that an essay might easily be written on the subject, while it is exceedingly difficult to say any thing interesting in a single short article.

Milk contains curd, sugar of milk, and butter. The latter exists in the form of small oily globules, encased by films of curd. These globules are specifically lighter than water, so that when the milk is allowed to stand, they gradually rise to the surface, and constitute cream. When the cream is kept at a moderate temperature, the sugar, under the influence of the curd and air, is transformed into lactic acid, according to well-known chemical principles.

The object of churning is to separate the butter from the curd by which it is surrounded. This is accomplished simply by agitating the cream and breaking the films of curd, setting the oil free, which runs together and forms lumps of butter. Cream from the formation of lactic acid, is generally sour before churning, and if not, always becomes so during the operation. The lactic acid acts on the films of curd, and renders them more easily broken. During the process, the cream increases in temperature from 5 to 10 degrees. The best temperature at which to churn the cream is a disputed point. It appears, however, to be well established by numerous experiments, that 55 degrees when the cream is put in the churn, and about 65 degrees when the butter comes, affords the best result. If higher than this, the butter is white and soft; if lower, the whole of the butter is not separated, and the labor of churning is much increased. The butter should come in from 20 to 40 minutes. If obtained quicker, it is generally at the expense of color, flavor, and hardness. After the cream is "broke," it should be churned slowly till the butter is gathered.

Some good butter-makers do not wash the butter at all, merely working out the buttermilk by pressure. Where good, cool spring-water can be obtained, we should always prefer to thoroughly wash the butter, taking great pains to remove all the butter-milk, Butter generally contains about 15 per cent. of water, curd, &c. It is important for the preservation of butter, that as much of this as possible should be removed. The quantity of salt required depends upon the quantity of water in the butter. The water should be saturated with salt; hence, the less water the butter contains, the less salt will be required for its perfect preservation. When butter is sold fresh, 15 or 20 per cent. of water is not a material objection; but when we poor city folks have to buy so much water at 15 or 25 cents per pound, do let us have it clean and fresh! Give us water, and keep the buttermilk for the hogs at home!

We need hardly say that the most scrupulous cleanliness is required in all the operations of butter-making. Cream is more easily tainted by noxious gases than almost any other substance. Hence, not only must the dairy or cellar be itself clean, but all fumes from the barn-yard, or out-buildings, carefully excluded.

Cheese as a Digester.

As a digester, as some not inappropriately call it, cheese—that which is decayed and mouldy being preferred by connoisseurs—is often eaten after dinner. The action which experience seems to have proved it to possess, in aiding the digestion of what has previously been eaten, is both curious and interesting, and has had some light thrown upon it by recent chemical research. When the curd of milk is exposed to the air in a moist state for a few days, at a moderate temperature, it begins gradually to decay, to emit a disagreeable odor, and to ferment. When in this state, it possesses the property, in certain circumstances, of inducing a species of chemical change and fermentation in other moist substances with which it is mixed or is brought into contact. It acts after the same manner as sour leaven does when mixed with sweet dough.

Now, old and partially decayed cheese acts in a similar way when introduced into the stomach. It causes chemical changes gradually to commence among the particles of food which has previously been eaten, and thus facilitates the dissolution which necessarily precedes digestion. It is only some kinds of cheese, however, which will effect this purpose. Those are generally considered the best in which some kind of cheese mould has established itself. Hence the mere eating of a morsel of cheese after dinner does not necessarily promote digestion. If too new, or of improper quality, it will only add to the quantity of food with which the stomach is already overloaded, and will have to await its turn for digestion by the ordinary process.

[Chemistry of Common Life.

POISONOUS COLORED CONFECTIONERY.—The "Lancet" commissioners, in reporting the result of their investigations respecting colored confectionery, express their surprise at the extent to which deadly and virulent poisons are daily made use of by the manufacturers of those articles. One hundred and one samples were analyzed; and of the yellows, seventy contained chromate of lead and colored gamboge; seventy-nine of the reds contained cochineal, red lead, and by-sulphuret of mercury; eight of the browns contained ferruginous earths, either vandyke, brown, umber, or sienna; two of the purples contained Prussian blue and cochineal; thirty-eight of the blues contained indigo, Prussian blue, Antwerp blue, and a sulphuret of sodium or alumnium; nineteen of the greens contained Brunswick greens, consisting of a mixture of chromate of lead and Prussian blue, verditer or carbonate of copper, Scheele's green or arsenite of copper. The above colors were variously combined in different cases, three and even four poisons occurring in the same parcel of confectionery. In four of the samples, the colors were painted on with white lead or carbonate of lead; thirteen of the samples were adulterated with hydrated sulphate of lime; seventeen samples were adulterated with wheat flour, three with potato flour, and one with arrowroot.

PROTECTING CLOVER HAY STACKS.—Josiah Lackey writes to the *Iowa Farmer*, that he has tried to protect clover hay from the effects of the weather in the following manner, and found that it answered as well as if the hay had been put in a barn. Clover hay put up in the ordinary way, like timothy, is apt to get musty and unpalatable, but put up in the mode recommended, it comes out good and sweet. He says: "When the stack, which is commenced the usual way, is raised to about one half its destined height, the ends of long wheat or rye straw are placed just on the edge of the stack, so that when the next layer of hay is placed upon it, the principal length of the straw will droop over the sides of the stack. Following this plan until the stack is finished, a complete and impervious covering is furnished to the hay, that will keep it nearly as well as the best barn. I think that the long cane-grass that grows in the sloughs of this country will answer a much better purpose, the straw being longer, and will turn quite as well." [Germantown Telegraph.

COFFEE DETHRONED.—Liebig (the illustrious German chemist) says that asparagus contains, in common with tea and coffee, a principle which he calls "taurine," and which he considers essential to the health of those who do not take strong exercise. Taking the hint from Baron Liebig, a writer in the London *Gardener's Chronicle* was led to test asparagus as a substitute for coffee. He says: The young shoots I first prepared were not agreeable, having an alkaline taste. I then tried the ripe seeds; these roasted and ground make a full flavored coffee, not easily distinguishable from the Mocha. The seeds are easily freed from the berry by drying them in a cool oven, and then rubbing them on a sieve. In good soil asparagus yields seeds abundantly, and if they are charged with "taurine," and identical with the seeds of the coffee plant, asparagus coffee may be grown in the United States at less than half the cost per pound of the article now largely imported.

The nearest fixed star has been discovered very recently to be Alpha in the constellation of the Centaur. The sun is ninety-five millions of miles from the earth, and this star, which we feel a certain degree of friendship for, because it is our nearest neighbor, is two hundred and six thousand times the distance of the sun from the earth. Light, which travels one hundred and ninety-two thousand miles a second, would require more than three years to reach us from that star.

WHEAT AND WOOL.—These two farm products can be well grown together. Probably the best rotation would be to sow all wheat land with clover and timothy seed mixed, and let that remain in sheep pasture three years, and then break up and sow again with a light dressing of lime and a renewal of grass-seed. If the clover has predominated over the timothy while in pasture, there will be no need of a second sowing of clover-seed, as there will be enough in the ground. No two staple crops can be better grown together than wheat and wool, and no one need fear going into the business of either for fear it will not pay. All the grower needs to insure him good prices is capital enough so as not to be obliged to sell except at such prices as he feels will pay, for both wool and wheat can be kept over without loss. The great West is to be the sheep walk of America, as wool can be produced upon the cheap lands there at a greater profit than at the East, and probably at a greater profit than any other crop

HOW THE EARTH LOOKS FROM A BALLOON.—Mr. Elliot, the æronaut, in a letter giving an account of his ascension from Baltimore, thus speaks of the appearance of the earth from a balloon: "I don't know that I ever hinted heretofore that the æronaut may well be the most skeptical man about the rotundity of the earth. Philosophy imposes the truth upon us, but the view of the earth from the elevation of a balloon is that of an immense terrestrial basin, the deeper part of which is that directly under one's feet. As we ascend, the earth beneath us seems to recede—actually to sink away, while the horizon gradually and gracefully lifts a diversified slope, stretched away farther and farther to a line that, at the highest elevation, seems to close with the sky. Thus, upon a clear day, the æronaut feels as if suspended at about an equal distance between the vast, blue, oceanic concave above, and the equally expanded terrestrial basin below."

THE SOUND OF BELLS.—The nearer bells are hung to the surface of the earth, other things being equal, the farther they can be heard. Franklin has remarked, that many years ago the inhabitants of Philadelphia had a bell imported from England. In order to judge of the sound, it was elevated on a triangle, in the great street of the city, and struck, as it happened, on a market day, when the people coming to market were surprised on hearing the sound of a bell at a greater distance from the city than they ever heard any bell before. This circumstance excited the attention of the curious, and it was discovered that the sound of the bell struck in the street reached nearly double the distance it did when raised in the air. In the air, sound traveled at the rate of from 1130 to 1140 feet per second. Sounds are distinct at twice the distance on water that they are on the land.

MARRIAGE RIGHTS AND DUTIES.—Connecticut has recently put two new laws on her statute book: One provides that the several provisions of the act of 1849, relative to the property and estate of married women, be, and the same are, hereby extended and applied to all property owned by any woman previous to the time of her marriage. The other enacts that upon the dissolution of any marriage by divorce, if there be a minor child or children of such marriage, who shall stand in need of maintenance or support, it shall be the duty of the parents of such child or children to provide for, support and maintain them, according to the abilities of such parents respectively.

SUBTERRANEOUS STREAMS.—A man named Morgan, while digging a well on his farm, near Hudson, Illinois, had sunk a shaft down fifty-three feet, when he struck a rock, and in trying to loosen it, it fell with a quick plunge into a subterraneous stream of water, about four feet in depth, which flowed with great velocity. Mr. Morgan had hardly time to grasp the rope which hung down the shaft, to save himself from falling into the turbid waters. A similar phenomenon is said to exist in Butler Township, Jackson County, in the same State, the water from which finds vent on the side of a bluff, and is of sufficient force to turn heavy machinery.

An Indian agent named Vaughn, who has traveled extensively in the North-west, states that in one region of the country north of Iowa every thing is inclined to petrifaction. Large logs of wood, limbs, vegetables, and once living animals, might be seen turned to solid rock. He saw tortoise by the score, that would weigh over 400 pounds; also birds, fishes and animals. He brought with him several eagle quills, petrified complete and perfect, also the head of a bird, and some curious specimens of wood and reptiles.

Jacob Strackhan, of Illinois, has a farm of 10,000 acres, and has on it this year 2,300 acres of corn, which will probably yield him 92,000 bushels. The corn fed to cattle is not husked, but cut up and given to them stalks and all. He owns another farm six miles long by four broad. He paid last year $10,000 for fencing. Besides these garden spots, he has large tracts of unimproved land.

A dividend of thirty per cent., ordered by the Chancellor, is payable to the creditors of the Commercial Bank of New Jersey, on the presentation of their respective certificates, at the State Bank of New Brunswick, by the receivers of the former Bank.

We have intelligence that the long-contemplated movement for the separation from the New Granadian Government of the four Provinces comprising the Isthmus of Darien, (or Panama,) is likely to be made in the course of a few weeks from the present time.

The largest disbursement ever made by the Sub-Treasury was made July 11th, $7,071,434. Of course the large payment resulted from the presentation of the Mexican draft.

Mere bashfulness without modesty is awkward, and merit without modesty is insolent. But modest merit has a double claim to acceptance.

Two Roman Catholic journals, the St. Louis *Shepherd of the Valley*, and the Buffalo *Sentinel*, have been discontinued for want of adequate support.

Henry F. Tallmadge, formerly U. S. Marshall for the Southern District of New York, died in New York on the 8th inst.

Somebody says, "he is a brave man who is not afraid to wear old clothes until he is able to pay for new."

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns and process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound and quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

THE THREE HOUSEHOLDS.

BY W. M. FAHNESTOCK, M. D.

"We may sometimes convey a moral in a sprightly narrative, which would have passed unnoticed in a learned essay."

In the far eastern part of Judea, bordering on the spicy groves and flowery meads of sunny Arabia, there lived, some centuries since, a maiden lady of much beauty and wealth, the only child of Prince Jussuf, and was the last lineal descendant of an honorable family; herself rendered more honorable, by her own amiability and sterling worth, than all royal descent can possibly bestow on any frail mortal.

Before the Princess Leila had passed the hey-day of youth, she witnessed the decline and decay of all her kindred, and she was left alone in possession of immense estates, inherited from both sides of her family. In no country could a more beautiful palace, surrounded by the most superb gardens, all studded with pavilions, fountains, grottos, bowers, statuary, and flowers of the richest hues, be found, nor one in which cooler shades and more reviving streams offered a more inviting retreat, or a more tranquil abode. Surrounded by everything that could attract the eye and soothe the spirit, still the fair and good Princess did not yield herself to idle luxury and ignoble ease, but longed to extend the enjoyments of her possessions far and wide, even to the extreme limit of all her means. Her father was an Israelite, and her mother a Persian, and blended in their domestic relations and social entertainments, the patriarchal simplicity with the luxury of oriental magnificence.

With such beauty, amiability, and possessions it would not seem strange that the Princess should be wooed; yet, wooed as she had been by hundreds, nay thousands, of the bravest, the brightest, and the greatest of all lands, she never responded to any proffered alliance from the innumerable hosts of Lords, Knights, and Sages, of the East and the West, who bowed at her shrine. She appeared to possess every virtue and every qualification to shine in any sphere of life, but her heart could not be won by any man of most unexceptionable caste; though companionship was an essential element [illegible] for she was kind, gentle, loving and benevolent beyond measure, and was constantly communicating to others of her own rich enjoyments. She would ever relieve want to the extent of her ability, weep with the suffering, and endure any privation to identify herself with the afflicted, still unrelenting, immovable, she remained to all the tender overtures of Sages and Sovereigns who sued for her favor.

The Princess, soon after being left an orphan, happened in Jerusalem at the time of the greatest event in the history of the world, namely, the birth of the Saviour of mankind. The strange tales which reached that city of the singular advent of the Babe of Bethlehem, marked by the still more singular phenomenon of the star in the heavens guiding the Wise Men of the East to the manger in which the child Jesus was born, soon followed by the inhuman purpose of Herod, to slay all the children in Bethlehem, from two years old and under, the Princess hastened to Bethlehem Ephratah, to proffer protection to the holy family, and remove them to her possessions in the East; but they had fled—departed into Egypt. She returned home sorrowful, unfeignedly distressed that she could not exercise those noble promptings of her noble heart. Her thoughtful spirit dwelt constantly on the mysterious conception and birth of the *God-man*, and she incessantly exclaimed, in the language of the angel Gabriel: "*Blessed art thou among women.*" So mysterious and so blessed, that she determined to devote herself, wholly, to the service of the Lord, peradventure He might use her to subserve some high and holy purposes in his economy of grace.

Some years afterward, the Princess was at Jerusalem, again, and going into the Temple, on the Sabbath-day, she heard the words of the great Teacher, then attracting so much attention and exciting so much interest among the people by his strange doctrines. Among the first who followed him openly, was the Princess Leila. She lingered upon every word that dropped from his lips, and loved it, because it was so much in consonance with her own sense of the truly good. After returning to her estates, she constantly meditated on the glad tidings her ears had heard, and which had made such an abiding impression on her heart. The more she meditated on the subject, the more she congratulated herself on having heard so profound an oracle; and she determined to revisit Jerusalem, to learn more of the precious doctrines of the new Teacher. On her arrival at that place, she discovered the whole city in a tumult, on account of that Prophet, who had the words of eternal life, and who spake as never man spake, and she availed herself of every opportunity that presented to hear his sweet messages to a dying world. But those were perilous times. His own were deserting him; yea, even within a few days the boldest of his disciples, Peter, denied him, and another, Judas, betrayed him into the hands of his enemies and persecutors. Nothing daunted, she followed him to the Judgment Hall; she followed him to Calvary, and followed him to the Sepulchre, and sat at a distance all the while the Redeemer lay within the sealed rock. She saw him rise from the dead, throw off the cerements of the grave, and go forth to comfort his sorrowing disciples, and to testify of the verity of his resurrection.

After the ascension of the Saviour, the Princess returned to her estates, to ponder on all she had witnessed; but so strange and incomprehensible were her accounts, that none could understand her narrative, or did not wish to believe it. She could scarcely satisfy herself for her own belief, on so strange a matter, from the slender opportunities she had enjoyed; yet, enough good seed had fallen on good soil, to take root, and she cherished her feeble faith fondly and devoutly, though it proved, in some things, a zeal not according to knowledge; but, like many others, with good, yea, the best intentions, she had not heard all, or not heeded all the truth necessary to guide her in carrying out those great and good purposes to their legitimate end; still, to work she was determined, whether exactly right or not, work she would, and that in her Master's name.

Having seen Him, who had been crucified, come to life again, she conceived the idea of raising a family from the dead, by the power of the new religion; who should be instructed and indoctrinated from the cradle in all the principles of her holy faith, and thus surround herself by a company of true believers. She, therefore, issued a mandate throughout her dominions, requiring all accoucheurs to bring all *still-born* children to the Palace; and set about to make amplest provisions to have them all well cared for. A large edifice was erected specially for their reception, with innumerable apartments, all beautified with the most gorgeous adornments—beds of eider-down, dressed with tapestry and laces, opening on the most beautiful verandahs and shady groves of the garden, which perfumed the whole establishment, and among whose bowers the most enchanting choristers of the air warbled day and night. It possessed all the magnificence of a fairy creation, and day and night innumerable ministering attendants were in waiting to render any service to its hapless inmates.

As each *Still-born* was brought into the establishment, it, he or she, was laid on a finely embroidered satin divan, under a richly decorated canopy, and was immediately surrounded by a dozen attendants, fanning invigorating breezes, burning incense, and sprinkling the unconscious form with the most luscious perfumes. Music was also brought into requisition, the kitar and cymbals, and even a nursing mother knelt over the child, incessantly moistening its lips from her breasts. Anon, they were carried about in the cool breezes of the garden, in appropriate sedans, and loud inspiring songs of congratulation were chanted into their senseless ears, by a well trained choir of minstrels. In a word, whatever wealth could command, and whatever unremitted devotion, with all the most ingenious appliances that could be devised and consecrated to the attainment of her laudable but mistaken purpose, the hapless be quickened to life. It proved "much ado about nothing," and "love's labor lost"—they not only continued cadaver, but wilted and became putrid, and had to be put away out of sight, as often as they were brought there for resuscitation.

With all the kind intentions and the most benevolent designs, all the efforts of the Princess, and her lavished expenditure, as might be anticipated by all, save one of such tender heart and sanguine temperament, proved abortive, and worse than useless. Saddened by her failure, after a prolonged experience, she abandoned so fruitless a project; but, animated with a zeal to be useful in her day, and to serve her generation, she devised another plan, which to her appeared much more feasible; and as she lacked no energy or means, she applied herself to her new task with renewed vigor.

Having seen the fallacy of attempting to inspire new life, by human means, where the principle of life was absent, she determined to become the fautress of that unfortunate class of beings, called *natural* children, the offspring of illicit love and infamy; and opened an asylum to receive them, and a Temple to rear them, gods and priests unto the Most High. With this design she enlarged the building erected for the Still-born, provided many nurses, many teachers, and many priests, to minister unto them and to instruct them in all the branches of literature, science, and theology. At the dawn of the morning, the garden was vocal with praises, lisping benedictions from every casement, from every bower, and from every secluded dell and cave, on the worthy and most enviable of princesses. Throughout the day the innumerable classes were intent on imbibing the principles of their Teachers, in separate groves and hortatories, and striving to master the arcana of the philosophy of their respective Sages; for the number had become so large, that they had to be divided into many subdivisions, over each of which, a man profound in learning was called to lead them, and instruct them in deep and hidden things. And at eventide, when they all occupied the garden walks and retreats, reciting, in the open air, the acquisitions of the day, and mingling in the courtesies of social intercourse, the Princess walked forth, to behold the fruits of her benevolent purposes, with much inward satifaction, and her heart bounded with high aspirations on witnessing her matured plan, basking under such a tide of successful experiment.

The world heard of the grand enterprise—this newly created Utopia—flourishing so signally under the auspices of the Princess Leila; and thousands resorted to the establishment to gaze upon so glorious a consummation; and scarcely any one of influence went away without carrying with them the same scheme, in some modified form, to adapt it to their own country, or circumstances, to introduce a like blessing into their own nation. But alas! alas! for human wisdom, and prescience. Like in many other things, imitations seldom succeed; and no wonder that they should not in this instance, for the original scheme proved but a short-lived satisfaction, even to its founder and benefactress. While they were few in numbers, and remained in one house, and all in subservience to one head—the immediate superintendence of the Princess—all things went on prosperously enough; but when they became separated into different classes, and different teachers, of different schools of philosophy, presided over the respective classes, jealousies first entered, soon followed by animosities, and eventually ran into contentions and conflict; so that it was not safe any longer for their benefactress, the kind-hearted Princess, to expose herself among them; so rife had unrestrained impertinence become among the contending partizans.

All the efforts of the Princess to reconcile the feuds and overcome their bickerings, by all acts of tenderness and forbearance, proved unavailing; so arrogant in their philosophy, and so self-opinionated in their learning, that no one would yield—none would even *consider*. Onward, onward, onward, in their heat of disputation, they ran into a state of open anarchy and active warfare—brother assailing brother, and brother crucifying brother—until the Princess was obliged to disperse her disciples, whom she had succored and cherished with so much tenderness, and with whose prosperity every pulsation of her own heart was identified.

Failing in both of her darling projects, she yielded herself to a melancholy, which threatened her sanity, and which was like to destroy her usefulness altogether. Her possessions could no longer afford her any happiness; yea, they became almost intolerable to her. Seated one evening in a retired bower, enshrouded in a dark cedar grove, ruminating on all the past, and yielding her distressed heart to despondency, dark and fearful, she began to write up a long black catalogue of bitter things against herself, and to arraign Providence for her untoward destiny. She had no kin on earth; all her visions of usefulness had failed, and she seriously meditated the sale of her possessions, to give the proceeds to the poor, and retire to an ermitorium close by the Holy Sepulchre, and waste her days in listless waiting for her change to come.

At that sad moment, a Stranger of most singular yet prepossessing appearance approached the grove—blending a most dignified aspect with an extremely placid and humble countenance. He carried in his every appearance the frontlet of peace—peace within, peace without—a holy, harmless man—a truthful, confiding man. The Princess shrunk behind a drooping branch of her bower to conceal her person, as he passed along, and while eyeing him intently, heard him incessantly exclaim: "Beautiful! very beautiful! good! very good! how gracious! how very gracious the Lord has been to the possessor. Blessed of women; yet more blessed, if her heart is set wholly on Him who has so graciously bestowed all these possessions upon her."

The Princess leaned forward to catch every word that fell from such gracious lips, and even ventured a step or two beyond the precincts of [illegible]

The mysterious visitor passed on. The Princess remained beyond her usual hour of tarrying, lest she should encounter the Stranger; but not from any sense of apprehension, for every thing about him disarmed all suspicion of danger. When she arrived at the Palace, two or three of her personal attendants, who had been looking for her all round the private walks near the Palace, informed the Princess of the singular personage they had observed within the grounds, corresponding exactly with what her own eyes had witnessed; yet, with like impressions of his benevolent appearance and harmless demeanor; thus neither the Princess nor any of her attendants regarded him with any forebodings of evil. Daily he came and went, yet so mild and gentle his mien, that none felt aught of his presence, but rather desired his return; as we ofttimes gaze, without alarm, at some strange aerial phenomenon, dazzling and even confusing our vision for a moment, certified, from its very nature, that it cannot bode any harm, while it may possess much to interest and to instruct. So the worthy Stranger was, intuitively, esteemed by one and all of the establishment.

A few evenings afterward found the desponding Princess, whose mind was still ruminating, painfully, on the reverses of her favorite projects, seated by a brook in a different part of the garden, watching the descent of the sun behind the western hills of her own possessions; and yielding readily to the natural tendency of the sadness which enshrouded her spirit, she read in the gloom of nightfall, her own advancing fate, and gave free expression to her feelings in heart rending sighs and showers of tears. Occupying a rustic bench cut in a clump of rocks, round which a private path abruptly turned, the Stranger was suddenly precipitated into her immediate presence.

More frightened himself than the Princess, he offered an apology for his intrusion and attempted to withdraw. Emboldened by the marked benignity of the Stranger, the Princess inquired his purpose on her premises, informing him, at the same time, that he had been observed before, and that watch was had on his movements.

He replied, with much frankness, and with an expression of goodness that found an easy entrance to her heart: "Madam, my mission is with the lowly; and having no claims to the favor of the high of earth, I have not made myself known at the Palace, although I have been wandering over these grounds some days. I love the works of my Master in Nature and in Providence. I have been gratifying my fondness for his works in Nature, by strolling through these beautiful gardens, and have been attempting to impart some feeble knowledge of his Providence to the dependents of these estates, having learned, that it could not be unpleasant to the Princess, to elevate the hearts of her people to the service of the true God, and Giver of every perfect blessing;" and he departed as abruptly, before the Princess could recover from her surprise at his modest words, so full of meaning and profit.

Days passed on without any further encounter with the Stranger, although scarcely any one on the estates entered the Palace without some tidings of generous benevolence of the mysterious being. In his perambulations, he had entered every cottage of the tenantry, and carried comfort and blessing in all his steps. To the sick he was physician and nurse, watching over them, administering medicine, and soothing their spirits after a fashion they had never dreamed of before. He adapted himself to the learned and the ignorant, to the proud and the humble, in such gentle, winning accents, that even the lordling, Felix-like, was almost persuaded to his faith; yet while he hesitated, he had no desire to send him away, to wait a more convenient season; and the humble, like Mary, were ready to sit at his feet and weep tears of joy at his comforting words, all dropped in proper season, and all finding a lodgment in the heart; while all, without exception, entreated the Princess to come to their hamlets and see what good the good Stranger had brought to their happy homes.

All this joy among her people only served to depress her own heart the more, as she perverted the good designs of Providence in sending a rich blessing to their doors, from the sad evidence that the blessing was unto others, and not unto herself, whom she assumed needed it the most, and her heart waxed rebellious. Her whole frame, mind and body, was smitten with lowering grief, and a fixed melancholy was settling rapidly on her broken spirit, which was only varied by sudden outbursts of discontent and unrestrained murmurings. Stealing along the margin of a deep stream, at a considerable distance from the Palace, and supposing herself beyond all hearing, and even where she might perpetrate any act to rid herself of earthly misery, she gave vent to the sad perturbations of her oppressed bosom—her pent-up disappointments and anguish, in the most desponding lamentations, and after the eastern custom, tore her hair and rent her garments in phrenzied violence.

"Daughter, do thyself no harm," was an admonition uttered in accents of greatest kindness, and in tones so subduing that they acted with the charm of Orpheus' lyre in calming the rage of the wild beasts of the forest; so sweetly and so powerfully was it exercised, that the Princess became perfectly ashamed of herself, and immediately attempted to glide away from his presence, and would have slipped from his gaze had he not opened his mouth again in words of gracious utterance, as he continued: "Thou art troubled about many things; choose that part which Mary chose, and thou shalt be happy—happy here, and happy forever. Trust in God, and he will prosper thy soul abundantly."

Covered with confusion of face for her unbelief, after having professed to have known the Saviour, the Princess, at first, attempted to defend her position, by her failures in her efforts to do good and serve the Most High; but the Stranger mildly replied, "Sister, [illegible] true, but you strayed beyond the *Record*, in carrying out your benovolent designs. God needs not the wisdom of man, and will not suffer any compounding with his Truth. Benevolence may be amiable, but to be efficient and approved, it must be founded in, and bounded by this precious God-Book;" taking a carefully preserved volume from beneath the folds of his bosom, and remarking significantly: "*No more, nor less*, than the rule of duty prescribed unto us by the Most High, can ever be smiled upon by Heaven. *Thus far, and no farther*, is the measure of Jehovah. God is good, and loves a faithful heart; but he only owns and blesses an *obedient* spirit—a *truly* obedient spirit—one that seeks *his* will—*Lord, what wilt* THOU have me to do—Not unto us, not unto us, but unto *thy name* be all the glory."

The Princess threw herself at the feet of the Stranger, and besought him to accompany her to the Palace, and set before her house the blessed words of the blessed God-Book. On their way thither he discoursed on the cares of earth, and the unhappy condition of mankind, inflicted by the trangression of our common parents; and after showing its effects on succeeding generations, urged the *new-birth*, by a living faith in the Lord Jesus Christ. In all her vagaries, the Princess had never lost her first love for the Redeemer; which prompted her to follow Him to the Judgment Hall, mount Calvary's heights in his stricken train, and keep vigils near the Sepulchre. The chord was touched that vibrated through every fibre of her system, and she was instantly subdued, and became tractable as a child, and urgently entreated more of the words of eternal life.

After having partaken of a frugal repast, and all the retinue of the Palace, with the Princess at their head, had gathered in the great vestibule, or hall, the Stranger took out the precious volume, which he ever called the *God-Book*, and read the First Epistle General of John, illustrating the text by appropriate comments, and dwelling particularly on the consolations of the Gospel; all of which he did in such a child-like manner, and almost entirely in the very words of Scripture, that every one was riveted, intensely, by every word he uttered, and even every expression of countenance, as he melted under his glowing theme of Christ crucified, and was transported into ecstatic raptures, by his high anticipations of glory illimitable awaiting the faithful in the realms of bliss; that even at midnight, after he had commended them all to the ever covenant-keeping God, and invoked His blessing upon them all, scarcely one of the whole number could tear themselves away from the holy atmosphere which seemed to envelope them, to recruit themselves by repose; nay, so thrilling was his discourse, and so deeply absorbing the pertinent readings, the precious words of the God-Book, that none wished to banish their vivid impressions by the oblivious mantle of sleep.

The next day, and the day after, and for a succession of days, the good fruits of the Stranger's happy labors were daily witnessed among them, reproducing almost the marvels of Ezekiel's vision among the dry bones; and he remained with them, ministering to their quickened spirits, out of the God-Book, day and night, as opportunity presented, with wondrous success. A blessing had, of a truth, descended on the Palace. All saw it—all felt it. It was manifest in every word and in every action. At the hour of the Stranger's appearance in the Hall, every succeeding morning, each one of the household, from the Princess to the humblest menial, found some errand to be present, all prompted, spontaneously, by one desire, to commingle their morning salutations, and, peradventure, catch some soul-vivifying word from the God-Book, to nourish the new life they experienced springing up within them. The good man had a sweet smile, a kind word, and an encouraging admonition, from the God-Book, for each respective individual; which animated them all exceedingly in their duties, and comforted them in their various departments of service. The whole Palace was animate with happy faces, and willing hearts; there was an emulation among them all to be fore most in every good word and work, and in serving each other; which contrasted favorably with the former superciliousness, when each looked unto his own things, and not to the things of others. Love not only begets love, but love begets diligence and devotion; and labor never flags when love prompts the service. Devotion, prompted by pure love to person or pursuit, is the most beautiful as well as the most profitable employment on earth, when bestowed on a worthy object or a worthy cause. It is all that life is worth. Life is too short for any thing but to love; and when that affection is manifested in its proper direction, blessing and blessing forever is its sure reward. Mankind has tried *force* long enough—force in political matters, force in domestic relations, and force in religious duties. No good cause ever needs force; nay, however good a cause may, apparently, be, when it relies upon coërcion for success, it must be counterfeit, or be sadly misused by its professed friends. The natural heart is corrupt, and mistakes the mission of pure love. Corrupt desires bring forth corrupt fruit, and the offspring is, and ever must be, evil and oppression, and only evil and oppression continually. Oppression is ever the result of self-will, and tenacious adherence to self-opinionated dogmas. Self-opinionated dogmas mar and destroy all and totally the highest wisdom and the fondest love. To manifest the legitimate fruits of true and abiding love, man's heart must be impelled by a new principle of action—*love divine*—must feed on the adulterated Word of Truth, and drink of the Fountain opened in the house of David, for sin and uncleanness; and not corrupt his ways by turning to the poisoned waters of broken cisterns, or quaff the beggarly elements of this world's wisdom—must drink with a devout purpose from the Living Stream, ever welling up unto eternal life, unmixed with the vain conceits and the fallacious expedients of short-sighted mortals.

Very soon the whole establishment was [illegible] elevating Word; all of whom honored their profession in all their walk and conversation. Nay, not only the inmates of the Palace, but all the inhabitants of the whole domains of the Princess became partakers of this happy calling. A charm had been diffused—almost a miracle wrought. The opening of the God-Book dispelled all the gloomy darkness and rankling animosities that had settled, like an incubus, on the former divisions among them, and even the thrasonical Teachers, through whose vain philosophy most of the disturbances were introduced, repaired thither, yielded their superior wisdom, and sought to be instructed in the peaceable principles of the God-Book. Its talismanic words were the whole secret of the Stranger's success, in reducing so much incongruity, and bringing order out of confusion and discord. The pandemonium became a paradise; and the triumph of the God-Book was complete.

Assembled with one accord, they now proposed to make a public dedication of themselves unto the service of the Lord, and constitute a household of faith. Various as had been their metaphysical views of the Godhead, various as had been their vague opinions of the ordinances, rites, and institutions of the Gospel economy, and various as had been their confused ideas of a public ritual, the Stranger presented to them the God-Book, as their *sole rule of faith and practice*, in all matters, simply remarking, in the language of the Apostle Paul: "All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness; that the man of God may be *perfect, thoroughly furnished unto all good works.*" To which they all, with one voice, cried, Amen!

Having embraced the unadulterated Word, as the lamp unto their feet and the light to their path, unobscured by the delusive bog-glimmerings of man's smoke-stained contrivances, and having merged all self-opinionated dogmas, determined to *let God be true, though it make all men liars*, no difficulty was found to guide so numerous a flock. Whenever any doctrine was broached on which there had been any dissidence, appeal was always made to "*the law and the testimony*," alone, and when any doubt existed respecting any practice or duty, "*the thus saith the Lord*" dispelled all obscurities and dispersed all darkness engendered by preconceived opinions. In the profoundly cherished sentiment of the *sufficiency* and the *supremacy* of the Scriptures, and the abiding purpose of living to the Spirit of Love, is to be found the interpretation of the heavenly influence and the mystical force which attracted this community as a magnet, and cemented the brotherhood as the heart of one man. Characterized by a mind to work and live in harmony, there was but one will and one purpose among them all—all emulous to promote, with greatest devotion, the cause which animated all their breasts, and absorbed their entire soul; because they looked not upon themselves as their own, but heeded the injunction of the God-Book, *to bear one another's burdens.*

Such unity and such consociation could never be inspired by human impulses. Their birth was from on high; they were new creatures in Christ Jesus—consummated, wholly, by the Word of Truth and the indwelling of the Holy Spirit; for they bore evidence, that they had been with the Master, and learned of him. Their chief delight consisted in searching the Scriptures, and filling the measure of their days to the glory of the Captain of their salvation. Such were the happy fruits, as well as the glorious triumphs of the God-Book; and such must ever be the reward and consolation of every church who tie not their faith to the sleeves of men, but who place their confidence in the Inspired Word, and the providence of Grace.

The church constituted of lively stones, and the Stranger chosen to go in and out before them, and break unto them the bread of life, the Princess, who had resisted the hand of princes and kings, became the "*help meet*" of their good Shepherd, to stay his hands in all his labors of love; they enjoyed many years together, and had a numerous progeny. They were blest in their offspring; for all were taught from their infancy, to be governed by the injunctions of the God-Book, and to know nothing but the Wisdom sent from above.

Reader, in the foregoing allegory, I have shadowed forth, in humble inklings, the history of the Christian Church, as illustrated in *three households*—the past, the present, and the future—yea, the *future aspect* of the church on earth, to which it must attain to prefigure the church ascendant. The first household, the *Still-born*, represents the *birth-right* enterance into the church militant, and the *federal covenant* claim to all the privileges of the house of the Lord; which pertain only to "*believers*" on the crucified Redeemer, and who prove themselves "*living epistles*" of their profession. The second household, the *Illegitimate*, represents the present distorted and distracted state of the professing church; which has, virtually, set at naught the Written Word, and has formed unto themselves *creeds, covenants, and articles of faith*, and thereby belie the word of Truth itself, which asserts its *sufficiency* and *supremacy*; as they impliedly assume, that they will not have God rule over them; for every church organization not founded, *solely*, on the *ungarbled Word of God*, puts its Author to an open shame, is *illegitimate*, and in its very nature, disorderly. The third household, the temple erected of lively stones, is designed to represent the faith once delivered to the saints. True consciousness of sin—the repentance which shall not be repented of—the spiritual birth—the church founded on the rock, the Word of God—and prompted solely by the pure principles of love—a household who have a mind to work, and forgetting themselves and eschewing all schisms and divisions, with one heart and with one purpose, labor day and night, to commend the principles of the doctrines of Jesus Christ, uncorrupted by the crafty expedients of human invention.

By the one principle only, *implicit obedience word and in truth*—tenacious adherence to all his testimonies, his statutes, and his commandments, can this peaceful unanimity ever be achieved and preserved. No man can serve two masters; for he will either hate the one and love the other, or else he will hold to the one and despise the other; and so it has proved in the whole history of the church in all ages. Tampering with metaphysical philosophies and man-made expedients, confusion first entered the ranks of the followers of the lowly Jesus, and still continues to perch on the banners of every man-willed sect to this very day. God thrust aside, for the inventions of men, introduced Sunday in the place of the Sabbath of the Lord our God, from mere worldly motives of opposition to Judiasm, and to conciliate the heathen, who worshiped the Sun on the *Dies-solis*—the Sun-day, without one Scriptural injunction for the change. God thrust aside for the wisdom of man, substituted *unconscious babes* for *believers*, as subjects of baptism, when the Word of God expressly demands *repentance* and *faith* in the Lord Jesus Christ; neither of which can an unconscious babe exercise; and with the same recklessness substituted *sprinkling* for *immersion*; and, thus, an innumerable throng of *still-born* members are foisted on the church, and become hindrances to spiritual advancement. They enter without spiritual life—they remain lifeless—and like every other lifeless thing, they become offensive and defiling. In like manner, God thrust aside for man's *expedients*, man raises man-made tests for entrance into the church, and man made tests for continuance in fellowship—extra scriptural plans and tests, which can only bring confusion and conflict into the flock, and ensure destruction to all enjoyment among the faithful. Unquestionably, until man comes to the foot of the Cross, becomes wedded to the Word of God, heart and soul, to be, in truth and not in profession, his *sole rule of faith*, in all things, untoward matters must continue to distract and destroy the church on earth, and that without remedy.

To the writer's mind, there cannot, possibly, be any compounding with the expediency of man in organizing a household of faith, or in keeping house in a Gospel sense. The Gospel must be every thing, or nothing. So with man's tinkering, his *wisdom will* be every thing or nothing. All the heterogeneous and heterodox creeds and covenants, *profess* to conform to Bible truth—yea, boldly asseverate, that all they profess is founded in and sustained by the Sacred Book; but see what a pandomonium they make—what a jargon of the simple faith once delivered to the saints. There is no consistency in a single one of them—nay, no harmony in any of them. They reflect not the one true light of the Bible, but only the dim, confused rays of prismatic sectarianism; and thus stultify the pure Word of God, and bring reproach upon the hosts of Zion. Were they founded, wholly, on the Word of God, without any admixture of man, this could not obtain; but by saddling their own crude fledglings upon their creeds, and claiming their discordant systems as Bible truth, they make the Lord the author of confusion and heresy. Throw away the prisms interposed between the mind of man and the Bible, and all this incongruity and disunion will be banished to the regions of outer darkness, to recoil upon the head of its instigator, the Father of Lies. So mote it be.

EXCEPTIONABLE LANGUAGE.

"*Let your communication be, Yea, yea; Nay, nay; for whatsoever is more than these cometh of evil,*" says our Saviour. And we suppose that, on the part of most professors of religion, there is such a conformity to this rule, that the grosser forms of profanity are avoided. No person who should be guilty of the shocking oaths which are heard in tavern bar-rooms and other vile places, would be considered worthy of any tolerable standing in a Christian church. Tried strictly by the Word of God, however, we do not know that such shocking oaths are any more offensive to the Holy One than a thousand mincing expressions, freely indulged in by Christians under the idea of adding strength to their assertions. These mincing expressions are certainly in violation of the precept, which teaches that whatsoever is more than "Yea, yea, Nay, nay," cometh of evil; for *more* they evidently are.

The miserable wretch who calls on God to damn his soul, or in a fit of anger invokes the curse upon his fellow, is supposed to have broken the command which says, "Thou shalt not take the name of the Lord thy God in vain;" and so indeed he has—not the strict letter of it, however, but the spirit of it, as explained by Jesus Christ. The literal meaning of the Third Commandment is, simply, "Thou shalt not forswear, or perjure, thyself; that is, thou shalt not violate thine oaths, but shalt strictly perform them." And the poor creature who has made some boasting assertion to his comrades, and then backs it up with an oath worthy of a pirate, may have no intention of uttering an untruth, or of failing to perform what he has promised. Still the spirit of the commandment has been broken, which, according to our Saviour's exposition, as much forbids an appeal to the Deity in ordinary conversation, as the Sixth Commandment forbids anger, or the Seventh impure desire.

But there are in use, even among Christians, many forms of expression which, if not downright swearing, are so near akin to it, that it would puzzle the nicest casuist to tell wherein they differ. What the Saviour's teaching evidently implies, is that a Christian's character for truthfulness and integrity should be so well established, that his simple yea, or nay, would be all that is requisite. An habitual swearing unnecessary. Even our courts of justice would be under no necessity of resorting to the oath of the Lord in taking testimony, if strict probity were universal. Certainly, he who is conscious of always rigidly observing the truth, is under no necessity, in ordinary intercourse with his neighbors, of fortifying his asseverations by expressions the least akin to swearing. The oath, in all shapes and forms, except as demanded by a civil court, should therefore be avoided.

Such is the dullness of some, however, that they can see nothing of the nature of an oath in an expression, which does not contain the sacred name of God, or Christ, or Heaven. But our Saviour's teaching implies, that any form of expression is an oath, which is more than a simple yea, or nay. If we may not swear by heaven, nor by the earth, nor by Jerusalem, nor by the head even, so neither is it lawful to swear by "*any other oath.*" James 5:12.

Now we take it, that a strict regard to this prohibition would not only break up the exceptionable language so often employed in common conversation, but it would also serve to modify, at least, if not entirely to exclude from use, some expressions, which have become too common with religious public speakers. Even in the pulpit, expressions are not unfrequently employed, which border so closely upon the profane as to fairly startle those who are unused to them. With a class of preachers called revivalists, a few years ago, such expressions were so much in vogue, that the cause of religion suffered great reproach on account of them. And in our religious conventions—Associations, Conferences, and the like—when any exciting subject is under discussion, certain brethren of ardent feelings are prone to express themselves in a way in which we are sure they would not, if they would reflect on the matter for a moment. Such expressions as, "In all God's universe;" "Nowhere under God's heavens;" "On God's green earth;" and many others of a similar nature, are, to say the least, of doubtful propriety. The name of the Most High is too sacred to be used with so much familiarity.

We are ready to make all due allowance for brethren who employ such language. They are persons of strong feeling, and therefore incline to express themselves strongly. But after all their effort to infuse strength into their expressions, they are not as successful as they imagine. We submit, that the foregoing, quoted merely as specimens of a large class, are not one whit more forcible than the simple expressions, "In all the universe," "Nowhere," "On the earth;" and in our humble opinion, the frequent irreverent foisting of the Sacred Name into such expressions, smacks very much of the common swearer, whose principal object is to give energy to his language by frequent appeals to his Maker.

T. B. B.

LETTER FROM CHINA.

SHANGHAE, April 21, 1854.

By the *North China Herald*, already forwarded, you will see that there has recently been a serious collision between foreigners and the imperialists, which resulted rather unfortunately to the former, and much more so to the latter. Some hundreds of the Chinese must have been killed in the affray.

While the foreigners were thus engaged, the rebels sallied out and took another camp near the city, and one strong battery, which had been a great annoyance to them, taking all their guns, &c., &c. That night, or very early the next morning, a large force was sent to take the imperial camps outside the little south gate, who, after considerable fighting, returned without accomplishing the object. But *Lew*, their Commander-in-chief, would not permit them to pass through the gate, telling them, that if 300 foreigners could with so little difficulty take and destroy five of the strongest fortifications possessed by the imperialists, they ought to be ashamed if they, numbering 1500, could not drive them from the position in question. Upon this they returned and made a deadly onset, and by seven o'clock a large area of the remaining suburbs, where the imperialists were quartered, was in flames. A brisk encounter continued for several hours, during which thousands of the imperialists were seen moving off to their encampment on the Soo-Chow creek. It is reported that the rebels drove them from all their positions outside the south gate, except two or three of their strongest points.

Three encampments near my house were destroyed soon after; and during a part of their fighting in that quarter, my house and fence were used as breast-works, but I understand they were not much injured. A part of my fence was demolished about a week previously, by the imperialists, which I had repaired again. I am expecting every day to learn that my house has been either plundered or demolished or both. My watchman has already been ordered with a threat to leave the premises. The imperialists are collecting there in large numbers, and are constructing a camp just behind it, which will probably bring my house right in range of the rebels' guns. There seems but little prospect of our being able to occupy it again for a long time to come, as there is no calculating when these hostilities will cease; and in all probability it will be a long time before society will again resume its former state of quietness and order. It is becoming a serious question with us, where we can find comfortable shelter, till such times arrive. For the past six months we have occupied a couple of rooms in Bishop Boone's house. But he has now returned, and wants the rooms for a with him, but kindly offered to let us remain till I could make other arrangements. I have been on the look out for months for another house; but to no effect. Every nook and corner within and about the foreign settlement is filled to overflowing. Last First-day we succeeded in finding one Chinese house, north-west of the foreign settlement, and on the English reservation, that could be rented. It is barely large enough for one family, and cheaply built, without any yard, court, or inclosures, and another house is to be built right in front of it, to be occupied by a Chinese family, the smoke and stench from which would be constantly puffing up into the second story, especially during the summer, when it could be least endured, it being on the south side. For such accommodations the owner charged $40 per month, with $60 deposit. He finally came down to $30 per month, and refused to go lower. There is one foreign house that could have been rented a short time ago for $1700 per annum, but that I understand is now taken. By this you will perceive that we could not live by renting, even if there were houses to be had, in our present circumstances. There are many new buildings going up; but they are being built by capitalists under engagement. To buy a lot and build a cheap house would be much more economical than to rent even for a few months. For if the location is well selected, it would sell to good advantage when we wished to dispose of it. But this would also require money, of which we are now very short, notwithstanding the remittance just received by the Storm. We are thinking very strongly, however, of adopting this expedient, and are negotiating for a spot of ground.

Rev. Mr. Edkins, the author of the almanac from which I made those extracts in my letter of September, (if my memory serves me,) has got out a new edition for the present year, in which he states explicitly, that before our Saviour's time, the seventh day was observed for the Sabbath, but that since His resurrection, His disciples have always kept the first day in commemoration of that event. Nothing more is said on the subject, except that important passages of Scripture are quoted opposite each Sunday in his calendar, to give a sort of sacredness to the day. This change is probably the result of the Quangse rebellion. If the revolution now going on in China effects no more good than to put a stop to such Heaven-daring forgery as has frequently been practiced on that subject hitherto, it will be of no small account.

The regular distribution of alms in which I was engaged was for a time broken up by the late collision, and was again resumed yesterday, within the foreign limits, as we considered it unsafe to venture beyond. At first we spent nearly five days visiting from house to house for the distance of two miles or more, south, west, and north-west of the city, examining critically into the condition of each family, and distributed tickets to the most destitute. This furnished us many good opportunities for conversing with them in regard to the wants of their souls, and for directing them to the treasury whence their needs can be supplied. We have since distributed cash eleven times, and one hundred garments furnished by our former Vice-Consul, Mr. Cunningham. On these distribution days I have preached twenty-three times, generally to large congregations, and obtained respectful attention. We have now money enough on hand to distribute about twice more.

As yet there has been no opening for going to Ching-keang or Nanking, and Mr. Roberts is still in Shanghae. We have had no recent news of the movements in the interior, except through the Pekin Gazette.

After speaking of the treaty with Japan, Bro. W. says: Now, what action is our denomination prepared to take in regard to this most inviting field? Are they going to leave it wholly for others to cultivate? *May God forbid.* Doubtless our brethren feel that they have done and are still doing all they are able to in the cause of missions; and indeed they have done nobly; but can they not do a *little* more, and raise their standard in Japan also? For what purpose has God thrown open that field, if not that its inhabitants may learn to revere his name? And who does He call to the work of publishing His truth there, if not those who will publish His whole truth, stripped of every false garb? Should we shrink from undertaking the work, because our numbers and means are not equal to others, or quail for fear of the giants in the way? Jehovah is able to remove all obstructions, and roll back the angry waters of Jordan before us, and make us possessors of the goodly land. And should our means fail, He will rain down manna from heaven upon us, if so be we are found doing His work, with faith in Him and honest devotion to His will.

We very much desire a reinforcement here in China. But rather than have that field left unoccupied, we would be willing still to struggle on alone. It will not be many months, if it is many weeks, before other denominations will begin to plant their standards there. I learn that it is already determined that Dr. Bettleheim is to go there. And a Sabbath-keeping banner should be among the first that waves in Japan. Brethren, *don't leave this field unoccupied.* It will only require a little less chewing of tobacco, and dispensing with a few ornaments, luxuries and pleasure excursions; all of which our Saviour dispensed with, that He might make known the gospel of peace to us; and what better are we, that we cannot practice a little of the same glad tidings to these our perishing brethren? We shall certainly be no poorer for it when we get to heaven; nor will our Saviour be any the less willing to own us when He comes to make up His jewels. The fact of our being few and weak, is no real cause for discouragement, but should rather encourage our faith; for God has always seen fit to choose *feeble* instruments to accomplish His *greatest works.* Those instruments which, to human understanding, are the least likely to succeed, are those which He has always used to bring about His purposes; and "things that are not, to bring to nought the things that are," that the heathen may *know* that He is God. Who can say but that He has suffered the advocates of His unmutilated law to be thus reduced to a mere handful that He may through them, in this the day of His power and vengeance, teach proud man, that He is still the occupant of His own throne, and that He is yet able to pluck up every plant which He Himself hath not planted? Where is there an instance in the history of missions, of a denomination or society who ever overacted in the work of publishing salvation to man, and was thereby enfeebled or diminished? If such a thing can be, Lord grant that we may be the first, and be a monument to future generations. But on the contrary, the history of all past ages shows that the strength, increase, and effectiveness of any Christian people is commensurate with their efforts and self-denials in their Master's cause. God is not so poor that He cannot provide for and reward His servants as He has promised; and He is not a man that He should lie. He will never call us to a work which He will not help us to accomplish. Our Saviour sent out his little handful of disciples, and told them to go and preach His gospel to the whole world, which commission they fulfilled in a few short years; although they were mostly composed of poor illiterate fishermen and publicans, without money or sympathy, and were pursued with stones, scourges, and flames, wherever they went. Their ability or means to carry on this work, to human appearance, was far less than what is possessed by us as a people. God is as much interested in the salvation of souls now as He was then, and is as ready to bless, assist, and sustain His servants in such efforts. It looks too much like insulting His goodness and treating with contempt His many promises and providences, for us to go to comparing our numbers and means with other denominations, as though our efforts should be graduated by their example, in preference to the rule God has given us. What happened to Israel when they adopted a like policy? If other denominations lack in faith, and fall short of their duty, they have got the account to settle with their own master. And if He will that they thus tarry till He come, what is that to us? *We* have something to do.

I think I mentioned in my last, that the Russian government had sent out an embassy and made a treaty with Japan. But that has proved to be a deceptive report.

We are all in usual health at present.

N. WARDNER.

THE PALESTINE MISSION.

The letters of Bro. Saunders corroborate the statements made by every other writer from Palestine on the subject of land and agriculture. This makes the question of establishing a "Home" for our operations in that land one of great interest at the present time. Our missionaries in China asked for money for a chapel, and their request was responded to at once, and between three and four thousand dollars were sent, and the work was done; and who feels the poorer for the effort? Now, a chapel is not so much wanted; the circumstances are different; a farming station is now wanted; a HOME for the outcast is asked for, to enable our brethren to labor efficiently among a class of our fellow men who are ignorant of the means of support, and who ask to be instructed in the way of industry, and "sole" liberty, and the question arises, Shall they have a Home adapted to the wants of the people among whom our missionaries are sent? Shall two, three, or five thousand dollars be at once subscribed and sent for this purpose? If either sum be determined upon, it may be done at once. Let every one who thinks it should be done, set about the work at once, while land is cheap. We shall all feel happier when the duty is done. Don't wait for the action of the Board. It will be some time before the Board meets. Let the money be raised, and the greatest part of the duty will be performed.

T. B. S.

A VESSEL FOR PALESTINE.—A vessel is expected to sail from New York soon, for Jaffa direct, when an excellent opportunity will present for sending any articles that may be ready for shipment. Few opportunities of this kind occur in the year.

T. B. S.

COMMUNION.

To the Editors of the Sabbath Recorder:

As S. S. Griswold does not look for unity of *opinion* among Christians, but seems notwithstanding to have high hopes of unity among them of some kind or other, I wish to inquire what that unity is to consist in? Is it to be a unity of spirit? Is it that they shall have the Spirit of God—that they shall be led by that Spirit—that their minds shall be fully pervaded by, and fully conformed to the motions of that Spirit? I infer such to be his idea. Suppose, then, such to be the fact, this moment—all Christians are of one temper of mind—all are led by God's Spirit. But still [illegible] as diverse in opinion as ever. Sup[illegible] would their unity be worth? Does S. S. G. say, they would treat each other kindly and honestly? But would they not (I ask) be as earnest and active *then* as *now*, to propagate what they believe to be important truth? Would they not strive as earnestly to oppose and expose falsehood as they now do? Does the Spirit of God blot out the distinction between right and wrong? Were the apostles and the prophets, who spake as they were moved by the Holy Ghost, less tenacious of that distinction than others? Does S. S. G. expect men will cease to have opinions, and to be influenced by them, because such terms as logic, dogma, dogmatism, and the like, are employed to degrade that characteristic of mind? Does he suppose that because a New England clergyman says Christian unity "is not logical," we shall cease to feel the necessity of rationality and consistency in our religious opinions? Does he expect to deny the applicability of reason to the subject in hand, and then succeed in teaching men the true doctrine of Christian unity by reasoning with them when he comes to "argue the affirmative of his subject?" Or do the difficulties of harmonizing his scheme with reason, or the Bible, suggest the expedient of appealing from their decisions to a still *more* indefinite authority, under the appellation of "*unity of the Spirit?*" Would he break down the bulwarks of reason, that he may introduce a scheme which reason forbids? Does not S. S. G. know, that there is quite as much difficulty in determining what the Spirit really teaches, and what the unity of the Spirit is, as there is in determining what the Bible and reason teach? What does S. S. G., or any other man, know about the Spirit, or its unity, but what he has learned from the Bible? Does he not know that his scheme of unity has long since been tried and found ineffectual—that it is an old idea? Did not the denomination called Christians start with that idea? And I ask, who has come farther from effecting unity among Christians than they? These, and numberless other questions of a grave and serious character, arise in view of this subject. I am filled with amazement and sadness to know that such a man as S. S. G. discards unity of opinion, or belief, from his scheme of Christian unity. I think I know all that can be said about the impossibility of oneness of opinion among men, &c. And yet, as I read the Bible, it every where asserts the falsity of the view of this subject subscribed S. S. G. But when Bro. G. undertakes to write on the Communion question, why don't he get at it? Why does he take such a circuit in approaching the question? I know every man must be allowed to present his views in his own way, and I wish him to. But why should a man of Bro. Griswold's discrimination, introduce such a long, abstruse extract as he has touching a mere collateral point, when he is himself *conscious* that it may require him to beg pardon for doing so? I think the question properly under discussion in the *Recorder* is a plain and simple one, and should not be obscured by foreign matter or false issues. I suppose the question to be discussed is, whether the Bible requires us to restrict our communion to a class of persons therein described, or allows us to partake of the Supper with every description of character. Is this not it?

ENQUIRER.

SABBATH-SCHOOL CELEBRATION.—The Plainfield, New Market, and New York Sabbath-Schools had an interesting pic-nic celebration on First-day, July 30th. They assembled at the meeting-house in Plainfield at 9 o'clock A. M., and thence went in a procession of some fifty carriages to a beautiful grove about one mile from the village. There the meeting was organized by the choice of Wm. Dunn as Chairman, and Thomas S. Alberti and Isaac H. Dunn as Secretaries; after which there was prayer by James Bailey, music by the choir and the children, and an address by George B. Utter. Then came an intermission of two hours for refreshment and recreation, during which the well-loaded tables supplied the substantials of life to some five hundred persons, while the grove rang with the merry voices of men, women and children. In the afternoon there were addresses by C. S. Titsworth, E. M. Dunn, A. Whitford, T. B. Stillman, H. H. Baker, James Bailey, Isaac Moore, and E. P. Clarke; followed by a collation of ice-cream, confectionery, &c. The weather was delightful, the attendance was large, and the exercises throughout were appropriate and interesting.

DEPARTURE OF MISSIONARIES.—On the 23d of July, the bark Sultana cleared from India wharf, Boston, for Malta and Smyrna, having on board as passengers the following missionaries, who leave for the several missions under the auspices of the American Board: The Rev. A. G. Beebe and Mrs. Sarah W. Beebe, the Rev. G. A. Perkins and lady, for the Armenian Mission; the Rev. C. A. Van Dyck, lady and three children, for the Mission to Syria; Miss Mary Goodell, daughter of the Rev. Wm. Goodell of Constantinople, as teacher.

EXCURSION TICKETS TO THE ANNIVERSARIES.—In reply to numerous inquiries on the subject, we have to say, that there is little or no prospect of obtaining excursion tickets on the Erie Railroad for those wishing to attend our approaching Anniversaries at Genesee. That company, and we believe the other competing companies, have adopted general resolutions against issuing such tickets.

WESTEN RESERVE COLLEGE.—The annual commencement, on the 13th of July, was an interesting occasion, and the appearance of [illegible] received the degree of A.B. The inaugural address of Prof. Hosford was well delivered, well written, and every word of it was fully appreciated by the immense audience. There were no less than 3000 present. Frederick Douglass delivered an oration of two hours' length before the Philozetian and Phi Delta Societies. He was invited there by young men independent in thought and speech, and of course slavery was his theme. The unity of the human race was his subject particularly dwelt upon. The large audience which crammed the spacious tent were completely swayed by the speaker's eloquence.

GODS MADE TO ORDER.—At one of the religious anniversaries just held in London, Rev. Dr. Archer read the advertisement of a Chinese idol maker, as published in one of the Canton papers in 1823. The artist declared himself ready to "execute to order idols from twelve feet high to the size of a marmoset monkey, or the most hideous monster that can be conceived, to inspire awe or reverence for religion." His charges for an ourang outang, 3 feet high, $700; a sphinx, $400; a bull with hump and horns, $650; a buffalo, $800; a dog, $200; an ass in a braying attitude, $350.

THE LIQUOR LAW IN PHILADELPHIA.—The Supreme Court of Pennsylvania has rendered a decision in one of Mayor Conrad's Sunday Liquor Law cases, to the effect that the selling of liquor on Sundays did not constitute a disorderly house, but was only a finable offense. The Mayor had taken the ground that the license only covers six-days, and does not warrant selling on seven days in the week. It is supposed that all taverns that can afford to pay the fine will now open on Sundays.

ACCIDENT LAST SABBATH.—A terrible catastrophe occurred in this city on Sabbath (Saturday) afternoon, July 29th, in the falling of a large unfinished gas-house at the foot of Fourteenth-st., East River. Three persons were almost instantly killed, and more than a dozen badly wounded. It seems that the building, which was nearly 200 feet square, and very heavy, was built upon made ground, and that the sinking of some of the pillars brought down the central roof, and that dragged two side roofs with it.

CARRYING OUT THE PRINCIPLE.—The *Christian Observer* (Philad'a) says: "A minister and member of the late General Assembly from Mississippi, remarked to us, that the last public service he performed before leaving home, was to baptize several negro children (the children of servants,) on the faith of their Christian masters."

A REPROVING CONSCIENCE.—We find the following in the Middleton (Ct.) *Witness*:

"A few days since the Hon. D. W. Camp, the State Treasurer, received a letter which shows that there is, in this money-getting age, some conscientious honesty. The letter was as follows, the amount inclosed ($135) being in bills of New York City Banks:

HON. D. W. CAMP: NEW YORK, July, 1854.
Dear Sir—The inclosed belongs to the State of Connecticut, to correct an error. Yours, &c,

A FAIR FUGITIVE.—The editor of the *Vermont Tribune* gives a thrilling account of a fugitive slave who has just passed through Vermont to Canada. He says:—

"She is 20 years of age, tall, well-formed, and of far more than ordinary intelligence, able to read fluently, a member of the Methodist church, and the daughter of her *master!* Yes, she was running away from her own father, Ruffin Gilchrist, of Easton, Md., because he had sold her to a South Carolinian for $1,100. This Ruffin had sold his own flesh and blood for so much hard cash, and but for his daughter's shrewdness and heroism would now have been fingering the price of blood. Charlotte, the fugitive, ran away, lay secreted in the woods (eighteen days, found a friend in Baltimore, who sent her to a Quaker in Philadelphia by railroad, by a mode we dare not tell, lest it should involve him in trouble. Her long exposure and dreadful journey to Philadelphia brought on a fever, from the effects of which she had not recovered when here at St. Albans. From Philadelphia to Boston by sea, thence to Maine, and then to avoid some bloodhound Southerners who were on her track, she turned her steps this way, avoiding her pursuers with consummate address, and finding excellent friends all the way, good accommodations on the U. R. R. With the money given her here, she went on her way to the only land where she could breathe free. God protect and guide her.

BURNING OF THE RICHMONDVILLE SEMINARY.—Robert H. Besson, James M. Wood, Harry Lamb, Lory A. Palmer, and Benjamin McDonald, who have been under examination for several days charged with arson for burning the Richmondville Seminary and Female Collegiate Institute, were committed by the Magistrates and admitted to bail before the County Judge in the following sums: Robert H. Besson $5,000, James M. Wood $5,000, Harry Lamb $4,000, Lorry A. Palmer $3,000, Benjamin McDonald $2,000. They are boys all under sixteen years. Four of them belonged to a club called "Rough & Ready," who were sworn to secrecy. Besson was the Captain of another club called Bucks, or Bucktails. Having been expelled from the Institution for misconduct, suspicion has strongly set in that he was accessory in some way to the destruction of the buildings.

A MOCK DUEL AND REAL TRAGEDY.—A New Orleans correspondent of the Louisville *Democrat*, writing under date of June 10, gives an account of a mock duel among some "sporting gentlemen," which ended in a real tragedy. The principals in this affair exchanged shots, when one of them, who understood the fact that the pistols were not charged with balls, fell and proceeded to die in an awful manner. His antagonist, who was not in the secret, was much frightened, and being advised by some of the jokers to flee, took refuge in a swamp, where he lay until hunted out by a friend and informed of the joke in the case. He was enraged, and a short time after, meeting the gang that had been engaged in the fun at his expense, in a gambling house, he made an attack [illegible] of them with a heavy cane, and was shot and killed by one of the persons assailed.

In recent Parliament papers we have a full exhibit of the workings of the cheap postage system in Great Britain. The penny postage system went into operation in 1840, and it is found that the letters mailed have increased 500 per cent. between 1839 and 1853, viz: being 82,000,000 in 1839 and 410,000,000 in 1853, and the increase is still going on. The figures for 1853 are as follows: estimated number of letters, 410,817,489; net revenue after deducting cost of management, £1,173,727; cost of management, $1,400,679. There was a profit in the Money Order Office Department of £14,149.

Mr. Silas Horton and wife, residing near Owego, who recently exerted themselves so nobly in warning the train on the New York and Erie Railroad of the danger before it—which was, that a large tree had fallen directly across the track—and thereby avoided the horrors of a collision, have been handsomely rewarded by the Railroad Company. The President has forwarded them each a life pass, a medal from the Company, and a silk dress for Mrs. Horton, accompanying the presents with a letter expressing the gratitude of the Company for their noble and humane conduct.

It is a fact worthy of note, that in the County of Elizabeth City, Va., there has not been within the last twelve or fifteen years a single individual confined in the Jail for any criminal offense, and a very limited number for any other cause. For the last two years the Jail has remained untenanted. There is not a solitary adult pauper in the county.

Fourteen persons united with the Orthodox Congregational Church in Gloucester, Mass., by profession, on the 1st Sunday of July, in part the fruits of a religious interest which has existed for several months. The youngest of these was twelve, the oldest was seventy.

The Wisconsin University, at Madison, Wis., is now in process of erection. It is to be built of stone. It stands on an eminence of 1,000 feet, a mile west of the Capital, in a park of 55 acres. It has a fund of $400,000, and will soon be a prosperous and flourishing institution.

Among other bills that have been rendered to the U. S. Marshal for services rendered in the case of Burns—is one for military services amounting to $9,000, one by the City of Boston for extra policemen, amounting to $7,000; H. D. Parker's bill, amounting to $4,000; and the steamtug John Taylor, $420. These are but a small number.

An agreement has been entered into among the morning papers of Buffalo, in obedience to which the *Express*, *Courier*, and *Democracy* will hereafter be issued on Sunday morning and not on Monday. This is to be done so that Sunday work may be avoided.

Three thousand three hundred dollars have just been appropriated by the Connecticut Legislature to aid in the erection at Brookline of a monument to General Israel Putnam, provided an equal sum can be raised by subscription.

An agent from an American Company has lately been in Copenhagen to request the permission of the Danish Government to lay down wires over Iceland and Denmark, as part of the line from America to Europe.

IMPERFECT IN ORIGINAL

General Intelligence.

Abstract of Proceedings in Congress.

SECOND-DAY, JULY 24.

In the SENATE, Mr. Pettit of Indiana made a personal explanation in reply to a letter of Col. Benton. A number of petitions were then presented and referred. The Civil and Diplomatic Appropriation bill was taken up and again postponed, and after the transaction of Executive business, the Senate adjourned.

In the HOUSE OF REPRESENTATIVES, after the reading of the Journal, ninety-two private bills were passed. Mr. Washburne of Illinois, then rose and stated that two material alterations had been made in the bill granting lands to Minnesota to aid in the construction of railroads, after the bill had passed the Senate, and offered a resolution, which was adopted, calling for the appointment of a Select Committee to inquire into the facts, with power to send for persons and papers, and to examine witnesses under oath. Mr. Stevens of Michigan, voluntarily acknowledged that he made one of the alterations, and that Col. Forney, at his (Stevens') request, made the other. The House, in Committee of the Whole, acted on the Senate's amendments to the Indian Appropriation bill, rejecting some of them. The Fortification bill was then passed by a vote of 72 against 68.

THIRD-DAY, JULY 25

In the SENATE, the Committee on Commerce reported the House bill making the collection district of Dunkirk a port of entry, and Cattaraugus Creek a port of delivery—passed. The River and Harbor Appropriation bill, with amendments, as it passed the Senate, was reported. The bill providing for a final settlement of accounts of revolutionary officers, was postponed till next December. The cousideration of the Civil and Diplomatic Appropriation bill was then resumed. The amendment, making an appropriation of $500,000 for the construction of water-works in the District of Columbia, was agreed to; also, an amendment giving Edward Riddle $26,000 for expenses incurred in fitting up the American Department of the World's Exhibition in London. An amendment, authorizing in the Presidential household a Private Secretary, Clerk, Steward, and Messenger, was also agreed to.

In the HOUSE, the Committee on Commerce were directed to inquire what legislation was necessary to regulate or prohibit the introduction into the United States of insane and blind foreigners. The House then went into Committee of the Whole on the Navy Appropriation bill. Gerritt Smith of New York moved as an amendment to the bill, that no intoxicating liquors shall be provided as a beverage. This amendment was amended so as to read, "and no officer shall be allowed to use intoxicating liquors except as a medicine," and the amendment so modified was agreed to. An amendment was adopted appropriating $370,000 to defray the expense of the Japan Expedition.

FOURTH-DAY, JULY 26.

In the SENATE, a large number of bills, received from the House, were read and referred. The consideration of the Civil and Diplomatic Appropriation Bill was then resumed; the question pending being on the amendment of Mr. Hamlin of Maine, making appropriations for Custom Houses at Elsworth and Belfast, Maine; Gloucester, Massachusetts; Burlington, Vermont; Toledo, Sandusky and Cleveland, Ohio; Milwaukee, Wisconsin; Galveston, Texas; Petersburg, Virginia; Buffalo and Oswego, New York; Newark, New Jersey; New Haven, Connecticut; Detroit, Michigan, and Chicago, Illinois. Mr. Broadhead of Pa. moved to amend the amendment by appropriating moneys for the erection of buildings for Post Offices and United States Courts in New York, Boston, Philadelphia and Baltimore. After considerable debate, the original amendment was adopted. An amendment was also adopted increasing the salaries of the Justices of the Supreme Court—the Chief Justice to $7,000, and associates to $6,500. The motion to increase the salaries of the United States Ministers at England and France to $15,000 was rejected.

The HOUSE resumed the consideration of the Navy Appropriation bill. Several amendments were proposed and discussed, after which the bill passed. The amendment of Gerrit Smith, which was agreed to on Third-day, prohibiting the use of intoxicating liquors by officers and men as a beverage, was reconsidered and rejected by the casting vote of the Speaker, Mr. Linn Boyd of Kentucky. The Senate bill regulating the pay and increasing the efficiency of the Army was then taken up and discussed. The bill increases the pay of privates from $7 to $10 per month, and gives a bounty of $2 for reënlistment, and increases the per centage of all officers up to the Major-General.

FIFTH-DAY, JULY 27.

In the SENATE, the Civil and Diplomatic Appropriation bill was resumed. An amendment was agreed to appropriating $300,000 for the purchase of the possessions and rights of the Hudson Bay Company in Washington Territory. The vote of yesterday, rejecting the amendment increasing the salaries of U. S. Ministers at London and Paris to $15,000 was reconsidered, and, after considerable debate, was adopted—outfits not allowed. Mr. Douglas moved an amendment, which was adopted, appropriating $25,000 for public buildings and $5,000 for a library in Nebraska, and the like sums for the same purposes in Kansas, and repealing so much of the Nebraska and Kansas act as puts the seat of Government of the latter at Fort Leavenworth. Numerous other amendments were offered, debated and adopted, and the bill then passed by a vote of Yeas 25, Nays 16.

In the HOUSE, the report from the Conference Committee on the disagreeing votes of the two Houses was concurred in. Mr. Barksdale asked leave to introduce a bill granting the President ten millions of dollars to enable him, during the recess of Congress, to protect the interests, tranquility and honor of the United States in the existing difficulties with Spain. Several members raised objections, and the bill was laid over. Mr. Chandler asked the consent of the House to offer a resolution calling for information relative to the destruction of Greytown by the U. S. sloop-of-war Cyane; also copies of the instructions of Capt. Hollias. Objections being made, it was laid over one day under the rules. The bill regulating the pay and increasing the efficiency of the army was then resumed. In order to amend the bill, the House went into Committee of the Whole on the State of the Union, and, after a brief debate, the clause increasing the pay of commissioned officers was stricken out, and without concluding the subject the Committee rose and the House adjourned.

SIXTH-DAY, JULY 28.

In the SENATE, Mr. Pierce of Maryland submitted a resolution of inquiry into the recent destruction of Greytown by the United States sloop-of-war Cyane—adopted. Mr. Hunter reported back the Fortification bill without amendments, and the Army Appropriation bill with amendments, and the Post Office Appropriation bill without amendment. By consent a bill was reported providing for the selection of sites and buildings for the United States Courts and Post Offices in New York, Boston, Baltimore and Philadelphia. The Post Route bill was received from the House, read by its title three times, and passed. The River and Harbor bill was taken up, and all the amendments of the Committee, but one, were adopted.

The HOUSE passed the Post Route bill. A resolution was adopted calling for information officially in regard to the destruction of Greytown, and the instructions of Com. Hollins. A communication was received from the War Department, covering a letter from Gov. Stevens of Washington Territory, stating that from Fort Simpson, he learned that the Indians had made an attack on the border settlement of the Territory, killing several persons, and he feared that Chief Justice Landon was among them. The Committee on Military Affairs reported a bill increasing the pay of the rank and file of the Army to $11 per month for infantry, and $12 for dragoons—passed. The House then went into Committee of the Whole on the State of the Union, and passed fifty-four private bills. The General Appropriation bill was then received from the Senate, with amendments appropriating five additional millions of dollars—ordered to be printed.

SABBATH-DAY, JULY 29.

In the SENATE, the bill relative to the accommodations for United States Courts and directing contracts to be made for sites and proper buildings in New York, Boston, Baltimore and Philadelphia for Courts and Post Offices, was further amended and returned to the House. The bill refunding to Col. Fremont $183,000, with ten per cent. interest from 1850, for beef furnished to California Indians, was passed. A number of private bills passed by the House on Sixth-day were received, read and referred—some of them considered and passed. The consideration of the River and Harbor bill was then resumed. Various amendments to the bill were proposed and rejected, and at half-past four o'clock the Senate adjourned.

The HOUSE at an early hour went into Committee of the Whole on the bill making appropriations for transportation of the United States mails by ocean steamers, or otherwise for the year ending June 30, 1855. The section appropriating $858,000 for the transportation of the mails from New York to Liverpool having been read, a long debate ensued as to the merits of the Collins steamers. An amendment fixing the 31st day of December next as the time for the Secretary of the Navy to give notice of the termination of the arrangements for the additional allowance to the Collins line was adopted, and the bill passed.

European News.

The steamer Africa, with European dates to July 15, arrived at New York July 27th.

The news from the Danube is important. The Paris *Presse* states that on the 7th of July the Turks took Mokan and Oineika Islands; and on the 8th Omer Pasha, with 40,000 men, surrounded the Russians and took Giurgevo. The Russians cut their way through, with the loss of 900. Gen. Churleff lost an arm.

Prince Gorchakoff was advancing, at last accounts, with 30,000 men, by forced marches, toward Giurgevo. Fifteen thousand Anglo-French troops being at Rustchuk, it is thought the Turks will risk a pitched battle.

The Turks have also crossed, in the face of the Russians, at Oltenitza. Details are wanting; but 150 wagons, with wounded, have already arrived at Bucharest. Among the wounded are eighty officers. A dispatch from Belgrade calls the island Kamadan-Seymonoff, and says that the battle lasted nearly twelve hours. In evacuating Giurgevo, the Russians burned some of their ships.

There is no longer any doubt that the withdrawal of the Russian troops from Wallachia is suspended. In Moldavia the Russians are fortifying the passes, and have destroyed the bridges, and by damming up the rivers have rendered the roads impassable. Since Wednesday, June 28, they have completely closed the Transylvania frontier. All indications seem to testify that Bucharest will be defended.

The Spanish insurgents maintain themselves, and may carry on a protracted guerrilla war.

Bombardment of San Juan.

The steamer Prometheus, from San Juan de Nicaragua, arrived at New York, July 24th, bringing intelligence of the bombardment of San Juan. It seems that the U. S. ship-of-war Cyane, commanded by Capt. Hollins, arrived at San Juan del Norte on the 11th July, in 21 days from New York, commissioned to settle certain difficulties between the American citizens and the local authorities; also to demand a full and satisfactory apology for an insult given a short time since to the Hon. Solon Borland, our Minister to Central America. The authorities and inhabitants of the town refused to make the slightest apology. After giving ample time, and no apology having been received, Capt. Hollins, on the 12th, issued a proclamation to the authorities and residents, that, unless an apology was made by 9 A. M. on the 13th, he should proceed to bombard the town. No apology came. He in the meantime took possession of the Transit Co.'s steamers, and sent them to the town, offering protection to all persons who chose to accept; and within one minute of the time designated by Capt. H., the cannonading commenced, and continued with brief intermission to 3 P. M. During the interval no disposition was manifested on the part of the inhabitants to come to terms for the saving of the property. At 4 P. M. a party landed, commanded by a lieutenant, who burnt the town. San Juan, or Greytown, on the 13th, was entirely destroyed; only one or two small buildings in suburbs remain to mark the spot. No lives were lost.

—From residents at Greytown at the time of the bombardment, and from passengers by the Prometheus, the *Tribune* gains further facts relative to the town and its destruction.

Greytown consisted of about eighty houses, nearly all of them built of wood, and by far the greater proportion of them constructed in the United States and taken there on shipboard. One of these—Lyon's hotel—cost $15,000. Not more than one-fourth of the houses in the new part of the town, which has been built since 1850, were occupied. They have heretofore been occupied, but were deserted from business considerations some time previous to this affair. The population of Greytown consisted of about 500 persons altogether; of which number ten or twelve were from the United States, about twenty-five were Englishmen, and twelve Frenchmen and Germans. The remainder of the population were Jamaica negroes and natives. The Americans, English, French and Dutch were engaged in hotel-keeping and trade. The houses occupied by the natives and negroes were principally frame buildings, with roofs of thatched palm-leaf.

When the Cyane appeared before Greytown and demanded satisfaction to the amount of $24,000, threatening bombardment if not complied with at a given hour, it was not believed by the inhabitants that the town was to be demolished, pillaged and burned. They expected that a few shots would be fired into the town, that a few houses would be perforated, and then hostilities would cease. Most of the English, however, went for protection on board of the British war schooner Bermudas, Capt. Jolly, lying in the harbor. Mr. Fabens, U. S. Agent, together with six or seven of the Americans, sought protection under the flag of the United States on board of the Cyane, and the remainder of the inhabitants of Greytown, including all of the English and Americans, left the place during the night and morning preceding its destruction. They all encamped together on the shore in the woods about a mile distant. Not anticipating the entire demolition of the town by bomb-shells and torches, they took but little of their effects with them. All the property left was destroyed. Consequently the houseless inhabitants were in great suffering for the want of food, and of clothing, and protection from the weather, when our informants left. They had stretched up sheets for tents, and many were obliged to sleep in the open air, without the least shelter, and were half famished for the want of food. A brig laden with provisions, which had just arrived as the bombardment commenced, has probably supplied them.

The terms of Capt. Hollins not being complied with, he opened his fire promptly at the appointed time—nearly every shot doing execution. He fired about two hundred shots, but not burning up the town as he desired, he sent ashore a launch with a lieutenant and about twenty-five men, who proceeded to set on fire all that remained of Greytown. While doing so they are said to have inspected the interior of the buildings rather closely, and pillaged as much as they pleased. Before finishing this work they were pretty thoroughly intoxicated with wines and liquors, and were constantly cheering. The amount of property destroyed by this bombardment is stated to be half a million of dollars.

THE BOMBARDMENT OF SAN JUAN.—A letter from Washington to the N. Y. *Tribune*, dated July 27th, says that in the destruction of San Juan, commander Hollins, instructions were faithfully carried out by him, and no thing more. He was ordered first to demand an apology from the town, and the payment of $24,000 indemnification for the destruction, in 1853, of a shed at Punta Arenas, belonging to the Transit Company. If these demands were complied with, he was next to require the surrender of the parties who insulted Mr. Borland, in order that they might be personally punished for that offense. But if the authorities and people of San Juan should absolutely refuse these satisfactions to Borland and the Transit Company, then Mr. Hollins was to open his batteries and lay the place in ruins. Previous to this, however, he was to take every precaution to avoid bloodshed by the bombardment. The burning was not explicitly ordered, but was left in his discretion, to be done if necessary to the destruction of the place. And finally, having completed this glorious work, he was to bring away the U. S. Commercial Agent.

NEW PATENT LAW PROPOSED.—General James, of R. I., has reported from the Patent Committee to the Senate a bill making many and important changes in our Patent Laws—in fact, effecting (if passed) a complete revolution in our Patent System. It virtually extends the duration of all valuable patents from fourteen years to twenty, on the payment of an extra fee of $100 at the expiration of their fifth year respectively; allows foreigners to take out patents on the same terms with citizens; abolishes Jury Trial in cases involving the validity of patents; increases largely the power and patronage of the Commissioner of Patents; creates an Assistant Commissioner, with four new Examiners, as many Assistants, and some more in prospect; authorizes U. S. Courts to restrain by injunction the importation of articles which, if produced here, would be infringements of any patent subsisting in this country; and authorizes suits for bygone infringements, though the patent may have now expired. [Tribune.

SUMMARY.

A dispatch dated Eastport, Thursday, July 27, 1854, says: The steamer Admiral in a dense fog yesterday broke her crank and was disabled for several hours. She was temporarily repaired, and at eight this morning, while proceeding on her way, struck a ledge of rocks three miles west of the Quoddy Light, filling rapidly. She was run ashore, the passengers taken off in boats, and all saved; also, the baggage and mails. Her cargo was thrown overboard to lighten her. She now lies under water. There were three hundred passengers, and the freight was valued at $300,000. She is supposed to be a total loss.

On Thursday afternoon, July 20th, an awful hurricane visited Davenport, Iowa. The steamer Ben Campbell had her pipes blown down; steamer Golden Gate and Emma Harmon had entire upper cabins blown off. On the former, two persons were killed. A canoe with three persons in it capsized, and all in it are supposed to be lost. The new store of B. Wickersham & Son, was blown down, and nine persons buried in the ruins. Seven had been taken out alive, but badly bruised, up to Friday morning. The remaining two were supposed to be ladies, who went in the basement to examine stoves.

A dispatch dated Rochester, July 30, 1854, says: The propeller Boston, Capt. McNett, was run into by a schooner on Friday night last, off Oak Orchard, and sunk. She went down in fifteen minutes after being struck. The propeller had a full cargo of flour, pork, wheat and corn, and was owned by the Ogdensburgh Railroad Company. The passengers and crew—twenty-five in number—arrived at the mouth of the Genesee River about 9 o'clock on Saturday evening, having been on the lake in an open boat nearly 24 hours.

The Clarke County (Ohio) Importing Company, lately received per ship F. W. Baily, at Philadelphia, ten bulls, twenty cows and heifers, and a lot of Cotswold and South-Down sheep, the whole costing upward of $20,000, besides freight and other charges. Some of the bulls cost 150 to 200 guineas each. One died on the passage. The selection was made by Dr. Watts and Mr. Waddle, two experienced breeders, and original members of the Ohio Company, which made importations twenty years ago.

The N. Y. *Tribune* says: We announce with hearty satisfaction the acceptance of the post of General Superintendent of the World's Exhibition by Nathan Kingsbury, Esq., of Rockville, Conn. He is a practical and successful manufacturer, widely known to the Manufacturing Interest throughout the country, who was in attendance at the opening and nearly to the close of the London Exhibition, and is familiar with the progress of its New York namesake.

A farmer and four of his family, living in a few days since, and two of [illegible] neighbors were astonished—they did not believe Cholera *could* rage in their high, open, healthy region. But an examination of the victim's premises solved the perplexity. The cellar bottom was saturated with stagnant bad-smelling water, in which rotten potatoes and other decaying vegetables were imbedded; and the family were drinking water from a foul, offensive well.

A sad event took place at Irondequoit Bay, some five miles from Rochester, July 23d. Two young men and a boy went to the Floating Bridge, at the head of the Bay, and procured a small skiff for fishing purposes, in which they went down to the Sand Bar. Previous to leaving, they drank quite freely of brandy, whiskey, and beer. While on their return up the Bay, and when not far distant from the steam saw-mill, the skiff was capsized, and the two young men were drowned.

A dispatch dated Boston, Thursday, July 27, 1854, says: Two deserters from the English army at Halifax, who, before they left, broke into the Queen's Treasury and robbed it of about $700, were arrested in this city today soon after their arrival, and most of the money recovered. Under the Ashburton Treaty they will be sent back, probably to be shot, as in view of the great number of deserters of late it has been determined to make a few severe examples.

The Tyler *Telegraph* of the 24th ult. says: "We learn from our friend A. M. Davis, who has just returned from Athens, Henderson county, that Mr. Coleman, near that place, lost five negroes on the 7th inst., who were killed instantaneously by a stroke of lightning. On the evening of the same day, he attempted to chastise one of his slaves, and two of them attempted to beat him, when he shot them both dead with a double-barreled gun. A day of terrible disaster to Mr. Coleman.

There has of late been a good deal of cholera in the vicinity of Buffalo, N. Y. A dispatch dated Buffalo, July 26th, says: The deaths at the Poor-House yesterday were reported as seventeen. The Board of Health met last night and passed resolutions directing an entire reform in the management of the house. The deaths by cholera at the Suspension Bridge yesterday were seven—all on the Canada side.

Off Cape Sable, on the 24th July, the brig William M. Rogers, of Boston, came in collision with the British bark Princess Alice, from St. John for Liverpool. The brig sunk in ten minutes. The captain and crew were rescued by the bark, and subsequently put on board the brig Halifax, which arrived here this forenoon. The Princess Alice was not seriously damaged.

A dwelling-house belonging to A. Bullens, and occupied by two Irish families, near the Junction depot at Chicopee, Mass., was destroyed by fire about 1 o'clock in the morning, July 28, and four females perished in the flames. Two of them were named Cauty, aged respectively, 9 and 21 years—one named Coughlin, aged 25, and the other named Collins, aged 8 years.

A dispatch dated Philadelphia, July 30, 1854, says: At Wilmington, at 7 o'clock last evening, one of Garnesche's powder mills, a mile and a half from town, exploded, killing James Lynch, the watchman, and injuring Dennis Cannon, the engineer. There were three heavy explosions, which shook the city much. The mill is totally destroyed.

A dispatch dated Boston, July 28, says: Cholera broke out in the State Prison at Charlestown last night, and up to noon to-day 70 prisoners were under medical treatment—20 in the hospital and 50 in their cells. Fifteen or twenty of the cases are reported real cholera, but the others are cholera morbus.

A dispatch dated Nashville, Wednesday, July 26, 1854, says: Dr. Jane of this city placed a keg of gunpowder under his house to-day, and blew it up, perishing in the ruins. The fire communicated to four adjoining buildings, which were also destroyed. The loss is considerable. The doctor is supposed to have been insane.

The Parkersburg *News* publishes the number and value of slaves that have escaped from Wood County, Virginia, for the last 15 or 20 years, together with the names of the owners, as ascertained by the Commissioner of the Revenue in his recent assessment. The number that absconded is 211—valued at $131,200.

One of the most destructive fires ever known in Jersey City occurred Sunday afternoon, July 30th, destroying property variously estimated from $200,000 to $400,000.

The *Washington Star* says that intelligence received by the Foreign Ministers per Africa, authorizes the belief that the Spanish insurrection will prove successful.

A dispatch dated Cincinnati, Saturday, July 29, 1854, says: Samuel Lewis, a prominent leader of the Free Soilers, died at his residence near this city last night.

The treaty with Russia, securing the neutrality of the United States in the Eastern question, and acknowledging the principle that a neutral flag protects vessel and cargo, was ratified July 25th.

The Ohio and Indiana Railroad will be completed by the 15th of September next, when there will be a continuous railway from New York, via Philadelphia and Pittsburg, to Fort Wayne in Indiana.

The notes of the Cochituate Bank, Boston, Mass., must be presented to the Receivers before the 1st of August next, in order to share in the dividend.

James Hewitt has been convicted at the Albany Circuit Court of incest with his daughter, and sentenced to ten years imprisonment in the Clinton State prison.

A Post Office Clerk has been arrested in Ypsilanti, Mich., charged with stealing several money letters.

New York Markets—July 31, 1854.

Ashes—Pots $5 81, Pearls 5 50.

Flour and Meal—Flour 6 87 a 7 12 for ordinary State, 7 18 a 7 50 for common to good State, 8 50 a 9 00 for common to good Ohio. Rye Flour 7 25 a 7 50. Corn Meal 3 75 for Jersey.

Grain—Wheat, 1 62 for Upper Lake, 2 00 for white Ohio. Rye 1 22. Corn 76 a 78c. for Western mixed, 80 a 81c. for Southern yellow.

Provisions—Pork 10 50 for prime, 12 50 for mess. Beef, 12 00 a 13 00 for country mess. Lard 9¾ a 10c. Butter 12 a 17c. for Ohio, 18 a 20c. for State. Cheese 7 a 9½c.

Lumber—15 00 for Eastern Spruce and Pine.

MARRIED,

At Clarence, Union Hotel, July 4th, 1854, by Eld. Rowse Babcock, Mr. POWEL C. DAVIS, of Newstead, to Miss ANN SCRIBNER, of Pembroke.

DIED.

In Jamestown R. I., after an illness of about five months, which, though at times very distressing, she bore without the least murmur or complaint, Mrs. ALICE C. H., wife of Bro. John Congdon, in the 37th year of her age. When about twenty years old she made a profession of faith in Christ, and united with the Baptist Church in New Shoreham. Subsequently she united with the Baptist Church in Jamestown, where she remained a member till 1843, when she embraced the Sabbath and joined the Seventh-day Baptist Church of Newport, R. I., of which she remained a member and an ornament till she was removed by death. In the death of sister Congdon the church has sustained a loss which in its present low state is deeply felt. But to her father and mother, brother William Augustus and sister Catharine Weeden, and their family, and particularly her afflicted husband, the loss sustained by this death is in many respects quite irreparable, for as a daughter, sister, and wife, sister Congdon was a woman of great worth. L. C.

In Brookfield, N.Y., July 21st, Mrs. BETSEY CLARKE, widow of the late Simeon Clarke, aged 74 years.

In Chequerville, N. Y., July 25th, of pulmonary consumption, Mrs. SALLY A. FLUNO, wife of Mr. Jacob Fluno, and daughter of the late Charles Burdick, aged 26 years and 8 months.

LETTERS.

A. D. TITSWORTH, Treasurer.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health. A. UTTER, M. D., Physician and Proprietor.

Agents Wanted,

THE services of a number of young men are wanted in selling the "Pearl or Scripture Library," containing sixteen volumes, 32 mo., bound in a neat style, and put up in a rich imitation rose-wood case.

The "Pearls" sell readily among all denominations, and testimonials of their utility are beginning thus early to be received. These works, for cheapness, will compare favorably with those published by the American Sunday-School Union or the American Tract Society, and form a complete compendium of the Bible on those subjects that relate to the faith and practice of Christians.

A liberal compensation will be given to all who are willing to engage in their distribution. Address

6tf H. H. BAKER, New Market, N. J.

Clothing Establishment.

THE subscribers, under the firm of TITSWORTHS & DUNN, have opened a Clothing Establishment at No. 22 Dey-street, New York, where they intend to keep constantly on hand, in large quantities and great variety, coats, pants, and vests. Country merchants desirous of introducing ready-made clothing as a branch of their business, may here obtain a supply on the most favorable terms. Individuals who desire to renew their wardrobes on short notice, may here be fitted with complete suits without delay; or, if they prefer it, may select their cloths and leave their orders, which will receive prompt attention. An examination of our stock and facilities will, we trust convince those who give us a call, that they can please themselves at No. 22 Dey-street as well as at any other place in the City of New York.

WILLIAM DUNN, A. D. TITSWORTH, Jr.
JOHN D. TITSWORTH, R. M. TITSWORTH.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice commencing Monday, April 10, 1854:—

Leave New York at 8 A.M., 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

Hudson River Railroad.

SUMMER ARRANGEMENT.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A.M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St. LEON RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Miscellaneous.

Homesteads and Public Lands in Congress.

The Senate of the United States has spent several weeks in discussing a Bill to graduate the price of public lands and donate lands to the landless. On the 21st of July, it passed a bill, of which the *National Intelligencer* gives the following synopsis :—

The first section provides that the minimum price of the public lands of the United States shall be reduced, after the 1st of July, 1855, and sold according to the following scale : For lands which shall have been offered at public sale and remain unsold for five years, one dollar per acre ; for lands which shall have been offered at public sale and remain unsold ten years, seventy-five cents an acre ; for lands which shall have been offered at public sale and remain unsold fifteen years, fifty cents an acre ; for lands which have been offered at public sale, and remain unsold twenty years, twenty-five cents an acre ; and for lands which shall have been offered at public sale and remain unsold thirty years, twelve and a half cents an acre ; provided that the graduating process, from fifty cents to twenty-five cents an acre, shall not take place until the lands in the fifty cent class shall have been exposed to sale for a period of at least two years, at the price of fifty cents per acre, after which the price of the said lands shall be reduced to twenty-five cents per acre.

The second section provides that whenever a State shall desire to acquire a preëmption right to all the lands, or to all the lands of any certain class and price, within its borders, for other purposes than a railroad or canal, and signifies the same to the President of the United States by an act of its Legislature, they shall be granted on the following terms : That said State may fix the price of said lands above that prescribed in the first section of this act, reserving the excess to itself; provided that the title shall not pass to the purchaser until he has paid the price fixed in the said first section to the United States, and that the lands shall be subject to the same legal subdivisions in the sale and survey as are now provided by law ; and provided further, that any State which shall accept the provision of this act, and shall preëmpt any lands under it, shall take them in full of the five per cent. fund thereafter to become due from the proceeds of said lands. But any State accepting the provisions of this and the preceding section shall take the lands at the price fixed for each particular class, and no lands shall be sold by them for twenty-five cents an acre until they shall have been previously subject to entry through a period of two years at the price of fifty cents per acre, to be paid to the United States.

The third section provides that whenever a State shall charter a railroad or canal to run through the lands of the United States, and such State shall accept the benefit of the provisions hereinafter prescribed by an act to be passed at a general session of its Legislature upon due notice being given of the fact to the Secretary of the Interior, it shall be his duty to set apart of the public lands, 7,680 acres per mile of railroad or canal, within twelve miles on each side, and as near the route of such railroad or canal as possible, and the same shall be withdrawn from sale or entry by public advertisement of the Secretary of the Interior, except in the manner and form hereinafter prescribed. The price of these lands shall be one dollar per acre for those which have not yet been offered at public sale, or for those which have been subject to private entry less than five years ; seventy-five cents for those which have been so subject to entry more than five years and less than ten years ; fifty cents for those which have been so subject to entry more than ten years and less than twenty years ; and twenty-five cents per acre for those which have been so subject to entry more than twenty years.

The fourth section provides that whenever a State through which such railroad or canal passes, and in which the said lands lie, shall desire to do so, it may select, as preëmpter, all the lands so reserved at the minimum prices designated in the third section of this act ; but the State must take up and pay in cash for said land within ten years from the time when set apart by the Secretary of the Interior, or otherwise its right to such of them as remain unsold shall be forfeited. But before the expiration of this period, the State may sell the lands thus reserved to individuals or corporations, provided that no title shall vest in the purchaser until he pays to the receiver of the proper land office of the United States, for the use of the United States, the price herein fixed as the price per acre for which the lands shall be sold.

The fifth section provides that, in the event of a difference between the Postmaster-General and the railroad company as to the compensation for carrying the mails, the matter shall be settled by mutual agreement between the Postmaster-General and the Governor of the State in which such railroad lies.

The sixth section provides that the lands purchased by any State, under the provision of the third section of this act, shall be applied by said State for the construction of the railroad or canal for which they were reserved ; and that no lands shall be included within the operation of this act to which the Indian title has not been extinguished.

The seventh section provides that this act shall in no way apply to town or village property, either inlots or outlots, nor be so construed as to interfere with any preëmption claim, or to lands reserved for schools, salines, or reserved sections on railroad grants, or other purposes, under any existing laws of the United States, nor to any of the mineral lands of the United States.

The eighth section provides that any free white person, who is the head of a family, or who has arrived at the age of twenty-one years, and is capable of holding lands under the laws of the State in which the lands lie, or if they lie in a Territory, then any person who is capable of acquiring a preëmption under the laws of the United States, shall, from and after the passage of this act, be entitled to enter one-quarter section of vacant and unappropriated public lands, and no more, which may at the time the application is made be subject to private entry, or a quantity equal thereto, to be located in a body, in conformity with the legal subdivisions of the public lands, provided that lands ceded by an Indian treaty stipulating for the payment to such Indians of the net proceeds of the sales of the ceded lands shall not be subjected to the operations of this act, except at the graduated prices fixed therefor.

The ninth section provides that the person applying for the benefit of the foregoing eighth section shall, upon application to the register of the land office in which he or she is about to make such entry, make affidavit before the said Register, that he or she is the head of a family, or is twenty-one years of age, and that such application is made for his or her exclusive use and benefit, and those specially mentioned herein, and not either directly nor indirectly for the use or benefit of any person or persons whomsoever ; and upon making the affidavit herein required, and filing it with the Register, he or she shall thereupon be permitted to enter the quantity of land specified : provided that no certificate can be given or patent issued therefor until the expiration of five years from the date of such entry, and until the person or persons entitled to the land so entered shall have paid for the same, twenty-five cents per acre, or, if the lands have been in market more than twenty years, twelve and a half cents per acre ; and if, at the expiration of such time, the person making such entry shall prove, by two credible witnesses, that he or she has continued to reside upon and cultivate said land, and still reside upon the same, and in such case, he or she shall be entitled to a patent, as in other cases provided for by law ; and all such persons as are specified in the eighth section, and who are now settled upon lands subject to entry by this act, shall be entitled to its benefits, upon the expiration of five years from the date of such settlement. The benefits of this and the preceding section of this act shall be extended to the settlers upon the public lands in California, upon payment of one dollar per acre.

The tenth section provides that the Register of the Land Office shall keep a register of all entries, and make return thereof to the General Land Office.

The eleventh section provides that any person who may have filed his or her affidavit of an intention to settle a quarter section of land under the provisions of this act may at any time acquire title thereto by paying the full graduated price for the same. But no person or persons shall be allowed to file a declaration of intention to settle for the purpose of claiming the benefit of the provisions of this act, in regard to five years actual settlement, after the State shall have purchased, or taken as preëmptor, the class in which said lands lie.

History of a Violin.

The French *Athenæum* relates the curious history of a precious violin, whose tones were heard during the late *fetes* given in honor of the marriage of the young Emperor of Austria. The substance of the relation is as follows : In the time of the Emperor Charles VI., the Count of Trautmannsdorf, who was then residing in Bohemia, as the Emperor's Grand Ecuyer, promised a friend of his who was charged with a diplomatic mission to the Court of France, the loan of two famous musicians of his household. It happened, however, that one of them, named George Steziski, though an excellent player, possessed an inferior instrument, and the Count was unable to procure, for love or money, a genuine Bremona for his use. Just at that time, however, an unknown musician was introduced into the castle hall and there performed a piece of his own composition. He had scarcely played ten minutes when the Count, discovering the superiority of his instrument, checked the performance in his impatience to possess himself of it. A long time elapsed before the artist could be prevailed upon to sell his violin, and even then his tenacious resistance was vanquished only by importunities of the most urgent character. At length the instrument was transferred, the owner receiving the following indemnity for his loss : 1. Three hundred florins hard down. 2. A new coat with gold wings, worth one hundred florins, on New Year's Day. 3. A knife and fork daily at the servant's table. 4. A measure of wine every day. 5. Two tuns of beer a year, for occasional drinking. 6. Lodging gratis. 7. Firing idem. 8. Candles idem. 9. Ten florins per month for pocket money. 10. In case of marriage, twelve bushels of fruit per annum. 11. Six bushels of fruit for an old female cousin during her life. 12. As many hares as she may desire to have for her own consumption.

The violinist lived sixteen years after the treaty, the articles of which were faithfully observed. The instrument has never gone out of the family, but has been carefully preserved from generation to generation as a precious treasure. It was originally made by the celebrated Jacob Stainer, a native of the Tyrol, whose productions had always commanded unprecedented prices. It was said that the few violins of his manufacture were fashioned from wood selected and cut by himself in a fine grove near his native town.

Salt your Stock.

Most persons, probably, are aware of the beneficial effect of salt upon the human system. By the ancients, salt was held in high estimation, and every one has doubtless noticed how extremely insipid meat and vegetables are when cooked without it, or with only an insufficient supply supply. Horses, cattle, and sheep, in short, all domestic animals, should be regularly supplied with it at all seasons. The liberal use of this mineral improves their condition and promotes their health, and when they have acquired the habit of partaking of it freely, there is no danger to be apprehended from their taking too much.

Salt promotes digestion, and destroys or dislodges worms, which at certain seasons effect a lodgment in the stomach and alimentary canal. We have, most of us, probably witnessed with what avidity wild and undomesticated animals seek at certain times the creeks and estuaries which indent the shores of the ocean—the "salt lakes," and what long journeys, dangers, and difficulties they voluntarily encounter to reach them. This is the result of pure instinct ; it is not to be attributed to mere caprice, as some have imagined.

Horses, sheep, neat cattle and swine are all equally eager for this sanatory and invigorating substance, and cannot be maintained in a healthy and thriving condition without it. The former, it has been remarked, when liberally supplied with salt, are seldom afflicted by the "bots," or with that scarcely less to be dreaded disease, the cholic. In salting sheep, especially during the vernal months, when the green, succulent and highly fermentable matter of which they partake has a tendency to create stomachic derangements, have thought it advisable to have a shed erected, and fitted with a range of boxes, in which a supply of salt can be constantly kept, and to which the animals, at all times, can have free and unrestrained access. A mixture of one part salt to two or three parts of wood ashes, may also be deposited in some of the boxes. This mixture possesses highly sanatory properties, and should be provided for all animals, particularly when first sent to pasture. They soon acquire a relish for it, and partake of it with great avidity.

Salt is also a valuable article in compost. According to Cuthbert Johnson's statement, it is now extensively used for this purpose by the farmers of Great Britain, and has been found singularly beneficial, particularly on light soils. The "squash-vine destroyer," he says, is easily prevented from committing its depredations by the application of brine, which is also a preventive of aphides, or plant lice, which so frequently lay waste the turnip and cabbage yards. But it should here be observed, that the direct application of very strong brine will prove fatal to the plants, and that it should be used for this purpose only in a weak state. By pouring it around the roots, it will tend to dislodge worms and other insect depredators. [N. E. Farmer.

A Murder in Michigan.

Several weeks ago, the papers mentioned some circumstances inducing the belief that Thomas Eastabrook, of Reading, Vt., was murdered while on a visit to Michigan last fall. Since then other facts have come to light, which make it clear that the man was murdered. The circumstances have been furnished the Buffalo *Republic* by a friend of the deceased.

It seems that Mr. Eastabrook, who formerly resided at Alden, in Erie county, N. Y., left Reading in December last, to go to St. Joseph County, Michigan, where he was engaged to marry a lady, who, also, formerly resided in Erie County, and where he intended to reside. He reached the railroad station near White Pigeon and within ten or twelve miles of the residence of Mr. Wood, where he expected to meet his betrothed. Here he procured a person to take him to a tavern within two and a half miles of the end of his journey, where his trunks were safely deposited. This was the last that was heard of him, until the facts which we are about to relate, were brought to light.

The non-arrival of Mr. E. on the day his nuptials were to be celebrated, caused much disappointment and alarm on the part of the friends of his intended bride. His trunks arrived on the day appointed, but nothing was heard of Mr. E., save the declaration of the person who left them, that he would be along soon, as he was coming by another conveyance. The day passed, and still another, and Mr. E. did not come. The lady, terribly alarmed, wrote to his brother in Reading, who left immediately to ascertain why he had not arrived. The brother stopped at the same station on the Railroad and happened to employ the same man who had carried his brother to the tavern. The teamster described Eastabrook to his brother, and stated all the circumstances which took place on the way and at the tavern. All seemed to be right thus far. It was then ascertained that two men had engaged to carry him to Mr. Wood's house, and that they left accordingly.

Here there seemed to be no further trace to be had of Eastabrook, who had left his trunks in charge of the landlord, with money to pay the expense of forwarding them. His brother made every exertion to ascertain what had become of him, but to no purpose. Suspicions of foul play generally prevailed, and the sheriff with other officers have been on the lookout since.

A few weeks ago, a man who had been about that neighborhood for some time, was arrested and committed to jail for larceny. During his confinement he appeared restive and much disposed to converse with the Sheriff and others. He was indulged in this, and cautiously interrogated on some points connected with the absence and whereabouts of Mr. Eastabrook. He made several admissions and declarations, that he afterward attempted to explain, but only to arouse a stronger suspicion that he knew what had become of Mr. E. After leading him on in this way for some days, the Sheriff told him his suspicions, and what he had ascertained in the matter. The prisoner told the Sheriff that he would reveal the whole of the murder ; that he could not rest till he had done so.

The prisoner then stated that two men took Eastabrook on the way to Mr. Wood's to the junction with the new road recently cut out for the purpose of hauling timber. There, as by accident, they met the prisoner, with another span of horses and a wagon, and two others in his company ; the names he gave of both. Here they inquired of the first party where they were going. On being told to Mr. Wood's, the two, in company with the prisoner, said they were going the same way, and wanted them all to get into their wagon and ride together on this new road, being more direct. They all got in the wagon and started. After going some thirty rods, the prisoner driving, they stopped, and one of the party took a club from under his coat and struck Eastabrook on the head. E. fell back, exclaiming : "O dear, I'm dead." Others of the party then stabbed him to the heart.

After this they stripped him of his clothes and money, dividing with all those present, and buried the body under an old root or stump. He stated that they got about eight hundred dollars from him, and that the boots fitted him, and they were given to him, and he had them on. The coat was given to another, who had worn it ever since. The Sheriff went, with others, to ascertain the truth of the prisoner's story. The body was found deposited just as he had described. Measures were then taken to secure the other murderers, and two of them were arrested and imprisoned. The others will be, probably, in due course of time. The prisoner stated that he had nothing further to do with the murder, than to hold the horses and take his share ; that he accidentally overheard the plans the others were perfecting to perpetrate this murder, when they set upon him, threatening to kill him if he revealed a word or uttered a lisp about it. He was compelled to do what he did. It seems these desperadoes had become acquainted with the circumstances of Eastabrook's visit, and knowing that he had purchased a place in the neighborhood, and would have money with him, they entered into this scheme to murder him and get possession of what he had with him.

We doubt whether such another foul deed can be found on record, where so many entered into a conspiracy for the murder of one man. All of them are likely to receive in time their just punishment for so nefarious and cold-blooded a crime. Mr. Eastabrook was a man much respected among those who knew him. He leaves many friends, and some connections in Erie county who will grieve to learn his sad fate.

Homeopathy and Cholera.

At a meeting of the Hahnemann Academy of Medicine, held in New York, July 15, 1854, the Committee on Cholera reported the following instructions for the domestic management of this disease :—

1. Avoid crowded assemblies and crowded sleeping apartments, and as much as possible, shun the presence of filthy persons, for the disease is mostly developed in crowded dwellings, ships, prisons, camps, &c.
2. Observe cleanliness of person, and enjoin the same upon your household.
3. Dwellings (especially the sleeping apartments) should in all cases be thoroughly ventilated.
4. Pursue your ordinary course of diet, observing some moderation as to vegetables and fruits. Night meals are to be avoided. Regularity in the hours of eating is very desirable. Alcoholic drinks are objectionable, the intemperate being particularly liable to this disease. Iced water and ices should be used with extreme moderation. Articles of diet known to disagree with the regular action of the bowels should be most scrupulously avoided.
5. Avoid mental or bodily excitement or fatigue. Keep the person warmly clad.
6. Cathartics and laxatives must be wholly avoided. No means should be taken to remove constipation, except such as are prescribed by a physician. The use of laudanum, opium, or cholera mixtures of any kind, is hazardous.
7. It is better to take no medicine as preventive of cholera, but the slightest derangement of the bowels should be met by appropriate treatment.
8. Should there be oppression or sickness at the stomach, shiverings or dizziness, with or without relaxed bowels, Ipecac of the second or third trituration or dilution, may be taken every two or three hours.
9. If there be watery looseness of the bowels, with or without nausea, pain or cramps, take one drop of Veratrum, first dilution, every half hour or hour.
10. If the diarrhœa should become profuse, (with or without pain or vomiting,) discharges very frequent, being watery or resembling rice-water, with or without cramps, coldness and blueness, with rapid sinking, take one or two drops of the Spirits of Camphor every five or ten minutes until reäction takes place.
11. From the moment the diarrhœa becomes urgent, the patient should go to bed and be well wrapped with blankets. Bottles of hot water should be applied to the feet, and medical aid at once be summoned. No external use of camphor is advisable while other remedies are employed.

Puget Sound, Washington Territory.

The *Pioneer*, published at Olympia, in a long article upon the excellence of Puget get Sound as a harbor, says : "The true value of Puget Sound, otherwise than merely as a great commercial mart for shipping to seek shelter, or for repairs, can be readily understood when it is known that the pine and cedar along its shores is of a quality unsurpassed on the Pacific and inexhaustible in quantity ; that the most desirable water power, falls and streams, are within its reach, on which saw-mills and other machinery are constantly being erected, which, in connection with our coal mines, on the very shores of the Sound, and the undeveloped fisheries of its waters, must, at no distant day, attract hither the capitalist and collier of the Alleganies, and the fishing smacks of the hardy and enterprising sons of New England—those of Nantucket, New Bedford, Cape Cod, etc., and then will the true value of Puget Sound to the western world, be properly felt and duly appreciated."

The *Pioneer* also publishes a forcible letter from Gov. Stevens to the Hon. Jos. Grinnell and others in New Bedford, engaged in the whale fishery, urging them to select some port on the Sound as a rendezvous for American whale fishermen, locate the adjacent lands, and create a depot for the entire business. He dwells forcibly upon the capacity, safety and facility of access of the series of harbors upon Puget Sound ; their close neighborhood to the best whaling grounds in the Pacific ; the splendid timber suitable for the finest spars for vessels ; the fisheries of cod, halibut, and other valuable species ; the facility of obtaining fresh provisions at moderate prices ; and concludes by predicting that such a depot once established would speedily become a rendezvous for seamen, and a place at which provisions of all kinds would seek a market. The investment would find an enormous return in the increased value of the property, and the territory be in proportion benefited by the introduction of this new resource and by the creation within herself of a maritime class of population.

The Tomato.

To many persons, there is something unpleasant, not to say disgusting, in the flavor of this excellent fruit. It has, however, long been used for culinary purposes in various countries of Europe, and has of late years been extensively cultivated and become a general favorite in this country. Dr. Bennett, a professor of some celebrity, considers it an invaluable article of diet, and ascribes to it very important medical properties. He declares :—

1. That the tomato is one of the most powerful deobstruents of the Materia Medica, and that in all those affections of the liver and other organs where calomel is indicated, it is probably the most effective and least harmful remedial agent known in the profession.
2. That a chemical extract will be obtained from it, which will altogether supersede the use of calomel in the cure of disease.
3. That he has successfully treated serious diarrhœa with this article.
4. That when used as an article of diet, it is almost a sovereign remedy for dyspepsia or indigestion.
5. That persons removing from the East or North to the South or West, should by all means make use of it as an aliment, as it would in that event save them from the danger attendant upon those violent billious attacks to which almost all unacclimated persons are liable.
6. That citizens in ordinary life should make use of it, either raw, cooked, or in the form of a catsup, with their daily food, as it is the most faithful article in the Materia Alimentaria.

Professor Rafinesque, of France, says : "It is everywhere deemed a very healthful vegetable and an invaluable article of food."

Dunglison says : "It may be looked upon as one of the most wholesome and valuable esculents that belongs to the vegetable kingdom."

A writer in the *Farmer's Register* says : "It has been tried by several persons with decided success. They were afflicted with chronic cough, the primary cause of which, in one case, was supposed to be diseased liver, in another diseased lungs. It mitigates and sometimes effectually checks a fit of coughing."

The method most commonly adopted in preparing this fruit for daily use, is to cut them in slices and serve them with salt, pepper and vinegar, as you do cucumbers.

To stew them, remove them ripe from the vines, slice up and put them in a pot over the stove or fire without water. Stew them slowly, and when done put in a small piece of good butter, and eat them as you do apple sauce. Some add a little flour bread, finely crumbled, or a couple of crackers pulverized.

The tomato is a fruit very easily raised. If the seed be sown in May, in good, rich soil, of a warm nature, with a sufficiency of old, well-rotted manure, there will rarely be any danger of failure. When the vines begin to leave, they should be provided with a trellis, or tied to stakes fixed in the soil, to keep the fruit from being injured by coming in contact with the dirt.

Never do too much at a Time.

Sir Edward Bulwer Lyton, in a lecture lately in England, gave the following history of his literary habits : "Many persons, seeing me so much engaged in active life, and as if I had never been a student, have said to me, 'When do you get the time to write all your books ? How on earth do you contrive to do so much work ?' I shall surprise you by the answer I make. The answer is this : 'I contrive to do so much, by never doing too much at a time. A man, to get through work well, must not overwork himself—or, if he do too much to-day, the reäction of fatigue will come, and he will be obliged to do too little to-morrow. Now, since I begun really and earnestly to study, which was not till I had left college and was actually in the world, I may, perhaps, say, that I have gone through as large a course of general reading as most men of my time. I have traveled much—I have mixed much in politics and in the various business of life, and in addition to all this, I have published somewhere about sixty volumes, some upon subjects requiring much special research. And what time do you think, as a general rule, I have devoted to study—to reading and writing ? Not more than three hours a day ; and when Parliament is sitting, not always that. But then, during those hours I have given my whole attention to what I was about."

WHO KILLED HIM ?—On last evening some cold-blooded liquor-seller for *three* cents sold poor John Donohey, a railroad hand, whisky. Donohey walked out upon the Sandusky Railroad to the bridge, one and a half miles from town, and as he was staggering along the track, the evening train swept around the curve. The engineer saw the man, and immediately whistled down the brakes, and with soul filled with horror, gave him every warning. Donohey saw the train coming. He stepped from the track. An oppressive load went off the engineer's heart; but alas ! the poor drunken wretch lost his balance, fell back, and the cow-catcher striking upon the head, split it open completely, and knocked the unfortunate man into the creek. The brakeman immediately sprang from the train and brought him ashore, but John was dead ! Who is the murderer ? We ask the liquor-seller who sold him liquor —answer to your own conscience as you will answer in the day of wrath—are you not his murderer ? And then put your hand upon your ill-gotten gain and say : "For *three cents* have I done this thing."

[Mansfield (O.) Herald.

FAUSTIN I.—In the letters from Hayti, published in the *Evening Post*, appears the following on the character of Solouque :—

"When it is borne in mind that Solouque was born a slave, and was the offspring of slaves born in Africa ; that he had no education whatever himself ; that he was elected President before he could read or write one word ; that he never visited any more civilized country than the one in which he lived, and which has been distracted by foreign and intestine war almost uninterruptedly from his birth ; and that he had never had an opportunity of hearing or learning any of the lessons acquired by the experience of older and more fortunate nations, one is constrained to admit that he is no common man ; and that, measuring his present elevation from his point of departure, and weighing his successes against his opportunities, he has proved himself entitled to no inconsiderable prominence among military heroes."

Dr. W. H. Edwards states, in the June number of the *Stethoscope*, that the mucilage of slippery-elm bark completely destroys the bitter taste of quinine. The dose of quinine is to be dipped in the middle of a table-spoonful of the thick mucilage, and then fully enveloped in it by means of a straw or the point of a knife, care being taken not to let the quinine touch the sides of the spoon. When thus prepared, nothing is tasted but the mucilage.

During an epidemic of small-pox, at Turin, Italy, out of $1,000 vaccinated persons, only one, according to Dr. Griva, was attacked by small-pox, whilst of 1,000 who had once had variola, three suffered a second time. At Geneva the ratio in each case was augmented, but the proportion remained the same—three in 1,000, and nine in 1,000. Hence, vaccina would appear to be a better preservative than variola itself.

In one of the industrial schools for poor and neglected children in New York city, were two little girls who, having been confined to wretched homes and filthy streets, *had never seen a flower*. What a volume of misery do the foregoing five italicized words contain !

An extraordinary calculating girl has been discovered in a school at Darvel, in Ayrshire —Margaret Cleland, daughter of a shoemaker ; she is between eight and nine years of age, and she multiplies great numbers mentally with astonishing rapidity.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87 ; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth ; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock P. M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life —increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me.

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS ; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

The Sabbath Recorder,
PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms :

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THEE, ONLY THEE.

BY GRACE DE LA VERITE.

O! grant, dear Lord, in that sad hour
Humanity doth fear,
When each *must* say the last good-bye,
And shed the parting tear;
From which the weary, the oppressed,
Those worn with care and toil,
Though longing for a final rest
With gloomy dread recoil;
No thought of cold and silent graves
May press my soul with fear;
No shade of pride or earthly love
May keep her hov'ring here;
No ling'ring looks she cast behind,
By earth-born thoughts controll'd,
But, gazing up with eyes of faith,
Thee—only Thee, behold!

Thee—only Thee, may then behold,
Who these same paths hast trod,
And sanctified our suff'rings here,
Thou holy Lamb of God.
Thee—only Thee, may then behold,
(No longer crowned with thorn,)
In thine own glory now arrayed,
To welcome thy new-born!

For the Sabbath Recorder.

COMMUNION.

BY S. S. GRISWOLD.

Having shown that opinionated dogmas can never be adopted as the basis of Christian unity, I beg leave, before proceeding farther, to offer a few remarks upon church order and fellowship.

There seems to be an opinion quite prevalent, that every organization of Christians into what is termed a church, is de facto *the* church; and Christians seem not to have been very scrupulous about multiplying these organizations to almost any extent, until church-making is certainly not above par. Even the same denomination, or sect, have not hesitated to form separate churches in the immediate vicinity of each other, and each claiming to be the church of that place. Within my vicinity a large Baptist church has been divided. Some ten or twelve brethren, and a few more sisters, thought their minister not orthodox, and this small minority convened a council of ministers, who, without granting any hearing to the large majority, or the minister, who had removed to a distance of some hundred miles, declared the minister unsound, and published so to the world, and that these dozen or more were the church. The Association sanctioned the act; and many now suppose that to be law and gospel. This is not a solitary case of ecclesiastical squatter sovereignty.

Now, that all of the thousand and one such organizations are in fact the church, I seriously doubt—organizations, many of which had their origin in self-will, ambition, mere difference of opinion concerning depravity, regeneration, perseverance, &c. Directly across the beautiful Mystic river, which divides our beautiful village, are two Baptist churches, of the "same faith and order," worshiping in two meeting-houses, within a stone's throw of each other. Now suppose the great Head of the church should send an epistle to the angel of the church at Mystic river, which of the ministering angels (pastors) would be entitled to take it from the office? Or, suppose such a letter to be sent to the Sabbath-keeping church in Adams, which of the angels there could lay claim to it? No invidious reference is had in specifying the above church, for they have as good reasons perhaps for their separate organization as one half of the ians, that will alter the case, but not until then are as much *the* church as hundreds of others in my view.

What, then, is the character to be assigned to that order of ecclesiastical organizations called churches? Are they human or divine? Doubtless partly of both, although chiefly of the former. Local churches, congregations, or assemblies, are permissively divine; like human government, which is permissively of divine appointment, while the various kinds of its administration are purely human. I refer to the fact, as to whether such governments are elective, hereditary, monarchial, or republican. So of local churches. Whether we consider them as merely permissive or obligatory, the exact manner of their original organization seems not to be very definitely defined by inspiration. That seems to have been left very much to the wisdom and judgment of those who should compose them. Therefore, while that external arrangement of church order which conforms the nearest to that of apostolic times may be the best, yet I apprehend any ecclesiastical assembly, or Christian congregation, or church order, designed for permanency, not in violation of Christian principle or action, may in a certain sense be denominated a church.

The local church of apostolic times seems to have comprised all the Christians permanently residing in a particular locality, whatever might have been their different views and practices, not inconsistent with Christian principle. A Christian church or congregation, then, of any specified locality, ought to embrace all and every true Christian resident there. And I believe it does, although, for various reasons, there may be a number of public congregations or meetings, when such church convenes for worship; such as the largeness of its numbers, convenience of assembling, &c.; but they are all one church technically, and should a communication from the invisible Head be sent to it, each true disciple would be entitled to hear it.

Such a body of disciples, having their hearts united by love, in honor preferring one another, each seeking another's welfare, rather than his own, remembering they were all brethren, having no master but Christ—I say, such a body of disciples would need no creeds, articles, or covenants, to bind them together, being held together by their love to each other, and by their union to their Head, which is Christ. Such a church being an embodiment and demonstration of the power of religion to unite its followers, would be a light, not only to enlighten, but to attract others. "How these Christians love each other," would be said now, as of old.

Although different opinions and practices might obtain among these Christians, growing out of each one's conception of what was truth, yet so long as honesty was conceded by each to the other—so long as each unhesitatingly acknowledged the other to be a true Christian disciple—what need would exist that such a disunion should take place, as included an apparent practical denial, by some of them, that the others were Christians, or at least were not entitled to a Christian ordinance? If any portion of this church, with the consent of the other portion, or perhaps without it, should deem it best, expedient, to form an organization for the better carrying out of any particular truth or duty, that all might be well and proper. But for them, when thus organized, to positively forbid the other portion, whom they admit are equally honest in not conforming to them as they are—I say, to deny the other portion of this church the privilege of enjoying a Christian sacrament with them, one in which both parties agree, seems to me to be, if not uncharitable, unscriptural and unnecessary. And I say this with all the objections in view, and with all due deference to those who differ from me. If one portion of the church are prepared not to admit the other to be Christians, that will alter the case, but not until then.

SECRET SOCIETES.

TO MY LAY BROTHER:—

Our discussion concerning "Secret Societies" may seem to be somewhat pointless, for the reason that, notwithstanding all you say in their defense, you *professedly* decline to defend them. That it is manifestly unfair for you to become a *voluntary* critic, and in that peculiar form of controversy to maintain an argument, and yet decline the responsibility of an open defense of the real question at issue, even yourself must see. Please, sir, *doff* your humility (?) and *don* your legitimate character, or *down with the quill!*

Of the past, however, I will not complain; but being inspired with the hope that we may yet see "eye to eye" concerning the relation existing between secrecy and temptation, I proceed to lay down several points as landmarks to guide us in the investigation, believing them to be in perfect harmony with my first proposition, and therefore allowable. To these I ask your attention as one professing some knowledge in the science of Christian philosophy, being careful to see how far we agree, that we may know how far and in what we disagree.

1. The human mind is so constituted, that secrecy always affects it more or less.

2. The human heart, in the exercise of its depravity, seeks the cover of secrecy, and will often defer or wholly abandon its purpose, when it cannot avail itself of this desired aid.

3. For deliverance from the power of evil influences, we are dependent upon the grace or mercy of God.

4. In the providence of God, we are daily brought into the presence of temptation.

5. When, in the providence of God, the path of duty leads into the presence of temptation, we are assured of the power of delivering grace. But—

6. Being free moral agents, and often "loving darkness rather than light," we *go* where God in his providence does not *call* us.

7. When we voluntarily go into the presence of temptation, uncalled of God, we sin, and forfeit the agency of restraining grace; and although the goodness of God may cause him to exercise delivering grace in our behalf, that by no means declares us innocent in the matter.

8. Whenever we go voluntarily into the presence of temptation, uncalled of God, and pray, "And lead us not into temptation," we do but mock God and deceive ourselves.

To the above sentiments you will, I doubt not, readily respond; the only chance for a difference of opinion being in their application. In their application to Secret Societies, you of course cannot follow me, seeing that these you decline to "defend." There are, however, some remarks of yours in this connection, to which I may refer. You will discover, by the above propositions, that when one exposes himself to temptation, through the influence of the law of secrecy (or otherwise,) uncalled of God, that is "secrecy out of place." Now when it can be shown that God leads men, in the performance of duty, to expose themselves to temptation in the formation of Secret Societies, I am ready, in any such instance, to confess that my view of secrecy will not apply. If it can be shown, in any instance, that God calls men to attend theatres as a matter of *duty*, no blame can attach to them. But attendance upon theatrical performances, when not required as a duty, I am certain, is wrong, for this reason, that experience and observation show the effect to be dangerous to both piety and morals. The Christian, under these circumstances, is certainly out of place when at a theatre. Now, I think it can be shown, from testimony the most reliable and abundant, that a Christian is as certainly out of place in a Secret Society as when in a theatre, or a ball-room, or a gambling-hall, as an attendant upon and promoter of their interests. But I go further, and say, that if I know anything as a philosopher, I know that Secret Societies are dangerous to the morals and spirituality of their adherents; if I know anything by observation and experience, I know that they are *snares* and *pitfalls. Yes, sir, I have the knowledge and experience on this subject that enables me to form an opinion that no sophistry or ridicule can overcome. My mind is as much made up on that subject, as that it is wicked to swear, or perverse to lie!*

But to proceed. Both yourself and others, when writing or speaking on this subject, as it seems to me, affect to be logical, when by a mere gingle of words you dispose of the question of secrecy as involved in this controversy. When you talk glibly of family secrets, church secrets, and society secrets, as if they were one and the same with "secret families," "secret churches," and "secret societies," do you really mean to deceive? Though you use them as convertible terms, yet every logician knows they are not. What shall we think of those men, so much proclaiming their own goodness and wisdom, and seeming to think that wisdom will die with them, when we see them attempting to carry points by this false and deceptious method of reasoning? For one, I suspect every man who plays falsely, either to be false at heart, or that he does not understand the game he plays at. Please, brother, to look at this until you can see the logical difference between a "secret family" and "family secret," a "secret society" and a "society having secrets," and then never attempt to deceive the masses by using as synonyms "Secret Societies" and the "secret of a society."

Again, when you attempt to convict me of error by representing me as friendly to missionary and other benevolent societies, having their origin in the principles of the gospel, and yet as being opposed to the Order of Sons of Temperance, whose mission is equally gospel-wise, you certainly fail. Please observe, that missionary and other societies of which you speak are *not* Secret Societies. But the Order of Sons is a secret organization. Opposition to the Order of Sons is not predicated upon the fact that it is a *temperance* organization, but that it is a *secret* organization. If missionary societies were secret organizations, but were nevertheless supported, while the Order of Sons were opposed because it were a secret order, then indeed your argument might be pertinent. But such is not the fact. Please bear it in mind, that I am opposing *Secret Societies* "as such."

You also seem to have adopted an error common to secret society men, and that is of supposing that a man must necessarily "fight as one that beateth the air" any evil that he has not experienced. Upon what other principle do you insist that a man, in order to oppose Secret Societies not as "one that beateth the air," must first join them? You might as consistently affirm this of theater-going, novel-reading, card-playing, opium-eating, debauchery, or any other crime or sin. Why, brother, the argument has not the virtue of even being specious! I think the additional light obtained from personal experience, to enable me to "take the goat by the horns," may well be spared, for two reasons. 1. Because there are plenty of "goats" from these folds running at large, that can be taken by the "horns" at any time; and, 2. Because several of the "goats" have "seceded," and the revelations they make are not such as would particularly interest me. I should about as soon think of going where the "rich man" went, to learn to preach successfully to sinners. But I would sooner take Abraham's advice, and "believe the law and the prophets."

I now come to your instruction of churches and their duties, and of ministers and their calling. "If churches would confine themselves to the object of their organization, and lay no unnecessary commands on their members, and the ministers of the gospel would imitate the apostle Paul, and 'become all things to all men, that they might save some,' bearing in mind that they are the servants of the church, and that they should not 'lord it over God's heritage,' in my opinion the church would grow in grace, the temperance cause be advanced, and both clergy and laymen would have more time to search the scriptures and be benefited thereby." So you say, and who does not say the same? The meekest saint and the veriest sinner surely would not differ about that. Why, if there is a sentiment in Christian creeds that can be repeated more readily than any other, by the strolling latitudinarian, the wandering Christian vagrant, the heady disorganizer, or the sneering infidel, it is that. I knew a man who felt scandalized because his minister opposed cotillions and dancing schools, going so far as to preach against them, and he said he "wished his minister would confine himself to preaching the gospel, and not go beyond his calling." He even went so far, in his zeal for the glory of the gospel, as to threaten to take revenge in its behalf by withdrawing his subscription, which would be very natural for that kind of piety. I was riding the other day in a stage-coach, and the driver expressed himself as being very much disgusted because "temperance people did not mind their own business." The reason why, you can judge. But pray, what is the object of church organization? Is it not two-fold—1. Subjective, in the matter of its own purification, and the salvation of its own membership, both present and future. Surely, the liberty of the gospel is not the liberty of "serving two masters." But let us see for a moment how your view will work. Take a church member who believes in dancing as an instance of Christian liberty. The church proposes to correct the evil, but he insists that the church shall confine itself to the "objects of its organization," and that it shall not lay on its members any "unnecessary commands." Another is a wine-bibber; another indulges in card-playing; another in theater-going; and another in slaveholding. Each one sets up, however, in his defense, that the church must confine itself to the "objects of its organization," and lay "no unnecessary burdens on its members," and will add, perhaps, that there is no "thus saith the Lord," in "just so many words," against these; and as their consciences do not condemn them, they insist that upon the score of Christian liberty they are to be indulged. The effect of all this is plainly to be seen. 2, The church, as constituted by Christ, has an aggressive character. It is to wage a perpetual war upon sin of every form, and labor for the renovation of this world, not by "conforming" to it, but by coming out from it and being separate. Your assumption concerning Paul, and your exposition concerning his becoming "all things to all men," upon which you ground your lecture to ministers, I protest against as totally misrepresenting him. Never was there a more vehement defender of the *principle* of right than was he, or a more bold opposer of the wrong. Hear him, in all the authority of his office, saying, "*Abstain from the very appearance of evil.*" But I put the question directly to you, Do you believe that the apostle would, if he were now living, in order that he "might save some," join the Free Masons, and that he might save others would join the Odd Fellows, and that he might save still others join the Sons and Templars and the Rechabites, and so on through the whole list, going through with their childish and foolish, if not hypocritical, ceremonies and mummeries, "becoming all things to all men," that he might save some? For myself, I would just as soon think of his becoming a "dandy-jack," wearing a red cap, and riding a "Shetland poney," that he might "save some!" Now, your failure in this matter is, that you have, in violation of all rules of argument, assumed the very question in debate, namely, the rightfulness of forming and supporting Secret Societies and upon this *assumption* predicate your lecture.

The seeming sharpness of this letter, dear brother, is not occasioned by any ill will towards you, or any one else. I believe, however, that you have lent your influence to a bad cause, and in the name of religion are working its overthrow, though unintentionally so, no doubt; and that yourself, and others similarly situated, ought, instead of rejoicing in your work of ruin, to immediately reform, and labor for the peace of Zion, whose harmony you are now greatly disturbing.

And now, as a minister, of religion, as one who has been in the service of the church for more than twenty years, and has dedicated to her upbuilding the whole labor of these years, who is growing grey and wrinkled and blind in her service—as one whose very life is wrapped up in her prosperity—I protest against her demolition by your hands. I appeal to you, and to all confederated with you, by all that is lovely in the peace of the church, in the purity of religion, in the bliss of brotherly confidence and amenity, to desist; I appeal to you, in view of disheartened brethren, distracted churches, and the *croakings* of the enemy, to desist. Not to desist from the practice of a single virtue, not from obeying a single requirement of *conscience*, or a single command of God, or "principle" of the gospel. But desist from a certain *form* of society organization, acceptable indeed to yourselves, but obnoxious to the great body of your Christian brethren. And in view of what is to be gained on the one side, and lost on the other, by accepting the above exhortation, I appeal to you, and the Christian sense of them who are "one in Christ," having been "made nigh by his blood," whether a refusal to comply does not savor more of the spirit of him who "causes division," than of that which is "gentle and easy to be entreated?" N. V. H.

From the United States Magazine.

A COLLEGE FOR BOTH SEXES.

It seems there is a collegiate institution at Alfred Centre, in this State, where male and female pupils have equal chances for an education, and receive alike the diplomas and honors of the College. We were not aware of this till now, and perhaps the fact will be news to most of our readers. We, therefore, publish the following letter, which we have received from a visitor there, giving some account of the Commencement Exercises on the 3d and 4th of the present month.

ALFRED CENTRE, N. Y.,
5th July, 1854.

Alfred Centre is two miles from the nearest railway depot—a quiet little spot—a gem amid the hills. It has much the aspect of a New England village, from which it was originally settled by a sect of "Seventh-day Baptists," who came out to this lone valley that they might choose their day of rest, and disturb nobody's Sabbath by so doing. The houses are low, and painted white, with green blinds, and peering as they do from the midst of abundant foliage, the effect is quite picturesque. But whatever might have been the design of the Seventh-day Baptists in choosing their location, the Alfred people are far from being exclusively of that sect at the present time. The site was chosen many years since by a gentleman of enterprise to be the foundation of a Seminary, or College, for the instruction of the youth of both sexes of the neighboring towns. He achieved his purpose with incredible patience and perseverance, and has now the pleasure of seeing three large convenient buildings crowning the side of the breezy hill, in which are accommodated some three or four hundred pupils, from all parts of the country. Besides this, there is a commodious chapel for religious or collegiate exercises.

It was a pleasant sight too see the youth of both sexes side by side in their recitations, and each receiving their diplomas without distinction of sex. On Monday, July 3d, the Female Literary Society held their anniversary. The exercises were creditable in the highest degree. I send you a poem read by one of the young ladies, which you will admit is very sweet, and gives promise of merit of a high order in the future.

In the evening, Mrs. E. Oakes Smith lectured, by invitation, to a large audience collected from the neighboring towns and villages. Then followed readings, music, poems, etc. On the Fourth, the day was pleasantly filled with the exercises of the male literary societies.

In comparing the productions of the two sexes in the various exercises of the College, the balance is by no means in favor of the masculine half of the pupils. I observe throughout the institution an air of courtesy entirely devoid of all familiarity in the deportment of the students. They dress plainly, live temperately, and perform the duties designed on the part of parents and guardians in sending them here—that is, they study. In this respect the College of Alfred Center might be cited as a model to more richly endowed seminaries. No ardent spirits are sold any where in the village, and the pupils have all of them an air of sobriety and good faith pleasing to witness; they are treated also by the faculty with a companionable considerateness. There is excellent material for an institution of the very highest order, and it is to be regretted that the funds of this College are not equal to their opportunities.

The musical department is well sustained, and in the evening we had the Flower Queen, so celebrated of late in school-girl annals, performed by about fifty young ladies, all dressed in white and crowned with flowers, the hair sweeping the shoulders in long curls. The effect was very beautiful, and the whole well sustained. The Queen looked, and sustained her part, admirably. This was really a very fine thing everywhere, but in a secluded spot like this, was a most unexpected gratification.

The graduating class consisted of about thirty members, of both sexes. I observed the young girls were some of them affected to tears as they received their diploma, and well they might be, for this is a new era in the experience of womanhood, and one that points most significantly to a great and brightened future. It would seem to be invidious to particularize any one of this interesting group, or I would like to name one whose calm, earnest face, simple diction, and womanly tone, gave promise of more excellence and usefulness in the time to come. The ladies were all tastefully habited in black silk dresses, with white silk scarfs passing over one shoulder and knotted under the other.

The occasion has been one of great interest to me, as illustrating views I have long entertained in regard to education, and which have been here carried out in a very good degree, though not entirely, for there is no reason why women of capacity should not fill professors' chairs in our public institutions. But time—time will bring about the realization of all great aims. Adieu. * * *

[The following is the poem of the young lady student, alluded to in the preceding letter.]

Farewell.

BY FRONIE COREY.

"Farewell! a word that must be, and hath been—
A sound which makes us linger—yet farewell!" [BYRON.

Farewell! a word of fearful power,
That's ever in the ear;
The burthen of each passing hour,
From the cradle to the bier;
A sound that echoes everywhere,
That heart may beat, or footstep dare.

It trembles low on every breath,
That rustles lightly by;
It blights the buds in Beauty's wreath,
And clouds Hope's sunny sky:
Its gifts are mournful ones, and sad—
A brow less smooth—a heart less glad.

I've stood within the halls of song,
'Mid wildest revelry,
And every heart and harp seemed strung,
To mirth and melody;
But long ere night had taken wing,
Broken was many a silver string.

I've seen the coral lip grow pale,
Tears dim the beaming eye,
As 'midst the joy, some hearts low wail
Came stealing sadly by.
E'en 'midst the music's merriest swell,
The discord came—it was—farewell.

Iv'e gazed upon the snowy brow,
Damp with the dews of death;
I've felt the faint pulse fluttering low,
With the last departing breath:
I've seen the eye grow strangely bright,
As if to trace the spirit's flight.

I've felt the hand of waxen hue
Clasp mine, when cold and weak;
It mutely gave the fond adieu,
The white lip could not speak.
That clasp unlocked the spirit's cell,
And gave to mine—but that farewell.

It was enough! it bore my thought
High o'er the care-dimmed earth,
To realms with so much gladness fraught,
Where the spirit has its birth;
It filled my soul with heaven-sent gleams,
From a fairer land, than the land of dreams.

And I have gazed on scenes like this,
In many a by-gone day,
With fairy forms that now—ah, yes!
That now are far away;
I've listened to the silver tone
Of voices, joyous as your own.

But the glowing cheek, the sunny brow,
The bright eye's laughing beam,
The happy heart—what are they now?
Nought—but a vanished dream—
A severed chain—a broken spell—
A song, whose last note was—farewell.

Farewell! in bitterness, again
The parting cup is filled;
Its nectar draughts are—tears of pain
From throbbing hearts distilled,
And of that cup, each ruby lip
Now wreathed with smiles, too soon must sip.

Farewell! perchance we never more,
As we *have* met, may meet;
The by-gone paths we've rambled o'er,
May sound to other feet;
But will not memory's golden spell
Still linger, though we say—farewell?

Ah, yes! like old delicious lays
Of music's sweetness, borne
From the far distance of bright days,
That never may return—
Visions of early bliss will thrill
The spirit's rusted chords—farewell!

ALFRED CENTER, July 3d, 1854.

REFORMATION OF WILLIAM WIRT.

A TRUE INCIDENT IN HIS HISTORY.

The distinguished William Wirt, within six or seven months after his first marriage, became addicted to intemperance, the effect of which operated strongly on the mind and health of his wife, and in a few months more she was numbered with the dead. But his habits hung about him, and occasionally he was found with the jolly, frolicsome spirits of a bacchanalian revelry. His true friends expostulated with him, to convince him of the injury he was doing to himself. But he still persisted. His practice began to fall off, and many looked on him as on the road to ruin. He was advised to get married, with a view of correcting his habits. He accordingly paid his addresses to Miss Gamble. After some months' attention, he asked her hand in marriage. She replied:

"Mr. Wirt, I have been well aware of your attentions some time back, and should have given you to understand that your visits were not acceptable, had I not reciprocated the affection which you evinced for me. But I cannot yield my assent until you make me a pledge never to taste, touch or handle any intoxicating drinks."

This reply to Wirt was as unexpected as it was novel. His reply was, that he regarded that proposition as a bar to all further consideration of the subject, and he left her. Her course towards him was the same as ever—his, resentment and neglect.

In the course of a few weeks he went again and solicited her hand. But her reply was, that her mind was made up. He became indignant, and regarded the terms she proposed as insulting to his honor, and vowed it was the last meeting they should ever have. He took to drinking worse and worse, and seemed to run headlong to ruin.

One day, while lying in the outskirts of the city, near a little grocery or grog shop, drunk, a young lady, whom it is not necessary to name, was passing that way to her home not far off, and beheld him with his face upturned to the rays of the scorching sun. She took her handkerchief, with her name marked upon it, and placed it over his face.

After he had remained in that way for some hours, he was awakened, and his thirst being so great, he went into the little grocery or grog shop to get a drink, when he discovered the handkerchief, at which he looked, and the name upon it. After pausing, he exclaimed:

"Great God! who left this with me? Who placed this on my face?"

No one knew. He dropped the glass, exclaiming:

"Enough! enough!"

He retired instantly from the store, forgetting his thirst, but not his debauch, the handkercheif, or the lady, vowing, if God gave him strength, never to touch, taste, or handle intoxicating drinks.

To meet Miss Gamble was the hardest effort of his life. If he met her in her carriage or on foot, he popped around the nearest corner. She at last addressed him a note under her own hand, inviting him to her house, which he finally gathered courage enough to accept. He told her, if she still bore affection to him, he would agree to her own terms. Her reply was:

"My conditions are now what they ever have been."

"Then," said Wirt, "I accept them."

They were soon married, and from that day he kept his word, and his affairs brightened, while honors and glory gathered thick upon his brow.

His name has been enrolled high in the temple of fame; while patriotism and renown live after him with imperishable lustre.

Christian benevolence knows no distinction of age, sex, color, or condition. She turns away from none.

"NO HEART FOR IT."

Who is it that has no heart for it? Alas! the Pastor. He has assumed the care of a church embracing many families. These families comprise the rich and the poor, the learned and the unlearned. On assuming the pastoral care of them, he said, substaintially, "I am devoted to them all, and as much as in me is, I am ready to devote myself to their spiritual and eternal welfare. I will preach the gospel to them publicly, and from house to house. I will make the Scriptures my daily and prayerful study, that I may show myself a workman that needeth not to be ashamed, rightly dividing the word of truth. I will never bring unbeaten oil into the sanctuary—crude, undigested discourses, which hungry souls cannot feed upon. I will visit the fatherless and the widows in their affliction. I will inquire into, and make myself acquainted with, the spiritual condition of those who wait on my ministry. I will rebuke sin wherever I find it, not with harshness, but with meekness and love. I will pray with, and for, my people, and make it my great aim to save their souls, warning every man, and teaching every man, in all wisdom, that I may present every man perfect in Christ Jesus; and to this end will I labor, striving according to his working which worketh in me mightily."

Such is the work which the pastor has promised to do; but alas! he has no heart for it. He thought he had when he first undertook it, but he was deceived. Like a fool, he trusted his own heart on this point, (Prov. 28: 26,) but he finds that his heart fails him. His affections are upon other things. His mind is habitually occupied with something foreign to, or at best having but a remote connection with, the great work to which he has professedly committed himself. He is not what he promised to be.

In some instances, the intellectual part of a minister's work is creditably sustained, while every other is neglected. He is fond of study, fond of investigating doctrinal subjects, and of bringing his powers to bear upon their elucidation and defense. If his calling were simply to be a *lecturer* upon Christianity, there would be no room for censure. It could not be said, that he has no heart for the work; for his whole heart seems to be in it. But he has undertaken to be a *pastor*—that is, a *shepherd*, for such is the meaning of the term. And it is required of shepherds, that they be diligent to know the state of their flocks, (Prov. 27: 23,) look after the scattered ones, gather the flock together, and care for each according to his wants.

But in other instances, a minister has no heart even for his studies—that is, for such studies as are appropriate to his calling. He may love ancient history; he may delight in poetry; he may be fond of philosophical investigations; he may be a student, and a diligent one, of those departments of knowledge which pertain to this world merely. But the Bible is a comparatively dull book to him. If called upon to address a literary society, or to give a Fourth of July oration, he is ready for it, and acquits himself creditably. But his pulpit performances show, that the Bible has been but poorly studied. The richness, the unction, the heart-searching pungency of scripture truth, does not pervade his sermons. Let the priest's lips keep knowledge, for the people seek the law of God at his mouth. Mal. 2: 7. But he has no heart for it; it is not the kind of knowledge which interests him.

Other cases exist, in which the minister seems to be good at visiting. He is always at it, and surely, this is the minister that will do good. But it is merely *social* visiting, such as one neighbor passes with another. He has nothing to say about religion; or if he has, it is about the externals of religion chiefly. He deals not with the consciences of those whom he visits. He asks not after their spiritual welfare; he inquires not into their habits with respect to closet exercises and family prayer; he presses home no important truth upon them, nor aims to make his visit religiously instructive and profitable. His visiting is not *pastoral* visiting. Why? Because he has not a *talent* for it, he says. Is it not, rather, because he has no *heart* for it?

A member of the church is known to be living according to the course of this world. Not that he is immoral, in the popular sense of the term, or ever offends by scandalous behaviour. But his whole life shows, that the world is that which he loves above every thing else. He does not steadily attend meeting on the Sabbath. He is never at the prayer-meeting. He never prays in his family. He is backward to do anything for the support of the gospel, and what he gives is given grudgingly, and in niggardly measure. It is the minister's business to "save such a one with fear, pulling him out of the fire," (Jude 23d.) It is not agreeable business, it is true. It would be much more easy to let him pass, hoping that, under the Spirit of God, the labors of the pulpit would be the means of softening his heart. But year after year passes, and pulpit labors produce no reforming effect. The evil goes on increasing. Why does the minister hold back? Why does he not go, as Nathan to David, with the message, "Thou art the man?" O, this is a kind of work that he has no heart for.

No minister fulfills his calling, who is not given to much prayer. Sermons generally give evidence for themselves, whether they have been well steeped in prayer, or not. The pastor who neglects his closet, may expect that a blast will be upon his labors. If he pray not for the people of his charge, he need not look for their growth in grace. Nay, he may expect that troubles will spring up among them, and that Satan will sow the seeds of error. When the pastors are become brutish, and have not sought the Lord, then they shall not prosper, and all their flock shall be scattered. Jer. 10: 21. Paul prayed, and had great conflict of soul for his brethren, that they might become perfected. (Col. 2: 1. See also Gal. 4: 19.) The great Shepherd led one continued life of prayer. But the shepherds that do feed themselves, and not the flock, have no heart for prayer.

Brethren in the ministry, let us examine ourselves. Did we enter the service under the impression that pulpit proclamations of the gospel, or the delivery of lectures upon Christian topics from week to week, would discharge our duty? If we did, we wofully deceived ourselves. And if, after so many years spent in the work, we find that little or no success has attended us, let us inquire whether the true reason is not found in this, that we have no heart for it. "If we do this thing willingly, we have a reward; but if against our will, a dispensation of the gospel is committed to us." 1 Cor. 9: 17. T. B. B.

WASHINGTON.

We found Washington very truly a city of "magnificent distances;" but magnificent mostly in outline and extension—not in the filling out, the development of the outline. Notwithstanding the vast amount of money that has been expended on the public grounds and places, there might yet be expended much more, to better advantage than in the purchase of Cuba and slices of Mexico. The public buildings, many of them, are magnificent, but badly located in the general plan of the city, either for beauty and symmetry, or even for convenience. The Capitol, especially, though finely located on a commanding eminence, is, in its contour and general arrangement, not very well calculated to represent the legislative and governmental idea of a great, progressive, and majestic nation, as this nation undoubtedly is. Everything is cramped and crowded. There is a want of unity, grace, proportion, roominess, airiness. It is too full of petty offices, restaurants, dark, narrow passages, winding and cramped stairways. It is true, that when the wings in process of erection are completed, it will give more room, but not otherwise help the matter much.

The Senate Chamber and the House of Representatives occupy either wing of the Capitol. They are semi-circular, and of size sufficient to accommodate about the present number of members. On entering the gallery of the Senate Chamber, a scene presented itself, of grave Senators hurrying hither and thither, with the confused hum of conversation, and the rapping of desks for pages, which most effectually drowned the voice of the Clerk in reading the minutes of the previous day's proceedings, and equaled only by the voices of members from various parts of the chamber, vociferating, Mr. President, Mr. President, striving to get his recognition, that they may get their particular and favorite measures or profound speeches before the Senate. After various efforts, they settle upon the Homestead Bill, which henceforward becomes the great question of the day. It was a day of work, and of struggle between freedom and slavery, for the Administration's substitute for the people's bill is in the ascendant.

We took pencil portraitures of the various speakers and actors of the day, as they appeared to our view.

HUNTER, of Virginia, author of the substitute, is, physically, well developed—mentally also, I guess.

BELL, of Tennessee—a fine, lawyerly looking man—age about fifty-five—head symmetrical and bold—speaks not fluently, but with considerable force.

MASON, of Virginia—noble looking, gentlemanly bearing, dark visaged, small, dark, piercing eye, jutting eye-brows—a nervous, but slow and dignified speaker.

BADGER, of North Carolina—bold, blunt, uncouth in gesture, unmusical in voice, slow, and common place.

TOUCY, of Connecticut—tall, slim, intellectual, dignified—speaks with ease and grace.

BUTLER, of South Carolina—the most rustic appearing man of the Senate, looking like some old codger, long, uncombed hair, uncouth, with a nervous jerk of the head, a keen, twinkling eye, sharp, nervous voice—possessing much keenness, sagacity, and power.

BAYARD, of Delaware—dandified, with curled soap-locks, an interminable talker, without much force or thought.

CLAYTON—a large, tall, scholarly-looking man—slow, dignified, and graceful in debate.

TOOMBS, of Georgia—dark, loud, noisy, coarse, fierce.

JONES, of Tennessee—long and lank, sharp and sarcastic, bold and fearless, gallant in his bearing—a noble specimen of southern chivalry, and of a western ranger.

PETTIT—Whatever may be said of his name, in respect to his spiritual, it certainly belies him physically. He is a good representative of a large, fat, lazy landlord.

DOUGLAS—a small, well-proportioned "Little Giant," with an agreeable little phiz—a small, lively eye, and a cheerful expression of countenance—speaks fluently, but not very rhetorically. Phrenologically considered, his head is wanting in the moral and religious faculties, and fully developed in the animal. He is seldom in his seat, but seems to have business with every one in general, and no one in particular, dodging here and there, smiling to this one, shaking hands with that one, talking confidentially with the next one, bowing gracefully to the ladies in the galleries, presenting the very beau ideal of a well-dressed drawing-room gallant—reminding us from his general appearanee of General Tom Thumb in his triumphal marches through the land. Such is the favorite and pet of Washington circles, and the leader of the American Congress.

HOUSTON—a tall, slim, pleasant looking, dignified old man, speaks slowly, gracefully, and eloquently. It is amusing to see him sitting in his seat, calm, collected, and complacent, attending to his own business, which for the most part seems to be whittling in true Yankee style, which, by the way, he does not perform very gracefully, being left-handed. He has his desk well supplied with good pine sticks, from which he generally makes a very careful and judicious selection. Or perhaps he becomes tired of the knife, and takes up scissors and paper, and instructs grave Senators how to cut out various fanciful figures and images. But wo to the unlucky Senator who happens to drop a remark not consonant with his views. He is a perfect Nestor in debate, and has the coolest and most humorous way imaginable of threshing stupidity and meanness.

CHASE—tall, full chested, straight as an Indian, bald-headed, noble forehead, noble bearing, a voice like distant thunder—looks exceedingly care-worn.

WADE—a remote representative of Calhoun or Jackson.

SUMNER—a thin, medium sized, scholarly looking man—with a prominent nose, long shaggy hair falling negligently over a pale, classic forehead, small twinkling eyes, quick, free, agile gestures, sweet smile, pleasant ringing laugh, a full, clear, sonorous voice—one of the most interesting men of the Senate.

On entering the House, we found such noise and confusion reigning, that it was next to impossible to hear any of the speakers, unless they spoke to the utmost stretch of their voices. It is well that the Americans are not fully aware from what utter confusion most of the national laws emanate, lest they might have less respect than now for them.

The Senate, after struggling through a ten-hours session, killed the Homestead Bill, adopted the substitute in Committee of the Whole, engrossed it for a third reading, and—adjourned. *

COMMUNION AT THE LORD'S TABLE.

I am induced to make some further remarks upon Communion, not for the purpose of prolonging the discussion, but in order to have a better understanding with brother Wheeler on this subject.

By his article on *Open Communion*, published in the *Recorder* of June 29th, he has taken a stand, not only against what I have written on the subject, but against the well-known sentiment and practice of the denomination of Christians of which we are both members. He says, "In reading these articles, had I been an individual of another denomination, I should certainly have considered myself classed with the vilest of men." Brother W. was formerly in this relation to his Sabbath-keeping brethren. Did he then understand that he was thus classed by us? He knew, or ought to have known, that the people with which he subsequently united held to a limited communion. He also knew, that this people professed to believe that the violation of any of the commandments of God is sin, whether it involves the transgressor in the sin of *incest, idolatry, Sabbath-breaking, covetousness, railing, drunkenness,* or *extortion.* And he also knows, that the apostle Paul, in 1 Cor. 5: 11, forbade his brethren to eat with such as were guilty of these offenses, even though they were called brethren. I am persuaded that he will admit, that a violation of the fourth commandment, whether by a repudiation of the precept, or by a plea of a change of the Sabbath from the seventh to the first day, is, scripturally and strictly, an unfruitful work of darkness. It is either a work of darkness or of light; that it is the latter, he will not pretend. We then can have no fellowship with, but are bound to reprove it. Eph. 5: 11. The same admission will he also make in regard to the innovations practiced in the ordinance of baptism, i. e., that they are a violation of gospel order, and that they are not according to any written or unwritten apostolic tradition authoritatively transmitted to us. Now, whatever our feelings or wishes may be towards such as err in these things, we are commanded, in the name of our Lord Jesus Christ, to withdraw from them. And the apostle adds, (2 Thess. 3: 14, 15,) "If any man obey not our word by this epistle, note that man, and have no company with him, that he may be ashamed; yet count him not an enemy, but admonish him as a brother." Brother W. must abide by this instruction, or fall under the rebuke of the apostle and of the church.

Brother W. further says, "to his understanding, at least, an incestuous person and a first-day professor are placed upon the same seat, though he is called a brother believer in Jesus Christ." If our first-day brother occupy that seat, we have not placed him there. If he prefer his errors to a seat with us at the communion, who is to blame? But I have advanced nothing intimating that I consider such a person *as a flagrant violator of all morality,* as he seems to charge me. That his walk is not according to gospel order, I do hold, and so does brother W., and if we are consistent, we shall be more anxious to obey the apostle, than to withhold the rebuke which he commands us to administer, "*counting him not an enemy, but admonishing him as a brother.*" The position of such a brother, so far as the communion is concerned, is the same as that of a convert who has made no public profession of his faith, has not obeyed Christ in baptism, nor become a member of a gospel church. I know of no open communionist who would think it proper to extend the communion to such a person. Our first-day brother could place himself on the same seat with him, if both should happen to be present at a communion season.

I forbear following out the possible and legitimate results of Open Communion. Suffice it to say, that having taken this stand, we could object to no professing Christian, real or nominal, though he be a violator of the law of God, a trafficker in human beings, an abettor of intemperance, or a keeper of a brothel, provided he claims to be a Christian, and we may have no means of knowing that he is not such a person. And who will deny that persons guilty of these vices can be found in what are called Christian churches? Whatever the workings of open communion may be in first-day churches, he knows but little of the history of our own churches, who does not know that the practice has been disastrous to every Seventh-day Baptist church that has adopted it. No course has proved more directly suicidal. There could be no effective discipline where it has been practiced. All such Sabbath-keeping churches have become extinct. If it be right to sustain our church organizations, it would be wrong to adopt a practice which would destroy them.

We are not yet prepared to condemn the piety, wisdom, and foresight of those ancient and devoted fathers and mothers in Israel, who bore up under a weight of reproach and persecution for conscience sake, which would have driven their yielding posterity into obscurity and oblivion; and who, under the guidance of the Scriptures, and influence of the Holy Spirit, withdrew from their erring brethren, and organized the church upon a more scriptural basis. Until it can be shown that they were mistaken in their work, and that they departed from the word of God in their religious theory and practice, and in the discipline which they established, it will become us to be cautious in advocating innovations, which would set their wisdom and labors aside. Indeed, we should not feel ourselves at liberty to sow the seeds of discord and division in the denomination; especially by proclaiming to the church and to the world, that we are corrupt, and inconsistent in our practice—that we foster all the heresies that are abroad in the land. If it be so, that we and our fathers have mistaken our true line of duty in this, or in any other matter, is it prudent to openly proclaim it to the world, without first presenting the matter of our dissatisfaction to a proper ecclesiastical body, where the subject can be deliberately discussed, and there show the church that she is in an error? No brother should feel himself at liberty to advocate, publicly or privately, an innovation upon the established practice of the denomination, which, should he be successful in gaining proselytes, would result in discord and division. The case is quite different with such as endeavor to bind to our common confession of faith and established religious customs. If these are to be, or ought to be changed, they should be brought before a lawful assembly, to be disposed of by the united wisdom of the whole body. The instruction of the apostle in Romans 16: 17, should put us on our guard against causing discord and division among brethren.

It may be that we have among us *Unitarians, Universalists, strong Arminians,* and likewise Trinitarians and Calvinists. But our general confession of faith does not admit of the reception of a member who does not believe that salvation is by grace through the atonement made by Jesus Christ, and that those who die impenitent will be subject to endless misery. If we have infidels in the church, they have crept in unawares, or have become such since their admission. If we know this to be the case, it strikes me that it is not the most excellent way, to hold up to the gaze of all mankind our spots and blemishes. A better work would it be to endeavor to lead our erring brethren back to the faith once delivered to the saints.

I am painfully conscious that we are not the people we should be in the purity and harmony of our faith, and rectitude of our practice. And I believe it is the imperious duty of all the members of the denomination, and especially such as occupy the position of teachers of the people, to follow after the things which make for peace, and things wherewith one may edify another.

W. B. MAXSON.

LEONARDSVILLE, N. Y., July 31st.

SELLING LIQUOR ON SUNDAY.—The business of selling liquor in a retail way on Sunday seems to be just now in bad odor. In New York, Brooklyn, and Williamsburg, and also in several neighboring cities, strenuous efforts are being made to put a stop to it, by instituting legal proceedings against the offenders. As the law now stands, no doubt the Sunday traffic is illegal; and perhaps it is as well that the law should be enforced. But we hope the day will soon come when the whole traffic will be pronounced illegal, so that the friends of good morals will be relieved from the inconsistency of prosecuting men for doing on Sunday what they are licensed to do on the other six days of the week.

LETTERS FROM PALESTINE—NO. 3.

The Route by Sea—Smyrna—Bark Adolar—Journal—Approaching the Promised Land—Reflections.

JAFFA, 5 mo. 31, 1854.

My dislike to sea life made the voyage from my native land hence seem somewhat protracted, though in reality, considering the means of conveyance, (sail vessels,) it has been a quick passage. Fifty days from Boston to Smyrna, six days ashore there, and eleven days thence to this port, in all sixty-seven days. The bark's course from Boston to Smyrna varied from the latitude of B. to 44° 55', thence down to 35° 45' north. We entered the Archipelago off Cape Matapan, south of and close by Egg Rock. In sailing up the sea of islands, we left the islands of Deuro, Andros and Scio on the right; on the left, Negropont, Ipsard, and Mitylene. The direct course from Smyrna to Jaffa is first west 15 miles, then N. W. 30 miles, W. 10 miles, S. 60 miles, S. S. E. 80 miles, S. E. 70 miles, thence S. E. by E. ½ E. 440 miles, distance 705 miles. Light baffling winds drove us from our course when off Mitylene, and also when off Cyprus. The distance from Boston to Gibraltar, or to the Rock, as the sailors call it, as given by the Captain, is 3,350 miles, and thence to Smyrna 1,800; whole distance to Jaffa, 5,855 miles; but the distance as we sailed was probably about 7,000 miles.

I have to regret that circumstances did not favor us, while at Smyrna, with a view of the site of the ancient city, and of the ruined amphitheatre, where it is said that Polycarp suffered martyrdom. I could but reflect that I was near the spot where was planted one of the seven churches of Asia, mentioned in Revelation, which was poor, suffered tribulation for a time, and yet was rich in faith, and long since received the crown of life. I almost imagined myself treading in the footsteps of John the Divine. At least, I assured myself that holy men of old had journied to and fro over the same ground, where now I saw the busy throng hurrying heedlessly and thoughtlessly onward to the grave, with scarcely a thought for divine compassion or need of mercy. Long, long years have changed the scene, the inhabitants, their character and condition. Ah! how much do they need the converting power of the gospel. Here is a great field for evangelical labor, and certainly material enough to try the patience of as many Jobs as the Christian church can afford to send and support. And surely, none but those who can exercise this grace should come here to live as missionaries of the cross.

We were introduced to three missionaries of the American Board, and to one of the Church of England. Three of these four are missionaries to the Jews. One of them has been in Smyrna twelve years, and as yet but little fruit attends his labors. The mission of the American Board to the Jews is but recently established. The missionaries, Messrs. Morgan and Parsons, made us a present of a few Spanish books and tracts, printed in Rabbinical characters, such as are used by the Jews in this region in their written language.

The population of Smyrna is variously estimated from 125,000 to 180,000. It is made up of Turks, Greeks, Armenians, Latins, Jews, and Franks. The latter class includes, as near as I can understand, both Europeans and Americans. Of Arabs there are but few if any. It seems to be expected of every man of business, that he should speak two, three, four, and even more languages. The numerical order in which the several languages are spoken is as follows: Turkish, Greek, Italian, French, Armenian, Spanish and English. The Propaganda, a large Catholic college, does much to keep up and spread a knowledge of the French. I was frequently told that all the educated young men of Smyrna spoke French. In company with one of the graduates, I visited the aforesaid college, but it being at the time of study, I was shown only to the library, the court, which was quite spacious, and the chapel. The students are assembled twice a day before the altar, pictures and images, for prayers. We visited two mosques, a synagogue, a Greek church and Latin. Romanism appears the same here as I have seen it in the West Indies, in Canada, and at home. The service and furniture of the Greek Church differs but little from the Latin. In the mosques nothing was to be seen but a few lamps and some Arabic characters printed on the walls, and here and there a worshiper bowing towards Mecca. In the one where our ladies accompanied us, they were just closing their service. Mats were spread over the floor; on one side of the room was a small stand, and a man reading the Koran to a few listeners, who were in a sitting posture, and occasionally bowing to the ground. We advanced into the chapel, but were requested by several to take off our boots and shoes, a rather inconvenient and untimely operation for us, to which we were quite indisposed. After a short stay, we retired, and perhaps saved ourselves some trouble in so doing. Our guide asked us four piasters—glad to get rid of him at that price. At the synagogue we saw some four or five hundred Jews. The priest was not present. After an hour and a half spent in a kind of sociably clamorous reading and chanting, the Law was brought forth, a few passages read, and then returned to its place in a little closet in the side of the house. With a good deal of ceremony it was taken out and carried up into the altar, the people weeping at the sight thereof, and when the service closed, it was borne back to its place, accompanied with a great deal of pressing and crowding in order to get near so as to kiss it. In the midst of the service there was a short interval devoted to secret prayer. The whole was to us strangers very impressive; at times quite solemn. While their eyes were uplifted and they engaged in prayer, I too lifted my heart to God, that the veil might soon be taken from their hearts, that they might see and acknowledge the Messiah.

We made a brief visit to the barracks, and were apparently well received. We were shown through spacious halls, where were groups of soldiers at supper. Their sleeping apartments were also quite comfortable. Thence we were introduced to the lieutenant's room, where, according to the invariable custom of the country, we were offered the pipes and a cup of coffee—the former was refused—the latter was accepted.

Returning to our lodgings, the same evening, we had a glimpse of the Pasha, who bowed to us very politely.

To an American, Smyrna is anything but a pleasant city, chiefly on account of its very narrow, crooked, nameless streets, and withal too filthy for health or comfort. Alleys would be a more appropriate name for the widest of them. There are no carriages, no carts nor wagons. All burdens are carried by men and animals. At every corner, turn, and road he makes, the pedestrian must be on the look out, as he is in danger of a rubbing or of being pushed over by a hog skin or goat skin filled with Dutch cheese or water, borne on the half-bent back of some poor man, or smutted and pressed against the wall by a camel load of coal, or sent sprawling upon the pavement by a man load of boards or timber. Fortunately, I escaped without accident of this kind, though I saw a fine broadcloth greased or soiled by a stuffed skin, a damage which made me watch sharply for my own interests.

The evening following Sabbath, the 6th inst., at 9 o'clock, we embarked on board the Austrian bark Adolar, Captain Gersaglia. Several persons, mostly young men, called at our rooms and bade us farewell; some of them requested correspondence, with which we shall try to comply. We shall not soon forget them. On our way to the Adolar, hailed the Rose Pool and bade her crew a hearty good bye. Captain H. and lady accompanied us aboard, and after half an hour gave us the parting hand. Some time after midnight our vessel got under way. At sunrise we were only nine miles from town, sailing under a very light breeze. More wind in the afternoon, but contrary. Troubled again with sea-sickness, though better at night. Read part of the 20th chapter of Acts, where it speaks of Paul's voyage from Troas to Mitylene. We were off this island beating about under contrary winds. Two vessels were seen on the island coast signalizing each other with lanterns. We signalized one astern. There is a report of pirates in these waters. If there be danger, we feel that God will protect us.

The morning of the 8th we passed the Straits of Scio and near the village of Scio, which appeared to stretch along the coast for six or seven miles. In the harbor are a number of vessels. The country around is well cultivated. A little further on passed the island of Samos.

9th. Passed the islands of Nicaria, Miconi, Nuxia, Denusa and Buey. Amargo is in sight, also the Fourmi Isles. Before us, a little to the lelft, is the island of Patmos, where John wrote his Revelation. See a large village or city on one of the mountain hights.

10th. Passed the islands of Binaso, Levitha, Coos, Stanpalia, Safrani, St. John, Shefri, Niceso and Tilos.

11th. Saw Scarpenta on the left, and Rhodes on the right.

13th. A fine day. Enjoyed the Sabbath very much. Have spoken frequently to the Captain on religious subjects, but he generally evades the conversation by calling attention to something else. He remarked to-day, "It is true, this is the Holy Bible, but it brings in but little money." A part of the Bible Class lesson was explained to him. Took my Greek Testament forward for the Greek sailors to read the Lord's Prayer and other portions. Through a few words of Italian tried to preach to them the words of this great salvation. O that the Spirit of God may enlighten them, and his word bring them to Christ.

14th and 15th. In sight of the Island of Cyprus. We make slow progress, but the weather is fine. Thus far we have enjoyed ourselves very well. The vessel is roomy, affording us space for exercise; the Captain frequently puts up an awning on deck to shade us from the hot sun. All on board treat us very respectfully. Our fare is rather coarse, but it is substantial. George, the steward, speaks a little English, is quite humorous and very accommodating. The sailors seem to have quite an easy time, are orderly and make but little noise.

16th. We are now, at 6 P. M., 95 miles from Jaffa. As we near the Holy Land, I cannot help thinking of the places and the country where have been made visible so much of the power, wisdom and goodness of God. May my sojourn there be attended with success and characterized by a holy life. Would like to profit upon the first view of the sacred mountains to renew covenant with God, to be more wholly his for time and eternity. Why doubt and fear, my soul? Cast all thy care upon the Saviour. His promises are sure—never failing. He will not forsake those who put their trust in Him. And as to success, how important to believe the fact that His word can soften stony hearts, and bring Jew and Gentile to sit at the feet of the King of kings.

The Jubilee at Union College.—The celebration of the fiftieth anniversary of the presidency of Dr. Nott drew a great crowd of visitors at Schenectady. Judge Campbell, of New York, delivered a very instructive historical address, in which he said that Dr. Nott had personally instructed more than 3000 men, whose influence was now felt in every department of society.

After the playing of "Hail Columbia" by the band, Dr. Nott entered the church, leaning on the arm of a gentleman, and moving with difficulty. He was received with loud and repeated acclamations, and took his seat apparently much affected by the occasion and the reception. Dr. Wayland then delivered an address, because commanded to do so, he said, by his former friend and preceptor, from whom, though his own hair was then gray, he had in his youth received the lessons of wisdom. His discourse regarded the higher effects of education. Dr. Nott himself also addressed the great assembly, with much feeling. After the venerable speaker had retired, the alumni, on motion of Judge Parker, unanimously adopted the following resolution:

Resolved, By the alumni here assembled, that we tender to Dr. Nott our most respectful and heartfelt congratulations on this epoch of his life. We congratulate him on the unprecedented period of half a century, during which he has presided over this college, and in which, under his wise administration, it has grown from the acorn of 1804 to the wide-spreading oak of 1854; we congratulate him on the manifold contributions to literature, science, and religion, which Union College has sent forth during these fifty years; we congratulate him on his triumph over the recent attacks upon him; for though, from the very first, we were well assured of the result, yet we could not know the unparalleled magnificence which it was to reveal; and lastly, we congratulate him on the affection and admiration which he so wonderfully inspires in all those who have sat at his feet, and of which our presence here is a proof; and we hope to return for many succeeding years to renew these our congratulations. *Serus in cœlum radiat.*

At the suggestion of Dr. Hamilton, of Buffalo, a committee was appointed to take measures for the erection of a statue of Dr. Nott in the college grounds.

The Liquor Law in Vermont.—At the recent session of the County Court in Caledonia county, the Grand Jury gave strong testimony to the efficacy of the Anti-Liquor Law, by their report in regard to the county jail. They say:—

"Having in view the present situation of the county of Caledonia, although our predecessors have reported the jail insufficient, we report that, in our opinion, the same is sufficient for the present, at least for this year, while the present Maine Liquor Law is in force. We will further state one particular reason of our coming to this conclusion: We are informed by the present high-sheriff of this county, who had the general supervision of the jail for the last two years and the present year, that the prisoners during the said time have gradually decreased till the present term of this court, and for the first time for several years past the jail has been entirely free from prisoners."

The Grand Jury of Orleans county bear similar testimony to the value of the law in that county. The following is an extract from their jail report:—

"Owing to some cause, and we believe our Liquor Laws the principal, the jail has had for a few years past but few occupants, and the certainty of the continuance of the present law, we believe, renders it unnecessary at present to do more than to cleanse and whitewash the rooms."

The Maine Law at Home.—The report of the overseers of the House of Correction in Portland, Me., to the county commissioners, is official evidence to the salutary operation of the Maine Law, and to the good effects of closing rumshops:—

"For the year ending June, 1853, we felt much encouraged when we were enabled to report that there had been but *forty-nine* commitments for the year, or less than one a week. But how much more pleasure it gives us, you may judge, and will undoubtedly participate in, as all human hearts will, to state that the commitments for the year ending with June, 1854, are but *nineteen!* a diminution of *thirty*. And, better still, that for the last six months there have been but *seven*. This is certainly a most cheering account. With but *one* exception, they were sentenced to the House for that devastating sin, drunkenness. Remove that evil from our midst, and the cells would be solitary. It seems, by the comparison of the two years, to be fast diminishing. We trust another year may present a still purer docket."

Christianity in Lapland.—Rev. W. Brown says that though now it is near three centuries since the Swedes began to extend the gospel in Lapland, it has hitherto made little progress. The inhabitants, it is true, are professed Christians; but their Christianity is merely nominal, and among some of them the form of it may be sought in vain. Traces of their having offered sacrifices to the gods of their fathers are occasionally discovered among them. Few of them reside in the neighborhood of the churches; and, indeed, they seldom attend them, unless on the solemn festivals, or at a fair, when they have the sacraments administered to them. To insure their attendance, they are subjected to a heavy fine, and a severe penance if they neglect the appointed festivals. The clergy, such as they are, go little among them, except during their short summers, they are careful, however, to attend the winter markets to receive their pay, and to sell them spirituous liquors, of which they are immoderately fond, and of which, it is said, they can drink an enormous quantity without being intoxicated.

Correction.—In our notice of the meeting of the Central Association, in the *Recorder* of June 15, two names were inadvertently omitted from the Council appointed to visit the churches in Jefferson County. The Council is to consist of Thomas B. Brown, Geo. Greenman, Thomas E. Babcock, Joseph Potter, Leman Andrus, Jonathan M. Allen, David Dunn, John T. Davis, and John Maxson.

Abstract of Proceedings in Congress.

SECOND-DAY, JULY 31.

In the **Senate**, Mr. Rush reported a supplement to the Post Route bill, which was passed. The Senate then took up the House bill amendatory of the postage law, some trifling amendments were agreed to, and the amendments of the House concurred in, when the further consideration of the bill was postponed for the present. [The bill fixes the domestic postage at three cents per single rate for a less distance than 3,000 miles, and five cents over that number of miles; foreign postage five and ten cents, both to be prepaid in all cases.] Mr. Seward reported a bill for the relief of Betsy Nash, widow of Dr. Nash of Madison Co., N. Y., an officer of the war of 1812. Mr. Adams of Miss., moved an amendment by adding a section for the relief of the widow of James Batchelder, who was killed in the Burns fugitive slave riot in Boston. After an exciting debate, the amendment was adopted, and the bill as amended passed. Mr. Sumner then asked leave to introduce a bill for the repeal of the Fugitive Slave Law, which caused great confusion. Objection being made, leave was refused. The River and Harbor bill was then taken up, but no action on it was reached.

In the **House of Representatives**, Mr. Wheeler presented a memorial from merchants in New York trading with San Juan asking remuneration for property recently destroyed by United States authority at that town. The House then went into Committee on the General Appropriation bill, as returned from the Senate with numerous amendments. The clause for the erection of public buildings in Kansas and Nebraska being under consideration, Mr. Giddings moved to strike out certain words, leaving the remainder to read that the act for the organization of those territories be repealed. After considerable debate, the motion was rejected by a vote of Yeas 50, Nays 73. After acting on other amendments, the Committee rose. The Speaker then laid before the House a message from the President in reply to Mr. Chandler's resolution calling for information relative to the recent destruction of Greytown.

THIRD-DAY, AUG. 1.

The **Senate** spent most of the day on the River and Harbor Bill, which was passed. After the transaction of some unimportont business, Mr. Mason of Virginia offered a resolution, which was adopted, calling on the President for information as to whether any thing had transpired since the issue of his proclamation upon the seizure of the Black Warrior, so changing our relations with the Government of Spain as to obviate the necessity of the adoption of the provisional measure suggested by the President in the said proclamation. The River and Harbor bill was then taken up, several amendments adopted, and the bill passed. After the transaction of Executive business, the Senate adjourned.

In the **House**, a bill was reported remodeling the Consular and Diplomatic systems of the United States. The bills from the Senate, constituting Lakeport, La., Paducah, Ky., Shreveport, La., Jeffersonville, Ind., Madison, Ind., Tuscumbia, Ala., ports of entry; and creating collection districts in Texas and New Mexico, were severally taken up and passed. The Civil and Diplomatic bill was then taken up. The Senate's amendment increasing the salary of the Chief Justice and Associate Justices, was rejected; also the amendment to reïmburse Edward Riddle such sums as were expended by him in his official position at the Industrial Exhibition at London; also the amendment appropriating half a million dollars for the continuation of the works for supplying Washington and Georgetown with water. The amendment appropriating $1,800,000 for the construction of Custom-Houses, Post-Offices and Courts, was agreed to. The Senate's amendment, authorizing the President to employ in his official household a Secretary, Clerk, Steward, Messenger and Assistant Messenger, was rejected.

FOURTH-DAY, AUG. 2.

In the **Senate**, Mr. Fish, from the Select Committee, reported a bill for the better preservation of the lives and health of passengers on board of emigrant ships, and presented a memorial from American citizens suffering by the burning of Greytown, praying for indemnity. The House amendment to the bill making Tuscumbia, Ala., a port of delivery was concurred in. The Fortification Appropriation bill was taken up and passed without amendment. The Senate then proceeded to the consideration of the Post Office Appropriation bill. An amendment was adopted, allowing the Postmaster of Washington City one mill per pound for public documents passing through his office, out of which commissions he is to pay his employees an increased compensation of $250 each. Several small amendments were agreed to, the bill was then reported to the Senate, the amendments made in the Committee of the Whole were concurred in, and the bill was read a third time and passed. The Civil and Diplomatic Appropriation bill was then taken up and discussed.

The **House** concurred in the Senate amendments to the bill to provide accommodations for the U. S. Courts in New York, Boston and Philadelphia. The consideration of the amendments of the Senate to the Civil and Diplomatic bill was resumed. The amendments were acted on, the House generally concurring in the recommendations made in Committee of the Whole, and the bill was returned to the Senate.

FIFTH-DAY, AUG. 3.

In the **Senate**, Mr. Hunter reported back the Ocean Mail Appropriation bill. The bill to provide for the surrender of certain bonds of the State of Indiana was adopted. The Naval Appropriation bill was then taken up, several amendments were adopted, the bill reported to the Senate, and the amendments concurred in. The Light House bill was then read a third time and passed. The House bill repealing the act granting lands to Minnesota, was taken up, and after considerable debate was concurred in. The Committee on Foreign Relations, to whom was referred the President's Message, reported against placing the sum of ten millions of dollars at the disposal of the President with a view to the purchase of Cuba. The Naval Appropriation bill was then taken up, and the amendment dropping incompetent officers was agreed to, and the bill passed.

In the **House**, a message was received from the President, transmitting a copy of the Reciprocity Treaty between the United States and England, and asking the necessary legislation to carry it into effect. A majority and minority report was presented from the Select Committee, on the alteration of the Minnesota Land Bill. Both reports exonerate from fraudulent intent, but at the same time censure the change, indirectly fixing the responsibility on Col. Forney, the Clerk of the House. Each report is accompanied by a bill. The bill repealing the Minnesota Land act, was passed. Mr. Hunt of Louisiana offered a resolution to expel John W. Forney as Clerk of the House, and after an exciting debate the resolution was rejected. Mr. Letcher then made a report in part from the Select Committee on the Colt patent, which was laid on the table and ordered to be printed. The report is to the effect that no evidence was shown that corrupt means had been used to procure the passage of Mr. Colt's patent. An ineffectual attempt was then made to take up the Homestead bill, also the River and Harbor bill; after which some other business of no special public importance was transacted.

SIXTH-DAY, AUG. 4.

In the **Senate**, the bill from the House to reduce and graduate the price of the public lands was passed. The bill to increase the rank and file of the army was also passed. The report of the Conference Committee on the Army bill was concurred in. The bill to carry into effect the Treaty of Reciprocity concluded between the United States and Great Britain was then received from the House and passed. The Senate agreed to the amendment of the House for a final adjournment at eight o'clock on Second-day morning. The report of the Conference Committee on the Post Office Appropriation bill was received and concurred in. The Committee of Conference on the Ocean Mail Steamship Appropriation bill reported that they were unable to agree. The amendment on which the disagreement exists is the one by the Senate striking out the clause requiring the Secretary of the Navy to give notice for the discontinuance of the contract with the Collins line. All the appropriation bills were passed except the Ocean Mail Steamer Appropriation bill. At two o'clock in the morning, the Senate adjourned, after a session of twenty-eight hours.

In the **House**, the report of the Committee of Conference on the Army Appropriation bill was concurred in. The Conference Committee on the River and Harbor bill made a report, which was agreed to. A bill to carry the Reciprocity Treaty into effect was then passed. The Committee on the Judiciary made a long report on the subject of the Gardiner and Mears frauds, which was ordered to be printed. A resolution was then adopted requesting the President to institute proceedings in law or equity against all the agents, attorneys and confederates who may have assisted George A. Gardiner and Mr. Mears, or either of them, in procuring awards from the Mexican Board of Commissioners, in order to test their liability to refund the amounts paid them as such agents, confederates, attorneys or assignees. Various Senate bills were referred, and among them one providing for the payment of such creditors of the late Republic of Texas as are comprehended in the act of September, 1850, appropriating $8,500,000, was referred to the Committee of Ways and Means. The Speaker signed the bill making appropriations for the Civil and Diplomatic Expenses of the Government, and increasing the pay of the rank and file of Army; also the bill declaring the Southern Boundary of New Mexico, by the annexation of the Territory recently acquired from Mexico, and also the bill for the Improvement of Rivers and Harbors. The President's message vetoing the Rivers and Harbors bill, was received.

SABBATH-DAY, AUG. 5.

In the **Senate**, nothing of importance was done, except that a large number of enrolled bills were signed by the President of the Senate—among them the Army and Post Office Appropriation bills.

In the **House**, there was scarcely a quorum of members, and almost the whole day was taken up in talk about the vetoed River and Harbor Bill.

[In both Houses, the session was evidently considered at an end; many had started for home, and the few who remained adjourned to meet for half an hour on Second-day morning.]

European News.

Of the news from Europe received since our last, the following summary contains every important item.

The Turks have gained some considerable advantages at Giurgevo, on the north bank of the Danube, and at Chernavoda on the south.

From the Black Sea it is stated that Sir Charles Napier has at last received permission to attack Cronstadt, and will soon set about it.

In Asia, Kerim Pacha had surprised 12,000 Russians and defeated them, capturing six guns and 400 men at a pass in the mountains.

In Spain, the revolution is gaining ground, and threatens to overthrow the present Government entirely, the insurgents being masters at Madrid, the garrison had pronounced against the Queen, and San Duio, the Premier, had fled.

Affliction of Ex-President Fillmore.—The New Haven *Journal and Courier* states the following incident:—

The telegraph on Friday announced the sudden death of the amiable daughter of ex-President Fillmore, and to-day we hear the news of the death by cholera of his brother, Charles Fillmore, at St. Paul, Minnesota. About a month ago we were coming down the Mississippi on the Golden Era, in company with President Fillmore and his daughter, when we were met by an upward bound boat having Charles Fillmore on board, and the two boats rounded to, for the purpose of allowing the brothers to meet for a moment. The interview was probably their last. Within a few weeks the daughter and brother are gone—both stricken down within a few hours from each other of the same disease, though hundreds of miles apart. Then they were in perfect health and enjoying to its fullest extent the pleasures of a magnificent excursion; now they both sleep in the tomb, and their father and brother is left to mourn almost alone the loss which can never be replaced.

Moravian Missions.—The United Brethren are followers of Count Zinzendorf, and constitute the first Protestant Church engaged in the missionary work in modern times, having begun their foreign operations as early as the year 1732, and counting among the missionary heralds some of the most devoted and zealous men the world has seen since the time of St. Paul. According to their last report, their income last year was 86,221 rix dollars, or, as the rix dollar is seventy cents of our currency, $60,354; their expenditures 83,419 rix dollars, or $58,393. The different fields of labor which they occupy, with the number of stations, missionaries and church members on each, are:

	Stations.	Missions.	Members.
Greenland	4	23	2,017
Labrador	4	30	1,308
United States	4	15	499
Danish W. Indies	3	8	2.595
St. Croix	3	13	5,591
St. Juan	2	5	1,901
Jamaica	13	36	13.311
Antigua	7	19	8,021
St. Villes	4	11	4.045
Barbadoes	4	12	3,710
Tobago	4	6	2,100
Mosquito	1	4	20
Surinam	8	55	17,933
South Africa	9	55	6,160
New Holland	1	2	
Total	70	296	65,149

Israelites in Boston.—The Boston correspondent of the *Independent* says that in that city the Israelites have made a handsome gain since their organization in 1843, with ten families. Now they number one hundred and twenty families, and have a neat house of worship on Warren street, that will seat five hundred persons, with rooms for a school and for business purposes. Their incorporated name is "Ohebei Shalom," which signifies friends of peace. Their minister is honored with the ancient title of Rabbi, and on their Sabbath, which is our Saturday, he reads from the five books of Moses, written on parchment, in Hebrew; and indeed all their public services are conducted in the Hebrew language, and they teach this to their children, as well as the English. They allow no mixing up of sexes in the congregation, but the women sit in the gallery, and the men occupy the body of the house. They have a burial ground at East-Boston, and also a market of their own, where all their meat is prepared, by being separated from the blood. They are a quiet, orderly set, and eschew the riots and mobs in which the children of the Pope make themselves notorious. No one deprecates their increase, which is quite rapid.

SUMMARY.

The general impression has been, that the experiment of making the Clinton State Prison pay for itself, or even its running expenses, by the manufacture of iron, would be a failure. But the prospect is now more favorable. The Albany *Express* says, that the experiment has now been brought to a successful issue; that on the 28th day of June last, the first specimen of iron was obtained, and that at the present time, with but one furnace, twelve tuns per day, of the very best quality of iron, are being run.

The Receivers of the Cochituate Bank have made their first report. They have reached in cash one hundred and sixty-eight thousand dollars. They have good debts to the amount of $131,000, and must realize $90,000 of the $350,000 doubtful debts, in order to pay off all claims except the stock. The Receivers propose to declare a dividend of fifty per cent., but the Court postponed it to August 22, in order to allow creditors time to look into the Receivers' report.

One of the latest Boston "notions" is that of a locomotive engine so constructed as to run from Boston to Worcester and back with one cord of wood! The distance between these two points is forty-five miles, and the running time each way was one hour and fifteen minutes, or ninety miles in two and a half hours. If this is not the greatest speed ever attained, it is the greatest economy by far.

One of the greatest triumphs of the invention for cutting staves out of solid blocks of timber that cannot be split, is the use of Cotton wood, hitherto considered one of the most worthless, yet most common trees of the west, and one that grows more rapidly than any other. The wood is sweet and sufficiently strong for flour barrels and all dry casks. It is considerably used in the neighborhood of Alton, Illinois.

The entries of government lands in Iowa, at the present time, far exceed all former precedents, even the great speculative times of 1846. The gross amount of land entries in this State for that last thirty days, has not been far from 100,000 per day, and the receipts for the current year will be more likely to exceed than be less than seven millions of dollars.

Near Milwaukee, Wis., a few days ago, five persons were burnt to death. They lived in a small shanty about twelve feet square. The only door into the hovel was through the inner part of the small wing, and it is supposed that by some carelessness that wing, which was used for cooking, took fire, and the smoke suffocated, while the flames prevented the escape of the unfortunate victims.

The State of Michigan has the honor of being the first State in the Union, if not in the world, which offers to the student *from all portions of America* a complete collegiate course of medical instruction *free of charge*. The College is in Ann Arbor, where seven Professors are on duty, and the course of studies is said to be comprehensive and thorough; the term commencing on the first of October, and continuing six months.

The *Christian Advocate* says that the large gambling-saloon in Sacramento, corner of Second and Jay streets, has been changed to a clothing establishment. What a salutary revolution! Before, men were robbed there; now, for a fair compensation, they will be clothed.

The Salem *Observer* says that Mr. Thomas W. Sweetser, recently deceased at Boston, has bequeathed the sum of $10,000 to the city of Salem as a fund, the interest of which is to be expended, under the direction of trustees, in furnishing cooking stoves and fuel to poor families.

A dispatch dated Boston, August 2, 1854, says: A suit, in which damages are laid at $20,000, has been instituted by a gentleman of West Roxbury against Mayor Smith, Marshal Freeman, Gen. Edmunds, and others, for injuries sustained on the occasion of the rendition of the fugitive Burns. Writs have been served on the above parties for their appearance at Court.

It is reported that nearly 2,000 dogs have been slaughtered at the public pound in New York since the Mayor's edict went forth on the 26th ult., and that nearly an equal number have been redeemed alive by their owners. Over $2,000 have been paid to the dog-catchers. The war against unmuzzled dogs will be continued until the 1st of September.

In Brooklyn, N. Y., Aug. 2d, J. N. T. Tucker, editor of the *Eagle*, killed his own child, four years old, by cutting his throat with a razor. Tucker was formerly a Baptist minister, but has latterly been very intemperate, and probably committed the awful deed in a fit of insanity produced by hard drinking.

A ship from Leghorn arrived at New York August 3d, bringing 25 Italian patriots to our shores, who, for the "offense" of struggling for the freedom of their country in 1848, under Garibaldi, were arrested, shut out from all intercourse with their friends and the world, and finally exiled to this country, by the Pontifical Government.

The yellow fever has broken out to a great extent among the American shipping in the unhealthy ports of the West Indies. A vessel from Matanzas, the B. Aymar, which sailed from that port, put into Mobile, the captain having died on the voyage of yellow fever, and the crew being all laid up sick.

The Albany *Knickerbocker* learns that out of 4,603 citizens holding office under the United States Government, 701 are foreigners—515 in Custom-Houses, 104 in the Departments at Washington, and 82 as Ministers or Consuls. In New York there are 96 foreigners to 703 Americans.

The extensive Cotton, Flour and Woolen Mills at Lebanon, Tenn., were consumed by fire on July 29. The loss amounts to $110,000, and the insurance to $31,000. Two hundred and fifty hands are thrown out of employment. It was the work of an incendiary.

The Corbins of Virginia, Maryland, and their collaterals, are to meet at Barnum's Hotel, Baltimore, on the 9th of August, for the purpose of defining their genealogy, in order to take some legal steps to investigate their claims to the "Jennings estate."

A brutal murder was committed at the St. Nicholas Hotel, in New York, one day last week. R. M. Graham of New Orleans and a Mr. Loring of California got into a dispute, when the latter was stabbed by the former, and killed.

Rev. Dr. Van Dyck, a native of Kinderhook, and for the last fifteen years attached to the Syrian Mission, sailed from Boston on Monday, for Beyroot, to resume his labors, from which he has had a respite for about a year.

The American Baptist Home Mission Society has come into possession of $6000, bequeathed by the late Garrat N. Bleecker, as the commencement of a permanent fund for the support of the secretaries of the Society.

Roswell S. Burrows, Esq., of Albion, Orleans Co., has made a munificent donation of three thousand dollars for the benefit of the Neander Library in the University of Rochester.

The steamer Agawam was destroyed by fire in the Connecticut River on Friday evening, 28th ult. The fire is supposed to have had its origin in the vicinity of the boiler. The loss is about $10,000.

Mr. Nicholas Harter, of Deerfield, Oneida County, N. Y., 93 years of age, a remnant of the Revolutionary soldiers, died a few days ago.

New York Markets—August 7, 1854.

Ashes—Pearls $5 50; Pots 5 81.

Flour and Meal—Flour 6 50 a 6 75 for ordinary State, 6 75 a 7 25 for common to good State, 8 50 a 9 00 for common to good Ohio. Rye Flour 5 50 for common, 7 00 for superfine. Corn Meal 3 75 for Jersey.

Grain—Wheat 1 60 for red Upper Lake, 2 50 for prime new Genesee. Rye 1 15 for old, 1 20 for new. Oats 42 a 44c. for Jersey, 44 a 47c. for State and Western. Corn 70 a 72c. for Western mixed, 74 a 76c. for round yellow.

Provisions—Pork 10 50 for prime, 12 00 for mess. Beef 12 00 a 13 00 for country mess. Lard 10c. Butter 12 a 16c. for Ohio, 16 a 20c. for State. Cheese 7 a 10c.

Lumber—15 00 for Eastern Spruce and Pine.

Wool—Fine Fleece is selling at 40c.

DIED.

At his residence in Stoughton Town, July 10th, Dr. Nathan M. Green, aged 33 years. Dr. Green was sick but six hours. By his sudden death, a companion and one child are bereaved of an affectionate husband and a kind parent; also numerous relatives of a dear friend, and the public of a good physician and useful man. Z. C.

At Millington, N. J., on the 1st inst., Mrs. Sarah Randolph, wife of Isaac F. Randolph, aged 65 years, 9 months, and 15 days. For eighteen years she has been a member of the New Market church. During a protracted illness of more than three months, she exemplified the power of the gospel, and died in its full hope.

On the 27th of July, Albert W. Sheldon, aged 4 years, 11 months, and 23 days; and on the 31st of July, Edson G. Sheldon, aged 1 year, 1 month, and 18 days; sons of Henry M. and Mary A. Sheldon.

Two sparkling dew-drops on the morning spray,
That early sun-beam melts and fades away;
So pure and lovely, only given,
That richest gems may gleam in heaven.

LETTERS.

Martin Wilcox, J W Green, C R Burdick, Wm Green, Lucius Crandall, Eli Forsythe, Pardon Cottrell, W B Gillett, R S Geer, W B Maxson, N V Hull, John Whitford, J A Champlin, A Steward.

WILLIAM M. ROGERS, Treasurer.

Our Anniversaries.

The Eleventh Anniversary of the Seventh-day Baptist Missionary Society will be held at Little Genesee, Allegany Co., N. Y., on the fifth day of the week before the third Sabbath in September, (14th day of the month.) The Anniversaries of the American Sabbath Tract Society and the Seventh-day Baptist Publishing Society will be held at the same place on the following day.

Board Meetings.

The Executive Boards of our Missionary, Tract, and Publishing Societies will hold meetings at Plainfield, N. J., on First-day, Sept. 10th.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

The location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health. A. UTTER, M. D., Physician and Proprietor.

Agents Wanted.

The services of a number of young men are wanted in selling the "Pearl or Scripture Library," containing sixteen volumes, 32 mo., bound in a neat style, and put up in a rich imitation rose-wood case.

The "Pearls" sell readily among all denominations, and testimonials of their utility are beginning thus early to be received. These works, for cheapness, will compare favorably with those published by the American Sunday-School Union or the American Tract Society, and form a complete compendium of the Bible on those subjects that relate to the faith and practice of Christians.

A liberal compensation will be given to all who are willing to engage in their distribution. Address

6tf H. H. BAKER, New Market, N. J.

Central Railroad Company of New Jersey.

The cars will run as follows until further notice, commencing Monday, April 10, 1854:—

Leave New York at 8 A. M., 12 M., and 4 and 6 P. M.

Leave Plainfield for New York at 7 and 8.30 A. M., 12.50 and 5.10 P. M., passenger, and 7.30 P. M., freight.

Leave Plainfield for Easton at 9.35 A. M., 1.40 and 3.35 P. M., passenger, and 6.30 A. M. freight; and for Somerville at 7.30 P. M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup t.

Hudson River Railroad.

Summer Arrangement.—Trains leave Chambers-st. daily for Albany and Troy as follows:—

Express Train, 6 A. M., through in four hours, connecting with Northern and Western Trains.

Mail Train, 9 A. M. Through Way Trains, 12 M. and 5 P. M.

Express Train, 4 P. M. Accommodation Train at 6.30 P. M.

For Tarrytown at 11 P. M.

For Poughkeepsie—Way Passenger Trains at 7 A. M. and 4.15 P. M. from Chambers-st.; and Way, Freight and Passenger Train at 1 P. M. from Chambers-st.

For Peekskill at 10 A. M., 3 and 5.30 P. M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

Passengers taken at Chambers, Canal, Christopher, 13th and 31st sts.

Sunday Mail Train at 3.40 P. M. from Canal-st. for Albany, stopping at all Way Stations

EDMUND FRENCH, General Sup't.

Great Western Mail Route.

Sixty Miles Distance Saved—Michigan Southern Railroad Line. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

Passengers by this line have the privilege of stopping at any point and resuming seats at pleasure. And they will not be subjected to the numerous and vexatious delays occasioned by LOW WATER, as by other routes.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

Providence, New Bedford, and Taunton. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

New York and Erie Railroad.

Trains leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Miscellaneous.

The Austrian Imperial Printing Establishment.

(Correspondence of the N. Y. Tribune.

VIENNA, July 8, 1854.

Printing was discovered in Germany, but improvements are now being made in different departments of the art, that would have astonished Guttenberg and the ancient veterans of the type. The censure with its worst features still exists in Austria, but more is being done here to perfect the art of printing by giving it a polygraphic character than in any other part of the world. The Emperor supports an immense establishment for that purpose, which I had the pleasure of visiting a few days since in company with Prof. Dunglison of Philadelphia. Von Hammer Purgstall, the celebrated Orientalist, kindly furnished us with a letter to M. d'Auer, *Directeur* of the establishment and Member of the Imperial Institute, and no pains were spared to make us acquainted with the important improvements lately introduced.

The establishment is unique in character, and of an immense size. The Government printing, the publication of the expensive works of the Academy of Sciences, the preparation of volumes for the Oriental Academy, and labors connected with almost every department of the fine and plastic arts, are carried on within its walls. Even the types used are cast in the establishment. It is polygraphic, or rather omnigraphic, as M. d'Auer showed me specimens of printing in six hundred and eight different languages and dialects—of all, in fact, that have been reduced to an alphabet. The Lord's Prayer has been published in all the above with Roman letters. The same has also been published in two hundred and six languages and dialects, with the characters peculiar to each. Twenty steam-presses are employed in the establishment. A large number of hand-presses are also employed for lithographic and other purposes.

I have space to mention but few of M. d'Auer's recent improvements in the polygraphic art. What pleased me most, and what is perhaps the greatest discovery made in Germany for many years, was his method of making impressions *immediately* after the original, thus dispensing with wood cuts and engraving of every kind. It matters not whether the object to be copied be natural or artificial. I was shown impressions of the most delicate plants, as well as of costly laces, colored in the most exquisite manner, raised in relief, and so perfectly natural that the microscope could reveal no faults. The manner of taking impressions of this kind is as simple as it is expeditious. The plant or leaf to be copied is dried and placed between two plates, one of copper and the other of lead, the latter being as malleable as possible. The plates are then submitted to an immense pressure between heavy rollers, and singular as it may seem in the case of a delicate leaf, or a piece of the finest lace, a perfect impression of the object is made in the leaden plate. A copy in relief can then easily be obtained by the employment of a plastic substance, and the latter having been submitted a short time to the galvano-plastic process, we have a plate by which copies of the original object can be produced in any number. The same process can be followed with ancient coins, fossil remains, fishes, and petrefactions of every kind, except that gutta-percha must be employed instead of lead to obtain the first mold. In lithography we must have a plate for every color, whereas but one is needed for all colors in the above.

I was surprised at the extent to which the galvano-plastic process was employed. M. d'Auer makes use of it in almost all branches of the geographic art. All his stereotyped plates are galvanized, a process which gives them far greater durability and renders their impressions more beautiful. Under his hand the hydro electric current is made to deposit a metallic plate on wood, gutta-percha, leather, and in fact a variety of plastic substances, which it was hitherto believed could never be employed. It is astonishing to observe with what facility paintings, and even crayon drawings on plates of copper, can *in this manner be multiplied*, and at the same time exactly and beautifully. The artist or limner makes the picture with appropriate colors on a silver-plated copper. The latter is then submitted to the galvanic process, whereby we obtain an exact copy of the painting or drawing, by means of which any number of impressions may afterward be produced. Even the slightest pencil drawings can be reproduced *ad libitum* in this manner without the aid of an engraver.

M. d'Auer is now engaged in bringing out a new invention, in which, by a process of etching and galvanography, daguerreotypes and photographs may also at once be communicated to copper plates, and thus, like the impression of a newspaper, be multiplied to any extent. Strange uses these to which we are putting the most subtle of elements. Purifying the air as it leaps from cloud to cloud, conveying our thoughts with lightning speed through telegraphic nerves, fighting our battles for us, it is now made to reproduce whatever is beautiful in nature or wonderful in the graphic art, with a skill far surpassing the most cunning hand of the artist. The rays of light are made to draw our pictures, the electric current acts as the engraver, and steam throws off the impressions faster than they can be enumerated by the human voice.

Chimitypie, or engraving by a chemical process, is also largely carried on in the imperial establishment, and has supplanted almost every other method of preparing plates for charts, maps, &c. The design is first engraved on a plate of zinc, the cavities and lines are then filled, and the whole plate covered with a fusible metal. A repeated application of nitric acid then removes all the superfluous zinc. On the second plate we have lines in relief, and with a little further manipulation it is ready for use.

Microtypie, has also been developed to an astonishing extent. By means of it the creations of the microscopic world are represented on paper with the greatest ease, and brought into books by the side of our hugest natural objects.

M. d'Auer has also a most perfect method of producing exact miniature representations of coins, engraved plates, &c. Exact copies of the same are first obtained by means of a *gelatinous* mass, which contracts to great extent when submitted to a certain chemical treatment. The above process may be repeated any number of times, and miniature representations of any desirable size be obtained.

The advances made in chromo-lithography are not less striking. Lithographic plates must here be employed, and M. d'Auer has succeeded in obtaining most satisfactory imitations, not only of good colored designs, but also of paintings in water colors and oil. Several specimens were shown, and it was impossible for me to distinguish the imitations from the originals. The works of the great masters may be copied and multiplied to any extent in this manner, and ornaments obtained for our parlor walls at a paltry price, which, if copied by hand, would cost hundreds of dollars. The extent to which the art of chromo-lithography can be applied is illimitable.

The treasures of ancient and modern art can be multiplied at pleasure, and the middle and even lower classes be enabled to enjoy what hitherto has been the exclusive possession of the wealthy. Instead of rude wood cuts, the poor man will, in a short time, be able to decorate his humble dwelling with exquisite imitations of the master pieces of Angelo and Rubens. It will contribute essentially to an improvement, or rather to the creation of a proper taste among the lower classes, an object which cannot be obtained too soon.

M. d'Auer spoke in the highest terms of a Philadelphia publisher, who recently spent some time in Vienna, and is the only man who has conceived the idea of forming a private polygraphic establishment similar to the one in Vienna. Success to his undertaking.

Milking Cows.

To insure the greatest yield of milk from a cow, she should not only be well fed and well tended, but also well milked. Now it is not every man or every maid who can squeeze fluid from a cow's udder, that is a good milker.

It is important, in the first place, that a cow's bag should be clean. For this purpose, when the animal is stabled—as they are, or should be, during the winter, on all farms, and throughout the year, by many—let the whole udder be washed with cold water, and immediately thoroughly dried with a towel. The advantages of this practice to the health of the animal and the healthiness of the milk, are great and manifest; and in this way, too, we escape the black sediment of which milk buyers so constantly complain, and which is nothing else than small particles of manure, brushed from the bag and belly of the cow into the milk pail. The hands of the milkmen by this process become washed clean, of necessity—an operation too generally omitted by those who consider themselves neat and careful. The same process obviates, too, the supposed necessity of moistening the teats by milking a fine stream into the hands and washing the teats therewith—a filthy practice, followed by almost all men, and too many women.

The udder being now cooled and cleansed, we are ready to begin milking. If the cow be well trained, she will now extend backward her hind leg for your convenience, without a word accompanied with the word of command "*hoist.*" They understand what is required of them, and need only at times a gentle reminder. But it is a singular fact, that man who are kind in every other relation of life, as husband, father, neighbor and master—are rough in their treatment of gentle "bossy." If they say "hoist," it is in stentorian tones; and too generally, the first intimation of their wishes is conveyed in a striking manner, by the edge of a heavy milking stool. Now a considerable experience among the "milking mothers of the herd," has convinced us that harshness of tone, or petty cruelty, is not only not productive of good results, but is extremely disadvantageous. Many cows, that hold up their milk to a cross milker, will give down freely to one more gentle. And the sack of grain, or other weight across the loins, which is well used to compel the animal to give down, would have been uncalled for, if a kind hand had always drawn her milk, or could be dispensed with, if gentleness takes hold of the teats.

Now the cow may kick. Well, to return kick for kick is a poor method of converting Mooley from the error of her ways, but she might be completely cured by kindness.

When fairly seated, it is of the utmost consequence that the milking should be done without violence, and as rapidly as possible. Many persons who pride themselves on their fast milking, jerk the teats violently, and others will cause them to become sore by the pressure of their finger nails. The best milkers scarcely move their elbows, but with the upper portion of the hand grasping and compressing the teat, force the jet of milk by the pressure of the lower fingers.

Whether a cow should be milked before, after, or during feeding, is a question of minor importance, and must be decided by circumstances. R. L. Allen, in his excellent work on "Domestic Animals," recommends, if we rightly remember, that they be milked while feeding, for the reason, that while thus engaged they will more readily let down their milk; but many cows, at other times quiet, will be a little uneasy while eating, and anxious to get not only what belongs to them, but a share of their neighbor's meal also. For this reason, we always milked before feeding, that the feed might appear as a reward of merit. Where one has but one or two cows, it is of course a matter of little moment. In fine, we recommend to those who want much milk and good milk, *kindness* and *cleanliness*. [Journal of Agriculture.

A Sad Story.

The following extraordinary case occurred in Mississippi under the slave law of that State:—

A planter was afflicted with a loathsome disease. So offensive were the ulcers, that he was deserted by his white friends; and while thus afflicted and forsaken, a girl, whom he owned as a slave, kindly and patiently waited upon him, dressed his ulcers, cleansed his person, and watched over him until he eventually recovered. With gratitude and affection to his benefactor, he took her to Cincinnati, Ohio, executed to her a deed of manumission, had it recorded, returned to Mississippi, and there married her in legal form. They lived together affectionately for many years, reared a family of children, and, as he lay upon his death-bed, by will he divided his property between his wife and children. His brothers hearing of his death, came forward and demanded the property. The widow and children were indignant at the demand. They too were seized; and the validity of that marriage was tried before Judge Sharkley, of that State, who decided that the whole matter was a fraud upon the law of Slavery—that the property belonged to the collateral heirs. His widow was sold by the surviving brothers, the children were bid off at public auction, and both mother and children now toil in chains or sleep in servile graves.

Snake Fascination.

From the St. Louis Herald, July 12th.

We have occasionally read accounts of persons having been fascinated or spell-bound by snakes, but never knew of an instance occurring in our vicinity until a day or two since, and one that we know to be a fact. A man by the name of O'Mara had a small child, a little girl about thirteen years of age, who came to her death through the influence of a snake, one day last week, under the following circumstances: O'Mara resides on Copperas Creek, in Franklin County, and but a short distance from the Pacific Railroad depot. Some nine months ago, early last fall, his family noticed the little girl to be pining away, and pale, although she had been very fleshy and hearty, and apparently without any cause or complaint of sickness. By the time winter had fairly set in, she was wasted away to a mere skeleton, but as soon as the weather became cold she again seemed to revive. She never complained of being unwell, and in reply to all their inquiries in regard to her health, she invariably said she felt very well, only a little weak. As soon as spring arrived, she could not be prevailed upon to eat any victuals in her father's house, but would take a piece of bread and butter, or a piece of meat, and go out to the edge of the creek to eat it. The family noticed her regularly, always going precisely to the same place, and invariably complaining of being hungry after her return, when, if more victuals would be given her, she would again return to the creek, as they thought, to eat.

Finally, some of the neighbors, having heard of the circumstances of the child's extraordinary conduct, and also of her wasted appearance, suggested to her father to watch her movements, which he did last Friday. The child had been sitting on the bank of the creek nearly all the forenoon, until near dinner time, when she got up and went to her father's house, asked for a piece of bread and butter, and again returned to the same place she had been. Her father kept behind her without making any noise. As soon as the child was seated, the father saw a huge black snake slowly raise its head into her lap, and receive the bread and butter from her hand; and when she would attempt to take a bite of the bread, the snake would commence hissing, and become apparently very angry, when the child, trembling like a leaf, would promptly return the bread to the monster. The father was completely paralyzed, not being able to move hand or foot. Entertaining, as most Irish persons do, a great dread for snakes, he felt alarmed for the safety of his child, not knowing the nature of the snake, or the extent of the influence on his child. His blood became almost clogged in his veins, and he groaned in perfect agony, which caused the snake to be alarmed, and glide away into the creek. The child immediately sprang to her feet and ran home, apparently much frightened.

Her father followed her, but he refused to answer any questions, and he then resolved to detain his child at home, but he was advised to permit her to go again the next day to the creek and to follow her and kill the snake. Next morning she took a piece of bread and went out to the creek, her father followed her with his gun in his hand, and as soon as the snake made his appearance, shot him through the head. The child swooned; the snake squirmed and worked himself round awhile, and then died; the child in the meantime recovered from her swoon, but was immediately seized with spasms, acting in a manner resembling the writhings of the snake, and finally died at the same moment the snake died, apparently in the greatest agony.

This horrible and at the same time melancholy occurrence is the first we have heard of for a long time, and in fact the first we ever knew of where we could positively vouch for its truthful correctness. We know that there are persons who doubt the reality of snake fascination, but if they entertain any doubts on this subject hereafter, the relations of this unfortunate little girl can be found ready and willing to corrobate our statement. This should serve as a warning to parents who reside in the country to be more careful in watching their children.

The Japanese People.

In our intercourse with this people we found them very inquisitive, though their questions very often seemed to be only to say something, without having any object in view, or use in the answer. Everybody carried his inkhorn at his girdle, (like the writer in Ezek. ix. 2,) and the answer is jotted down in the book carried in the bosom. The courtesy of the officials shows the degree of politeness in which the Japanese are trained, and does them credit; society seems to move on in an agreeable manner among the higher grades, but the servility of the untitled people strikes one less favorably. When one of them is spoken to, he kneels nearly to the ground; and if in a house, he bends nearly to the ground as he sits. However, each grade kneels and bows to the one next above him, and so there is no envy, I infer, where even justice is thus dealt out. All official people wear two swords thrust into the girdle in an uneasy manner, higher ones having a sword-bearer coming after them, and no one can lightly touch it. These weapons are highly polished, the metal seems to be excellent, and the hilts are often richly ornamented; their manufacture is a monopoly. The people whom we have seen are well fed and healthy in the main; ophthalmic diseases are common, and the small-pox shows its existence in many a face. The officials put on silks as their common dress, at least those outwardly worn, crape forming the most usual fabric; the poor wear a substantial sort of cotton, blue and blackish, and pretty well covered, so far as one can judge. Their houses are on the whole, in villages near our anchorage, less commodious than those of the Lewchewans and Chinese in similar circumstances; their roofs are covered with thatch over a foot thick; and the walls of the building are constructed of sliding panels, one of paper and another of board. The floor is raised as high as the corridor which surrounds the building, between the paper and board panels, and laid with thick mats, on which the inmates eat, work, sleep, and receive their friends. In large apartments, part of the inclosure is merely the ground well pounded, where agricultural implements and produce are stored, and the cooking carried on. The effects of the constant smoke from the kitchen are visible on the blackened rafters; and in the better sort, cooking is doubtless carried on in an outer building. As the inmates do all their work on these mats, which are usually kept commendably clean, there are no tables, chairs, or bedsteads in the house, rendering it very empty to our notions of domestic comfort. In dull, rainy and cold weather, the interior of these houses is still more gloomy in our view, for the roof projects so far over the out panels that it increases the shade in the house still more than the paper glazing. Altogether, a Japanese peasant's dwelling would not please our New England farmers, and I hope they may ere long introduce some of the conveniences we are so much used to into their houses. The position of the women among these poor people is such as you might expect. They are made to work hard in the fields and houses, hoeing, weeding, reaping, and other duties falling to them as well as the men, while the cares of the house, weaving, spinning, and such work seems all to be theirs too. They wear a cloth or fancy kerchief wrapped around their head in the fields, and often, too, in-doors. The custom of shaving the eye-brows of married women imparts an odd aspect to their countenance, taking away the distinct impression given to all the features by that one; they are not shaven until after a child is born. Another more repulsive fashion among them is that of blackening the teeth, which is done so completely that when a woman is most pleased and laughs the merriest, she appears the most hideous. You think, almost, she has made an inkstand of her mouth. I believe this ungraceful custom is not everywhere fashionable in Japan, but, displeasing as it is, it is less objectionable than that of cramping the feet as in China.

[Japan Cor. N. Y. Observer.

Lowell Mason.

The N. Y. correspondent of the Boston *Transcript* says:—Great activity prevails among the publishers of sheet music and music books. Mr. Lowell Mason, whom you Bostonians so well know, is engaged upon his crowning musical work. It is to be called the *Hallelujah*, and will contain the maturest flowerings of a mind of great natural strength and activity, enriched with half a century of assiduous and well-directed culture. Mr. Mason is the author of fifty musical works, over forty of which were written and published in Boston, two in London, and four in New York. Among these are the *Boston Academy's Collection*, and the famous *Handel and Haydn Society's Collection*, which ran through thirty-five editions; also, the *Carmina Sacra*, which has had a larger sale than any other music book ever published.

Beside editing the fifty books mentioned, Mr. Mason has always been extensively engaged in lecturing and teaching, and how he has ever got through with all his work is a mystery. I have been informed that it has always been his practice to rise about 8 o'clock and go down to breakfast, where there would be lying beside his plate a batch of music proof, which he would examine and correct while breakfasting. At 9 o'clock, his teaching and other public labors would begin, and continue until dinner time. By the side of his plate at dinner would be another lot of proof, which he would correct as he dined. After dinner, he would again engage in teaching, lecturing, or other business; and at tea there would be more proof to be examined and corrected. After tea, he would give a lesson in music to some class or to his choir, unless otherwise engaged, and then return home and work till midnight, and often till 2 o'clock in the morning. It is said that for twenty years he was never known to spend even half a day in mere amusement. His labor was a labor of love, and consequently his work was his recreation. It is thus that Mr. Mason has been enabled to write fifty works, instruct thousands in music, lecture far and wide, travel over the United States and Europe, amass a splendid fortune, and give away another fortune, for his industry is only equaled by his benevolence. And now, the *Hallelujah* is to be the crowning work of his long and useful life. It will doubtless be a magnificent production, worthy of its author and our country, which has thus far taken the lead of all the world in works of Psalmody.

CHEAPER PAPER.—The Long Island *Vindicator* says: Mr. Samuel Nolan, late of the city of Dublin, Ireland, now resident in New York, with the assistance of his brother-in-law, Dr. Antisel, has invented and patented at Washington, a paper-making machine and pulp that meets all the difficulty. Dr. Antisel, whose chemical knowledge is so universally known and prized, has invented a pulp, which in its raw state will not cost more than about one-sixth of a cent per pound, and by the aid of the machine invented by Mr. Nolan, can be brought into market, made into paper, at a cost of about four cents per pound. Paper at present costs about 16 cents, so that the value of the invention can at once be seen. The material from which the pulp is manufactured will flourish and grow abundantly in ground that is at present useless to the farmer, and here, too, the community will be the gainers. We have seen and examined specimens of the pulp, and have no hesitation in pronouncing it just the thing wanted. It is as white and clear as the most clearly bleached cotton, and is capable of the most delicate tint. The harshness and transparency of the straw paper is not to be found in it, while it is capable of the highest finish, maintaining all the pliancy and toughness of the pure linen rags.

LONDON.—Mr. Cheshire, in his *Results of the Census*, thus illustrates the vast size of the metropolis of England: "London extends over an area of 78,029 acres, and the number of its inhabitants, rapidly increasing, was 2,362,236 on the day of the last census. A conception of this vast mass of people may be formed by the fact that, if the metropolis was surrounded by a wall, having a north gate, a south gate, an east gate, and a west gate, and each of the four gates was of sufficient width to allow a column of persons to pass out freely *four* abreast, and a peremptory necessity required the immediate evacuation of the city, it could not be accomplished under *four and twenty* hours, by the expiration of which time the head of each of the four columns would have advanced no less distance than *seventy-five miles* from their respective gates, all the people being in *close* file, *four* deep."

A PRACTICAL PREACHER.—A preacher, who came one day to officiate at a village in Lincolnshire, had been led to believe by his brethren that the inhabitants were very stingy towards their spiritual providers. Accordingly, at the conclusion of the service, he thus addressed the congregation: "My brethren, I have been given to understand that there is a very current notion entertained by many in this village, that the local preacher or prayer leader whose appointment may be fixed in this village, is in his nature something entirely spiritual, or, in other words, an *angel*. Now I am determined to give you to understand that such a notion is all moonshine, and that we are really men of the same flesh and blood with yourselves, and like yourselves subject to all the ills that flesh is heir to; and that you may see how entirely wrong you have been in entertaining such a notion, I will show you what I have in my hand, and what I shall do with it." Here the preacher produced *a large piece of bread and meat*, and began to eat. For the courageous hint, we have no doubt he will receive the thanks and prayers of his brethren. [London Inquirer.

DRESS.—A lady, writing to the *Pennsylvanian*, says: "Speaking of beauty, I wish people would dress pleasantly, benevolently. I saw a lovely girl to-day looking unlovely and unlovable, because her muslin dress was stiffly starched, to *keep clean longer*. My laundress tries to persuade me into the barbarous custom. To my mind, a woman should always look as soft to the touch as the flower, and as pure. All her garments should be made of the finest and softest material possible, material that will easily dispose itself into folds, falling gracefully around her, and not, by being liable to be ruffled every moment, compel her to stiff attitudes and starched demeaner, denying her luxury of lounge and loll; why, my very words would grow prim and precise, were I to wear a dress which depended on flour or potato for its propriety."

VARIETY.

The amount of lumber surveyed at Bangor, during the six months ending on the 1st July, was 67,161,291 feet, namely, green pine, 22,366,265; dry pine, 5,689,078; spruce, 31,442,402; hemlock, hardwood, bass, etc., 6,753,546. This shows an aggregate increase of 19,000,000 feet. The amount of spruce surveyed is nearly double what it was a year ago.

The aggregate number of deaths in this city during the twenty-eight weeks that have elapsed since the 1st of January last, is 2986 more than during the corresponding period of the year 1853. In short, the increase of mortality has been about 28 per cent., while the increase of population is probably not greater than 10 per cent.

The Philadelphia "Dollar Newspapers" are printed on paper made from straw, by Mellier's process. This paper is really excellent and beautiful, says the *Scientific American*. It is much stronger than paper made from rags; it is firm and hard like linen paper, and is as white as any paper printed in the country.

Abraham Hews, Esq., died at Weston, Mass., recently, at the age of 88 years. This venerable man was, at the time of his death, perhaps the oldest postmaster in the United States, having retained office through all the changes of administrations from the time of his appointment under President Madison, in the year 1812.

The Danville *Register* states that the dysentery is prevailing to an alarming extent in the neighborhood of Leaksville, N. C., within the past few weeks. In one family three out of five children died of it. In another its ravages were more fatal still, sweeping off some ten of its number in rapid succession.

The San Francisco Sun is responsible for the following:—"We have met a grammarian who had just made an unsuccessful tour through the mines, conjugating, or rather cogitating, thus: Positive, *mine*, comparative, *miner*, superlative, *minus!*"

The Rev. John Newton, when his memory was nearly gone, used to say that, forget what he might, he never forgot two things: 1st. That he was *a great sinner*—2d. That Jesus Christ was *a great Saviour*. Two most important subjects of recollection.

The number of deaths in New York last week was 1,139, of which 241 were from cholera, mostly persons of foreign birth. The whole number of deaths from cholera, this year, in New York, is 910.

The Worcester *Spy* announces that Mr. Paine has overcome the difficulty arising from electrical explosions, and that he has perfected his invention for producing light, heat and motive power, from the decomposition of water.

Henry G. Perkins, Esq., Collector on the Boston and Worcester Railroad, while dining at Bascom & Walker's saloon, in Boston, on the 22d, had a wallet containing $500 abstracted from his pocket.

Seven fugitives from Kentucky—two men, three women and two children—arrived at Detroit recently by the under-ground railroad. They were first-class passengers.

A grant of $10,000 has been made to the Wesleyan University by the Legislature of Connecticut, on condition that $30,000 shall be raised by the friends of the institution.

A mother in San Francisco cures her little boy of swearing by washing out his mouth with soap suds every time he has profane words in it.

On Thursday evening, July 6th, a finback whale was seen and captured off the bar at Nantucket, by the captain and crew of the schooner William P. Dolliver.

A New Rule, on the New York and Erie Railroad, went into effect on the 10th ult. Each passenger is charged ten cents extra for a ticket purchased on the cars.

Eight girls are regularly employed as compositors in the Cincinnati *Gazette* office, and the same number in the office of the Pittsburgh *Journal*.

Several of the recently appointed officers for Nebraska and Kansas have left Washington for their new homes in what is now recognized as *the* "far west."

The Syracuse *Sentinel* notices the death of Mr. Whallen, who died in that city, at the age of 117. He was a native of Ireland.

Among the recent deaths by cholera is that of a daughter of ex-President Fillmore, who died at Aurora, N. Y., July 26th.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams, will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York, over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK.

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy.

Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass. Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & Co., and by all Druggists everywhere. 37-3

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

MY FATHER'S PICTURE.

This precious gift to me! Oh, who can tell
The wild emotions that my bosom swell,
When to my throbbing breast, with pain and fear,
I clasp this relic of my father dear?

Long, long my absent one has sweetly slept
In his low couch. The rose and violet
Have now two summers bloomed above his head,
And the lone willow soon will shed
Its nightly tears; so like a daughter's grief,
Who weeps in solitude, and shuns relief.
The bright calm moon its holy light has shed
Full oft upon his grave; the breeze with fairy tread
Sweet music oft hath made, as though 'twere sweet
To soothe the slumber of his lone retreat.

This semblance of himself! It opes the tomb,
And calls my parent forth. Again health
Sits upon his brow; I hear his voice,
His footsteps, and his counsel grave;
I see the life-lit eye, the radiant face,
The silvery hair, and feel his warm embrace;
He lives; I clasp again my father dear;
Again his smile I see, and rapture yields to tears.
But cruel mem'ry breaks the enchanting spell,
So pale and cold he lies; the tolling bell,
The pall, the hearse, the slow and measured tread,
The last long lingering look into his lowly bed;
The pang my bleeding, stricken heart oppressed,
When the cold clod fell on his manly breast,
Withering my inmost soul, and with dread weight,
Flashing the fearful whole, that I am desolate.
Peace, peace, my soul; my throbbing heart, be still,
And calmly sink into thy Maker's will;
Drink, drink the cup, and bitter though it be,
Thy Saviour holds it; He will strengthen thee.

My father's picture, dear! I'll treasure thee,
And oft thy silent voice shall comfort me;
Rest on my heart, till my loved one I see,
When mortal shall be clothed with immortality.

For the Sabbath Recorder.

UNIVERSAL PEACE—NO. 4.

BY C. ROLLIN BURDICK.

War and its Consequences.

We have heretofore been contemplating the immense sacrifice of human life on the sanguinary altar of war. But the sacrifice of human life is not the only, nor, as we shall see, the chief evil of war, mournful and heart-sickening as murder statistics are. We think we shall be able to show, that the retrogressive tendency of war, morally and physically summed up in one whole, is more disastrous to society than its sacrifice of life.

We first commence with the expense of war. It may be supposed by some, that this is a very trifling thing to bring as an argument against war. In comparison it may be, but in itself it is of vast importance. Wealth, as a means, is absolutely indispensable. It is no more necessary to dig canals, to construct railroads, to build steamboats, to bring into existence cities in the place of the wilderness, and to adorn and beautify the face of the earth, than to send the missionary to his field of labor and support him there, to give support to the clergyman in his holy labor, and to keep "the schoolmaster abroad"—the propagators of religion and science, the two mighty engines of civilization. Without this element, human progress would be at an end, The desert would still remain uncultivated, and man would continue to live upon roots and herbs in a savage state. It is this element that, guided by the spirit of religion and science, brings all the comforts of life. We say this because it may be objected, that the poor man, left to himself on God's free earth, can delve from the soil all the necessaries of life. This of course is admitted, but he must have tools of some kind with which to perform his labor, even if they are of his own manufacture, and these are his wealth. It follows, then, that if wealth is of such vast importance to the progress of humanity, the destruction of it in war is of very great consequence.

To give a long train of statistics on this head would be uninteresting to the general reader, but for the sake of illustrating the expense of war, we will look at a few examples. We will take the expedition of Xerxes to Greece. He led, as we have seen, 3,000,000 men on this expedition, and it lasted two years. Now each man's time could not have been worth less than ten dollars of our money per month, and the expense of equipment and support could not have been less than fifteen. This would make the expense of each man twenty-five dollars per month. We see, then, that the expense of supporting this great army for the time mentioned would be $1,800,000,000. Add to this vast sum the value of property destroyed, and the expenses of the opposing armies, and the sum could not fall short of $3,000,000,000. With this we could span the American continent from the Atlantic to the Pacific with two railroads having a double track; we could run another with a double track along the whole length of the Mississippi valley; another like it along the Missouri; another along the Arkansas; another along the Ohio to the head waters of the Allegany; and another along the whole Atlantic coast, from the bay of Fundy to the Florida cape; in other words, we could build and equip 40,000 miles of railroad. But let us look at this matter a little farther. Nearly all these 3,000 men were killed. Supposing this shortened their natural life five years; so much time would be lost to the human race. This time, at the rate of $10 per month, would amount to $1,800,000,000.

We have said before, that 14,000,000,000 persons are supposed to have perished on the battle field. Supposing that these men served on average three years before they were slain, and that as many more served with them, who were not slain; at the above estimate, their expense would be $25,200,000,000,000. This sum can be safely increased to $35,000,000,000,000, to meet the destruction of property always attendant on war, aside from the necessary expenses. Again, supposing the lives of those slain were shortened five years, another loss results to the human race of $8,400,000,000,000, making a loss in capital of $43,400,000,000,000. Capital is always productive, and at 5 per cent. it reproduces itself in twenty years. This loss occurred at least on a mean of one thousand years ago. This immense sum would reproduce itself fifty times at simple interest during that period. This gives us $2,170,000,000,000,000 waste of wealth in war. Give me this enormous sum, and I will purchase every acre of land on the earth at $100 per acre, and I will spend $100 more in clearing, &c.; I will give every three persons on the earth a farm of fifty acres, and will put buildings on each farm worth $100,000; I will give each family of three a library worth $1,000, and a capital of $500,000, with which to make a beginning in the world. Upon every square mile of land I would build a school-house worth $5,000, in which I would put $1,000 worth of apparatus, a library worth $10,000, and a standing fund of $5,000 to keep them in repair; and I would leave also a yearly legacy of $1,400 to pay a teacher and keep the house in repair. Upon every three miles square I would build a church edifice at the cost of $20,000. In each church I would put a library worth $25,000. I would also have a standing fund sufficient to pay a minister $1,000, a chorister $500, a sexton $250, and leave $1,000 per annum for church purposes. On every ten miles square I would build academic buildings at the cost of $25,000, and give them apparatus worth $10,000, a library worth $20,000 and a principal of $50,000 to help indigent students, &c. I would also leave a standing fund sufficient to pay a principal teacher $2,100, a preceptress $1,050, five assistants $840, and leave $700 per annum for contingent purposes. On every fifteen miles square of territory I would build academic edifices for the fine arts, music, &c., at the cost of $100,000, and I would give them a library of music, &c., worth $200,000, and a standing fund for contingencies of $150,000. To each academy I would pay forever, a principal $5,000, and twenty assistants $2,500 per annum. I would also give every man, woman and child a piano worth $600. On this same extent I would also erect public buildings for courts, &c., at the cost of $300,000, and would give $300,000 as a principal to support public officers. On every tract of territory thirty miles square, I would build University buildings at the cost of $150,000, I would give them libraries worth 300,000, apparatus worth $50,000, a sinking fund to board students, &c., $500,000; a yearly stipend for repairs, &c., $4,200; and I would also pay forever a president the sum of $4,200, and ten professors $2,100 per annum. I would build two miles of plank road for every square mile, and leave a yearly income of $200 for each mile of road to keep it in repair. On every five miles I would run two omnibuses worth $2,000 each, and pay the drivers $1,000 per annum forever. I would interweave the whole world with a lattice work of railroads on an average of fifteen miles apart each way, and equip them for use. For every hundred miles I would hire forever a superintendent, paying $2,000, a sub for every 20 miles $1,000. For every thousand miles I would give $2,000,000 per annum to keep in running order. For every five miles I would employ one conductor, one engineer, one station agent, one freight agent, each $1,000 per annum, and one woodman at $700, five brakemen at $500 each, and on every mile I would place a watchman at $500. Thus I would have travel and transportation free for all. Every 25,000,000 inhabitants should constitute a nation, making forty nations in the world. I would give each president a salary of $50,000, five heads of departments $10,000 each, one congressman for every 30,000 inhabitants $5,000 salary. I would put $150,000,000 into each treasury, $10,000,000 yearly for river and harbor improvements, &c.; $2,000,000 for national buildings, $5,000,000 for a national library, and $5,000,000 for a philosophical cabinet, $10,000,000 for a national gallery of art, and $100,000,000 for a national college. I would also give to the whole $100,000,000 yearly for contingent and international expenses, and $10,000,000 for a congress of nations. To each nation I would give one thousand steamships at the cost of $1,000,000 each, and $75,000 yearly to each ship to keep them running to all parts of the world. To every ten persons I would give a pleasure barge worth $300,000, and give them $2,000 per annum to keep in repair. After having made all these rich provisions for the world, could I change the balance of my money into gold, with it I could pave a fancy street twenty feet wide to the depth of six inches, and 70,000 miles long, sufficient to connect all the principal cities in the world, upon which I could ride in a golden chariot, if I should choose, with eight million dollars in my pocket for spending money.

This is no exaggeration. The suppositions made are really within bounds, and the calculation, I believe, is correct, or nearly so. It has been my aim to keep within rather than go beyond the reality. The results astound me. I would not have supposed that a thousandth part could be accomplished with the sum in question, enormous as it is. We have only seen what all the waste of labor and capital in war might have effected in the progress of mankind, had it been rightly expended. This bright picture might have greeted our eyes, and a vision still more glorious in the moral and intellectual world, had war never raised its clarion voice, and had man fulfilled his destiny. These bright visions might be realized in future, in the lapse of three thousand years, if men would now listen to the voice of reason, and sheath the bloody sword. The sacrifice of wealth, then, comes in for a conspicuous place in our argument against war.

LITTLE GENESEE, N. Y. August 1, 1854.

HINDRANCES TO ZION'S PROSPERITY.

It may be that some thoughts antagonistic to the views of many on this subject, will be expressed in this communication. However, if there is any good in it, let it be received, and the bad be cast away. One thing is certain, the prosperity of Zion is a subject of deep interest to every regenerate soul. Some mistakes may be held in reference to it on the part of Christians; some may think the aspect of things flattering, and others the reverse; and there may be extremes in both cases. This is an age of profession, and the difficulties in the way of assuming the Christian name are comparatively few, especially in free Christian countries. It is an easy thing to be a professor of religion, but as difficult as ever to be a real Christian, if not more so. The world, the flesh, and the devil, are dressed in new attire in these latter days, and are more difficult to meet and oppose than when they assailed us as positive and sworn enemies. It is to be feared, that multitudes, in our communities, are mere professors, without any real Christian knowledge, experience, or even character. We may form a lower estimate than the truth will warrant, and the prosperity of Zion may be greater than we imagine. There is, however, considerable complaint, and almost [illegible] low estate of religion, and the fewness of converts to Christ. There seems to be a want of confidence in the regular means of grace, and the publishing of the gospel. In fact, to a great extent the ordinary instrumentalities in operation have but little effect upon our congregations. Some extraordinary efforts are generally resorted to, when the people get wearied out with the dead calm which has long prevailed, and in which many have fallen fast asleep. Then comes a change—the sluggish sails begin to move and spread out to the wind—the dead waters become agitated, and the vessel moves on gaily. Backsliders bewail their declensions, confess their faults, and again their voices are heard in the circle of prayer. Sinners profess conversion, after they have visited the anxious seat a few times, shed a few tears of excitement, and have fallen into a calm and quiet state of mind, which they call peace. Then a baptizing follows, or a gathering into the church, and a record of the whole in our public papers; and after a short time we hear no more of additions for a year or two or more, and in some cases never until the same routine of exciting measures come into operation. Nor is this all, for it happens that the backsliders get back again, many of the converted sinners are soon unconverted, and the discipline of the church requires a separation—indifference and coldness, neglect of public ordinances and death, or a slumber and sometimes distraction comes upon the whole.

Now all this is far from prosperity—this is not the Christianity of primitive times—this is not the church a light in the world, the salt of the earth. It may be a city on a hill, which has been scathed by the lightning or dilapidated by the hurricane, or half demolished by some fearful conflagration. The prosperity of Zion is a very different thing from what is commonly called so. It has to do with numbers; for a steady and constant increase, like the sowing of the seed and the returning annual crop, is the promise to God's people. It has much to do with the plain and faithful and zealous preaching of divine truth—the publishing and diffusing of the gospel of Christ; for these are the non-carnal weapons which break down the strong holds of sin, error and delusion, where sinners hide, and which subdue the haughtiness of the human heart, cast down the vain imaginations of men, and bring every thought into subjection to the will and authority of Christ. It has much to do with the purity and holy lives of professors, for they are the epistles of Christ, written by the divine Spirit, and known and read of all men. It has much to do too with a healthy and strong tone of piety, for the apostle grasps a whole cluster of graces and moral excellencies, and holds it up to public view before the churches as a model of Christian character. He also describes the church as a temple built by a divine hand, (and of course strong and beautiful,) and the habitation of the divine Spirit—or as a perfect human body, with its well-constructed parts, designed for beauty and strength—untouched by the fall—a noble, erect, symmetrical body, with divine lineaments, and so much under control as not to be decoyed away by any inducement. If we take up a single body of Christians who have come together on a profession of faith in Christ, and of renewal of mind by the Holy Spirit, prosperity may be described in a few words: Spiritual minded—holy and upright in life—faithful in the discharge of duty, public and private—attachment to the truth—ardent love to the brethren, and forgiving one another—affection for and coöperation with the pastor—prayerful—active—advancing in knowledge and Christian experience—honoring every one according to the talent God has given, and the position in the church in which the great Head has placed them—a steady and progressive increase of members, under the faithful and affectionate preaching of the word and the regular means of grace.

What there is existing as hindrances to such a state of prosperity, may occupy a future communication—for if the prosperity of Zion is as desirable as we believe, and more desirable than anything else, surely every lover of Zion exclaims in the language of the Psalmist, "Lord, send now prosperity."

THE BIBLE.

An Essay read at the recent Anniversary of Alfred Academy.

The term Bible was applied by the primitive Christians to the sacred writings by way of pre-eminence; and in truth the Bible deserves the pre-eminence, for "it stands unrivaled amid a world of letters." It is not a compilation of books, but rather the great original, the inexhaustible fountain, from which ages have drawn a flood of light and knowledge. It is the world's great mirror, in which is reflected the purest system of morals and manners, and the soundest and most perfect maxims for individual or national discipline, found beneath the sun. It contains the life-giving principle of all true happiness, wisdom, greatness, and goodness. It is the world's great chronologer, being the only source of all the knowledge for half the world's history. We may investigate a world of books, examine monuments, decipher all inscriptions, penetrate far into the earth, analyze its strata, collect its fossils, and arrange all according to their seeming place in the revolution of time; still we are obliged to turn to this volume to learn when the world was created, by whom, and how man became its inhabitant. It gives a most singularly beautiful narrative of our first parents in their primeval purity, of their fall, and of their genealogies from Cain, who spilt the first blood that stained the Eden of earth, to the Lamb of God, who expired on Calvary to *redeem* the world from sin's pollution. It describes to us in the most simple, yet comprehensive language, the drowning of the world on account of sin, the miraculous deliverance of Noah and his family from a watery grave, the faith and sacrifice of the aged patriarchs, the journey, captivity, and conquests of the children of Israel, and finally the giving of the Law to them amid Sinai's awful grandeur. Again, it pictures Joseph, in all his wanderings, from the dreaming boy up to the responsible station he occupied in the Egyptian court; from thence to his reception of his father's blessing; and even down to his own peaceful death, so beautifully illustrative of the world's promised Saviour, whose spotless life, persecution, death, resurrection, and ascension, it points to as the most perfect specimens of grandeur and disinterested love in the world's history, and to which humanity will ever look with pleasure.

These are among the many interesting events described with such pathos and beauty in this story of the world's *creation* and *redemption*. It was in view of this unrivaled and inexhaustible love of the Saviour of man, that the weeping prophet rolled back the dark vista of time, pierced far into the future, and filled the burning pages of this inspired word with the story of the cross, a story so deeply interesting to all nations, that it shall continue to be their song, as well as the song of angels, while ceaseless ages roll their rounds.

If we search the Bible from Genesis to Revelation, we find the same sentiment of pure disinterested LOVE to God and man breathed in every page. This was the all-pervading spirit which consecrated Eden's happy bowers. It hovered over the darkness of Gethsemane, and lit up the gloom of that mournful death scene. It was breathed from the sinless lips of an expiring Saviour, as he prayed, "Father, forgive them." The Bible, so richly fraught with love, tends to soften, refine, and elevate the soul, and thus promote the happiness and cement the bonds of society. It quells the savage war-whoop, plants the arts and comforts of civilized life, and the institutions of praise to the living God. It transforms the poor degraded inebriate into the affectionate and virtuous husband and father. It wipes the tear from the eye of the widow and orphan, and restores peace and quiet to their desolate homes. It expands the intellect, renovates the soul, and fits it for the enjoyment of Heaven.

All nations begin to feel its warming rays; and even here where we are now convened, to celebrate the advancement of science, we are indebted to the Bible for the advantages we enjoy. Heaven grant that we may ever enjoy its advantages, and so feel its influence, that as we emerge from these classic halls into the broad arena of life, our every action shall proclaim its truths. May it be our highest aim in life to restore to earth its happy Eden, by elevating our race, and dispersing happiness and knowledge through every rank. May it be ours to soothe the desponding and desolate, clothe the naked, feed the hungry, and restore to their rights Afric's abused children. May we take the Bible as our companion, our guide, our only weapon of defense—remembering it is fitted to every age and condition in life. It follows the infant from the cradle to the grave, directing every step, lightening every burthen, soothing every sorrow, and brightening every joy. It enrobes in a shield of faith, and nerves the soul, sure of success, to combat the foe in its deadliest forms; and as age approaches, it leads him into green pastures, and to the Rock where he drinks large draughts from the life-giving fountain, and, unfurling the canvas of faith, he passes over the Jordan of death, triumphantly exclaiming, "I fear no evil; thy rod and thy staff they comfort me." Thus he is received into the arms of his triumphant Redeemer.

Such being the effects which the Bible produces upon the world, and upon the soul, let us search it as students with well disciplined minds, and with hearts vigorously exercised in its principles. May our mission be like our Saviour's—to redeem a world from sin, by dissipating the gloom of selfishness, and scattering the seeds of love.

E. B. S.

THE PLACE WHERE JOHN BAPTIZED.

In the course of an hour and a half we reached the place which is marked out by tradition as the locality where John baptized the holy and blessed Saviour, who ever deemed it right to "fulfill all righteousness." I was somewhat surprised to find the Jordan so much narrower than I had supposed; I had expected to see a broad stream, not unlike many of the rivers of less note in our [illegible] and often high banks, where the river flows during most of the year, it appeared to me not to be more than sixty or seventy feet wide. It is but a guess, and judging by the eye, for I had no means of measurement with me, and therefore am not to be relied upon at all for any accuracy; all that I would affirm positively is, that the Jordan is by no means a wide river, and is narrower between its banks than many of the creeks in our part of the world. The current is extremely rapid in this part of its course, running, I should think, from three to four miles an hour; and so strong is it, that very rarely can the most muscular swimmer make head against it. Instances happen once in a while of persons being carried away and drowned in consequence of having braved it too far. I think myself a pretty good swimmer, and in ordinary cases would mind nothing of launching forth to reach a point a mile or more distant; but when I stood and looked upon the Jordan for a while, and tried to estimate the force of that powerful current, I knew that it would not be safe for me to venture out beyond my depth, and I did not.

The color of the water is nearly that of gray slate; and the river appears to gather much sediment in its course from the north, but I cannot express to you how sweet and delightful the water is. Notwithstanding its turbidness and mixture of earthy matter, coming from the Dead Sea only two hours before, the contrast was very striking; for that is nauseous and pungent to a degree inexpressible; this is delicious and refreshing to the taste, almost as much so as the water of the Nile. Of course I could not leave the Jordan without bathing in its most honored stream; my companion declined going in, fearing the chilliness of the water; so all alone, in a woody and retired spot, protected by the shade of the sycamore, the ilex, and the willow, I disrobed and advanced into the river; the bank is very declivitous, and in a few moments I was nearly out of my depth. I found it difficult to stand against the current, which rushed by me with considerable force, and the water was decidedly cooler than that of the Dead Sea. You will believe me, that the associations of the place and the time were not without effect upon my mind; from the depth of my soul I blessed God for the privileges of His covenant, sealed to us by the holy sacrament of baptism; and I seemed to myself to be looking upon the solemn and touching scene of our Lord's baptism, by His messenger whom He sent to prepare the way before Him. Earnestly did I supplicate that God of his mercy would wash and purify my soul, body, and spirit, by the blood of Christ Jesus our Lord; and with the deepest reverence, remembering whom I was worshiping, I bowed my head beneath the waters of the Jordan three times, and pronounced each time the name of the Father, the Son, and the Holy Ghost, the Triune God of our salvation.

We lingered in this lovely and secluded spot as long as we dared; penetrating into the dense thicket, I tried hard to find me a good stick for a pilgrim's staff, but met with very indifferent success; filling a bottle or two with the water, and remounting our horses, we bade adieu to this deeply interesting place.

[Spencer's Travels.

DEDICATION OF AN ALBUM ON "MOUNT HOLYOKE."

To the Editors of the Sabbath Recorder:—

I send you the following lines without the author's knowledge; but as they were written for public perusal on the pages of an Album, no violence seems to be offered by their publication.

T.

Mount Holyoke, from thy lonely rock,
  We've conned the landscape o'er,
And few of all this numerous flock
  Are wiser than they were before.
We see earth's vale around us spread,
  Her rivers far beneath us flow;
And by the winds of freedom led,
  The flocks of heaven above us go.
But who of all who tread this place,
  This single thought have given,
Though high you've climbed, with weary pace,
  You are not one step nearer Heaven.

W. J. S.

JULY, 1854.

COLLEGE HONORS.

A good many gentlemen have lately been favored by this or that College with certificates of their ability to doctor Theology or Law, and there has been some sharp discussion in certain journals respecting the fitness and force, in certain cases, of these tags to decent people's names. We submit that "the game is not worth the candle." Some of the new LL. D.s and D. D.s are probably above and some below the average of such ware; but we have remarked no such absurd creations this year as in former days. And besides, what does it all amount to? Who ever writes or thinks of Gen Jackson as an Harvard Doctor of Laws, or cares whether Channing was or wasn't dubbed a D. D.? The greatest follies in this line are soon covered by the thick mantle of oblivion.

The following letter from an eminent Carolinian, now departed, to the President and Fellows of Yale College, may be worth reviving in this connection:

NEW HAVEN, Sept. 9, 1830.

GENTLEMEN: Having been prevented from attending the exercises of Commencement, either in the forenoon or afternoon, I was not aware until this morning that the degree of LL. D. had been conferred upon me yesterday by the Senatus Academicus of Yale. Whether it has ever been customary to hint such an intention to the person for whom the honor is designed, I know not, but in the present instance I had not the slightest suspicion of such an event, or I should have saved myself the pain of writing this letter by a frank declaration of my own sentiments. I exceedingly regret the circumstance, as I have long since made up my mind never to accept such a distinction from any quarter whatever. I know you will do me the justice to believe that there is no institution so much respected and beloved by me as Yale, and that from no other could such an honor be as acceptable as at her hands. But I must not receive it even from her. And the reasons which influence me make this more imperiously a duty now, because the offer comes from the Academic Senate of my own venerable Alma Mater. My first reason is personal; and those at least who know me thoroughly will credit the sincerity of my declaration that I am unworthy of the honor, and I have resolved, conscientiously I know, rightfully I believe, never to receive any mark of distinction, whether so estimated by others, or by myself, when I feel that I do not deserve it. I trust I may be permitted to assign this reason without the charge of ostentation, as I hope I may give the next without the imputation of disrespect. I disapprove the whole scheme of conferring such degrees as D. D., LL. D., for I must condemn titles in religion and literature as much as titles of nobility. I regard all of them as landmarks of the states of society, and relics of institutions in the world, unworthy of our imitation, and inconsistent with the dignity and simplicity and purity of our own. I regard them so far as we have adopted them, as alien to the best interests of religion and literature, and so far as they exert any influence unfriendly to them. I must not therefore sanction, by the acceptance of the intended honor, a practice which I disapprove.

I am sure I need not say, gentlemen, that nothing but a sense of duty could have left me to bear the pain of this communication. But as I must endure the greater pain of self-reproach, if I were to acquiesce in the distinction intended for me, I feel that whatever may be your wishes and opinions, you will admit that I have only done what was right. With an anxious desire to express myself so as not to go a step beyond the line of strict duty and propriety, and with an equal solicitude to give not the least offense, I trust my sincere intentions will secure the last, though I may fail in the attainment of my first object. Accept the assurance of my gratitude for the honor intended me, and of my regret at the necessity which constrains me to decline it. Accept also for yourselves personally my best respects, and for the prosperity of the institution under your guardianship my best wishes. Your obedient servant,

N. Y. Tribune.] THOMAS S. GRIMKE.

POLITICAL PREACHING.—An anecdote is related of the celebrated Mather Byles, a clergyman of Boston at the time of the Revolution. On being asked why he did not preach on politics sometimes, he replied, that he had thrown up four breast-works behind which he had entrenched himself, neither of which could be forced, and continued, "In the first place, I do not understand politics; in the second place, you all do, every man and mother's son of you; in the third place, you have politics all the week, pray let one day in seven be devoted to religion; in the fourth place, I am engaged in a work of infinitely greater importance; give to me any subject to preach on of more consequence than the truths I bring to you, and I will preach on it the next Sabbath."

Many years ago, drunkards in England were punished by being obliged to carry through the public streets what was called the drunkard's cloak, which was a large barrel, with one head out, and a hole in the other, through which to put the head, while the hands were drawn through small holes in the side.

PRAYER IN THE FAMILY.

We have, on several occasions, tried to urge upon our brethren the importance of Family Prayer. We know not whether our efforts have been followed by any important results; perhaps they have not. Perhaps the number of prayerless families in the denomination is still as great as ever. We are not willing to believe, however, that our labors have been in vain. Honest, well-meant labors in God's cause are never lost. He upon whom success depends has His eye upon them; and, soon or late, the families of the Seventh-day Baptist denomination will be known as praying families.

We believe that there are many heads of households among us, who labor under a conviction, daily, of the importance of this duty; have been exercised about it, indeed, for many long years. But for some reason they shrink from it. We have little or no doubt, that some who may read these remarks will be reminded of the times when they have felt so intensely on the subject, that it seemed like resisting the Holy Spirit not to carry out their convictions, and perhaps they will not lay down this paper without having such feelings come back upon them. Perhaps, as bed-time approaches, something will whisper to them to call their family together, and make one desperate struggle to begin what has so long been neglected. Will they regard the admonition?

Some shrink from the duty, because of a consciousness that their daily life does not correspond with such a profession of dedication to God as prayer implies. For it is certain, that he who sets up the family altar, professes before his household, that he regards religion as 'the chief concern of mortals here below.' It is tantamount to saying, "As for me and my house, we will serve the Lord." But how can he make this declaration, morning and evening, when his conscience tells him that he walks according to the course of this world day after day? Perhaps he is unreasonably angry several times in the day; perhaps he fumes and scolds, because things are not exactly to his mind; perhaps he carries a sulky temper; perhaps he drives hard bargains with his neighbors, is niggardly, close-fisted, covetous; perhaps he seldom or never goes to the prayer-meeting, and seldom or never gives any thing for the support of the gospel; perhaps his conscience tells him that these things are so, and that his family and neighbors know it as well as himself. And his conscience thus daily accusing him, how can he call his dependents together, and say to them—for prayer *does* say it—that the self-[illegible] service of Christ is all that is really worth living for?

Certainly, we do not wonder that such people have no family altar. For why should they establish what would be a standing rebuke of their conduct? Especially, we do not wonder at it, if they are determined to persist in such conformity to the world. It is well, indeed, if conscience is sufficiently active to tell them, that the love of the world and the love of God cannot dwell together in the same heart; for there are some hardened hypocrites, whose prayers will be the louder and longer, the more that they have devoured widow's houses by their exactions. It is well that they are not utterly blind; that what little light is in them is not total darkness. Still it is strange, that such persons do not see the inconsistency between their daily walk and any profession of religion at all. Why do they belong to the church? Why do they sit at the Lord's table, and profess fellowship with his sufferings and death?

But there are others who, though they do not habitually deny the power of godliness to the extent which our remarks indicate, are nevertheless conscious of so much of a worldly spirit, and of so little whole-hearted devotion to the Saviour, that they cannot bring themselves to the daily performance of a duty, which seems to profess a more entire consecration of themselves, and household, to God. But again we ask, why then make any profession of religion at all? If the intention is to lead nothing more than an ordinary moral life, why seek a place in the church, and communion with Christ in the symbols of his death? The real secret of the matter is, however, that they are conscious of being governed, in a great measure, by a worldly spirit, and are not yet willing to have it otherwise. For *if* they were willing, they would manifest it by availing themselves of such means as would help them to reform.

'And is the daily observance of family prayer a help towards overcoming the world?' Does it strengthen the piety of those who practice it? Does it render them more circumspect in their conduct?—more careful to avoid the appearance of evil? We say yes; for if the neglect of it proceeds, as it too often does, from an inward conviction that the practice of it implies more holiness than their daily life justifies, it is fair to expect, that if those who are guilty in this respect would but take up the practice, they would thereby place themselves under the influence of a motive which could hardly fail to stir them up, and make them more careful not to belie their profession. This motive, we know, would avail nothing with unrenewed persons. But we are not speaking of such; we are speaking of those who, having been made partakers of the divine nature, are supposed to be in a condition to appreciate those motives which appeal to their sense of consistency. And as it is through motives that God stimulates his people to activity, and ensures their progress in the divine life, so it is right, nay, it is their duty, to place themselves under the influence of such as will tend to make them ashamed, both before God and men, whenever they manifest any inconsistency between profession and practice.

And now, dear reader, if family prayer may be safely and innocently omitted, why may not every other form of prayer be omitted also? Why not exclude the exercise of prayer from our public meetings? Why not discontinue the prayer-meeting? Why not have preaching, on the Sabbath, and perhaps the addition of singing, but no prayer? Would you think it well to have our meetings thus conducted? Would you think it right to so revolutionize the prevailing practice as would do away the meeting of two or more persons together, that they might agree as touching any thing that they ask in the name of Christ? Yet you cannot plead an argument against prayer in the family, which would not be equally good against prayer in any and every religious assembly. T. B. B.

BRITISH CORRESPONDENCE.

GLASGOW, July 28th, 1854.

The efforts made for the maintenance of Sunday sanctity in this country are manifestly failing to serve that purpose. In Scotland, we have now a law which very much restricts Sunday drinking in public houses—and which aims at preventing this altogether. In England, the hours of drinking are to be farther abridged—the House of Commons having just passed a Bill restricting the time of public houses being open to the hours between 1 and 2 and between 6 and 10 on Sunday afternoons and evenings. It is not unlikely, indeed, that before this Bill becomes law, it will undergo modification, as, in the House of Lords, where now it is, one of the members has intimated an intention of moving that exemption be made of its enactments in favor of Sunday excursionists. Still, this is a considerable change as respects *the opportunities* of Sunday drinking. But cotemporaneous with this are efforts for secularizing that day, and tending to bring it eventually to its place among "the six working days" of God's word, that are exciting no small apprehension upon the part of those who prefer the traditions of men to the word and law of God.

Three months ago, the London "*Times*," whose articles on Sunday observance were formerly hailed with rapture by the church organs, had a leader calling upon the working men to petition Parliament to authorize the Sunday opening of the Crystal Palace. The influence and extent of circulation of the paper, excited the apprehension of those of opposite views—especially as it was easily to be foreseen, that the opening of the Palace [illegible] Company in the kingdom. As, however, no general movement of this kind was made, a large number of the shareholders of the Palace Company had a meeting of the whole proprietors called, to consider whether they might not have the Palace and grounds open to themselves, without any money payment, on Sundays. At the meeting yesterday week, however, the Chairman intimated that the Directors had meanwhile consulted the Solicitor General on the subject, and that his opinion was, that such a course might possibly invalidate their charter. It was therefore deemed more prudent to leave the matter to Parliament to decide for them. Doubtless they were the more encouraged to do so by the publication, a week before, of the Report of a Select Committee of the House of Commons, favorable in the highest degree to their object, and going even far beyond what they proposed to do. This Committee had been appointed last year, and was reäppointed in February this year, to report whether any alteration or amendment can be made for the better preservation of public morals, of the system of licensing public houses, coffee houses, hotels, dancing saloons, and other places of public entertainment. It seems to be in accordance with the recommendations in their Report, that the House of Commons have passed the Bill of restriction upon public houses already referred to. But the Committee, while limiting the period of Sunday drinking, are highly in favor of Sunday amusements, and are considered by the church organs to have gone out of their way to recommend that provision be made for these. They therefore not only propose that the Crystal Palace should be opened on Sunday after 2 o'clock, but declare that "it is expedient that places of rational recreation, now closed, should then be open to the public." They therefore urge that the British and Geological Museums, the National Gallery, the exhibitions at Marlborough and Gove Houses, as national institutions, should all be opened. Even in the case of other places of rational recreation, in so far as these are now closed by law, they recommend that such law should be so far amended as to enable the Lord Chamberlain or other competent authority to determine should be opened. The Committee examined witnesses, and print their evidence. They point attention to the great advantage which they conceive to have been derived by the public of Dublin from the opening on Sundays of the grounds of the Zoological Society, in the Phœnix Park, at a charge of one penny for admission. Sir Joseph Paxton stated before them, that "he has been particularly struck with *the reverence* which the lower classes display" [not towards God or His law, but] "*for any thing* grand or beautiful." He therefore thinks "an incalculable amount of good" would result from giving them "the opportunity of *recreation* at the Crystal Palace, on the Sunday afternoon."

The Committee remark on the inconsistency that suffers the singing saloons of Manchester and Liverpool and Cremorne, and the Eagle Tavern Gardens, to be open on the Sunday, and shuts, in the face of all but the proprietors and those who have free admission, the Gardens of the Zoological Society, and the vast and varied school of ocular instruction provided within the grounds and building of the Crystal Palace, as too glaring for countenance. That even this part of this Report will be acted upon by Parliament, there is every reason to expect. But as the period expired this week when new motions could be entertained, it cannot be done directly this session. Mr. Hume has, however, a motion on the business paper of the House of Commons for Tuesday, first, embracing all that is here proposed with the *National* properties of interest. There is indeed no reason to doubt, that legislative protection for Sunday, as *a sanctified* day, is near its termination. J. A. BEGG.

LETTERS FROM PALESTINE—NO. 4.

Arrival and Reception—Sweet Home again.

May 17th. In the visions of the night, I went to the prairies of the West, in Wisconsin and Illinois. (My bed is the captain's chest.) How lovely they looked! They would have looked lovely to you, dear reader, were you also so far from home—near 6,000 miles away! Was impressed all the morning that we should see land before noon. At 10½ one of the Greeks who was at the wheel beckoned to me and pointed N. E., exclaiming in a subdued voice, "*Terra, voi vidi?* Si signoré," yet tried to look earnestly and still doubted. The horizon was obscured by a smoky haze. Thought I saw land. Looked again and again; then felt quite sure of it. Went forward and asked the second mate to look. "*Si o non?*" I inquired. "Si Signoré, terra, terra." Hardly daring to credit my senses, I called George. "Yes, master, I see him—I smell him—that's land—I see him." Looked all around me, comparing this with other points of the horizon, but could not see another like suspicious spot; and then, a little more than half way from guessing to knowing, from a doubt to a certainty, I walked aft and ventured the cry of *Land ho!* The captain turned out, looked around, and shook his head. Half unwilling to call it Cape Fly Away, I waited awhile, when, as it grew plainer, a little before 12 M., I called attention to the same point, fully satisfied that what I saw *was land*—the Old Land. There was at the horizon the same faintly blue, smoky outline of mountain tops as three quarters of an hour before. *That* is *land.* "Si, si," said the captain. It was now confirmed, that the mountains of Palestine, to the N. E. of Jaffa, were looming up [illegible] I could have shouted, "Glory to God in the highest!" and even have sung, "Praise God, from whom all blessings flow." The times of of the patriarchs, the prophets, and apostles, passed rapidly in review. What must be the emotions of the Christian when near heaven, if a view of the terrestial Canaan awakens such feelings, and creates such desires for a closer walk with God? Verily, it is possible to have the sting of death taken away; for Jesus can do it; and a sight of the celestial country (by faith) must give fresh assurance to the soul, and nerve it for the final struggle—that grapple with the king of terrors—Death. Reader, are you a Christian? O! how important for you to be prepared, at the end of the voyage of life, to look with rejoicing upon the country before you. At dinner, asked our Catholic captain if he had ever visited Palestine. "Iamais," never. We all feel interested in that country. "Si, signore," yes, sir. It is the place of the display of great wonders, judgments, goodness, and mercy, to the human family. "Sans doute," without doubt. He evidently was reflecting upon serious matters, but was unwilling to expose his sentiments thereupon. He had as much as he could do to *palir* the flush of his countenance, and according to his usual habit, turned the conversation to something else. Ah! hard as is his heart, and as much as he is inclined to infidelity, he exhibits a feeling of the truth, the majesty, the overwhelming power of sacred history, in which he evidently is somewhat informed, and is made to feel that there is a God who will ere long bring him into judgment. The approaching scene before us kindles interest in the eyes of all on board. At 3½ P. M. had the first sight of Jaffa. The clearing away of the fog, and the shining of the sun from behind us, throwing his rays on the city and along the shore, made the scene very interesting. All hands ran forward to get a glimpse of the city from which an ancient prophet took ship to Tarshish, and attempted to run away from his duty. "O, I am glad—a great deal more than I was when I saw Smyrna," was a childish expression, a sentiment in which more mature minds heartily joined. At 4 P. M. came in sight of the plains of Sharon. In the rear are high mountains, much obscured by clouds. When land was first discovered, we were fifteen miles off. As it is very squally, we sail only from one to six knots, making slow progress. Went forward with my daughter to get a better view of the land of God's own choice. Tried to impress upon her mind the things which pertain to the great and holy work upon which we are about entering. At 5 P. M. the captain, as usual for him, enjoys himself playing with the children. It is now squally, then almost a calm, and then a light fresh breeze. The men are getting out the anchor chain, squaring the yards, and taking in sail—a busy time on entering port. Reader, think of this. I have often been struck with the thought, that all things should be in readiness—a vigilant watch kept up, together with a thorough knowledge of ship management, when nearing heaven. Enjoyed a most beautiful sun-set, not dazzling bright, but of a hazy red—one of those varieties which please the eye, and lead the Christian to love and praise God for the beauty and glory of creation. How pleasant to have nature and grace smiling upon us as we enter the land of Palestine.

18th—Evening. Came to anchor in the harbor of Jaffa at half past seven. Went below and read the ninth chapter of Acts, and then enjoyed a good family prayer meeting. At eight and a half, a boat hailed us, which professed to have the health officer aboard. As such a visitor was quite untimely, the captain refused to let him come on board. After a few inquiries, we were asked if our vessel was not a man-of-war—a new idea to the captain, who determined to profit upon it, and have a little fun. Said he had a few guns and some powder. They would not believe his first report, and so I suppose he thought they might have it their own way till day-light should correct their mistake. They were going off, when the captain hailed them quite earnestly. They returned and came along side. A lantern was passed down, and after a good deal of parleying in Italian and Arabic, the officer, for such he proved to be, got our report and left, charged by the captain to report to the American Consul, that his passengers were all Americans, having business of great importance. The bark arriving in ballast, with only a few passengers, had excited the suspicions of the people ashore that ours was a warlike errand. The captain had, without our consent, provided a dozen muskets with which to welcome the pirates, so that it was with some show of truth that he said he had arms aboard. Had I been able, I would have told them that the weapons of our warfare were not carnal, but mighty through God to the pulling down of strongholds. It requires much of that peace and love which the gospel inspires, to meet and suffer the abuse of evil-minded men, but then, ought we not always to take the Saviour's method of resisting evil?

Arose at four o'clock in the morning, that I might have a season of quiet for meditation and prayer previous to setting foot on the shore of Israel. The morning hour of prayer imparts health and vigor to the soul, and is always a precious season to the living Christian.

Did not expect to go ashore till 9 or 10 o'clock, but was unexpectedly hurried off by the captain to look for a place for our goods, which was happily found in the American Consul's store. We were conducted to his house in the country, about a third of a mile [illegible] the city, where we found quite comfortable quarters—i. e. comfortable for this country. Paid off our captain and bade him good bye. Exhorted him to make the Bible his constant, his daily companion. The tears came into his eyes as he turned away, leaving half a promise that he would comply with my request.

At the Consul's house, we found Miss Williams, an English-American lady, who has been in the country some two or three years, and is now teaching a small school of Jewish children in Jaffa. Was much fatigued with the business of the day. The clamoring of the Arabs, running here and there, watching and contriving to save our own and to give others their due, effectually prepared me for a good night's rest on a board seat or divan, in spite of fleas and mosquitoes.

19th. Mrs. Minor and Mr. and Mrs. Dickson called upon us. Accepted Mrs. M.'s invitation to go to her house and tarry a few days.

20th. Sabbath evening was a lovely season. In the morning and afternoon had prayer and conference meeting. Fifteen individuals, all Sabbath-keepers, present to enjoy the exercises and keep holy day to the Lord. Felt to praise the Lord for the privilege of so many to remember the Sabbath in this land. All have been brought here without any preconcerted action of their own. Some are from Germany, and others from the United States. May the Lord send from the four quarters of earth, till this land shall indeed become the glory of all lands.

21st. Went to Rabbi Levi's garden, occupied by Mrs. Minor; thence to a river three miles distant, and saw the mills and silk gardens spoken of by Mrs. M. some time ago in the *Recorder.*

25th. Am once more in my own hired house, and after fourteen months traveling, feel that it is doubly sweet to be at home again. Indeed, at our first meal, breakfast this morning, tears of gratitude flowed freely, as our hearts were uplifted in thankfulness to the bountiful giver of our comforts. Have rented the American Consul's house near the city, or a part of it, by the month, with the refusal of it for a year, at 3,000 piasters—which is, reckoning 120 piasters the English sovereign, and the latter at four dollars eighty-eight cents, one hundred and twenty-two dollars per annum. Moved into the house yesterday. After a good deal of looking and inquiring, I am satisfied it is the best I can do for the present. We have a small storeroom on the first floor; on the second, three good-sized rooms and a hall or inclosed court, through which in the dry season a stream of water is kept running night and day for irrigating a large garden belonging to the Consul. The house is quite pleasant, more so, indeed, than any other in the neighborhood. I do not much like the idea of so high a rent, but do not see how I can avoid it until I have the means and it is thought best to purchase.

31st. Employed, some days ago, a poor Jew to teach me Arabic, to go to market, and assist me in the garden. As he is wholly unaccustomed to labor, I find he will hardly earn his five piasters per day, and an occasional present, which he expects, and from which, on account of the custom of the country, it is hard to deviate. He is really an object of charity, and for the hope of doing him good and helping him to independence through his own labor, I choose to employ him rather than seek one who for the present might be more profitable. Although the garden, or part of a garden, which I have rented, is a mile and a half distant, I prefer to have something of the kind to do, to help my living and get experience, while looking around for the best place to locate the mission. I think it will be expedient to purchase soon, as property is rising, and foreigners are beginning to look after and secure the best locations.

A word further in regard to expenses and prices. For landing, storing, and moving my goods and present to the Custom-House Officers, ten dollars. We pay for bread about the same as at home. Fresh mutton or beef 4 to 5 cents the pound; eggs, which are quite small, 4 cents per dozen; potatoes, three cents per pound; other provisions are in proportion to these prices; some dear, others cheap. The rate of exchange is about ¾ per cent. for French and English gold, and eight per cent. on bills of exchange. The friends of the mission will see by this and other communications, that our Heavenly Father hath thus far been very gracious unto us. Pray, dear brethren, that we may win souls to Christ. Yours, WM. M. JONES.

PALESTINE MISSION.

A good example has been set by some of our Mystic brethren for this mission. Put us down for five hundred dollars, to be paid when the sum of three thousand dollars shall have been subscribed, or the same ratio if only two thousand shall be subscribed. We make this proposition for the object of securing land for the Palestine Mission only. Another five hundred is subscribed on the same condition. A brother at the West has remitted [illegible] dollars more for the same. Go on, brethre[illegible] We want to send the first three thousand [illegible] next opportunity. Don't let us wait till wiser men have supplanted us in this good work. T. B. S.

The Schooner MELITA sailed with what few articles were on hand last week. The iron and tools required by Bro. Saunders were sent. T. B. S.

BAPTIST HOME MISSION SOCIETY.—The N. Y. correspondent of the *Watchman and Reflector* says that the Baptist Home Mission Society is in trouble—not for the want of [illegible] because two suits of rooms are tendered to it and urged upon it. At present, the Society occupies rooms in the 1st Baptist Church, where the Bible Union has its headquarters. But these rooms will probably be abandoned, to please those who do not wish to be so closely connected with the Bible Union. Then the new house of the American and Foreign Bible Society will probably be thrown open to this Society; but in case of its accepting rooms there, the friends of the Union, it is said, threaten to start another Home Mission Society, which will affiliate with the Bible Union. The only alternative is thought to be, for the Home Mission Society to procure rooms entirely independent of both the Bible Society and the Bible Union—a course with which neither party would be satisfied, but which might be submitted to as a compromise. We agree with the correspondent in question, that the "spirit of restless faction that urges matters to such ruinous extremities, under any circumstances, cannot be too strongly deprecated."

MISSIONARY DELEGATION.—Rev. Dr. Anderson, the senior Secretary of the American Board of Commissioners for Foreign Missions, recently sailed from Boston on a visit to the various missions of the Board in Hindostan. From a Boston letter to the *Independent,* we learn that it has become a question of grave interest in that country, how far the English language shall be the medium of religious instruction to the natives. English free-schools, under British patronage, are becoming numerous and popular; and, as they tolerate all manner of Hindoo superstitions, great numbers of young men attend them who might otherwise be led to enter the mission-schools, and be brought under religious influences. In these circumstances, the missionaries naturally incline to open English schools of their own, on an evangelical plan. But to what extent this should be done, is a question about which they are not agreed, as it involves the disparagement, if not the ultimate displacement, of the native language. Dr. Anderson's leading object is to confer with the missionaries on this question, and to aid as far as may be in its adjustment. He is understood to be in favor of the continued and permanent use of the languages of the country. He expects to be absent about a year.

A BENGAL UNIVERSITY.—A great scheme has been announced in Bengal. This is the establishment of a Presidency College in Calcutta, which will in reality be a Bengal University. Pupils from all the government schools throughout Bengal are to be admissible, and it is proposed to grant degrees—or rather diplomas—answering to the University degrees at Oxford and Cambridge. The idea of this University was roughly suggested by Lord Dalhousie, and it has been filled in and modeled into shape by Mr. John Peter Grant, and Dr. Mouat, the Secretary to the Council of Education.

FROM BURMAH.—Cheering missionary intelligence continues to reach this country from Burmah. The *Christian Chronicle* gives the following extract from a recent letter of Rev. E. Kincaid to Rev. J. H. Kennard of Philadelphia:—

"I do not go to Ava now, as there is no man to preach in Prome and the neighboring towns. In all the newly acquired provinces, there is only Bro. Ingalls to preach in Burman besides myself. Within fifty miles of Prome are five other cities, and a great number of villages. I have been just one month in Prome, and have twenty-five or thirty inquirers, and five have asked for baptism. I have fitted up a zayat for a dwelling, and another for a chapel. I can have a congregation at any time and in any place. I am invited to other cities and villages, and as one pony could not endure all the work, I have just bought another. The Lord has opened a door of faith here to his people, blessed be his holy name. Pray for us, and for the Holy Spirit's influence on these churches. I have only one native preacher, but expect another. Our brother Simons has arrived. I am sending out three others as colporteurs to talk and give a tract or a portion of the Scriptures. Two of them I have sent east to some Karen villages, as they have never heard of Christ."

DEPARTURE OF MR. ONCKEN.—The Baptist missionary, Oncken, sailed for his home in Germany a few days ago. An exchange says that "Mr. Oncken landed on our shores in May 1853, soon after which he was considerably injured by the Norwalk disaster. The disability thus occasioned, has been a serious hindrance to him in prosecuting the work for which he came to America. But spite of this, he has visited nearly if not quite every Northern State of our Union, and addressed large and interested congregations in all parts of the country. A special object of his coming hither was to raise funds for chapel building in Germany—an object which has commended itself, and met with a degree of success. The labors of Mr. Oncken while among us have been earnest and well directed. He has made, it cannot be doubted, abiding impressions on behalf of the missions in Germany, and of a vital Christianity everywhere.

"We are pleased to learn that a final settlement for damages was made with the New York and New Haven Railroad Company prior to his leaving, and that the amount awarded him for the same will be, deducting costs, about three thousand dollars."

TRIENNIAL CATALOGUE OF UNION COLLEGE.—Professor Pearson has issued a Triennial Catalogue of Union College. The catalogue ranges from 1795 to 1854, and indicates that [illegible] college has had four presidents, sixty-eight [illegible]es; seventy-five professors and tutors, [illegible]easurers, and three registers. Gradu[illegible], 3239; students who did not graduate, 1070; total, 4309. Honorary degrees, 388. Of the graduates and non-graduates, the following are the professions as far as known: Editors 26, clergymen 855, lawyers 1070, physicians 265, presidents, professors, and teachers 225, merchants, mechanics, and bankers 154, farmers and planters 95, civil engineers and architects 60, army and navy officers 12, total 2792. Number known to be dead, 759. Number living, 3,580.

THE BIBLIOTHECA SACRA, for July, contains the following articles: 1. Excursion from Damascus to Yabrud, by Rev. J. L. Porter, Missionary to Damascus; 2. Druidism, by Rev. Edward D. Morris, Auburn, N. Y.; 3. Caste in the Island of Ceylon, by Rev. Messrs. Meigs, Poor and Holland, Missionaries; 4. Christian Character a Power in the Redemption of the World, by Austin Phelps, Professor at Andover; 5. Did Paul Model his Language after that of Demosthenes? Translated from the German of Koster; 6. The Genius of Hebrew and Roman Learning, by P. B. Spear, Professor in Madison University; 7. The Citations of the Old Testament in the New; 8. Notices of New Publications. 9. Select Literary and Theological Intelligence. Andover: Warren F. Draper.

MONUMENT TO THE PILGRIMS.—The *rock* on which the Pilgrims first set foot in this country has become nearly invisible—the top of it having been taken away to place in front of Pilgrim Hall, and the remainder, which lies just even with the surface of the ground, being partially hidden by a dock. But a monument is soon to be erected to commemorate the spot. The Trustees of the Pilgrim Society have raised the necessary funds, and offer a reward of $300 for an approved plan.

STATE COUNCIL OF COLORED MEN.—A State Council of Colored Men was held at Syracuse last week, when resolutions were adopted—

First, In favor of petitioning the Legislature for such a change of the Constitution as would put colored men on a footing with white men in regard to political rights, especially the right of franchise.

Second, Recommending colored voters to give their suffrages only to such men as would favor this object.

Third, In favor of a Manual Labor College, and against separate schools for colored children and favoring caste; and,

Fourth, In favor of an Agricultural Fair.

INCOMES IN ENGLAND.—From a late parliamentary return, it appears that 186,682 persons paid an income-tax during the year ending April 5, 1853. Of these, 33 persons possessed more than £50,000 per annum; 373 from £10,000 to £50,000; 664 from £5,000 to £10,000; 380 from £4,000 to £5,000; 683 from £3,000 to £4,000; 1456 from £2,000 to £3,000; 4843 from £1,000 to £2,000; 815 above £900; 1709 above £800; 2004 above £700; 3021 above £600; 5260 above £500; 7187 above £400; 14,679 above £300; 30,142 above £200; 40,473 above £150; and 33,158 below that amount. Under another schedule, 54 paid on incomes above £500, and 21,295 on incomes under £150.

It was stated before the assembled multitude at Indianapolis, at the Republican State Convention, by Rev. G. B. Jocelyn, a Methodist minister, that out of five hundred traveling ministers in that State, only three are going for the Nebraska swindle.

General Intelligence.

The Cholera in New York.—In answer to the flying reports that there is a great deal of Cholera in New York, the *Tribune* makes the following statement of facts:—

During the month of May there were, by cholera, 13 deaths, of whom 2 were born in the United States, and 11 were foreigners. In June the deaths numbered 193, of whom 38 were natives, and 155 foreigners. In the five weeks since that time, there have been 972 deaths, of which 210 were natives, and 762 foreigners—making, in a period of three months, 1,178 deaths, 250 being natives, and 928 aliens. Of the natives we find about two-thirds, or 166, males, and 83 females. Of the 166 males we find about one-half, say 90 only, who are adult. Of this 90 about 30 were regular inmates of the Alms-House, Lunatic Asylum and prisons, and colored men—leaving as the absolute mortality from cholera of white male adult Americans—the number of SIXTY cases in a period of a hundred days, in a city of seven hundred thousand inhabitants! And of these sixty, about two-thirds were natives, or long residents of the city. And further, it is a matter of fact, that more than half of these sixty were of broken constitution, generally of intemperate habits, men who had long ago assigned their lease of life to the rumseller, and some of whom brought on the disease of which they died by a reckless course of long continued dissipation, drinking almost hourly for the purpose of "keeping off the cholera."

The Graduation Bill.—The Washington *Union* says that the Graduation Bill has become a law, and gives the following synopsis of it:—

"The scale of graduation enacted by the law is as follows: All lands which have been in market for ten years or upward shall be subject to entry at one dollar per acre; fifteen years and upward, at seventy-five cents; twenty years and upward, at fifty cents; twenty-five years and upward, at twenty-five cents; and thirty years and upward, at twelve and a half cents per acre. Upon every reduction the occupant and settler to have the right of preëmption at such graduation prices until within thirty days preceding the next graduation, but not to interfere with any right which has heretofore accrued to actual settlers. Any person applying to enter any of the aforesaid lands is required to make affidavit that he or she enters the same for his or her own use, and for the purpose of actual settlement and cultivation, or for the use of an adjoining farm owned or occupied by him or herself, and that, together with such entry, he or she has not acquired from the United States under the provisions of this act more than three hundred and twenty acres."

Robbery of a Congressman.—The Richmond (Va.) *Dispatch*, Aug. 8th, says:—The Hon. Fayette McMullen, a member of Congress from this State, was accidentally left at the Slash Cottage yesterday morning. Being very anxious to get on, he was very politely tendered the use of a hand-car by Mr. Thompson, who has charge of that section of the road. It was the wish and calculation of the party to reach the city before the train going north should start. When they reached the creek a short distance north of the Hermitage, the car was taken off the track from fear of a collision; Mr. McMullen, however, being impatient to proceed, induced the hands to place it again on the track; they had scarcely gotten under way before the morning train going north hove in sight; all hands immediately jumped off, at the same time shoving the hand-car back so as to make the collision as slight as possible. In the hurry of the moment, Mr. McMullen failed to take off his carpet-bag containing some $1,800 in money, $1,500 in bills on the Bank of Kanawha, and $300 in gold. The train going north came in collision with the small car and the carpet bag was thrown out; when found it had been ripped open and the money taken out.

Death of Henry Bibb.—Henry Bibb, editor of *The Voice of The Fugitive*, published at Windsor, Canada West, died of congestion of the brain, on Tuesday, the 1st inst., after an illness of sixteen weeks, aged 39 years. Mr. Bibb was born a slave in Kentucky, in 1815, and lived under the withering influence of Slavery until he was 25 years of age, when his noble spirit could endure the oppression of the task-master no longer, and he resolved to liberate himself from the grasp of the man-stealer, or perish in the attempt. With his eye on the North Star, he set out for a land of freedom, and by the aid of locomotion and an inventive genius, he was soon beyond the reach of human kidnappers. Since he regained his liberty he has been connected with the Anti-Slavery movement as lecturer, author and editor, and has been universally esteemed wherever he was known.

More Freed Slaves.—A Georgia planter, who died a year ago, leaving a very large estate, embracing besides land and money, one hundred and fifty-five healthy negro slaves, and no nearer heirs than nephews and nieces, directed, by his will, that the negroes should be emancipated and settled in Indiana or Illinois, and left a large portion of his property to buy them farms and farming implements and stock. But the laws of Indiana and Illinois forbid the settlement of such population within the borders of those States, and in this dilemma, it being evident that the will cannot be implicitly obeyed, the executors are desirous of sending the negroes to Liberia, whither a part of them, who are very intelligent, are anxious to go. The case has been brought to the notice of the American Colonization Society, and will be thrown into the Georgia Courts for adjustment.

On Saturday night, August 5, the bridge across the Connecticut River, between Hanover, N. H., and Norwich, Vt., was burnt to the water's edge—a perfect wreck. The fire was discovered about 12 o'clock, and all the efforts made to arrest the progress of the flames were unavailing. It is supposed to be the work of incendiaries. The bridge was owned by a corporation, which about a year ago raised the tolls, contrary to the judgment and wishes of the public, whose business or pleasure required them to pass. For the last two winters a road has been built, in a disorderly manner, adjacent to the main road, so as to admit of passing over the ice, evading toll. For this suits were commenced by the corporation.

RELIGIOUS INTELLIGENCE.

The first commencement of the State University of Wisconsin, took place on the 27th ult., at Madison. An address before the Athenæum and Polymnian Societies was delivered by Levi Hubbell, Esq., of Milwaukee. Several orations were delivered by young men of the University, and the degree of Bachelor of Arts conferred on Charles T. Wakely and Levi Booth, the first graduates of the institution. The occasion was one of much interest to the citizens of Madison, and the State generally.

The Missionary Society of the Methodist Church having determined to increase their mission in China, the bishop having in charge the foreign missions has selected for that field of labor Rev. Joseph B. Perrie, of Prince George county, Maryland, Rev. Otis Gibson, of Franklin county, N. Y., and Prof. Wentworth, of Dickenson College. These gentlemen are expected to sail from New York the first favorable opportunity.

An arrangement is on foot amongst the friends of temperance, offended by the sale of wine, etc., at Sydenham, England, to purchase the Surrey Zoological Gardens, and to erect a large building of glass. It is proposed to raise £100,000 by 100,000 £1 shares, and the gardens have been provisionally purchased for £25,000.

The following missionaries sailed from Boston recently in the ship "Race Horse," for their respective fields of labor: Rev. Sandford Richardson and wife, Edwin Goodell and wife, Benj. Parsons and wife, all for the Armenian country; and Dr. Nutting and wife for the Assyrian mission.

Mrs. Whittlesey, the daughter of Rev. Burr Baldwin, who left Newark as a missionary to the Sandwich Islands in 1843, has just arrived in New York, *via* Cape Horn, in the clipper ship "N. B. Palmer." Her precarious state of health caused her return.

The *Morning Star* intimates, that in and about Buffalo are several Free-Will Baptists and others, who contemplate going to Nebraska, and they want a preacher, a thorough anti-slavery preacher, to go with them, one not afraid of work nor of "respectability!"

Anti-Nebraska resolutions have been passed by the Baptist Conventions of Maine and Connecticut, and by the Episcopal Convention of Rhode Island.

At Geneva large numbers of converts from Rome are in attendance upon Protestant instruction, and five times more Bibles and Testaments have, during the last year, been issued from the depot of the Bible Society, than in any year preceeding. A deputation from the Evangelical Alliance, and from the dissenting churches of the canton of Geneva, recently attended, for the first time, the anniversary meeting of the Geneva Missionary Society, which was held in one of the largest churches in the city.

The Senate of Turin (Sardinia) have passed a law imposing penalties on such of the clergy as shall, in their public discourses, pronounce any censure upon the laws and institutions of the State. This measure is designed to repress the arrogance of some of the Romish ecclesiastics, who have, of late, been loud in their condemnation of the liberal policy adopted by the government.

Recovered their Freedom.—The three negro boys (says the Fredericksburg *Herald*) referred to by us some weeks ago, as instituting suit for their freedom in Madison county, through the interposition of some right-minded guardians of the public weal, gained their point by a decision. It seems they were born in Fredericksburg, and taken to raise by some one who afterward went to Madison. Their identity, and the fact of their being born free, was lost sight of, and the person dying who had them in charge, his creditors seized on his property, together with these boys, James, John, and Joe. Mr. Wm. Slaughter and Mr. John Timberlake procured funds to send witnesses from this place to testify to the facts in the case, and Wm. L. Early, Esq., appeared as volunteer counsel in their defense. After the decision that they were entitled to their freedom, they were bound out by the Court to be dining-room servants until they are each 21 years of age.

A New State Proposed.—We have information from a credible source, says the N. Y. *Tribune*, that a proposition has recently been made to the three nations, the Cherokees, Creeks, and Choctaws, to form a State out of the territory occupied by these semi-civilized tribes, admitting them as citizens. This proposal was accompanied by an offer to build them a handsome State House at the expense of the General Government, and to bestow certain other advantages. The offer came from the Superintendent of Indian Affairs, and was sanctioned by the Executive of the Federal Government. The evident design was to form another slave State, as there are large numbers of slaves held by all these tribes. But the proposal was rejected by the Cherokees, for the reason that it would place them upon the same level with other tribes not so far advanced in civilization.

Terrible Fatality.—Some three or four weeks since, the cholera broke out among a party of 300 laborers on sections 25 and 26, on the Illinois Central Railroad, some twelve miles from Galena, near Scales' Mound. For a time it was thought that the disease could be subdued by medical treatment, but the mortality became so fearful that the laborers were advised by their employers to fly. The whole party left, some going one way and some another. We are now informed, says the Galena *Jeffersonian*, Aug. 1, by Mr. McCoy, the contractor, that of 300 in his employ at the time the disease made its attack, more than half are dead, the major part of them falling victims after they had fled. Scales' Mound is 450 feet above the level of the Mississippi; the ground is dry, and the air pure. No local cause can be assigned for the mortality.

Singular Phenomenon.—An unusual and beautiful solar phenomenon was visible for about two hours in the morning of Aug. 11th. The sun appeared to be surrounded by several rings of different shades, shapes and centers. Two rings, with the sun nearly in their centers, appeared, and intersected each other at two opposite points. The inner circumference of the rings within the points of intersection were dark, but beyond the points they were luminous. Several other circles and arcs appeared with the sun either in their circumference or near one side. Under the sun was the appearance of an inverted rainbow. The appearance is very unusual in this latitude. One similar was observed in Connecticut Sept. 9, 1844, and another of the same general character at Jackson, Tenn., Jan. 1, 1824.

SUMMARY.

On Thursday evening, the 20th ult., during an awful thunder storm, the house of Mr. Ralph Anderson, on the prairies six miles southwest from Freeport, Ill., was struck by lightning, and all the persons in the house, eleven in number, except one little boy, were struck down and injured more or less, and the oldest daughter, Augusta, a lovely girl in her 17th year, was instantly killed. The fluid struck her head, burned her hair, melted her hair-pins, and went round and round her down to her feet. Several of the children and Mrs. Anderson are badly burned and blistered on various parts, and one little girl about 11 years old, so badly burned as to render her recovery doubtful.

A hail storm of very extraordinary character, accompanied with high wind and some rain, passed over a part of Madison County, Ill., on the 31st ult. The storm continued for about ten minutes, and hail-stones which measured nine inches round were picked up. They fell in tremendous quantities, of all sizes—killed pigs, chickens, &c, split the weather-boarding of the house, passed through the ends of shingles, skinned the bark off the trees, and broke off limbs two inches in diameter. The corn in the field was very much injured, one-half of it being completely prostrated.

A fatal accident occurred at Le Roy on Sabbath (Saturday) August 5, by which Mr. Dennis Carroll was instantly killed. He was a mason, and at work upon the machine-shop of the Conhocton Railroad, now in course of erection at Le Roy. The scaffolding gave way, while there were upon it six or seven men, all of whom, together with a large quantity of stone, were precipitated to the ground. Mr. Carroll was much bruised, and had one of his legs broken. He was killed instantly. Four of the others were very seriously injured.

At Falmouth, Maine, a young man by the name of Timothy Prince, accompanied by a little boy about three years of age, started out on the morning of the 7th, in a boat for the purpose of fishing for mackerel. It is supposed that soon after starting, the sprit-sail swung round, by which the little boy was knocked overboard. Some one from the shore saw Mr. Prince plunge in to save the boy, and after long and ineffectual attempts so to do, sink to rise no more. Thus were man and child engulfed in a watery grave.

The last California mail brought intelligence of three great fires which destroyed property worth about $1,250,000. They were at San Francisco, Sacramento, and Columbia. Commercial matters in San Francisco, and trade throughout the country, were in a most depressed condition. Stocks on hand and known to be on the way are sufficient for about two years' consumption, of most articles. The falling off of rents has consequently been strong and large—stores last year bringing $1,500 a month now renting for $600.

A letter from Albany, N. Y., dated August 9th, says: The liquor dealers here are making strenuous efforts to head off the "League," which has recently proved very effectual in breaking up a large number of groggeries. The rummies have collected about $5,000 by levying contributions upon each other, and placed it in the hands of Mr. Tracy, their treasurer. A rummy's case was tried in the Court of Special Sessions yesterday, but the Jury could not agree, and was discharged.

The earnings of the Milwaukee and Mississippi Railroad for July were in 1853 $16,154,85—in 1854 $35,574,74. The road is now running to Madison, 100 miles, while it was running to Janesville, 70 miles, in the month of July, 1853. Taking the average per mile of last year's business, the increase of length of road would require receipts of about $23,100, leaving a margin of over $12,000 for actual increase of business during the dullest month of the whole year.

We noticed recently a valuable importation of short horn Durham cattle for the Clarke County, Ohio, Importing Company; and we perceive that the stock is to be sold at auction at Springfield, on the 6th of September. This sale comprises nine thorough-bred bulls, and twenty cows and heifers, to which will be added a lot of imported sheep, among which are South-Downs, from the flock of Jonas Webb, the most celebrated breeder of that class of sheep in England.

The Belfast *Age* says that Mackerel are being seized in great numbers along the southern coast of Nova Scotia. Every little creek and bay from Cape Sable to Halifax is overflowing with them. They are taken in nets, from one to six hundred barrels being secured by a single draft. Men, women, and children are employed day and night "curing" them, yet the whole atmosphere is "odorous" with the stench of those impossible to be taken care of. No. 1s are selling at about 2 and 2½ cents a dozen.

On the night of August 1, the High Constable of Sherbrooke arrested two gangs of counterfeiters in Canada, who carried on business about five miles distant from each other in the woods. All their implements were taken, consisting of one printing-press, twenty-six plates for paper money, one machine for stamping gold and silver, which weighed eight hundred pounds, twenty-four moulds for running hard-money, dies, ink, paper, engraver's tools, and thousands of dollars in counterfeit money.

A dispatch dated Boston, Tuesday, August 8, 1854, says: On Saturday night, during a dense fog off Cranberry Isle, the steamer Governor, from Portland for St. John, N. B., ran down the schooner Lady Arabella of Surry, Me., sinking her immediately. Two seamen went down in the schooner, but the remainder on board, including one lady passenger, were saved. The Governor sustained considerable damage, and put into Cranberry Isle for repair.

The Pioneer Company of northern men, formed under auspices of the Massachusetts Emigrant Aid Association, arrived near the mouth of the Kansas River on Friday, July 28, all in excellent spirits and fine health. They proceeded immediately into the Territory with one of the agents of the Emigrant Aid Company, and are located, for the present, on the right bank of the Kansas River, about forty miles from its mouth.

The U. S. Navy Yard Foundry in Washington was totally destroyed by fire Aug. 11th. At the moment the fire occurred, the workmen were engaged in casting the cylinder of the U. S. steamer Fulton, and had about two-thirds of the metal poured into the molds, when the latter exploded, the explosion instantly setting the building in a blaze. At the time of the explosion there were nearly one hundred spectators, in addition to a large number of workmen, in the building, and all fortunately escaped without serious damage.

Mr. C. C. Dennis, the Superintendent of the Buffalo and State Line Railroad, was found guilty of kidnapping by an Erie Jury Aug. 10th. The charge arose from the late riot at Harbor Creek during the Erie Railroad disturbance. When the mob endeavored to lynch Dennis, the cars were put in motion to protect him, and a Harbor Creek man, named Cooper, who was on the train, was carried into New York State.

From Europe we have advices of large crops. That of France is said to be one-fourth above the average, and those of England and of Germany are reported as abundant. From California we have advices that the home supply of wheat is very large—that the mountain regions are raising immense numbers of swine, cattle, and poultry—and that fresh meats are generally as cheap in the mines as in the agricultural valleys below.

The people of Columbiana County, Ohio, have raised $1,200 for premiums to be given at a great Horse Exhibition to be held at Salem, Oct. 12, 14. It is got up on the plan of the "World's Horse Convention," but only for that portion of the world living in Ohio and Pennsylvania. It is also intended as a great sale fair as well as show for prizes.

Letters from Malaga are received as late as July 19. They report that the disease among the vines had considerably increased, and the crops could not fail to be badly injured. The packing of grapes the present season, it was thought, would have to be abandoned.

The Springfield *State Journal*, the central Whig paper of Illinois, has adopted for its motto an extract from one of Henry Clay's speeches—"I never can, and never will, and no earthly power can make me, vote to spread slavery over territory where it does not exist."

A dispatch dated Cincinnati, Wednesday, Aug. 9, 1854, says: The *Gazette* of to-day says it is supposed that from fifteen to twenty lives were lost by the recent sinking of the steamer Cape May near Mount Vernon, Indiana. At last accounts five dead bodies had been taken from the wreck.

New York contains 1,400,000 acres of land, and of these 144 are reserved for public grounds. But New Yorkers talk of having another park, to contain 500 to 600 acres. The seven parks of London embrace 1,642 acres. About ten miles from London are Richmond Hill and Park, covering 2,250 acres, and Windsor Park, of about 2,800.

In accordance with instructions from the United States Secretary of State, Gov. Stevens has addressed the Hudson Bay Company, taking the ground that "their right to trade with the Indians in Washington territory is not recognized, and will no longer be allowed," and granting them until the 1st of July next to wind up their affairs.

It is stated that Madame Sontag, just before her death in Mexico, expressed a fear that she had been poisoned—and further, that both her body and that of Pozzolini has been disinterred, and that evidence was found which settles the question beyond a doubt, that they had both met an untimely death.

On Second-day, July 31st., Messrs. Silas Greenman & Co., of Westerly, R. I., launched from their ship yard, a fine schooner of about one hundred and fifteen tons burthen, to be called the "White Rock." She is to be commanded by Capt. Isaac Gavitt, and is to run between Westerly and New York, up the North River, &c.

Judge Sheppard F. Norris, the Democratic candidate in Ohio for Judge of the Supreme Court, has decided that a slave brought to Ohio by or with the consent of the owner, and afterward escaping from a slave State, is free, and cannot be remanded to Slavery.

Work was commenced at D. McKay's yard, East Boston, last week, in laying the keel of a new clipper ship, to equal the "Great Republic" in size—or 4,000 tons burthen. It is to be built for the Messrs. James Baines & Co., of Liverpool, and to be named the "Donald McKay."

There was a terrible and destructive storm in the vicinity of Fairmount, Va., on Thursday, Aug. 3d. Several buildings were unroofed, trees were thrown across the railroad track, the crops completely prostrated, and an immense amount of damage done.

A dispatch dated Albany, Saturday, Aug. 5, 1854, says: A fire is raging in the woods north of Lachine, Canada. Three children were left by their parents in a shanty while they went to hunt up some cattle, and the children were all burned to death.

A letter from Marseilles, dated July 19, states that cholera was raging with great virulence in that city, and 80,000 of the inhabitants had left. On the 15th there were 157 deaths; 16th, 190; 17th, 165; 18th, 157.

The students of the Theological Seminary at Cannonsburg, Pa., recently met, James Price presiding, and adopted strong resolutions against Slavery, slave-catching, and the Nebraska bill.

The travel to Boston from other cities and States is unusually light this summer, and the hotels are the sufferers. Some of the large houses which were crowded last year are now not more than half full.

On Wednesday, Aug. 2, by the capsizing of a sail-boat in Toronto bay, D. Miller, boat-builder, Mr. Dunlop and son, and a man named Stephens, were drowned.

Thompson's Bank Note Reporter quotes Land Warrants lower, as follows: 160 acres, $185 and $190; 80 acres, $92 1-2 and $95; 40 acres, $46 1-4 and $46 1 2.

The bills of mortality in New York for the week ending Aug. 5, show an increase of only nine over the previous week, and only 302 deaths by the cholera.

Several Banks in Chicago have made arrangements by which they resolve not to receive, hereafter, any Indiana stock-secured bank notes for less than 2 per cent. discount.

The Central Presbyterian Church in New York was destroyed by fire on the 9th inst. Loss about $70,000.

New York Markets—August 14, 1854.

Ashes—Pearls $5 75; Pots 7 00.

Flour and Meal—Flour, 7 50 a 8 25 for common to good State, 9 00 a 9 62 for common to good Ohio. Rye Flour 5 50 for common, 7 00 for superfine. Corn Meal 3 87 for Jersey.

Grain—Wheat 1 60 for red Upper Lake, 1 80 for red Southern, 2 30 for new Genesee. Rye 1 12 a 1 15. Oats 45 a 48c. Corn 72 a 73c. for Western mixed. Oats 45 a 48c. for State and Western.

Provisions—Pork 10 50 for prime, 12 37 for mess. Beef 12 00 a 13 00 for country mess. Lard 10 a 10¾c. Butter 12 a 17c. for Ohio, 17 a 20c. for State.

Hay—65 a 70c. for River.

Lumber—15 00 for Eastern Spruce and Pine.

Seeds—Clover 8 a 8½c. Timothy 17 00 for mowed, 22 00 for reaped. Flaxseed 1 70.

Tallow—12¼ a 12½c.

Wool—28 a 30c. for native, 42 a 45c. for American Saxony Fleece.

MARRIED,

In Greenmanville, Ct., July 29, by Eld. S. S. Griswold, Robert Jeffrey to Mary Jeffrey, both of Stonington.

In Groton, Ct., August 6, by the same, George F. Browning, of South Kingston, R. I., to Mary E. Nichols, of Stonington. Ct.

DIED,

In New Market, N. J., Aug. 6th, of chronic inflammation, Dea. David W. F. Randolph, aged 75 years. He embraced religion when about thirty years of age, and soon after united with the Seventh-day Baptist Church, where for nearly half a century he has stood as one of its members. As early as 1817 we find that he took an active interest in the affairs of the church, and was elected one of its trustees; but it was not until Feb. 17, 1823 that he was called to the office of a deacon. From that time until his death he remained a worthy member, ever taking an interest in what pertained to the peace and prosperity of Zion. Although slowly he approached the grave, yet he dreaded not to enter its dark portals, for his trust was in his Redeemer. He entered into rest. A large concourse of friends gathered around his remains, saw them deposited in the vaulted chamber; dropped the silent tear, and then departed. H. H. B.

At Shiloh, N. J., August 6, Rev. John Davis, aged 79 years. Mr. Davis was born and lived all his days in this place. At the age of twenty-eight years, he professed religion, and when thirty years old he was ordained the pastor of this Church, which place he filled to the general satisfaction of the congregation for thirty-three years, when, in consequence of a growing palsy infirmity, that caused a general trembling of the whole system, he resigned the charge of the church; since which time he has lived a very pleasant, retired, quiet life, being able to harness his horse, visit his friends, and always to be in his seat in the house of God on the holy Sabbath, though for a number of years he has not attempted to preach. His sickness was only of two days duration, during which he was helpless and unconscious. "The memory of the just is blest." For further particulars of his life, we would refer the reader to the *Seventh-day Baptist Memorial*, vol. 2, No. 1, where a biography of him has been published. W. B. G.

Near Shiloh, N. J., August 4th, Mary Davis, widow of the late Lewis Davis, aged 63 years. Mrs. Davis had been infirm for some years; but not so as to be unable to visit her friends, and to fill her place in the house of God on the Sabbath. The day of her death she was as well as usual, and after having dined, she still sat by the table conversing with the lady she boarded with, in reference to the Sabbath-School celebration and excursion she had attended only two days before, when the lady saw something uncommon in her movements; she caught her to prevent her falling from her chair, when the lamp of life immediately went out, without a struggle or a groan. She had been from her youth a worthy member of the church in this place, where by many she will be greatly missed. W. B. G.

At Milltown, Ct., July 23d, 1854, of paralytic affection, Mrs. Martha Peckham, wife of Robert Peckham, aged 49 years. She was a member of the 1st Seventh-day Baptist Church of Hopkinton, R. I., where she united a number of years since, and has ever maintained a life of consistent piety. Her life has been one of severe trial; and her friends and brethren are now consoled with the thought, that though it has been through much tribulation, yet she has entered the kingdom of God, and there finds rest.

LETTERS.

C M Lewis, H H Baker, R G Burdick, P S Cottrell, Silas Johnson, Ephraim Maxson, E M Dunn, N Saunders, A S Davis, E T Burdick, Gideon Hoxsey, B G Stillman, C A Bacon, Henry Babcock (sent to Perrysburg.) Peleg Babcock (due from E A L $1.)

Caleb H Sheppard, Shiloh, N J	1 00

WILLIAM M. ROGERS, Treasurer.

Our Anniversaries.

THE Eleventh Anniversary of the Seventh-day Baptist Missionary Society will be held at Little Genesee, Allegany Co., N. Y., on the fifth day of the week before the third Sabbath in September, (14th day of the month.) The Anniversaries of the American Sabbath Tract Society and the Seventh-day Baptist Publishing Society will be held at the same place on the following day.

Board Meetings.

The Executive Boards of our Missionary, Tract, and Publishing Societies will hold meetings at Plainfield, N. J., on First-day, Sept. 10th.

Yearly Meeting.

The Yearly Meeting of the Seventh-day Baptist Churches of Rhode Island and Connecticut will be holden with the First Church in Hopkinton, Aug. 25th, commencing at 2 o'clock P. M. The Introductory Discourse by S. S. Griswold. Further notices of the meeting will be given at that time.

N. Saunders, Committee.

New Market Seminary.

THE Academic Year of this Institution, for 1854 and '55, is divided into three terms, each fourteen weeks long.

The Fall Term commences Sept. 5, and closes Dec. 8.
Winter " " Dec. 13, " " Mar. 20.
Spring " " Mar. 28, " " July 4.

The Department of Instruction is in the care of Mrs. R. H. WHITFORD, Preceptress, who will be assisted by competent teachers, as occasion may require.

Instruction.—The Common English Branches, Reading, Writing, Geography, Arithmetic, and Grammar, will be taught each term. The Higher English Branches taught as follows:—In the Fall Term, Chemistry, Geometry, and Book-Keeping; in the Winter, Natural Philosophy, Physiology, and Astronomy; in the Spring, Botany, Geology, and Moral Science. Algebra, Etymology, and Rhetoric taught all terms in the year. Classes in French and the Extras will be taught whenever desired.

Expenses.—*Tuition, per term*—for Common English Branches, $3 50; for Etymology and Book-Keeping, $4 50; for Higher English Branches and French, $5 00; for Incidentals, $ 25.

Extras, per term—Penciling, $1 00; Crayoning, $2 00; Embroidery, $3 00; Oil Painting $7 00; Piano Music, $10 00.

Regulations.—No student is admitted for less than half a term. No deduction in price of tuition made for absence, except in cases of sickness. Nothing sectarian is taught or countenanced in the school.

A new and commodious building will be ready for the shcool at the opening of the Fall Term.

David Dunn, Pres. of Board of Trus.
Isaac H. Dunn, Sec'y.
New Market, N. J., July 20, 1854.

Milton Academy.

A. C. Spicer, Principal, and Professor of Mathematics and Natural Sciences.
Albert Whitford, Professor of the Greek and Latin Languages and Literature.
Mrs. S. M. Spicer, Preceptress, and Teacher of Painting, Penciling, French, German, and Italian.

First Term for 1854 commences Wednesday, Sept. 6th—closes Wednesday, December 6th.

A commodious academic edifice, constructed in the best style, is in progress of erection by the Trustees. An ample apparatus for a complete illustrative course of experiments in the departments of Philosophy, Chemistry, and other natural sciences, of a much improved style and quality, has just been purchased at Boston. Other teachers will be employed, and no pains will be spared to advance the interests of pupils and patrons. Absolute thoroughness of discipline is our aim.

Aug. 10, 1854.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice commmencing Monday, April 10, 1854:—

Leave New York at 8 A. M., 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 7 and 8.30 A.M., 12.50 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHICAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

Hudson River Railroad.

NEW ARRANGEMENT.—On and after Monday, August 14th, 1854, the Passenger Trains will run daily (Sunday excepted) as follows: Leave New York from the station corner Chambers-st. and College Place, at

6 00 A M—Express Train for Albany and Troy, connecting with Northern and Western Trains. Through in 4 hours from 31st street.

7.00 A M—Poughkeepsie Way Passenger Train.

8.00 A M—Mail Train for Albany and Troy, stopping at Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, and all Mail Stations North of Poughkeepsie.

9.00 A M—Peekskill Way Passenger Train.

12.00 M—Way Train for Albany and Troy, stopping at Yonkers, Tarrytown, Sing Sing, Crugers, Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, Hyde Park, Rhinebeck, Tivoli, Oakhill, Hudson, Stuyvesant, and Castleton, and connecting with the Express Train leaving Albany at 6.30 P M for Buffalo, and at Troy with Northern Trains for Saratoga and Montreal.

1.00 P M—Po'keepsie Freight and Passenger Train.

3.30 P M—Peekskill Way Passenger Train.

4.30 P M—Express Train to Albany and Troy, stopping at Tarrytown, Sing Sing, Peekskill, Garrisons, Fishkill, Poughkeepsie, and all Time Table Stations North, and connecting at Albany with Western Express Train at 10.30 P M for Buffalo.

5 00 P M—Poughkeepsie Passenger Train.

5.30 P M—To Peekskill, stopping at all Way Stations.

6.30 P M—Emigrant and Freight Train for Albany and Troy, stopping at all Time Table Stasions.

8.30 P M—To Tarrytown, stopping at all Stations.

OLIVER H. LEE, Superintendent.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Miscellaneous.

John Jacob Astor.

From "Fifty Years in both Hemispheres," by Vincent Nolte, the following account of Astor is taken:—

"Astor was born at Heidelberg, where the original name of his family is said to have been Aschtor, and had come to New York as a furrier's apprentice. His first savings, that is to say, the wages he got in the peltry warehouse, for beating out and preparing bear, doe, and other skins, he invested in the purchase of all kinds of peltry, bear, mink and rabbit skins, which he got from the Indians, who, at that time, wandered about the streets of New York; and so soon as he had collected a certain quantity, he sent them to Europe, particularly to the Leipsic fair. There he traded them off for Nuremburg wares, cheap knives, glass beads, and other articles adapted to traffic with the Indians on the Canadian frontiers, and took them himself to the latter points, where he again exchanged them for furs of various kinds. As he has often told me, with his own lips, he carried on this traffic untiringly for twelve long years; going in person alternately, to the Canadian frontiers, and then the Leipsic fair, and lived all the while, as he had ever been accustomed to do, humbly and sparingly. At length he had managed to bring together a considerable capital, and gradually became a freighter of ships, and fitted out expeditions to the North-west Coast, to trade with the Indians of Nootka Sound for furs.

"Another circumstance contributed to the increase of his means. At the peace concluded in 1783, between England and her revolted provinces, the thirteen United States, many acres of land in the State of New York, some even in the neighborhood of New York City, were voted by Congress to the German soldiers who had fought in the American army. The latter were chiefly Hessians and Darmstadters. Most of them died in the course of the year, without having succeeded in converting this property into money; but the relatives and heirs they left behind them in Germany did not forget these little inheritances. Upon the occasion of a visit made by Astor to Heidelberg, in later years, most of the parties last referred to, as inheriting the allotments of the deceased German soldiers, and residing in Heidelberg, united and made our friend their legally authorized attorney, in order to realize something, if possible, from their hitherto useless acres. But the hoped for increase of the value of this property was, on the whole, rather slow in coming, and the heirs wanted money, money, quick and ready MONEY. Astor having been applied to on this score, told them that, in order to get ready money, they must reckon up the real present value of the cash itself, and not any imagined value of the land, and that only through pretty considerable sacrifice could they get cash for the same. Thereupon the parties advised with each other, and finally Astor received peremptory orders to sell, without further delay. Unknown speculators were found; the proceeds were small, but the heirs got what they wanted—money. At the present day, many of these pieces of ground are among the most valuable and most important in the City, and have gradually passed through Astor into other hands; the unknown speculators, however, have faded from the memory of everybody."

Scientific Farming in England.

Mr. Mechi, formerly a successful London merchant, now the most enterprising and liberal improver of Agriculture in Europe, annually invites a considerable number of persons interested in industrial progress to visit his farm just before his summer grain is ripe, and see what he is doing and with what success. The London *Times* gives an account of his gathering this season, from which we make the following extract:—

According to his usual plan on these occasions, Mr. Mechi took his guests, after a slight refection, into his fields; and here, passing rapidly from point to point, he explained with a volubility and happiness of illustration peculiar to him, everything that possessed interest, or upon which information was desired. Now, on the confines of his farm, he complacently contrasted his neighbor's wheat with a piece of his own adjoining it, stating why the one was better than the other, and the probable value of the advantage gained. Next he was standing before a fine field of oats, dilating upon the importance of thin sowing, answering vivaciously a sustained fusillade of questions, and promising himself a return of from 11 to 13 quarters per acre upon the crop. Then came the liquid manure distributor, with its hose scattering around it showers of refreshing aliment for plants. In five minutes Mr. Mechi had told his visitors all about it—how quickly the fertilizing products of his feeding sheds were on the land—in what quantity he could apply them—how digestible and direct the form in which they were presented—how wonderful the results in vegetation which they yielded; the mechanical and chemical details of the process were dashed off in a few sentences, the folly of not utilizing town manures in the same manner inculcated, and immediately afterward visitors and host were before one of Garrett's best portable threshing machines, which the manufacturer proceeded to explain. Mr. Mechi had, some time ago, tested at Tiptree an American invention of this kind, and, nothing daunted by the present excellence of Garrett's, described its superior merits in some respects, urging the implement makers to get rid as much as possible of the reciprocating action in their machines, to produce them lighter and cheaper, to work out the problem of steam cultivation, and generally to go ahead. In this manner he took his guests from field to field, stopping at one point to show the spring running 40,000 gallons a day, with which he liquifies his manure, at another to explain his mode of folding and feeding sheep; again, to read a letter from Mr. Kennedy, the Scotch agriculturist, recording what a surprising increase of food for stock he has obtained by the use of liquid manure. His grain and mangold crops excited general admiration, and on no former occasion has he shown anything like them. The wheats especially are magnificent, up-standing, even in growth, large-eared, and so high that some adventurers who started to explore a field sown with "Payne's Defiance" were at once shut out of view by the waving and luxuriant mass of vegetation. In the management of his Italian rye-grass Mr. Mechi's farming shows to the least advantage; but for this, as Mr. Caird very properly observed after dinner, the dry climate of the eastern counties is somewhat responsible. In making the round of his farm, Mr. Mechi delivered a succession of short but very amusing and vigorous peripatetic lectures on almost every important point connected with agriculture. His visitors were delighted with the freshness, the good humor, the volubility, and, in the main, the soundness of these expositions. They certainly have a stamp about them which nobody but Mechi could give, and his field-preachings on agriculture are alone worth traveling a long distance to listen to. There was not time left before dinner to examine the feeding-sheds, the stock, and the general arrangements of the homestead, but enough had been seen to satisfy the keenest appetite for improved cultivation. Smart exercise in the fresh air had now brought a large proportion of the guests into a frame of body and mind thoroughly calculated to do justice to the ample provision which their host had prepared for them. In a spacious tent, erected for that purpose, they sat down to the number of nearly 300, and there the evening was most agreeably terminated in that round of toasts and speech-making which seems an indispensable condition of festive meetings in this country.

Cultivation of Flax.

The war between Russia and the Western powers in Europe, will completely interrupt the usual exports of flax and flax seed from Riga Odessa—the ports from which large supplies are usually drawn—while the Mediterranean and Dutch supply must also be very uncertain, from the risk threatened to shipping by Russian cruisers. Already the price of these commodities has been seriously affected by the war. Flax seed is now worth about two dollars per bushel in New York—the general price being 75 cents—and flax and hemp are also very high. Our farmers who have been far-seeing enough to sow flax this spring, will reap an ample return, and we have little doubt for the following harvest, (1855,) and perhaps for several years, flax will be among the most remunerative crops. Besides the high price certain to be obtained for good, well saved seed in any quantity, another inducement to grow flax is the fact that the straw can be sold to good advantage in New York and the Eastern States, where formerly it was scarcely worth saving. In Holland and in Ireland, the flax straw from an acre brings the producer an average return of $40 to $50, and when the quality is very fine, even as high as $100 to $150, and this in ordinary times, and of course there will now be a large increase in value; when the price of twelve bushels of seed per acre is added to the above, the growers here can calculate the return that foreigners obtain from a crop which is almost neglected with us. Why should this be? We have every variety of soil and climate; we have men capable of studying out the means by which good crops are obtained abroad, and what more is required?

Our export of seed was very considerable some years ago, but the trade has been lost in consequence of carelessness in the growth, and—it is said—dishonesty in measurement. We now import from East Indies and other parts, between two and three millions bushels of flax seed yearly, to be consumed by oil crushers, who again export the oil-cake to England, where a high price is obtained from the stock breeders, who appreciate its peculiarly nutritive qualities.

There is no reason why we should not grow all this seed at home, and be large exporters besides, if we rightly set about the improvement of our crop. Nor do we see why it would not pay to bale up out flax straw (tightly as we do hay,) and ship it to the spinning mills of Europe, so long as our home manufacture cannot consume all we grow. Before we can do this, however, we must vastly improve the growth and mode of preparation for market, which has hitherto been done in a truly slovenly manner.

[American Agriculturist.

Irrigation.

If there is a single farmer in America unconvinced, after seeing the effects of the drouth of this summer, that irrigation has become one of the necessities of agriculture, we are mistaken in the common-sense capacities of farmers. If all the fields in cultivation that are susceptible of irrigation had been watered this year, in those places where the drouth has been most severe, the increase of crops would have paid one-fourth of the cost, if not more.

Charles A. Peabody, at Columbia, Ga., has succeeded by irrigation in producing strawberries upon the same vines six months in the year.

By irrigation, and by that alone, are the people of Mexico sustained; and generally their plans are of the rudest kind. Here we depend entirely upon rains and dews, and when they fail, there is one universal howl at the "terrible effects of the drouth." The county of Jefferson has lost half the usual crops by drouth three years in succession. The county of Chautauque has been burnt up to a distressing degree for two seasons. Some of the northern counties of Ohio have several times within a few years been obliged to sell off their stock on account of drouth; and scarcely a year passes that we do not hear of much sufferiug arising from this cause in a dozen different localities.

The cause of drouth, as generally given by scientific writers, is denuding the country of forests, and all concur in the opinion that it will grow worse and worse as long as we continue the work of destruction of the earth's natural shade. It does not follow that the worst effects will fall upon the land last cleared; it may fall a hundred miles distant; it is the general change of the atmospheric influences always following the clearing up of a new country.

Now we put the question to the farmers of this country, with all these facts and effects before your eyes, is it not time for you to begin to think of irrigation—to begin to devise means by which alone you can ever hope to get a fair return for your labor upon the soil?

No country on earth, perhaps, was ever so favorably situated for irrigation as the northern portion of the United States. Notwithstanding the generally hilly surface, there are thousands of springs and rills that only need to be led by natural descents into artificial channels; and where they do not exist, such a windmill as we noticed the other day, can be made to pump up water from a lower level to a reservoir on the hill, to be let down when required for the use of growing crops. Our country is not like the arid deserts of Mexico, where travelers are sometimes ninety miles upon a much traveled road, without water. Here we have water everywhere within reach, not only for stock but for irrigation. The driest section of the country we know of is in Kentucky, upon the limestone formation, and there water for stock is preserved in artificial ponds, and might be for purposes of irrigation; or if some general water system was devised, the streams of the country could be made to supply by their own power, the reservoirs upon the hill-tops. There is no question in our mind about the advantages of irrigation, the only question is, will it pay? In our opinion it will pay better than any other expenditure that can be made by, or for the benefit of, agriculture. We call the attention of the reader to some facts connected with irrigation in Italy.

In Lombardy, irrigation has been in vogue for seven hundred years, and as may be observed in the spread of particular manufactures where once planted, so of irrigation, it has continued to spread over all the land capable of being brought under the system. Whole fields have been graded, as we cut down and fill up the uneven surface of a city plot, to bring the land under the power of the canals and ditches. The title of all running streams in the Lombardo-Venitian kingdom has been reserved in the government, so as to prevent any individual monopoly of this necessity in all agricultural pursuits in that country.

The right to use the water of streams for purposes of irrigation is let out to individuals, under certain restrictions, and the interest of the several parties likely to be affected, is adjusted by a highly educated class of hydraulic engineers, no one of whom is allowed to assume the duties or practice the profession unless he is a regular graduate of the University of Turin. There is a Government corps of engineers, and those who practice the profession on private account.

It requires the highest degree of skill to construct the interminable system of canals in Lombardy, and to gauge all their capacity so as not to waste a gallon of water, and yet give each tract of land the exact supply stipulated for.

Canals are often formed by landed proprietors without any immediate prospect of benefit; they look to the ultimate advantages, and so they can by that means save their land from deterioration without getting back the first cost, they consider the outlay a profitable one.

By the use of water, the capacity of the land to support an increased number of cattle is almost inconceivable. It is estimated that the triangle included between Milan, Lodi and Pavia, the sides of which are about twenty miles, contains one hundred thousand horn cattle, and as many swine, and one-fourth of that number of horses. [N. Y. Tribune.

Gunpowder Tea.

Our readers may have heard of the story of the Yankee shoemaker who purchased of a peddler half a bushel of shoe-pegs, all neatly sharpened at one end, and warranted to be the best of maple, and who found them, on inspection, to be nothing but pine. Not caring to be "taken in and done for" after that fashion, and being constitutionally fond of whittling, he went at them with his jack-knife, and sharpening the other end of each peg, resold them to the peddler on his next trip for—oats! The celestials, whose imitative faculties have always been notorious, have improved their recent opportunities of intercourse with the Yankee barbarians by learning a lesson or two out of their book, and are vindicating the capacity by beating the originals. This is seen in a portion of the return cargo of the ship Eagle, which recently arrived from San Francisco. In what particular disguise the component parts were sent out we cannot learn; but the shape in which they have come back shows that the Chinamen are quite shrewd enough to prosper by the side of the cutest Yankee in the land of their adoption. We have before us a specimen of gunpowder tea, said to be a fair sample of 60 tuns, which arrived from San Francisco in the ship Eagle, to "order." There is not the least smell or taste of tea about it, but in appearance it is the most complete imitation we ever saw. It is probably made of thin paper rolled in mud; but in weight, color, peculiar shape of the leaf, and every thing else but flavor, it cannot be distinguished from the genuine article. Even the little bits of broken stones seen in good samples of gunpowder tea are imitated to the life—apparently all from the same material. Once mixed with genuine tea, the adulteration could hardly be discovered.

[Journal of Commerce.

The Iron Foundries of Pittsburgh.

It is said that there are now in Pittsburgh thirty-eight iron foundries, of which nine are almost exclusively employed in the manufacture of steam-engines, and twenty-nine in the manufacture of various kinds of hollow ware, machinery, &c. The foundries which are employed in the manufacture of steam-engines consume yearly 3,200 tuns of wrought iron, 9,200 tuns of pig, employ 640 men, and produce 120 steam-engines every year. Their net capital is $549,000. The heaviest establishment among the other foundries is the Fort Pitt Works. At this establishment there were built some years since two iron steamers of four hundred tuns each and a revenue cutter, which latter craft is still in existence on Lake Ontario. In 1853 the Fort Pitt Works consumed 2,225 tuns of pig iron, and 1,000 tuns of wrought iron, and employed 260 hands. They are now engaged on a Government order for twenty-one guns, called Columbiads, having a ten-inch bore and throwing a one hundred and twenty-four pound shot. It is estimated that the total amount of pig iron, blooms and scraps, annually consumed in Pittsburgh, is at least equal to 127,375 tuns.

SUCH AS THE CHOLERA CALLS FOR.—A Detroit paper says that a family of Germans, who resided on the Chicago road, within fifteen minutes walk from the City Hall, and had been supported at public expense for the last eight weeks, has been swept away by the cholera. First, the father was taken, then the two children, and lastly, the mother, in whose underskirt was found two thousand and five hundred dollars in gold. They had lived amid reeking filth, foul stenches, and health-destroying vapors, for weeks, and had imposed upon the public charity; but their avarice has availed them nothing. They are now rotting in untimely graves of their own seeking, and the county is sole heir to their concealed wealth.

Basis of Good Farming.

Mr. Isaac Moore, who farms one hundred and fifty acres of clay loam, with limestone diffused through it, and in position (and surely no better soil could be desired than this) on Clover street, Brighton, Munroe Co., N. Y., writes us that his usual average per acre is as follows:—

Indian Corn—75 bushels; extra yields 80, 90 to 100.

Potatoes—formerly 250 to 400 bushels; latterly 200.

Wheat—(50 acres) 25 to 35 and 40 bushels, rarely 50.

Oats—(little sown) once 489 bushels from five acres; seed 22 bushels.

Hay—2 to 3 tons; once 4½ tons.

These are large crops; and here is the explanation:—

"I never sell straw; this goes back in some shape to the land. My barn-yard yields me many hundreds of wagon loads of manure; what I fail to get on to my lands in the spring of the year, I keep as 'bank deposit' till autumn.

But clover and plaster are the great fertilizers of the soil of Western New York. When I sow wheat, oats, or barley, I sow ten to twelve pounds of clover to the acre. Any farmer who will follow this process for fertilizing need never go to Peru to obtain guano. His farm will never run down. I have cultivated roots but little. What I have done, I have found profitable. [Tribune.

Value of a Manuscript.

The original manuscript of Gray's Elegy was lately sold at auction in London. There was really "a scene" in the auction-room. Imagine a stranger entering in the midst of a sale of some rusty-looking old books. The auctioneer produces *two small half sheets of paper,* written over, torn and mutilated. He calls it "a most interesting article," and apologizes for its condition. Pickering bids ten pounds! Rodd, Foss, Thorpe, Bohn, Holloway, and some few amateurs quietly remark, twelve, fifteen, twenty, twenty-five, thirty, and so on, till there is a pause at *sixty-three pounds!* The hammer strikes. "Hold!" says Mr. Foss. "It is mine," says the amateur. "No, I bid sixty-five in time." "Then I bid seventy." "Seventy-five," says Mr. Foss; and fives are repeated again, until the two bits of paper are knocked down, amidst a general cheer to Payne & Foss, for *one hundred pounds sterling!* On these bits of paper are written the first drafts of the Elegy in a country church-yard, by Thomas Gray, including five verses which were omitted in publication, and with the poet's interlinear corrections and alterations—certainly an "interesting article;" several persons supposed it would call for a ten pound note, perhaps even twenty. A single volume, with "W. Shakspeare," in the fly leaf, produced, sixty years ago, a hundred guineas; but probably with that exception, no mere autograph, and no single sheet of paper, ever produced the sum of *five hundred dollars!*

Which is the Happy Man?

We know a man in Michigan who lives on the interest of his money, and that is only $70 per annum. He has, it is true, a small house with one room in it, three or four acres of land, and keeps a cow, a couple of pigs, and a few hens, yet he and his wife always appear cheerful and contented, and preserve a respectable appearance on their $70 per annum.

We know of a man in New York who expends $25,000 per annum for his household expenses. He pays for gas light more than the whole income of the Michigan man. He makes annual holiday presents to more than the whole amount of the property of the Michigan man. It costs him a sum six times as large as the whole income of our philosopher to support a single waiter.

We know them both very well, and we think our Michigan friend by far the happiest, healthiest, and most enviable man. They are both advanced in years. The cheapness of books and papers place abundance of rational enjoyment in the power of the countryman; an accumulation of physical ills, and a necessity for intense activity, deprives the citizen of calm and quiet enjoyment and reflection. The former, in the probable course of events, will die of old age at ninety, the latter at seventy. Such is the distribution of happiness and wealth. [Toledo (O.) Blade.

CURIOUS EFFECTS OF HAIR ON GRASS.—A few years ago, the purchasers of hog-hair at Terre Haute, Ind., carried it out upon the prairie and spread it on the grass to dry. This was in the fall and winter. After being washed with the rains, it was raked up, leaving a portion sticking in the grass. In the spring this was the earliest green spot and continued to be the sweetest, as was proved by the cattle resorting there to feed. By and by one of them died, then another and another, though apparently fat and healthy. Then one was opened to ascertained the cause of death, and afterward others for curiosty. In the stomachs of those that had fed most upon this hair manured spot, were found two or three dozen hair balls; such as we used to be told when a boy were "witch balls." We have seen them three inches in diameter and solid as it is possible to compact hair together. The calamity grew so serious that the owners of cattle had to plow up the ground and turn under the sod and its rich manuring, which continued to show its effects for years after. Hair balls are often found in the stomachs of cattle on the farm, from a morbid appetite, eating their own or another animal's, or when the swine have been butchered; and perhaps oftener produce death than is imagined. To prevent accidents, let all the hair be plowed under; it is very valuable manure.

BIOGRAPHY.—A writer in a late number of *Tait's Magazine* in speaking of the "biographical mania," says: "The biographical tide continues to heave and swell upward. It is encroaching on bank and field. It is knocking down landmarks; and where it does not absolutely carry off soil, it is converting good pastures into spongy swamps. In plain English, the biographical mania is diluting our literature, it is caricaturing religion, it is dwarfing science, and it is addling the brains of village politicians. The last twenty years have produced more biographies than the previous hundred; and yet we know, from painful experience, that the necrology of the period in question does not contain in its registers the names of many great men or women. The conclusion is hence irresistibly forced upon us that biography, instead of confining itself, as once was the case, to the apex of the pyramid, now nestles itself at the base, and really, on some occasions, it rubs at the foundations of the edifice."

REMOVAL OF THE MAIN BONE IN THE LEG OF A BOY.—John Baja, a lad fifteen years of age, son of a widow lady of Allegany City, had received some six months ago an injury of the right leg, by a fall, in consequence of which the whole shaft of the bone had become decayed. To save the limb, Dr. Walter removed last week, while the boy was under the influence of chloroform, the main bone of the leg from the knee to the ankle, by expatrition. Incredible as it may appear to the non-professional, that a limb could be saved and be made useful by the removal of the whole of the main bone, still experience has taught that a new bone will be rapidly regenerated in childhood, and the shape, length, and usefullness will be preserved. This is a triumph of modern surgery, thus to save a limb, while it is a blessing to the afflicted to be restored without mutilation. The boy is doing well, free from pain, and his recovery appears to be certain. [Pittsburgh Journal.

VARIETY.

How the universal heart of man blesses flowers! They are wreathed around the cradle, the marriage-altar, and the tomb. The Persian in the far East delights in their perfumes, and writes his love in nosegays, while the Indian child of the far West clasps his hands with glee, as he gathers the abundant blossom—the illuminated scripture of the prairies. The Cupid of the ancient Hindoos tipped his arrows with flowers; and orange buds are the bridal crown with us—a nation of yesterday. Flowers garlanded the Grecian altars, and they hang in votive wreaths before the Christian shrine.

At the commencement of the New Orleans College, on the 17th ult., a single candidate represented the graduating class. He underwent his solitary examination before a full faculty of professors, and a large audience. The Louisiana *Courier* states that for four hours and a half, almost without a moment's rest, he sat calm and unexcited, answering the most intricate questions. In the evening his degrees were duly conferred, when he delivered an address and necessarily graduated with all the honors of his class.

Those who rail at poetry and refinement as superfluous ingredients in every-day happiness, little know what main props they thus seek to undermine. These will abide when even principles waver. Manly delicacy is as necessary in family life as manly rectitude, and womanly tact as womanly virtue. There is as much happiness wrecked from the absence of the one as of the other, and perhaps more. Those who neglect the varnishes of life, commit an insidious sin toward themselves, and these lie in the mind, and not in the purse.

The British North American Provinces contain a surface of 341,155 square miles, equal in extent to one third of that portion of the United States lying east of the Mississippi. They contain a population at the present time of about 2,700,000. The annual imports are about $41,000,000, of which about $14,000,000 are from the United States. The annual exports are about $31,000,000, of which $11,000,000 are to the United States. The amount of tonnage annually employed is 1,600,000.

On Friday last, says the Boston *Traveler* of Aug. 1, Mrs. Henry Clark, in returning from a berry party in Medford, was suddenly notified, by the noise of his rattle, that she was within a few inches of an enormous rattlesnake. Nothing daunted, she immediately procured a stone, with which she so far disabled him that she could fasten a cord around his neck and drag him to her home, much to the astonishment of her frightened husband. His snakeship measures nearly six feet in length, and has twelve rattles, indicating that he is fifteen years old.

On Tuesday, Aug. 1st, Sheriff Church seized at the railroad depot in Middlebury, about 40 gallons of Medford Rum, the property of George Pemberton. The case was heard before Geo. S. Swift, Justice, and said liquor adjudged forfeited, and was destroyed the same day. Quite a little group assembled to see the "precious stuff" poured out—the eyes of some sparkled with gladness to witness the destruction of so much moral poison—a few looked on with the deepest solicitude, apparently to see if the earth would drink it in.

The Hon. W. W. Pepper, one of the Circuit Judges of Tennessee, was formerly a blacksmith; and "for the fun of it," he lately made with his own hands, an iron fire-shovel, which he presented to the Governor, the Hon. Andrew Johnson. In return, Gov. Johnson, who was formerly a tailor, cut and made with his own hands a coat, and presented it to the Judge. The correspondence which passed between these distinguished and worthy American mechanics, is published in the Tennessee papers.

The chief school-superintendent for Upper Canada says that twelve years the school laws have sanctioned the establishment of separate schools for Roman Catholics and others. Yet the number of separate schools has never exceeded fifty, and at the latest official returns it had sunk to twenty-five, of which four were colored, three Church of England, and the rest Roman Catholic.

Mrs. Douglass, who was recently confined in the common jail of Norfolk, Va., for giving to youths of dark complexion moral and religious instruction, has recently published a "Personal Narrative," from which it appears she is a native of the South—no "abolitionist"—and that her pupils were the children of free colored persons.

It is proposed, as there will be a large collection of temperance men from every part of the State, at the Anti-Nebraska meeting at Saratoga Springs, on the 16th, that the opportunity be improved for a temperance gathering on the day following, for consultation and mutual encouragement. In this the American Temperance Union cordially concur.

The Alumni of Yale College are busy raising $150,000 for the improvement of their Alma Mater. $80,000 of the $150,000 fund has been subscribed, and efforts are to be made to complete the amount. S. B. Crittenden, Esq., lately of New Haven, offered to raise his subscription from $5,000 to $15,000, and his generous example will be followed by others.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial,* bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor,* bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder,* vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester, New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.,* made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns and process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound and quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings,* comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me
Yours, with respect, JOHN C. WHITLOCK.
Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.
Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.
Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

PRAYER IN SICKNESS.

When the light of life is fading,
An the world grows dim and dark;
When the current of life's river
Rushes o'er my trembling bark;
When before my spirit's vision
Stretches vast eternity,
Like a great and boundless ocean—
Saviour! take me home to thee!

When I tread the darksome valley,
Which before me thou hast trod,
Tasting all its bitter anguish,
Guide me, O thou Son of God!
Should my weary spirit falter,
'Mid the thick and dismal gloom,
O revive me by thy presence—
Saviour, take me to thy home!

SHILOH, N. J., 1854. SARAH.

THE PUPIL AND THE TEACHER.

An Address delivered at the Sabbath-School Celebration in Plainfield, N. J., July 30, 1854,

BY E. M. DUNN.

Among the topics that occur to the mind as appropriate upon an occasion like the present, I have chosen one which seems most naturally to be suggested from the scene before us—*The Pupil and the Teacher.*

And here I would not be understood to refer merely to that class of persons who may have chosen the distinct profession of the teacher as their avocation, nor to those who may devote their lives to the pursuit of scientific truths. For, however much we may honor the calling of the professed instructor; however valuable we may deem the labors of the retired student, who wears his life away to bring to light some hidden truths—some principle of science which is afterward to promote the comfort and happiness of millions; I say, however highly we may regard the labors of this class of persons, yet these are not the only pupils—these are not the only teachers.

All mankind have a common mission. We behold the insects of the air; we signal out one specie, and inquire, for what purpose they were created?—and lo, we find that each individual specie was created for a specific end. In the creatures of the field, we recognize each class has its own sphere of action, to which it is peculiarly adapted, and for which it was originally designed. And as we ascend in the scale of creation, and arrive at the great family of man, physically, mentally, and morally similarly endowed, we are led to inquire, What is man's mission in life? Man's nature is twofold—physical and spiritual. The physical is, or should be, subservient to the spiritual. The enjoyments of the one are brief and perishing, and if sought after to excess, are degrading and ruinous. The enjoyments of the other are enduring and perpetual, and if pursued with never so much zeal, they never lose their brightness, nor do they ever injure, but rather exalt their possessor. If we make any additions to the physical—if we impart to it new graces and beauty—these will wither and decay in the lapse of years. If we make any additions to the spiritual—if we stamp upon it the impress of beauty—not only will these marks of cultivation beautify and adorn it, while it is encased in its earthly tenement, but they will go with it throughout the cycles of eternity. Reasoning thus, we infer, that the supreme interest and duty, the great mission of man, is, to nurture his own spirit, and to nurture the spirits of others; in other words, *to teach and to be taught.*

If, then, this be the great mission of each individual, irrespective of his calling—to teach himself and to instruct others—do you ask, what portion of one's time and energy should be devoted to the prosecution of this great work? Or is it suggested to your mind, that business cares are so essential and urgent, that but little time and energy is left for the cultivation of the intellect and the nurturing of the soul? Hence you allow these things to those whom fortune has favored with more leisure, while you assign over your duty of instructing others to those who are especially trained and paid for the purpose. I reply, that all of that time and strength which is not actually demanded to provide for our physical sustenance, should be devoted to acquiring and imparting information, and to the promotion of our spiritual natures. Now, how much time is required to provide for our physical comfort, may not at first seem easy to determine; yet surely it is but a brief portion of our existence, and constantly growing less, as inventions in art, and discoveries in science, are from time to time being made and applied to the diminution of hard manual toil. The Indian requires a much longer time to provide for his actual necessities, than the civilized American; for the one works out his subsistence in the same manner that he did two thousand years ago, while the other enjoys the accumulated advantages wrought out by previous generations, each more intelligent than its predecessors. The various improvements made in agricultural implements, by which the husbandman clears away the forests, upturns the virgin soil, plants his seed, and reaps his harvest, with comparatively little manual toil, were all designed by an overruling Providence to give mankind a greater portion of life, in which to *study* and to *teach*—in which to enlarge the mind and soul, and to enhance the spiritual condition of others. As Dr. Wayland remarked a few days since in Schenectada, "God is lifting up from our soul that depressing weight of labor which paralyzes the intellect."

But to what an ignoble end are these results of superior ingenuity prostituted. Instead of subserving that higher purpose, of sundering some of the ties which bind humanity to earth, and giving him greater facilities for cultivating that intellectual principle which likens man to his Maker, they more universally aid to develop to an inordinate degree those baser passions of our nature—avarice and sensuality. If an hundred acres of land can be tilled now with the same outlay of hard labor as five acres could an hundred years ago; and if by science applied to agriculture, one acre now will produce as much as two did then; why, it requires the hundred acres, with their increased rate of produce, to provide for the *imaginary* bodily wants of man now; whereas these five acres would amply supply all his *actual necessities.* Not only must an individual accumulate a sufficient amount to procure him food and raiment, and a comfortable home, but he must yearly lay away in his coffers hundreds and thousands, to secure him a title-deed to respectability, and an honorable standing in society. He must place around him luxuries and costly fixtures, which instead of prompting the mind to study, and enabling it to think more clearly, and teaching the soul to soar higher, only effeminate and bind the spirit down to earth. Look into the homes of any community, and behold what an array of gewgaws and tinsels, of rich furniture and costly tapestry, to adorn the wooden temples in which we live. And in the same homes where so much pains is taken to gratify the lower or bodily senses, you will find but little, if anything, expended for a library, wherewith to enrich the mind; and even those few familiar works which are deemed indispensable to every fireside, are but seldom perused. Now, we all acknowledge this to be the case; yet none of us are willing to take any reproach to ourselves. We call it a fault of the times. Oh, how many wrongs and follies are packed off on the shoulders of the times!

These things are sufficient to show us that mankind are not engaged in executing their commission—that of learning and instructing. It is to be hoped, that future times may bring a better state of affairs, when it will not be deemed a desecration of time and energy, to devote four, six, or even eight hours of the twenty-four in executing the great business of life, to *study* and to *teach*—in making those beautiful impressions on our own spirit and on the spirit of others, which time cannot efface.

Again, if the better portion of our lives were devoted in this way, we would not realize that craving want after those luxuries which cost us so much time and anxiety to obtain. We fill our houses with sofas and ottomans; we spread beneath our feet the most costly coverings; we load our tables with spices, wines, and perfumes; we clothe ourselves every day in "purple raiment and fine linen," and all to entertain our friends; whereas, if our minds were properly cultured, and well stocked with ideas, we could endure to eat our homely fare while standing; in short, we could dispense with many of these superfluities, and still enjoy that feast of mind and flow of soul, which is the true joy, the higher happiness of life.

Now, I would wage no unjust war against those refined comforts and elegancies which art devises, and an honorably earned competence and a well cultivated taste place around us. Since the body is the only earthly habitation for the mind, it is our most imperative duty first to provide for it; but when it is amply provided for, we commit a great wrong in allowing it to usurp the sacred right that belongs to the mind and the soul.

Having shown you what we think to be the business of life, and how we wander away from its accomplishment, and also how, by grasping physical pleasures, we cheat ourselves of spiritual and more substantial bliss, we wish briefly to remark upon the peculiar glory that surrounds our common mission.

The pleasures of knowledge are three-fold—the pleasure we receive in attaining it—the joy we experience in imparting it—and the conscious satisfaction that one realizes when he reflects that his immortal nature has not been neglected, but that all the energies of his being have been devoted to its cultivation. Surely, there are none before me who have not experienced that the operation of attaining knowledge is pleasurable. True, the discipline of the mind is oft-times, and almost universally, difficult. More laborious than to thrust the hard iron into the unwrought earth, is the task of working out of the elements of the untutored mind a rich and productive soil. But the pain of preparatory labor is forgotten amid the joyous anticipations of an abundant harvest. As the industrious miner delves amid the hidden recesses of the earth, in pursuit of perishing treasures, he heeds not the drops of sweat that are dripping from his heated limbs and aching brow, but dwells in imagination upon those jewels upon which his heart is set, expecting that the next blow will place the glittering gold within his possession. So too, as the enthusiastic student threads the mysterious labyrinths of science, he wends his way along unconscious of pain or fatigue, hoping soon to exclaim, in the language of the Grecian philosopher, "*Eureka, Eureka,*" "I have found it, I have found it;" and when the new truth bursts upon his vision, he experiences an ecstatic joy which language is inadequate to describe. Horace Mann has truthfully remarked, "We were created in ignorance and weakness, for the very purpose of enabling us to feel the conscious delight of gathering in knowledge, and of growing stronger in virtue." And this happiness is not experienced by the professed student merely, but by all, of every avocation, who are willing to pause amid their business cares, to enrich the mind and add to their store of human knowledge. We have within our organization a spirit of curiosity, which Providence designed should always prompt us to investigation, and which bears the same relation to the nurturing of the intellect as the appetite bears to the nourishment of the physical frame. We all know that we receive pleasure in the gratification of the physical appetite, and that pleasure is in proportion as the appetite is preserved keen by a temperate mode of living. So also the gratification of the spirit of curiosity, the appetite of the mind, asking for mental food, is attended with the most intense delight, and that delight is in proportion to the keenness of our curiosity. It is our duty to cultivate this spirit to the greatest possible limit within our power; for the great difference between the wise and ignorant is, that the one have cultivated this spirit, and the other have not. Parents must have noticed this curiosity in the first manifestations of intelligence in their children; and it is your duty carefully to call out and to cultivate this attribute in them. And when your little child, that has scarce entered the vestibule of thought, shall earnestly ask you, "Who made the heavens?" "Who sends the rain?" "Where does God reside?" turn him not away by an evasive or unsatisfactory answer, but lead his little mind, link by link, in the chain of investigation, until you have taught him the foundation truths of our holy religion.

And you will experience a joy in doing this; for, as I told you before, there is a joy also in imparting knowledge. The wealthy and generous capitalist, as he bestows his bounties here and there upon the poor and destitute, experiences greater happiness than he who receives the gift. But the intellectual capitalist, who, by dint of untiring industry, hath laid away in the coffers of his mind those imperishable treasures, the giving of which does not impoverish the possessor, realizes a far superior delight, as he bestows here and there the needed precepts and teachings of knowledge. Ask the teacher, whose eyes have become dim, and whose cheeks have grown pale, in the faithful discharge of his duties, if he has not recognized substantial bliss and a noble satisfaction in writing upon the hearts of his fellow-men those precepts which will teach them to live better, and which will enable them in turn to instruct others. And as his frame is tottering by reason of incessant application, you may feel constrained to lend him your commiseration. Truly, for what he has done for humanity, he demands your generous sympathy; yet if you could look into the secret chambers of his soul, you would find that, of all men, he has but little occasion to ask your pity; for though destitute of earthly riches, the reflection of his past labor makes him rich indeed. Not only is this the case with the professed instructor, but with all who are willing to gather in the dew-drops of science, which glitter everywhere in this beautiful temple that God has made for our habitation, and who are also willing to make their pathway through life radiant by imparting information to all with whom they may chance to mingle.

If our organization demands of each and every one of us, to be pupils and teachers, surely our relation to God demands of us to study and to teach morality. Young has beautifully said,

> "How empty learning, and how vain is art,
> But as it mends the life, and guides the heart.
> What volumes have been swelled, what time misspent,
> To fix a hero's birth-day or descent."

Yes, our minds must be directed to that which will "mend the life and guide the heart;" and to do this, we must be students and teachers of the Bible. Perhaps I might be justified in saying, that the Bible alone contains more poetry, more eloquence, more beautiful and forcible reasoning, more touching pathos, deeper and more comprehensive truths, than all other books combined. The truth therein contained is presented in the form best adapted to the multifarious variety of disposition and talent to which it is addressed. It opens to the sorrowing and distressed, fountains ever bubbling up streams of holy consolation. It teaches the tradesman, around whom temptation is ever weaving its subtle snares, to do business without a compromise of private opinion, or of lofty integrity; and it sets forth the great principles upon which commerce should be conducted. It furnishes the scholar and the poet with exhaustless sources of divine instruction, more inspiring than the muses which swept the lyres of ancient bards. Its main precepts are readily understood by the simplest child, and its pages are fraught with subjects of study and contemplation for the profoundest sages. Its maxims should be engraven indelibly on the tablet of every heart. And as Alexander carefully perused the Iliad of Homer, that he might be enabled to imitate and to catch the spirit of its great hero, Achilles, so should we unceasingly study the word of God, that we may imitate its divine Hero and Author, and thus, by intimate association, imbibe the spirit of Him who regulates the universe. All that we have heretofore remarked concerning the delights of the pupil and teacher, is true in a far superior sense when applied to one who studies and expounds the Holy Scriptures. And if we find the examination of those sacred pages tedious and uninteresting, it is only because we have not the grace and spirit of God to appreciate them. Of all who attempt the perusal of Milton's great epic, by far the greater number cast it aside as a difficult and irksome task, and only because they have not that taste and passion for poetic excellence which will enable them to appreciate the beauties that are couched in his immortal verse. So if, in the perusal of the great Book of Life, we have not the awakening influence of the Holy Spirit, to enlarge the understanding, and to give us the power of correct interpretation, or if the vision of the soul is bedimmed by worldly interest, we cannot expect to recognize those priceless pearls that are everywhere imbedded in that great fountain of truth. As a proof that the imparting of Bible teachings is a pleasurable duty, I can do no better than refer you to those who have devoted their lives exclusively to this great work. Ask your religious teacher, whose yearly salary is perhaps only a fifth or a tenth part of your annual income, and whose anxiety and toil may be greater, if amid all the sacrifices and trials that attend his labors he does not experience a joyous satisfaction, which he would not exchange for all the combined pleasures that a princely fortune or a world-wide renown could place around him. And if he does not answer you in the affirmative, he is unprepared to appreciate the nobility of his calling. It may have been deemed unnecessary for me to urge the importance of Bible instruction before an assembly of this kind, but the occasion seemed to demand it—an occasion truly glorious, when children, parents and grand-sires meet together to celebrate the anniversary of the Sabbath-School—an association which, aside from the Christian Church, is more sacred than all other compacts—which is, indeed, an entrance to the church itself—the outer court-yard, from whose flowery paths many a young spirit is ushered into the holy citadel. And I could not well take my seat without addressing a word to these children, for whom this festivity is especially provided.

My young friends, the position that you enjoy is truly a favored one. While to-day, under the watch-care of loving parents, you have been mingling your songs of praise to your Heavenly Father, myriads in other lands have been wandering homeless and uncared for, without those earthly comforts which you so bountifully enjoy; and, more than all, without the teachings of the Bible, to point them to a Saviour in the skies; and I think you understand me when I tell you, it is your duty to improve these superior advantages which God has bestowed upon you. You too are not too young to become students of the Holy Scriptures; and while you may be nobly prompted to excel your classmates in your daily studies, above all things strive to excel in a knowledge of God's Word. If you read it, and ask for divine grace to enable you to understand it, and to follow its requirements, it will not only make you cheerful and happy, and prevent those annoyances and vexations which so frequently mar your associations with each other—it will not only make you useful and influential men and women, but when death comes, it will give you a passport to heaven and the presence of the angels. This is the only way in which you can reward your parents for the sleepless nights and toilsome days which they have devoted to your welfare. This is the only way in which you can please Him who said, "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven."

Companions in the morning of life, to you also would I address a single remark. We are now standing in the green summer time of our existence. The sun hath just risen upon our horizon, and sheds a glorious radiance through the pathway that stretches out before us—while Hope is weaving bright pictures of happines all along our future sky. It is for you now to decide what part you will act. If you will look in upon yourselves, you will find that you have within you "the appetites of a brute and the attributes of an angel." Will you, by reckless indulgence, become degraded to the one, or, by cultivation and spiritual communion, become exalted to the other. It is not to be feared, that any of you will become abandoned—for those who are swept down the darker currents of degradation, enshrouding their names forever in ignominious shame, are not such as delight in attending an occasion like the present. Yet remember, that the ties which bind the spirit to earth are ofttimes of a tender and delicate nature. The affectionate and solicitous mother, fearful of danger, clasps to her bosom her only child, unwilling to bid it go amid the bustling world, and reap its honors or heal its wrongs, and thus, by the excessive indulgence of a passion which, if properly exercised, is the noblest prompting of her nature, she prevents her boy from attaining those honors or wielding that influence which perchance may have been his duty and his fortune. And again, the loving father, amid the embrace of an endeared home-circle, and in the enjoyment of the tender caresses of a beloved family, may be indifferent to the cultivation of his mind, or deaf to the voice of his country as she bids him break away from those social joys, which otherwise would be pure and elevating, did not his duties to his country and his God demand his more immediate attention. Thus, however attractive and proper the pursuit and enjoyment of pleasure may seem, I warn you not to listen too intently to her syren voice, but to hearken more attentively to those higher mandates which bid you go and execute the great mission of life—*to study and to teach.* You may set your heart exclusively upon the accumulation of property, if you will, until you become not only the master of superabundant wealth, but until it becomes the master of you, and as the sun of your life inclines to its western verge, you will find that where the surface of your heart has come in contact with this base world, it is vile and corrupted, while far down within its pure depths there are riches whose true wealth you never have enjoyed. Finally, may it be your prayer and determination, "Oh, let me live to teach this soul higher to soar, or let me die." Many of you are now engaged as Bible students, and let me suggest, that as opening manhood is dawning upon you, you can in no way so effectually manifest your gratitude as by becoming the sources of light and of knowledge to others. Think not, as many of our age are too apt to conclude, that the Sabbath-School has no longer any claims upon you. I care not how high you may rank in mental excellence; you cannot attain a point so high that you will experience any loss of dignity in guiding and instructing others. The most renowned statesmen and learned divines have not considered it beneath them to go into the dark paths of ignorance, and to lead by the hand the suffering and the destitute to an enjoyment of the privileges of religious instruction. And methinks this is and ever will be the brightest jewel in the coronet of their greatness.

Respected parents and teachers, we have no occasion, nor indeed, had we, would it become us, to address you otherwise than in terms of the highest commendation. We see among you the pioneers of a glorious and successful effort—an effort to erect for us, your children, beneath the shadows of the Christian Church, a refuge from all the vices and temptations of a wicked world—a place where the plan of redemption and the truths of divine revelation may be unfolded to the simplest child. A few there are among you. from whom the heat and burden of the day is fast rolling away, whose task is well nigh done. We can promise you no other reward for your toil than the assurance that you leave behind faithful adherents to the principles you have taught us—laborers in the same cause in which you have so successfully enlisted. A higher reward awaits you in heaven.

To-day, and upon this spot, are mingled in joyous celebration three generations; but there is a time approaching when all generations shall come together as to a point—when the scenes of to-day shall have been lost in oblivion—when these voices of song and of praise shall have been hushed forever, and when those who have been faithful, as *students and teachers* here, shall be accepted as associate members among the angels, whose *teacher* is God, and whose study is His character and perfection; and I know of no greater incentive toward spiritual improvement here, than the hope of occupying a high vantage ground when the spirit shall be translated to a land of the blest, where a purer air and sublimer associations shall aid the perfection of those attributes of the soul for the full development of which this earth is too cold and ungenial; for the nurturing of the spirit is not only the mission of this life, but will be the great theme of eternity.

* * *

Whoever feels pain in hearing a good character of his neighbor, will feel a pleasure in the reverse; and those who despair to rise to distinction by their virtues, are happy if others can be depressed to a level with them.

THE KANSAS EMIGRANTS.

BY J. G. WHITTIER.

We cross the prairie as of old
The pilgrims crossed the sea,
To make the West, as they the East,
The homestead of the free.

We go to rear a wall of men
On Freedom's Southern line,
And plant beside the cotton tree
The rugged Northern pine!

We're flowing from our native hills
As our free river's flow;
The blessing of our mother-land
Is on us as we go.

We go to plant her common schools
On distant prairie swells,
And give the Sabbaths of the wild
The music of her bells.

Upbearing, like the Ark of old,
The Bible in our van,
We go to test the truth of God
Against the fraud of man.

No pause, nor rest, save where the streams
That feed the Kansas run,
Save where our Pilgrim gonfalon
Shall flout the setting sun!

We'll sweep the prairie as of old
Our fathers swept the sea,
And make the West, as they the East,
The homestead of the free!

THE GREAT MEN OF FRANCE.

BY LAMARTINE.

If we look at the characters, compared as regard religious sentiment, of the great nations of Europe for us. The great men of other countries live and die on the scene of history, looking up to heaven; our great men appear to live and die, looking at the spectator, or at most, to posterity.

Open the history of America, the history of England, and this history of France; read the great lives, the great deaths, the great martyrdoms, the great words at the hour when the ruling thought of life reveals itself in the last words of the dying. But cross the Atlantic, traverse the channel, come to our times, open our annals, and listen to the last words of the great political actors of the drama of our liberty. One would think that God was eclipsed from the soul, that his name was unknown in the language.

Look at Mirabeau on the bed of death. Said he, "Crown me with flowers; intoxicate me with perfumes. Let me die to the sound of delicious music." Not a word of God or of his soul. Sensual philosopher, he desired only supreme sensuism, a last voluptuousness in his agony.

Contemplate Madam Roland, the strong-hearted woman of the Revolution, on the cart that conveyed her to death. She looked contemptuously on the besotted people who killed their prophets and sybils. Not a glance towards heaven. Only one word for the earth she was quitting—"Oh! Liberty!"

Approach the dungeon door of the Girondins. Their last night is a banquet; the only hymn, the Marseillaise. Follow Camille Desmoulins to his execution. A cool and indecent pleasantry at the trial, and a long imprecation on the road to the guillotine, were the last two dying thoughts of this dying man on his way to his last tribunal.

Hear Danton on the platform of the scaffold, at a distance of a line from God and eternity. "I have had a good time of it; let me go to sleep!" Then to the executioner—"You will show my head to the people; it is worth the trouble!" His faith, annihilation; his last sigh, vanity. Behold the Frenchman of this latter age!

LONGINGS FOR THE CONVERSION OF SINNERS.

It is said of the learned John Smith, "that he had resolved very much to lay aside other studies, and to travail in the salvation of men's souls, after whose good he most earnestly thirsted." Of Alleine, author of the "Alarm to Unconverted Sinners," it is said, that "he was infinitely and insatiably greedy of the conversion of souls; and to this end he poured out his very heart in prayer and in preaching." Bunyan said, "In my preaching, I could not be satisfied, unless some fruits did appear in my work."

"I would think it a greater happiness," said Matthew Henry, "to gain one soul to Christ, than mountains of silver and gold to myself. If I do not gain souls, I shall enjoy all other gains with very little satisfaction, and I would rather beg my bread from door to door than undertake this great work." Doddridge, writing to a friend, remarked, "I long for the conversion of souls more sensibly than for any thing besides. Methinks I could not only labor but die for it with pleasure."

Similar is the death-bed testimony of the sainted Brown, of Haddington: "Now, after near forty years' preaching of Christ, I think I would rather beg my bread all the laboring days of the week, for an opportunity of publishing the gospel on the Sabbath, than, without such a privilege, to enjoy the richest possessions on earth. O labor, labor," said he to his sons, "*to win souls to Christ.*"

Rutherford "could assure his flock that they were the objects of his tears, cares, fears, and daily prayers; that he labored among them early and late." "And my witness," said he, "is above, that your heaven would be two heavens to me, and the salvation of you all as two salvations to me." Fleming, in his "Fulfillment of Scripture," mentions one John Welch, "often in the coldest winter nights rising for prayer, found weeping on the ground, and wrestling with the Lord on account of his people, and saying to his wife, when she pressed him for an explanation of his distress, '*I have the souls of three thousand to answer for*, while I know not how it is with many of them.'"

Brainerd could say of himself, on more than one occasion, "I cared not where or how I lived, or what hardships I went through, *so that I could but gain souls to Christ.* While I was asleep, I dreamed of these things; and when I waked, the first thing I thought of was this great work. All my desire was for the conversion of the heathen, and all my hope was in God." [Scottish Guardian.

A WORD TO PUPILS AT SCHOOL.

The mental indolence, or whatever else it may be, that hinders the improvement of young people, and disappoints the fond hopes of parents who place them in institutions of learning, is such a prevalent evil, that we gladly offer a passing word, if peradventure we may be instrumental of good in so doing. We make no appeal to ambition; for the class of youth that we have in our eye have so little of this principle, that the appeal would be useless. The desire to excel is, with them, nothing in comparison with their love of ease. If they can barely keep along with their classes, and meet their recitations so as just to save themselves from open disgrace, it is all they care for. Nor would it be more effective to appeal to their sense of duty; for the duty of improving one's opportunities so feebly impresses them, that their consciences never become greatly disturbed in this respect. Besides, it is only the real Christian who rightly estimates his responsibility in this matter.

But we have sometimes queried whether our young people ever looked upon it as a simple question of honesty. We dare say, there is not a young person who will read this article, who would not spurn with indignation the remotest hint that he could be guilty of a dishonest act. Will he rob? Will he defraud and steal? Not he. Who dare insinuate such a thing? Did any body ever know him to be guilty of so mean a thing? But keep cool, till we can reason with you a little.

Dishonesty lies in defrauding another of what is due to him. Whenever, in our dealings, we take any thing of value from another, and do not give him an equivalent for it, we act the dishonest part—we defraud him. On this principle, gambling is dishonest, because he who wins gives his antagonist no equivalent for what he takes. He simply appropriates his antagonist's money to himself, but gives nothing in return. Lottery speculations come under the same category.

Suppose you had bought of a merchant what you supposed to be a tub of honey. Your money was paid upon the presumption that you were receiving the full value of it in good sweet honey. When you get it home, you begin to use it; but upon getting down a few inches below the surface, you find that the honey has given out, and all that remains is vile, filthy mud. Do you not at once pronounce that merchant a dishonest man? Do you not say that he has defrauded you—that he has robbed you? Do you not feel, that his act is as clear a violation of the commandment, 'Thou shalt not steal,' as if he had broken into your desk, and taken so much money out of it? You do feel exactly so, and are ready at once to appeal to the law for a redress of your grievance.

Now for the application. Your father places you at school—the academy, or the college. He enters into a contract with the teacher, or teachers, to pay him, or them, a certain amount of money. In return, the teacher engages to put into your head—if it is found capable of receiving it—a certain amount of knowledge. This is the equivalent for value received—a fair, business transaction. If your father withholds the money, he defrauds the teacher; if the teacher withholds the required instruction, he defrauds your parent. In either case, there is dishonesty, because there is not an equivalent rendered for value received.

But in this business transaction, there is one very important circumstance that we have not mentioned. The contract is conditioned upon something which you, the child, are to perform, and that is the diligent application of your mind to study. The teacher does not agree to put a given amount of knowledge into your head, in consideration of value received, unless you will second his effort by diligent study; nor, on the other hand, does the father require it of him, except on this condition. You are, in fact, a third party to the engagement, and when it is entered into, you pledge yourself to the teacher on the one hand, and to your parent on the other, that you will make the necessary application. Thus the bargain is ratified.

Now it is evident that, if your teacher performs his part faithfully, and your parent his, the responsibility lies wholly upon yourself whether your parent is defrauded of the money he pays for your education, or whether he receives the value of it. It is, therefore, a simple question of common honestry. Will you be honest enough to see that your parent receives the full value of what he pays for your education? Or will you defraud him by allowing him, nay, compelling him, to pay it out for nothing? If you idle away your time, his money is gone, and he has got nothing for it. You come home at the end of the term, or year, and though he find a little honey on the surface of the tub, the rest is all mud. Who then shall be held responsible for so gross a fraud? Not the teacher, for he has performed his part of the engagement. Not your parent, for he has faithfully performed his. Upon you the guilt rests; and keenly as it touched your sense of honor to be charged with dishonesty, it requires more than a common share of ingenuity to show that the charge is not just.

Children are too apt to look upon what the parent suffers in such a case as merely his misfortune, or his disappointment, and upon themselves as having committed only the venial faults of youth. But the parent is not only disappointed; he is not only stung with mortification; he is grossly wronged. And the wrong is none the less, because it has been perpetrated by his own child; it is rather the greater. Had the child been sent abroad to purchase for his father some article of use or convenience, with the injunction to get the very best that the market afforded, and should, through sheer carelessness, get a worthless thing, nevertheless paying as much for it as if it were just what his father wanted, who does not see that the father is defrauded? So when he sends you away to school, or college, to buy an education, he expects you to buy the very best that the institution affords. He does not send for a worthless article. If your negligence returns but a poor or indifferent education, you have more than disappointed him; you have wronged him, grossly wronged him. T. B. B.

LETTERS FROM PALESTINE—NO. 5.

JAFFA, 6 mo. 30, 1854.

On the first instant, I began work in the garden, of which mention was made in my last letter. I work a few hours every other day. It is at such an inconvenient distance from my house, that about half as much time is required to go and come as I can afford to spend in actual labor; yet I take pleasure in digging and hoeing over the soil, and especially the soil of ancient Israel. The Jew in my employ accompanies me to the garden, but he is so ignorant of all kinds of work, that he is likely to be of but little use for some time. Myself and family are devoting as much of our time as possible to the study of Arabic, and while our progress is slow, we hope in the end to learn it. The Jews in Jaffa, all I believe, speak Spanish; some of them speak Italian and German, and now and then one a little French. Many of the Armenians and others speak Italian and French; but the language of all is Arabic. Still, the labor of acquiring many languages by a missionary cannot well be dispensed with in this country.

The 7th instant Doctor Barclay and family arrived here from Jerusalem, en route to the United States, via Alexandria, Malta, Rome, Paris, and London. After tarrying with us a few hours, they took lodgings in the Armenian convent in town. Major Brett, of the English army, and lady, who accompanied these friends, took lodgings with us. Doctor B., lady, two sons and daughter, are missionaries of the Disciple or Campbellite denomination, and after having spent about four years in Jerusalem, receiving much encouragement in their work, and obtaining experience, are now going to the States for purposes connected with the establishment of an agricultural colony in this land, and their future usefulness. Much labor has been bestowed in explorations in and about Jerusalem, and the fruit of this labor the Doctor expects to give to the world in the form of a book.

Major Brett has spent nearly thirty years in India; speaks Hindustani very fluently; was acquainted with Dr. Judson, and frequently heard him preach; speaks with a good deal of interest of the Scudder family in Southern India, and of many of our American brethren in that part of the world. His wife is a person of ardent piety, and professes the peace principles to the Quaker extent of that doctrine. During their stay with us, (eleven days,) we discussed again and again the Sabbath question. The idea seems fixed in her mind, that the Sabbath is abolished; and yet she acknowledged that our arguments are very strong to the contrary. If Paul had only said, "Remember, brethren, to keep the Sabbath day holy," it would settle the question with her. Like ten thousand more in the world, when they come to argue the question, the Sabbath is looked upon as a part of the ceremonial law, the whole of which Christ nailed to the cross—a doctrine which leads its advocates to believe that the Decalogue is no longer binding, but that its main precepts have been newly arranged, and incorporated in the gospel system; the first day claims our regard on account of the resurrection of Christ, and an impression has obtained, that the apostles and early Christians met on that day to break bread, and that we ought therefore to do the same.

It was principally through this lady, that a discussion of the Sabbath question was brought about between Dr. Barclay and myself. We met at my house in the afternoon of the 14th, and occupied nearly three hours; first Doctor B., and then the writer in reply. Seventeen persons present. By mutual consent, the debate was resumed on Sabbath morning, the 17th, at nine o'clock, and continued till one P. M. Present twenty-three or twenty-four persons. The following is a brief abstract of the discussion:

Doctor B. said, in opening the debate, that it always afforded him great pleasure to investigate Bible truths; and as the Sabbath was a ground of difference between us, he hoped if he was wrong to be shown the same, and would hold himself ready to abandon his error; and he hoped the same of his Sabbatarian brethren. [The persons keeping Sabbath in this country, besides Mr. Saunders, myself, and our families, to whom he referred, are Mrs. Minor, two single sisters living with her, three German brethren, and Mr. Dickson and his family, consisting of Mrs. D. and four children.] He would endeavor to follow truth wherever it could be found, cost what it might. In keeping the commandments there is great reward. If the few Sabbath-keeping Christians in the world are right, then is the Christian world in a most deplorable, a most awful condition, and the sooner they know it the better. A most fearful responsibility rested upon them, if this subject be true as held by the Sabbatarians. He believed in a day for Christian worship—that it was the duty of Christians to meet on the first day of the week, and not upon the seventh, for the purpose of breaking bread—that the day was appropriate, because on that day Christ rose from the dead. He would then proceed to show that this day of Christian worship should be, not the seventh, but the first day of the week. *First*, the seventh-day Sabbath cannot be binding upon us, because it is impossible for men in all parts of the world to keep a Sabbath or a seventh portion of time, since in those exceptionable parts they have several months night and then several months day. In Greenland, Lapland, and the north of Russia, the inhabitants are certainly exempt from this law, as they cannot divide their time into weeks, and they cannot live without making fire, which last thing the Sabbath law positively forbids. *Second*, the Sabbath law requires that no manner of work be done on that day; no fire must be kindled; no sticks were to be gathered. If the law was violated, the penalty was death, yea, death of a most revolting kind. The manner of enforcing this law does not comport with the spirit of the gospel. *Third*, the Sabbath was given to the Jews, and not to the Gentiles, as might be seen by a reference to Deuteronomy 5: 15—"And remember, that thou wast a servant in the land of Egypt, and that the Lord thy God brought thee out thence through a mighty hand and by a stretched-out arm; therefore the Lord thy God commanded thee to keep the Sabbath-day." Now this verse states that God gave the Jews the Sabbath because he delivered them from Egyptian bondage. It was given to them specially on account of their liberation from a hard and cruel servitude; we nowhere read of its being given to the Gentiles.

Fourth, the seventh-day Sabbath he regarded as preëminently an Old Testament institution, *most rigorous and exorbitant in its demands—a yoke the most onerous and burdensome*. What could be more onerous, more difficult to bear, than to be forbidden to think our own thoughts and speak our own words?

Fifth, He believed the Sabbath was abolished, from the language of the Apostle in 2 Cor. 3: 7, 14, Gal. 4: 9, 11, Col. 2: 16. Nothing could be plainer than that these verses teach the total abolishment of the Sabbath, and therefore all obligation to it has ceased.

Sixth, But while the old Sabbath has with the old covenant been blotted out, the *resurrection-day*, under the gospel dispensation, is the day for Christians to meet and commemorate the death of our Lord. This he would prove most conclusively from both precept and example. That Christ, the Apostles, and early Christians, were in the habit of assembling to break bread and for worship, he would prove from a reference to the law and to the testimony. (1.) The evening after the resurrection of our Lord, the disciples were assembled for worship, and Jesus met with them. John 22: 19. This was the starting point. (2.) The next first day, the Saviour met again with the disciples—see verse 26. (3.) They were all assembled on the day of Pentecost, which was upon the first day. That day was honored in a remarkable manner, by the outpouring of the Spirit and the conversion of three thousand souls. (4.) In Acts 20: 7, we have another example of the meeting of the disciples on the first day of the week. They met to break bread. From the word *when* in this verse, he inferred that they were in the *habit* of doing so on that day. (5.) First Corinthians, 16: 1, 2, was next cited to prove his position. He affirmed a meeting, a habitual meeting, by the Corinthian church, and by the churches of Galatia, on the first day of the week. Moreover, the disciples continued steadfastly in the Apostle's doctrine, in fellowship, in breaking of bread, and in prayers. They taught, "Forsake not the assembling of yourselves together, as the manner of some is;" from which he inferred again, that the time of their meeting was on the first day of the week. We have shown, that the churches met frequently upon that day for worship, but we nowhere read of the meeting of Christians on the Sabbath. No one instance of Christians meeting for worship on the Sabbath day in the New Testament! The Old Testament Sabbath was not abrogated at once, but went gradually into disuse, the first day superseding it, because of the preference which the disciples gave to it on account of the resurrection of our Lord.

In conclusion, he affirmed that the Lord's day, or first day of the week, is a more generous and lovely institution than the old Sabbath. It is as much greater than the seventh day as the work of Redemption is greater than the work of Creation. While we can call to mind the work of Creation, we remember with joy and untold interest that our Saviour rose from the dead on this day—that he burst the bands of death, and came forth a victor—a conqueror over all his enemies, and thus finished the work of Redemption.

In reply, the writer remarked: *First*, as to the impossibility or impracticability of keeping the Sabbath in the northern latitudes, whatever would in this respect apply to the seventh day, would apply equally to the first day. The latter could be no more binding upon us, for the supposed reason, than could the former. But God, who made this world, determined also the bounds of the habitations of men. If they shut themselves up in mines, or in climes where they cannot distinguish day from night, and where they consequently lose all reckoning of weeks, it certainly is no fault of His, nor of the institution under consideration. But he apprehended that the fact in the case was otherwise than as stated by his respected opponent. The night, even, in the long night of months in high latitudes, has its shades of darkness and its glimmerings of light, occasioned by the daily approach and receding of the sun to and from the horizon. So in summer, though for weeks the sun is visible, it is higher and then lower, or as it goes down towards the horizon, men retire to rest, and when it begins to ascend they arise and go about their daily occupations. The people there are therefore capable of dividing their time into weeks; the Sabbath law extends as far as the bounds of the habitations of men. Suppose that in the far north, yea, under the north star, men could distinguish but two days in the year, would that excuse *us* from the cognizance of weeks and of days, who have every natural means for so doing? If the Sabbath was made for low latitudes only, is that any reason why we should excuse ourselves from obligation to the same, since in certain acts men are exempt from its claims. If this be so, it is a very strange way of reasoning. But we have not so learned the law of the Lord. His laws are made for us transgressors in all times and places and circumstances. They are for us, as universal as the reign of sin. Yea, the law under consideration was made for man before he had sinned, and before he had need of a Saviour. We cannot suppose God so ignorant of his own work and of the fitness of things as to make a law of this kind, and afterwards, finding that it suited only a narrow belt of the ball, to abolish it.

Second—The objection that it cannot be kept in cold climates, and that refraining from all manner of work would entail a great amount of human suffering, is worthless, when we take into account the service of the altar and of the tabernacle on the Sabbath, as well as the Saviour's explanation of the law, where he plainly shows that, in respect to health, comfort, care for property, and works of mercy, they are not only permitted, but lawful. As to gathering sticks on the Sabbath, God gives six days for labor, and in that time man can provide, and amply provide, fuel for Sabbath purposes. The objection to the Sabbath on account of the penalty annexed, ought to be, rather, if permitted at all, an objection to the penalty, and not to the institution itself. The law is good, holy, just, spiritual; and while the penalty for its violation is also just, we freely admit that it is fearful; but because it is a fearful thing to fall into the hands of the living God, are we therefore to preach that we are absolved from love and obedience to Him? Under the gospel it is not "an eye for an eye, and a tooth for a tooth," but mercy and salvation to the humble, repenting transgressor. We enforce obedience by the constraining love of Christ, and not by stones, crucifixion, and death. The transgressor who repents can not only "have the benefit of the clergy," but also of the favor of an offended God, through the Redeemer. [The doctor said the transgressor of the Sabbath law was to be stoned to death, without having even the benefit of the clergy.]

Third—The Sabbath was made for man long before there was any such distinction made as Jew and Gentile. The great reason for its observance is contained in Exodus 20: 11—"For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day; wherefore the Lord blessed the Sabbath day and hallowed it." The Sabbath was instituted in paradise, and as our Saviour says, was made for man. The sons of the stranger (of the Gentile) who keep the Sabbath from polluting it, will God make joyful in his house of prayer. All flesh (all mankind) are yet to come before the Lord and worship him from one Sabbath to another. Isa. 56: 6, 7, and 66: 23. The reason for the Sabbath concerns the Gentile as much as it does the Jew. The former has as much need of its blessings as has the latter. It is frequently spoken of as a blessing, and not as a curse. God has promised to honor and prosper the *man*, not the Jew in particular, but the man, who shall call the Sabbath a delight, the holy of the Lord, honorable. Aside from the great reason of its observance by mankind, was one which God saw fit to give to the Jews for them to think of when they kept holy day. And nations would do well at the present time to ponder this reason well. God had just emancipated them from SLAVERY. In their hard and cruel bondage they may have had no time allowed them for public worship, much less to keep holy Sabbath to the Lord; but *now and forever is this blessing theirs;* theirs because they are now under a dominion which is entirely opposed to slavery. God had manifested his utter abhorrence of slavery and of slaveholders by the plagues of Egypt, and in particular, by the slaying of the first-born and the overthrow of Pharoah and his army in the Red Sea. What sin on earth is there that we can for a moment compare to slavery? Look at the system in the United States; what a monster evil it is becoming. We have only to think of it as an illustration of the sufferings of the poor Hebrews. But God has not only set up a monument for all men to remember every week that He created all things, but he has made the same a precious memorial of his love of freedom and his holy hatred of slavery. Taking into account all the reasons for the giving of the Sabbath, we see nothing in them exclusive of, but a great deal that embraces the Gentiles. The latter have now the fullness of the times granted them, a Sabbath for rest and remembrance of creation.

Fourth—We must express our astonishment that Christians should ever look upon the Sabbath as represented by our brother—an institution never incorporated in the ritual of sacrifices; called the HOLY OF THE LORD, HONORABLE, and of which the Saviour acknowledges himself the Lord.

Fifth—The language of the Apostle, in 2 Cor. 3: 7—14, Gal. 4: 9—11, and Col. 2: 16, does not specify the Sabbath. The ministration of death and of condemnation is done away. We have now a ministration of mercy. What the argument of the Apostle has to do with the matter of *obligation* to a merciful institution, we fail to see.

Sixth—The references to the resurrection, to Acts and Corinthians, to show the first day a commemorative day, in the place of the Sabbath, were taken up in their order. The occasion of the resurrection of our Lord being so unexpected, brought the disciples together the evening following the first day of the week. They did not assemble to break bread, nor to commence the celebration of a new Sabbath or worship day. 2. The next time they met was "*after eight days*," and not upon the following first day of the week. 3. The day of Pentecost, and not the first day of the week. To prove it the first day, it will be necessary to show that our Lord did not lie in the tomb three days and three nights. The sacred record speaks of it as the day of *Pentecost*, and not as the first day of the week. 4. Acts 20: 7—was a farewell meeting between Paul and the brethren at Troas. They met on the evening following the Sabbath, held an all-night meeting; the next day Paul and his companions went on their journey. This is the only account of the breaking of bread on the first day of the week in the whole New Testament. The little word *when* refers rather to the specified time than to any custom or habit of the church. First Corinthians 16: 1, 2, speaks of a laying "by him" against the coming of Paul. It is recommended that it be done on the first day of the week, but not one word concerning a public assembly on that day to be found in these verses. It is granted that the disciples continued steadfastly in the Apostle's doctrine; but where is it written that the first day of the week is the Lord's day? or where have the Apostles recommended, commanded, or hinted, that the day in question is worthy of special regard on any account whatever by the Christian Church?

The statement that the church never met upon the Sabbath, was answered by a reference to Acts 13: 14, 27, 42, 44—15: 21—16: 13, 40—17: 2—18: 4, 11.

The idea that Redemption is a greater work than Creation, and therefore needs a day to mark and celebrate the difference, is altogether a human assertion and inference therefrom. Both lack scripture proof.

Near the close of my remarks, the Doctor, interrupting me, took exception to my reference to American Slavery; thought that it was going a good way from the subject. He owned slaves in Virginia, believed slavery a Divine Institution, had suffered in Jerusalem through the influence of Uncle Tom. I should remember that slavery was in this country also; must be careful about its discussion here, &c.

To this I replied, that I had referred to it (slavery) because he had set the example. He had affirmed the Sabbath given to the Jews because of their emancipation from Egyptian Slavery; American Slavery was a good illustration to show the force of the reason for giving the Sabbath to the Jews. I felt quite happy, in view of my abhorrence of the system, that the Sabbath could be looked upon by men, not only as a monument, a standing monument against Atheism, but a memorial of God's hatred of slavery and love of freedom.

On Sabbath, the 17th, we met at the house of sister Minor. The Doctor insisted on my speaking first. I occupied seventeen minutes; the Doctor eighteen minutes. Again I spoke and occupied fifty-seven minutes. The Doctor closed the discussion in a speech of an hour and forty minutes.

The gist of his remarks may be briefly stated. 1. A repetition of his arguments on Fourth-day. 2. That our arguments were nought but mere assertions, wanting entirely in Scripture proof, and as opposite to high Heaven as darkness is to light. 3. Moses was the author of the law, but Christ is our lawgiver. 4. If we keep the law, we are no longer under grace. 5. The Sabbath a most onerous, an exceedingly burdensome institution; a yoke which we are not able to bear. 6. Slavery is sanctioned by high Heaven; by God to Abraham, Isaac and Jacob, and the prophets; by Christ, and by Paul, who commands us to return runaway slaves. 7. A review of the Address to the Baptists on the restoration of the Sabbath; exception was made, and with a good deal of earnestness, to the question and paragraph on page 9, commencing, "But could Christ, or his apostles, consistently alter the law of the Sabbath?" 8. Christ never appeared after his resurrection to the disciples on the Sabbath, but *always* on the first-day. He met them every first day till he ascended into heaven. 9. The idiom of the Hebrew is such that the expression, "after eight days," means upon the eighth day. 10. Thinks there was a change of time at the resurrection, so that somehow the night was lost, and therefore we have only daylight to regard as day. 11. Never before heard it disputed that Christ was crucified on Friday. 12. Thought his opponent had come from Yankee land, when he heard him account for the command: "Ye shall kindle no fire on the Sabbath throughout your habitations." 13. The custom of Paul and of Christ in relation to the Sabbath, weighed nothing in his mind in its behalf; Paul was in the habit of going into theaters to preach the gospel, and we might with as much reason argue that we should patronize theater-going. 14. Sabbatarians need not think that they were to become gainers over their first-day brethren in converting Jews. He believed they would be subject to tenfold more antipathy on account of their Sabbath principles than if they observed first-day. 15. In reply to his opponent, that Christians were in the dark on the Sabbath question, he would say, he knew well where our principles would lead us to. He would warn us of the end of the road we were traveling! It would surely lead us to Judaism! He expected it, and cited the case of a Mr. Cresson, now in Jerusalem, who has turned from Christianity to Judaism, to show the certain tendency of our views and practice concerning the Sabbath. 16. By the same process of reasoning we adopt to prove obligation to the seventh-day Sabbath, he could prove that every one of us should go and hang ourselves! None of us kept the Sabbath, as the law required. It was a rigid, overbearing law, exacting too much, and therefore under the gospel is very properly and mercifully abolished.

For want of time, I replied to only a part of the foregoing remarks, and for want of time and space must omit my answer. My prayer was and is now, first, that in discussing the question I might be deeply imbued with the spirit of the gospel, and adhere closely to truth as set forth in the Scriptures; and, secondly, that the Word, the doctrine of the Sabbath, might be honored through my humble instrumentality. I was anxious to have the debate continued, but Elder B. and family were to leave the 19th for Alexandria. Major B. and lady left the 18th for Beirut.

On the 15th, in company with Doctor B. and others, I visited Nahar el Owja, or Crooked River, an hour north of Jaffa. From the mouth to the falls, where the mills are situated, a distance of three miles, it is nearly thirty yards wide, and navigable for small craft. Along on each side, and far above the mills, is a very fine valley of land. There is a good deal of waste water power at the falls. The mills are constructed of the rudest machinery, and grind a coarse flour in a very slovenly manner. Doctor Barclay thinks the water privilege, the exceedingly rich soil of the river flats, and its proximity to Jaffa, make it the best site for an agricultural colony of any that he has seen in Palestine. Could our people obtain five thousand acres, or even one thousand, of that land, for the purposes of a colony, I should think it would be a wise and profitable acquisition. To secure such a location, we must have the money. If some of our rich brethren would come here with their families and live, buy land, and make it their home, the thing would be accomplished. With a small capital, I believe our prudent farmers would get a living here, and at the same time help others to live. Every day's experience impresses me with the idea that this land is the place for a large colony of our people. There is much land to be bought, and I am informed that a good title can be obtained. Some suppose that certain sections can be obtained of government at a trifling cost.

We are now in the dry season; have not had any rain since we arrived. Ramadan, the ninth Mahommedan month, which appears to be a fasting month, as the Mahommedans eat nothing from sunrise till sunset, closed on the 25th. Many of them appeared to rejoice when it closed, and one would suppose they might well long and wish for the breaking up of so tedious, painful, and unmeaning a fast. Our health is quite good. New comers are all made uneasy by scores of fleas, sand-flies, and musquitoes; but we are getting the better of them. The thermometer for the month has stood at 66 in the morning, 80 at noon, and 74 at sunset.

At this date, we have no news of any importance from the seat of war. All is quiet, so far as we know, throughout Palestine. On Sabbath we have worship morning and evening, or at 10 A. M. and 2 P. M. Average number, fifteen, and all Sabbath-keepers. I am longing for the day when I shall be able to speak to the people freely and fully of the gospel of Jesus Christ. To preach Him crucified, as the only Saviour, to Arabs, Jews, and all, I hope to bend and shape all my energies and time. Pray for us, dear brethren, that the word of the Lord may have free course through us and be glorified.

W. M. JONES.

A GOOD NAME BETTER THAN PRECIOUS OINTMENT.—We were never more affected with the force and beauty of the above sentiment, than a few days since, when listening to the earnest conversation of an intelligent stranger, nearly seventy years of age, who was himself a Presbyterian professor, when he said, "that from a child he had been personally and intimately acquainted with the Seventh-day Baptists of Hopkinton and Westerly, and he never knew a more intelligent, generous, and conscientious people in his life." Verily, said I in my heart, the sentiment is as honorable to yourself as just to them! N. V. H.

SCHOOLS IN NEW HAMPSHIRE.—There are in New Hampshire 2,294 schools; 87,825 scholars; average wages per month of male teachers exclusive of board, $16 42; of females, $7 18; children from 4 to 14 not attending school, 2,669; from 14 to 21 who cannot read or write, 428; school houses built last year, 70; incorporate academies, 46; money paid for tuition in academies and private schools, $23,494 30; raised for public schools, $212,324.

ALFRED ACADEMY.

We have received a Catalogue of the Officers and Students of Alfred Academy and Teachers' Seminary for the year ending July 5, 1854. It gives the names of 48 graduates previous to 1850, 19 in 1851, 21 in 1852, and 14 in 1853. Last year there were 4 resident graduates, 21 under-graduates of four years standing, 26 of three years standing, and 346 of one and two years standing. The Calendar for 1854–55 shows that the first term opens on the third Wednesday in August, and closes on the fourth Wednesday in November; the second term opens on the first Wednesday in December, and closes on the second Wednesday in March; the third term opens on the last Wednesday in March, and closes on the first Wednesday in July. The Catalogue contains the following paragraphs under the head of "The Institution and the Public:"—

The Trustees of the Institution, in presenting their sixteenth annual Catalogue to the public, would return their acknowledgements for the marked favor and liberal patronage received from its numerous friends and patrons. Their highest ambition and only object have been to found a Seminary of unsurpassed excellence—a Seminary that shall bless the Church and the world. They have appreciated the necessity of laying the foundation of intellectual and moral attainments and discipline upon a broad and permanent basis; and they have provided, in a liberal manner, the appliances and facilities for securing these objects. They labor to send forth young men and women, so educated as eminently to qualify them for the realities and responsibilities of active life.

The progress of this Seminary, from its origin in 1836 till the present time, has been steadily upward. Notwithstanding it has had to encounter the obstacles incident to founding a Seminary in a new country, yet every year has marked a decided advancement. Its interests have not been allowed to flag a moment, and its patronage has as uniformly been increased, either in number, or grade of scholarship. No puffing nor extra efforts have been made, but reliance solely placed in its own progressive merits; and the Trustees feel that it is now no invidious boast to claim for it a rank among the first class Seminaries of the Empire State.

Indulging a strong faith in the arm of God, and the generous intelligence of the people, it is believed that its future history will be marked by all that is high, noble and progressive, in the educational movements of the present and coming age.

With a Faculty that are zealously devoted to their work, the public may rest assured, that no pains will be spared to merit that confidence and patronage with which the Institution has been heretofore favored.

THE ANTI-NEBRASKA CONVENTION.

The Anti-Nebraska Convention held at Saratoga, N. Y., on the 16th inst., was largely attended and enthusiastic. N. T. McKoon, of Queens County, acted as President, assisted by seven Vice-Presidents and five Secretaries. Addresses were delivered by a number of leading anti-slavery politicians, among whom were R. N. Havens, E. D. Culver, L. P. Noble, Horace Greeley, H. J. Raymond, Joshua Leavitt, Leonard Gibbs, Judge Hathaway, and others. The propriety of making nominations was considerably discussed, and it was concluded to meet again at Auburn, on the 26th of September, to nominate candidates for State officers to be supported at the ensuing election. The practical points of political effort embraced in the resolves adopted by the Convention, and to which its members have pledged themselves, are:

I. The restoration of the Anti-Slavery proviso in Kansas and Nebraska.

II. All the Territories of the United States shall be free.

III. No more Slaves States shall be admitted into the Union.

IV. This policy shall be held superior to all party considerations, and every party shall be abandoned which does not make the same its first object.

The Saratoga Convention.—The Saratoga Convention was one of more force and power than any similar Convention that we ever attended. The intelligence and earnestness of the delegates, the harmony of sentiment as to what must be done, and the *purpose* manifested to do that, were alike refreshing. The resolutions of the Convention were adopted with the greatest possible unanimity, and we feel certain, that the long desired period has come, when, if wise counsels prevail, the real friends of freedom in the whole country can be rallied under one banner. Let us see to it that our enemies do not divide us, and that we do not unwisely divide ourselves. *United we shall conquer!* N. V. H.

Sunday-keeping in France.—The following paragraph, from the French correspondence of the *Independent*, shows that French Catholics, like intelligent Catholics almost everywhere, place Sundays and fetedays on a par. It is a pity that Protestants should expose themselves to the charge of inconsistency in receiving the papal Sunday and rejecting the papal fetedays:—

"I gave you, in a former letter, some information on an interesting movement set on foot in Paris, and in other places, for the closing of stores on Sundays. Nothing could be more praiseworthy than such efforts as aim to persuade the people to cease Sunday labor freely, and, so far, no one, even among the infidels, was disposed to blame or to oppose them. But unfortunately our zealous papists have no faith in certain truths they preach; they do not trust their power, and they seem bound to always dishonor Christianity by trying to *compel* men to obey its precepts. Finding that to persuade shop-keepers to shut up their stores on Sunday was a process both slow and difficult, they called upon the government—their great resource—and asked for a law which should compel every body to keep the Sunday and the *fêtes* of the Church. Mistaking their desires for reality, they, several times, announced that the government was about to take up the cause of Sabbaths and *fête*-keeping, and obtain by force that which religion could not obtain by influence. This announcement called forth a declaration from the *Moniteur*, that the government meant to do no such thing, and was willing, on the contrary, to maintain the right of every body to act, in this respect, according to his own opinion."

European News.

We have one week later intelligence from Europe, of which a summary will be found below.

On the morning of the 30, the Russians are stated to have attacked the Turkish and French camp at Giurgevo, but were totally defeated with the loss of 2,000 killed and a large number of prisoners.

The Russians were retreating in forced marches. They had quitted Frateschi, and it was occupied by the Turks.

The evacuation of Wallachia was completed, and a proclamation had been issued declaring that all the soldiers who remained behind would be considered deserters.

A telegraphic dispatch from Vienna states that the Russians were totally defeated at Slobodize on the 23d July, by the Turks, and that they lost 2,000 men and 500 prisoners. The *Austrian Correspondenz*, however, contradicts this intelligence.

Four hundred British on the 18th made a descent on Kolinga, in the Island of Desel, and after destroying four boats, retired.

The total Austrian force on the frontiers reached 330,000 men under command of Baron Dekess. The frontiers have not been crossed, but the preparations for hostilities were on a colossal scale.

From Asia, the reported defeat of the Turks by the Russians at Kars is confirmed, and the Russians were beseiging Kars.

Cholera had made its appearance among the British troops.

The cholera was increasing in violence at Constantinople.

The news from Spain is more favorable, and tranquility has been preserved. Espartero entered Madrid on the 28th of July and was received with enthusiasm. A proclamation had been issued by the Queen testifying her confidence in the people and in Espartero.

In the foreign news, is a curious trial, giving the particulars of an attempted abduction by Mr. Carden, at Rathronan, Ireland, of a young lady, Miss Arbuthnot, who is the sister of Mrs. Gough, wife of the Hon. Capt. Gough, the son of Lord Gough, lately advanced to the peerage for his services in India. Mr. Carden, it appears, wished to revive that wild Irish practice of the last century—abducting beautiful heiresses, and marrying them against their will. Accordingly, with several retainers murderously armed, he stopped the carriage of the fair one, in which were also her two sisters, married and unmarried, while it was coming from the Parish Church, where she had been receiving the sacrament. The three ladies were dragged from their carriage, and Mr. Carden had a desperate struggle to secure Miss Arbuthnot, but not succeeding at the moment, called on the strongest of his guard for help; but the chance presence of some men put the miscreants to flight—a shepherd of Lord Gough giving Mr. Carden a flogging with his own whip. Upon the trial it appeared that the most approved means for stopping feminine cries were provided by the abductor, including chloroform. The tough resistance offered by the heiress saved her. Another moment and she would have been carried off before the chance aid came up. It is said that Mr. Carden is a monomaniac on the subject of abducting an heiress, and was ready to go to Spain for that purpose. He will not go, however, under two years, for the Court sentenced him to that term at hard labor.

☞ The steamer Baltic, which left Liverpool August 9th, arrived at New York on the 19th, bringing among her passengers the two distinguished musical artists, Madame Giulia Grisi and Signor Mario, who come to this country on a professional tour.

What it Costs.

The Courier and Enquirer's Washington correspondent has been adding up the figures in the several Appropriation bills passed at the late Session of Congress, and makes the following ugly exhibit:—

Civil and Diplomatic Appropriation bill	$14,480,000
Army	10,375,000
Navy	9,851,000
Post Office	6,500,000
Deficiency	1,900,000
Light House	1,491,000
Construction of six steam frigates	3,000,000
Mexican Treaty appropriations	10,000,000
Invalids and other pension appropriations	850,000
West Point Academy appropriations	140,000
Fortification appropriations	964,000
Indian appropriations	2,270,000
Indian War	75,000
River and Harbor bill for Cape Fear, North Carolina	140,000
Miscellaneous appropriations for Military Roads, Claims, &c.	600,000
Indefinite appropriations, payment of interest on National Debt, &c., collection of the revenue from customs, &c.	5,000,000
Ocean steam appropriations, (accidentally lost)	2,100,000
Total	$69,645,000

Railroad Convention.—A convention of representatives of the competing railroads from New York westward, was held in this city last week. Resolutions were adopted, involving a general advance of charges on freights and passengers, and a reduction of speed and amount of service. Through fares from New York to Buffalo by the two great routes are to be advanced on the 1st September to $8, equal to 58c. advance, and to $9 during the winter season. Freight is to be advanced about 10 per cent. at present, with a further advance hereafter. There is also to be an entire discontinuance of the system of runners and Western agents, which will be an immense saving to all the roads. The system of free passes has been materially abridged by resolution, and its entire abolition submitted to the consideration of the Presidents of the various roads. A uniform classification of freights on all the four great lines has been adopted, and the charges equalized. It was found upon comparison with other freight, that the mail service was performed at a cheaper rate than any other branch of service, and steps are to be taken to obtain a commensurate increase of compensation. The mail compensation was estimated to be 25 per cent. cheaper than the lowest grade of freight.

A Man Whipped for Helping a Negro to Escape.—A man was recently very severely lynched in Wellington, Ky. The facts of the case are substantially as follows: Col. John M. Lewis and Mr. Fackler, of Saline County, had each a runaway negro. They followed the fugitives into Jackson County, where they were captured. Col. Lewis had his slave handcuffed, and the other was at liberty. At Wellington, the owners of the slaves stopped for dinner; while the negroes framed an excuse for going to the stable. In the stable a white man by the name of Wm. T. Doval, induced Lewis's slave to go into the stable loft, where he was covered up by the white man under a large pile of sheave oats. It was soon discovered by the statement of Fackler's negro, and one belonging to Mr. Major, where the negro was concealed, and on a second search he was found. The man was immediately arrested under a warrant and taken before Mr. Justice Hook, who committed him to jail and delivered him into the custody of the township constable. Upon this the citizens appointed twelve men summarily to decide upon the case. They sentenced him to receive twenty-five stripes with a cowhide over the shirt, and immediately leave the State. The stripes were duly inflicted, and the fellow left town with an order to come to Lexington and take passage on the steamer J. H. Lucas, for Illinois, with a promise that the citizens of Wellington would pay his passage.

Death of a Murderer.—The Chickasaw *Intelligencer*, published in an Indian Nation, by an Indian, gives the following account of the death of the Indian Lequahah, *alias* Polecat, *alias* Morgan, the last surviving murderer of Messrs. Stemm and Leppleman. Morgan, pursued by his tribe, traveled almost 200 miles to the tent of a distant brother, which he entered at night, and in rely to inquiries propounded to him, repeated a truthful narration of his crime, pursuit and escape. His brother heard the tale, reminded him of former admonitions, and requested him to promise to surrender himself to justice. He refused, and in a few moments he fell dead, by the hand of a man noble enough to sacrifice even a brother upon the hallowed altar of public justice.

The Connecticut Liquor Law.—The New Haven *Palladium* says that many persons who have doubted the wisdom of so stringent a liquor law as the present, have all along said that they were willing to see the experiment fairly tried, and that if it worked well, they would give it their hearty support. The law, since it has been in operation, has been daily gaining friends from this class of persons, who are numerous and influential. Many grog-shops have been shut up by their keepers, who have "cleared the coop" and gone to the great Babylon of the country, or to parts unknown. Dutch, Irish, Hungarian, with a very small springling of the lower tier of Yankee, have found their occupation all gone, and they are gone too!

SUMMARY.

A dispatch dated Philadelphia, Wednesday, Aug. 16, 1854, says the ferry-bridge at Almond-st. wharf gave away this morning, while a large number of persons were upon it. The party was composed principally of women and children belonging to the Sunday School of St. Paul's Catholic Church, who were embarking on board the steamer Sun, for an excursion up the river. The weight on the slip broke the timbers supporting the platform, in the center, and precipitated all on it into the water. A scene of fright and consternation ensued, but it is believed that all escaped, though some females were drawn out in an insensible state.

The letters from China, give some account of the attack upon a Dutch barque in Chinese waters. It was the most formidable attack which has occurred there for some time. The barque was boarded from five junks, the pirates being mostly armed with spears. After a short, but severe contest, the crew were driven forward, all except the mate, who had been badly wounded, and who was thrown overboard by the pirates. The captain was also badly injured, but received some attention at the hands of the pirates, who, though they plundered his vessel, gave him a cloak to cover himself.

The bills of mortality in New York for week before last show the large reduction of 98 in the number of deaths; 24 being the reduction in cholera, 21 in dysentery, and 35 in convulsions. The proportions of age and nativity are not materially altered. Up to this date in 1849 we had 4,055 deaths by cholera in a population of 500,000; this year, 1,456 by cholera—population 700,000. At the rate for 1849, allowing for increase of population, the deaths by cholera would have reached 5,677, or nearly five times the actual amount.

A violent tornado swept over the south part of Breckville, Ohio, on the 10th inst. uprooting trees, prostrating fences, and whirling rails about like straw. The Rev. Mr. Randal, of Columbus, returning from the funeral of his mother at Richfield, together with a son of Gen. Oviatt, was out in a buggy, exposed to the full fury of the storm. The buggy was dashed against a stump and broken. A barn belonging to Mr. Huttleson, was struck by lightning and with its contents entirely destroyed.

Dr. J. C. Patterson, Postmaster at McWhirtersville, Tenn., was arrested by Gen. Clements, U. S. Marshal, on the 5th, on the charge of having robbed the mail. The charge was sustained, and Patterson committed to jail to await his trial before the Federal Court. Money had been frequently missed from the mails on that line for some time past.

The Rev. John Sawyer, of Garland, Maine, is the oldest officiating clergyman in this country. 'Father' Sawyer will be 99 years old next October. He was born in Hebron, Ct., on the 9th of October, 1755. He was ordained in 1787, and has since been active in the duties of the Christian ministry.

A dispatch dated Boston, Thursday, Aug. 17, 1854, says: Capt. Taylor of the Br. bark Briton's Pride, arrived at this port this morning, reports: Aug. 12, in lat. 41 56, lon. 66 05, passed a chest painted green and lettered "G. B., City of Glasgow," in a gilt ornamental wreath, and in a few minutes afterward passed a head-board about twelve feet long, with letters on it, but could not make them out. These were doubtless remnants of the ill-fated steamship City of Glasgow.

The N. Y. *Tribune* of August 18th, says: We regret to be obliged to announce the suspension Messrs. Henry Sheldon & Co., one of our most respectable cotton commission houses. The cause of suspension is advances to southern planters. It is confidently believed by the house and its friends that the assets are much more than sufficient to meet all its liabilities. Messrs. Bassett & Aborn, stationery importers, also suspended a few days since.

The New Orleans *Commercial Bulletin* says: "We are inclined to believe that the okra plant of the South is destined to alleviate the grievous evil under which all publisherdom labors. We have seen specimens of strong white rope manufactured from its fibre. If it will make rope, it will certainly make paper, and if it will make paper, the present exorbitant prices must come down materially, for the supply of the raw material will be as inexhaustible as cheap.

Two Irish women were tried in Ware, Mass., last week, before Justice Clark, of Enfield, for illegally selling intoxicating liquors. Both were convicted and fined $10 and costs each, and in default of payment were committed to the house of correction, in Northampton, for two months. One of them had twin children, and the other one child, all about seven months old. The women paid their fines, and were discharged, together with their babies.

A dispatch dated Cincinnati, Friday, Aug. 18, 1854, says: A camphene lamp in a butcher's shop on Western-row, near Liberty-st., exploded on Wednesday, while it was being filled. Three children, who were in the shop at the time, were so dreadfully burned that they have since died, and the man who was filling the lamp when it exploded, named Ruff, is not expected to live.

The relatives of seamen who accompanied Sir John Franklin on his unfortunate exploring voyage to the Arctic regions, have been paid by the Admiralty the difference between what has been received on the advance-note left by the unfortunate mariners and the full monthly pay due to the time when the notes were stopped, about four months ago. Some of the lost mariners' wives have drawn above £100 which was due to them.

The post-route bill, which was signed by the President at 10 o'clock on Thursday night, required for its enrollment one thousand sheets of parchment, costing $200! It is a recapitulation of all the existing post-routes in the United States, to which some six or seven hundred new ones are added. The arrangement is alphabetical, for convenience of reference.

The Salem (Mass.) *Journal* says that Mr. Joseph Pond, of Salem, recently had two of his houses cleared of tenants in a summary manner by the aid of a Catholic priest. Some difficulty occurred between the Irish tenants and their neighbors, and the priest, fearing trouble, proceeded to curse the houses. As the Irishmen did not dare to occupy a house accursed, they were completely cleared of their tenants in the course of a week.

The St. Charles (Kane Co., Ill.,) *Democrat* of the 1st says that, during a thunder-storm, the Rev. D. W. Elmore of Fayville was struck dead by lightning. He was in the harvest field, at work; the lightning struck him, completely divesting him of his entire apparel, except one of his shirt wrist-bands, and rending them almost to atoms.

The Hon. E. H. Jansen, State Treasurer of Wisconsin, who lost two children a year or two since, by the burning of his house, when the little creatures perished in the flames, has within the last fortnight lost by cholera his three remaining children and a brother and sister.

Much excitement exists in the neighborhood of Cumminsville, on account of the recent burning of a number of Bibles in the public highway by some Irish Catholics. The Bibles were distributed by the American Bible Society, and the remains of those burnt can now be seen at the rooms of the Bible Society.

The Kingston (Canada) *Commercial Advertiser* learns from the Grand Secretary of the Sons of Temperance, that the chances in favor of a Prohibitory Liquor Law passing at the next session of Parliament, are very great indeed. In the last Parliament not a single member was pledged to support such a measure.

Some miscreant set fire to the powder magazine at Maysville, Ky., at 2 o'clock on Sunday morning, Aug. 13. Thirteen houses were destroyed by the explosion; no lives were lost, and but a few persons were injured. The explosion was terrific, the magazine containing 800 kegs of powder.

The last news from Europe brought the information that the Turkish Government has conferred on Shamyl the highest rank in its military establishment, having appointed him to the supreme command of all the armies operating against the Russians in Asia.

Fifty thousand dollars have been subscribed to the Pearl Fishing stock at Wilmington, Del., and arrangements are in progress to send bells, divers and vessels to the Pacific to fish. The Company are reckoning their profits at 1,300 per cent.

Alexander McCall, one of the first settlers in the "clearing" where Cincinnati now stands, died Aug. 6, at his residence in that city, having attained the age of eighty-six years.

The Oshkosk (Wis.) *Daily Courier* says that on the morning of the 7th inst., just as the steamer Barlow was leaving the dock, one of her boilers exploded with terrible effect, instantly killing two men.

St. Louis has recently been the scene of a severe riot, growing out of the elections. Inquests have been held upon seven persons who were killed during the riot, and one or two others have died from injures received.

The city authorities of Boston have decreed that all the names of non-residents who come to Boston and get drunk and are arrested shall be published.

Wesley Adams, a distinguished physician and leading member of the Methodist Church, died a few days since at Thomasville, Geo. He was 79 years old, and is supposed to have been the first white person in America named after John Wesley.

Mr. Williams, a relic of the Revolution, died on Sunday at Albany, at the advanced age of 102 years. Mr. Williams was an active participant in many of the principal engagements of that exciting period. He was the last remnant of the Revolution of '76 in Albany.

Near Paris, Illinois, five or six months ago, George Hodge committed suicide by cutting his throat. A few days since, Sophia Hodge, his widow, killed herself by taking arsenic.

New York Markets—August 21, 1854.

Ashes—Pearls $6 00; Pots 7 00.

Flour and Meal—Flour 8 25 a 9 25 for State, 9 25 a 9 50 for Ohio, 9 75 a 10 25 for fancy Genesee. Rye Flour 5 50 a 7 75. Corn Meal 3 87 a 3 94 for Jersey.

Grain—Wheat 1 65 a 1 80 for Western red, 1 80 a 1 85 for Western mixed, 2 12 a 2 22 for white Genesee. Rye 1 15 a 1 17. Barley 75 a 80c. Oats 40 a 42c. for Jersey, 47 a 48c. for Western.

Provisions—Pork 10 75 for prime 13 25 for mess. Beef 10 37 for city prime, 12 00 a 16 00 for mess. Lard 10½c. Butter 12 a 17c for Ohio, 18 a 20c. for State, 21 a 24c. for Orange County. Cheese 8 a 10¼c.

Hay—65 a 70c. per 100 lbs.

Lumber—15 00 for Eastern Spruce and Pine.

Potatoes—2 87 a 3 25 per bbl, for common to prime; 4 50 a 4 87 for Virginia.

Seeds—9 a 9½c. for Clover. Timothy 17 00 a 18 00 for mowed, 21 00 a 22 50 for reaped. Flaxseed 1 70 a 1 75 for 56 lbs.

Tallow—12½c. for city rendered.

Wool—28 a 30c. for Native, 42 a 45c. for American Saxony Fleece.

MARRIED,

Near Harrisville, Va., August 1st, by Eld. Asa Bee, Mr. Jeremiah Bee, of New Milton, Doddridge Co., to Miss Hannah M. Ehret, of the first named place.

In Wirt, Allegany Co., N. Y., on the 10th ult., by Eld. Leman Andrus, Thomas J. Wright, of Clarkesville, to Elizabeth Lebar, of Wirt.

By the same, on the same day, Alvarado Eastman, of Clarkesville, to Rachel Ann Lebar, of Wirt.

On the 12th inst., by the same, Daniel E. Babcock to Hannah A. Witter, both of Wirt.

DIED,

In Fulton, Rock Co., Wis., May 21, 1854, Mrs. Adelia S. Coon, wife of Stephen Coon, aged 29 years. Sister Coon had lately moved to her new home from Alfred, Allegany Co., N. Y. We understand she was a member of the Seventh-day Baptist Church of Christ in Hebron, Pa., in good standing. By her Christian course of conduct, she had won to herself the friendship of all who know her. V. H.

At Auburn, Fayette Co., Iowa, July 23, of billious diarrhea, A. J. L. Dunn, only son of Edwin S. and Emily Dunn, aged three years and five months. Beautiful and gifted beyond his years, he was the pride and joy of his parents; but the Saviour called, and he obeyed.

"I take those little lambs, said he,
And lay them in my breast;
Protection they shall find in me,
In me be ever blest.
"Death may the bands of life unloose,
But can't dissolve my love;
Millions of infant souls compose
The family above." W. A. C.

In Verona, N. Y., Aug. 1st, 1854, of croup, Phidelia A., daughter of Dwight and Rosannah Trowbridge, aged 4 years, 3 months, and 25 days. D. P. C.

In Hopkinton, R. I., July 27, Mr. Daniel C. Crandall, aged 40 years. P. S. C.

In Hampton, Conn., Aug. 1st, Sarah, wife of E. B. Lewis, and daughter of the late Col. J. M. Knowles, of Westerly, R. I.

LETTERS.

C R Burdick, A Stillman, V Hull, D P Curtis, W C Kenyon, Simeon Dilley, Luke P Babcock, P L Crandall, Henry Babcock, J R Butts, J C West, E G Champlin, E R Clarke, J M Allen, L Woolworth, E M Osgood, D Dunn, F F Lewis.

RECEIPTS.

FOR THE SABBATH RECORDER:

E B Lewis, Hampton, Ct	$2 00	to vol. 11	No. 52
D M Crandall, Rockville, R I	2 00	11	52
Simeon Dilley, New Vernon, Pa	2 00	11	52

Henry W Green "	4 00	11	52
Chas B Miller, Southampton, Ill	2 00	11	36
Phineas Crouch "	2 00	10	52
Perry Stillman "	4 00	11	52
Edwin S Dunn, Douglas, Iowa	2 00	12	9
E M Osgood, Lairdsville	2 00	11	52

FOR THE SABBATH-SCHOOL VISITOR:

John R Butts, Southampton, Ill	$1 00

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Albert Whitford, Milton Wis, vol 3	$1 00
John R Butts " " 3	1 00

WILLIAM M. ROGERS, Treasurer.

Our Anniversaries.

The Eleventh Anniversary of the Seventh-day Baptist Missionary Society will be held at Little Genesee, Allegany Co., N. Y., on the fifth day of the week before the third Sabbath in September, (14th day of the month.) The Anniversaries of the American Sabbath Tract Society and the Seventh-day Baptist Publishing Society will be held at the same place on the following day.

Board Meetings.

The Executive Boards of our Missionary, Tract, and Publishing Societies will hold meetings at Plainfield, N. J., on First-day, Sept. 10th.

☞ The Educational Committee appointed by the General Conference will hold a session at Little Genesee during the Anniversary season. The Committee consists of T. B. Stillman, W. B. Maxson, W. C. Kenyon, J. R. Irish, L. Crandall, G. B. Utter, J. M. Allen, and O. P. Hull.

☞ The next meeting of the Executive Board of the Seventh-day Baptist Western Association will be held at Little Genesee during the season of Anniversaries.

Yearly Meeting.

The Yearly Meeting of the Seventh-day Baptist Churches of Rhode Island and Connecticut will be holden with the First Church in Hopkinton, Aug. 25th, commencing at 2 o'clock P. M. The Introductory Discourse by S. S. Griswold. Further notices of the meeting will be given at that time.

N. Saunders, Committee.

New Market Seminary.

The Academic Year of this Institution, for 1854 and '55, is divided into three terms, each fourteen weeks long.

The Fall Term commences Sept. 5, and closes Dec. 8.
Winter " " Dec. 13, " " Mar. 20.
Spring " " Mar. 28, " " July 4.

The Department of Instruction is in the care of Mrs. R. H. Whitford, Preceptress, who will be assisted by competent teachers, as occasion may require.

Instruction.—The Common English Branches, Reading, Writing, Geography, Arithmetic, and Grammar, will be taught each term. The Higher English Branches taught as follows:—In the Fall Term, Chemistry, Geometry, and Book-Keeping; in the Winter, Natural Philosophy, Physiology, and Astronomy; in the Spring, Botany, Geology, and Moral Science. Algebra, Etymology, and Rhetoric taught all terms in the year. Classes in French and the Extras will be taught whenever desired.

Expenses.—*Tuition, per term*—for Common English Branches, $3 50; for Etymology and Book-Keeping, $4 50; for Higher English Branches and French, $5 00; for Incidentals, $ 25.

Extras, per term—Penciling, $1 00; Crayoning, $2 00; Embroidery, $3 00; Oil Painting $7 00; Piano Music, $10 00.

Regulations.—No student is admitted for less than half a term. No deduction in price of tuition made for absence, except in cases of sickness. Nothing sectarian is taught or countenanced in the school.

A new and commodious building will be ready for the shcool at the opening of the Fall Term.

David Dunn, Pres. of Board of Trus.
Isaac H. Dunn, Sec'y.
New Market, N. J., July 20, 1854.

Milton Academy.

A. C. Spicer, Principal, and Professor of Mathematics and Natural Sciences.

Albert Whitford, Professor of the Greek and Latin Languages and Literature.

Mrs. S. M. Spicer, Preceptress, and Teacher of Painting, Penciling, French, German, and Italian.

First Term for 1854 commences Wednesday, Sept. 6th—closes Wednesday, December 6th.

A commodious academic edifice, constructed in the best style, is in progress of erection by the Trustees. An ample apparatus for a complete illustrative course of experiments in the departments of Philosophy, Chemistry, and other natural sciences, of a much improved style and quality, has just been purchased at Boston. Other teachers will be employed, and no pains will be spared to advance the interests of pupils and patrons. Absolute thoroughness of discipline is our aim.

Aug. 10, 1854.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

The location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Central Railroad Company of New Jersey.

The cars will run as follows until further notice commmencing Monday, April 10, 1854:—

Leave New York at 8 A.M., 12 M., and 4 and 6 P.M.

Leave Plainfield for New York at 6.55 and 8.30 A.M., 12.20 and 5.10 P.M., passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup t.

Great Western Mail Route.

SIXTY MILES DISTANCE SAVED—MICHIGAN SOUTHERN RAILROAD LINE. The Railroad is now open to the Mississippi River. Running time to St. Louis 56½ hours.

Passengers can leave New York by the NEW YORK AND ERIE and HUDSON RIVER RAILROADS, at 7 o'clock A. M. and 5 o'clock P. M., arriving same evening at Dunkirk or Buffalo, and connecting with LIGHTNING EXPRESS TRAINS on the LAKE SHORE RAILROAD, and reach Chicago next evening at 9½ o'clock, where a comfortable night's rest may be obtained, and proceed at 8 o'clock next morning by the CHICAGO AND ROCK ISLAND RAILROAD for La Salle, Bloomington, Springfield, Alton, and St Louis, all the way by RAILROAD. Also connecting at Chicago with trains on the CHICAGO AND GALENA RAILROAD, to Rockford, Freeport, Galena, and Dubuque.

For Through Tickets, or any further information, apply at the Company's Office, No. 193 Broadway, corner of Dey-st., to

JOHN F. PORTER, General Agent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. Inland Route, without change of cars or detention, carrying the Eastern Mail.

The steamers C. VANDERBILT, Capt. Joel Stone, and COMMODORE, Capt. John G. Bowne, in connection with the Stonington and Providence, and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from Pier No. 2 N. R., first wharf above Battery Place, at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the mail train which leaves Boston at 5 30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The natural advantages of this route are superior to any other. Being shorter and more direct, the trip is more pleasantly and expeditiously performed, while passengers can always rely on reaching their destination in advance of those by either of the other routes.

The COMMODORE, from New York—Monday, Wednesday, and Friday. From Stonington—Tuesday, Thursday, and Saturday.

The C. VANDERBILT, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

Hudson River Railroad.

NEW ARRANGEMENT.—On and after Monday, August 14th, 1854, the Passenger Trains will run daily (Sunday excepted) as follows: Leave New York from the station corner Chambers-st. and College Place, at

6 00 A M—Express Train for Albany and Troy, connecting with Northern and Western Trains. Through in 4 hours from 31st street.

7.00 A M—Poughkeepsie Way Passenger Train.

8.00 A M—Mail Train for Albany and Troy, stopping at Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, and all Mail Stations North of Poughkeepsie.

9.00 A M—Peekskill Way Passenger Train.

12.00 M—Way Train for Albany and Troy, stopping at Yonkers, Tarrytown, Sing Sing, Crugers, Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, Hyde Park, Rhinebeck, Tivoli, Oakhill, Hudson, Stuyvesant, and Castleton, and connecting with the Express Train leaving Albany at 6.30 P M for Buffalo, and at Troy with Northern Trains for Saratoga and Montreal.

1.00 P M—Po'keepsie Freight and Passenger Train.

3.30 P M—Peekskill Way Passenger Train.

4.30 P M—Express Train to Albany and Troy, stopping at Tarrytown, Sing Sing, Peekskill, Garrisons, Fishkill, Poughkeepsie, and all Time Table Stations North, and connecting at Albany with Western Express Train at 10.30 P M for Buffalo.

5 00 P M—Poughkeepsie Passenger Train.

5.30 P M—To Peekskill, stopping at all Way Stations.

6.30 P M—Emigrant and Freight Train for Albany and Troy, stopping at all Time Table Stasions.

8.30 P M—To Tarrytown, stopping at all Stations.

Sunday Mail Train at 9 A. M. from Canal-st. for Albany, stopping at all Way Stations

OLIVER H. LEE, Superintendent.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Miscellaneous.

Indian Good Faith.

A correspondent of the Detroit '*Free Press,*' gives some interesting anecdotes of the great Indian warrior and prophet Tecumseh:—

While the enemy were in full possession of the country around Monroe and Detroit, Tecumseh, with a large band of his warriors, visited the river Raison. The inhabitants along that river had been stripped of nearly every means of subsistence. Old Mr. Rivard, a Frenchman, who was lame, and unable by his labor to procure a living for himself and family, had contrived to keep out of sight of the wandering bands of savages a pair of oxen, with which his son was able to procure a support for the family.

It so happened that while at labor with the oxen, Tecumseh, who had come over from Malden, met him on the road, and walking up to him said:

"My friend, I must have those oxen. My young men are very hungry, they have nothing to eat. We must have the oxen."

Young Rivard remonstrated. He told the chief that if he took the oxen, his father would starve to death.

"Well," said Tecumseh, "we are the conquerors, and every-thing we want is ours. I must have the oxen; my people must not starve; but I will not be so mean as to rob you of them. I will pay you for them, and far more than they are worth, but we must have them."

Tecumseh got a white man to write an order on the British Indian agent, Col. Elliot, who was on the river some distance below, for the money. The oxen were killed, large fires built, and the warriors soon feasting on their flesh.

Young Rivard took the order to Col. Elliot, who refused to pay it, saying, "We are entitled to our support from the country we have conquered. I will not pay it."

The young man, with a sorrowful heart, returned with the answer to Tecumseh, who said, "He won't pay it, will he? Stay all night, and to-morrow we will go and see."

On the next morning he took young Rivard, and went down to see the Colonel. On meeting him he said, "Do you refuse to pay for the oxen I bought?"

"Yes," said the Colonel, and he repeated the reason for the refusal.

"I bought them," said the chief, "for my young men were very hungry. I promised to pay for them, and they shall be paid for. I have heard that when white nations went to war with each other, and not with peaceful individuals, they did not rob and plunder poor people. I will not."

"Well," said the Colonel, "I will not pay for them."

"You can do as you please," said the chief; "but before Tecumseh and his warriors came to fight the battles of the great king, they had plenty to eat, for which they had only to thank the Master of life and their good rifles. Their hunting grounds supplied them with food enough; to them they can return."

This threat produced a sudden change in the Colonel's mind. The defection of the great chief, he well knew, would immediately withdraw all the nations of the red man from the British service; and without them, they were nearly powerless on this frontier.

"Well," said the Colonel, "if I must pay, I will."

"Give me hard money," said Tecumseh, "not rag money"—army bills.

The Colonel then counted out a hundred dollars in coin, and gave them to him. The chief handed the money to young Rivard, and then he said to the Colonel, "Give me one dollar more."

It was given; and handing that also to Rivard he said, "Take that, it will pay for the time you have lost in getting your money."

The Telegraph on the New York and Erie Railroad.

The traveling public know but to a limited extent the important use which the telegraph subserves in the running of trains on the New York and Erie Railroad. For some years the telegraph was completely distinct from the railroad, and only used on certain important occasions. When a train left Jersey City nothing could easily be known of it, except from the passing trains, till its return. Under the guidance of its conductor and engineer it journeyed on to its destination, and accidents might occur, and the Superintendent remain almost entirely unconscious of any thing wrong. A great change has been effected; an experiment has been tried, and the results are almost magical. The New York and Erie Railroad Company have constructed—and, we believe, were the first to construct—a telegraph line exclusively for their own use; like the road, divided into four divisions, and yet connected throughout its whole extent. This line is under the able superintendence of L. G. Tilloston, Esq., and is in a state of such perfect efficiency and system that the General Superintendent, D. C. McCallum, Esq., receives every hour in his office an accurate statement of the position and condition of every train on the road. He is also able to know if a train be five minutes late in coming into any station, and the cause of it, almost as soon as it occurs. In former times, if one of the fast trains broke down at any place, all other trains, which were to switch off to permit it to pass, could go no further without incurring imminent risk, so that there was a complete stagnation along the whole line. The delay of one was the delay of all that had to meet that particular train; but by the use of the telegraph, under its present complete development and accurate system, when any stoppage occurs, the Division Superintendents are immediately made aware of it, and an order is sent along the wire which keeps every train in motion, preserving its own time till the difficulty is removed. This is a saving in time, labor, and fuel, which cannot easily be calculated. We learn that there are nearly eighty telegraphic stations along the line, and during day and night the greater part of these are open. Every half hour each operator must report his presence to the officer who superintends that division, and the record of the officer must be submitted as often as found requisite, and all discrepancies are at once discoverable. A system of abbreviations has been invented by Mr. Tilloston, by which time and accuracy are both secured. Certain figures are used for definite sentences; for example, 42 implies—We want a passenger car at.——

The telegraph is now a most important auxiliary in working the road, and altogether indispensable. It communicates to the General Superintendent and Division Superintendents a species of ubiquity, enabling them at once to take cognizance of every incident which can possibly occur. As the nerves in the human system instantaneously convey to the sensorium every impression which they receive, so these wires convey to each official intelligence—the information which he requires to enable him to guard against accident, and to preserve the property and lives committed to his charge.

Mr. Tilloston has systematized and reduced the telegraph to a more practical application than it has hiterto served, and public safety and general dispatch are the happy results—results which communicate to the New York and Erie Railroad travelers a security and confidence which must greatly enhance the business of the road.

[Oswego Times.

Bonaparte's Early Poverty.

M. Theirs, in his history of the Consulate, recites some very strange and previously unknown particulars respecting the early life and penury of Napoleon Bonaparte.

"It appears that after he had obtained a subaltern's commission in the French service, by his skill and daring at Toulon, he lived some time in Paris, in obscure lodgings, and in such extreme poverty, that he was often without the means of paying ten sous (ten cents) for his dinner, and frequently went without any at all. He was under the necessity of borrowing small sums and even worn out clothes, from his acquaintances! He and his brother Louis, afterwards King of Holland, had at one time only a coat between them, so that the brothers could only go out alternately, time and time about. At this crisis, the chief benefactor of the future Emperor and conqueror, "at whose mighty name the world grew pale," was the actor Talma, who often gave him food and money. Napoleon's face, afterward so famed for its classical mould, was during that period of starvation harsh and angular in its lineaments, with projecting cheek bones. His meagre fare brought on an unpleasant and unsightly cutaneous disease, of type so virulent and maglignant, that it took all the skill and assiduity of his accomplished physician, Corvisart, to expel it, after a duration of more than ten years.

The squalid beggar then, the splendid Emperor afterwards—the threadbare habiliments and imperial mantle—the hovel and the palace—the meagre food and the gorgeous banquet—the friendship of a poor actor, the homage and terror of the world—an exile and a prisoner. Such are the ups and downs of this changeful life, such are the lights and shadows of the great and mighty.

Gardening for the Young.

We commend the following beautiful remarks from a valued correspondent, to the attention of parents and guardians:—

The absorbing pleasures of a garden offer a natural and readily appreciated attraction to the young, and I am convinced from much experience, that no other pursuit will operate so favorably on the youthful mind, as the culture of flowers. Nature has implanted in every infant an innate love of flowers, and it is the bounden duty of all who are entrusted with the responsible duty of educating and developing the infant faculties, taste, and propensities, to guide and direct them to such pursuits as are most likely to refine and improve them. What other pursuit, I would ask, is so entirely guileless and unalloyed, and what is there in the whole range of creation so perfectly in harmony with the untainted and pure mind of the child fresh from the hand of its Creator, as the enjoyment of his most charming as it is his purest handiwork, as displayed in a flower garden. Teach, then, the child to till and cultivate flowers—they will assuredly win their own way to its affections, and you lay the foundation of a love for the sweetest and purest of all earthly pursuits, which in after life, when the allurements of the wicked world are gathered around him, will win him from and shelter him against their dangerous blandishments. I can say with perfect truth, that the happiest hours I have ever spent in a long and chequered life have been in the society of my flower garden, and it has this additional advantage, that while many of the gaities and pleasures, which fascinate us in early life, cease to please in the decline of life, the flower garden loses not one jot of its fascination to our latest hour.

Saving Grass Seeds.

Many farmers neglect to save their own grass seeds because it needs attention at a time when they are most busy with their grain and hay; but if farmers generally would make it a point to save seed for their own use, they would find their account in it, both in prime cost, and in not being imposed upon by buying foul seed from another man's farm, who had no interest in keeping your land free of weeds.

Orchard grass is among the first to ripen, and will be ready to cut from the 20th of June to the first of July, according to location and soil. This should be either reaped or cradled, and immediately put in compact shocks, to stand a couple of weeks. The stubble may then be mowed and hayed, taking care not to disturb the shocks. When dry, the shocks should be moved very carefully to the barn for storage, as the seed shells out easily.

Kentucky Blue Grass comes in season for harvest about the same time as orchard grass. The best method of gathering the seed of this grass is by stripping the heads by hand; the process is rather slow, but no other way will bring the seed in good condition, as it is too light and chaffy to be threshed and winnowed. At the price for which it sells in market, even this slow way pays well.

Meadow Fescue (English Blue Grass) is ripe early in July, and having a tolerably heavy seed, can be cut by the sickle or cradle, and when dry threshed and winnowed carefully, to separate the chaff.

Fowl Meadow Grass ripens its seed in the last of July. We consider this as the best grass that can be raised for meadow swails and marsh lands. It is fine, nutritious, and yields a great burden; and—like a good-natured wife—will bear a great deal of neglect without spoiling. When in head, this grass very nearly resembles red-top, and is often mistaken for it. The seed is very fine, and sells at a high price—as much by the bushel as clover seed, though much lighter.

Timothy Seed ripens in July, and as it is contained in strong heads, is very easily harvested and got out, either by reaping, cradling, or with such a machine as Wagner's clover harvester, simply taking off the heads. We wish to bespeak the attention of farmers generally to saving the best seeds of the leading grasses.

[Ohio Cultivator.

Sweet Corn.

We have had some little experience, for the last five or six years, in raising sweet corn for the table, and for fodder; and that experience has taught us that sweet corn exhausts the soil just about in proportion as the stalk is larger, and more nutritious than the Northern yellow corn. The kind of sweet corn we have raised, grows about eight feet high, the ears eight or ten inches long, large white and plump kernel, and ten rows to the ear, the pith of dark red color; and it is called the Evergreen Sweet Corn. The seed was procured from Ohio, some eight years since. For fodder, we sow it in drills, three feet apart. The yield of fodder the last year, was at the rate of seven tons to the acre. Our horses and cows leave the best hay to luxuriate upon sweet corn stalks well cured and run through the straw cutter. The stalks of the sweet corn are large, and require much care in curing, to prevent mould. They should stand erect in the barn, or wherever sheltered, and enjoy the benefit of the air. Cutting the stalks as near to the ground as possible, we leaned the tops of two rows together—leaving here and there a stalk uncut, and placing from ten to twenty stalks together near the top, to prevent their falling. In this manner the stalk dried rapidly; and gathering them before the heavy and late rains, we have not lost a pound of fodder. Sweet corn should be planted or sown in drills—or broadcast if any prefer—and the same time that common corn is planted. The richer and deeper the soil, the more sure and abundant the crop. [Vermont Watchman.

A French Farm.

During our visit to the Horticultural Horse Show at Providence, R. I., we spent some time with Samuel B. Halliday, who occupies a farm of 130 acres just out of the city. Mr. H. is chiefly engaged in cultivating a market garden, or what in New Jersey would be called "truck" for the city market. He has 1 acre of asparagus, 1 1-4 acre of rhubarb, 3 of spinach, 1 1-2 of tomatoes, 1 1-2 of celery, 9 acres of peas sold green, 3 1-2 of beets, 4 of cabbage, 5 of early turnips, 1 1-2 of carrots, 1 of parsnips, 1 of string beans, 1 1-2 devoted to raising seeds for home use, 10 acres of potatoes, 15 acres of corn, &c. Most of these are sown or planted at different seasons, and so arranged as to keep the market supplied at the right time, to give succession of work to laborers employed, and also to get as many crops from the ground as possible. This last item is of considerable consequence where land is so valuable or high priced as it is on the outskirts of our cities.

As an example of how this may be done, Mr. H. first gets an early crop of spinach, and from the same ground carrots or beets; early peas and potatoes are followed by turnips, or millet for soiling; the ground for early beets is next occupied with celery; millet and late cabbage are put upon the inverted sod, after the first cutting of clover. Of course land cultivated in this way needs thorough manuring, which it constantly receives on this farm. Mr. Halliday has a number of cows constantly manufacturing milk for the city and fertilizers for the field. They are soiled, that is, kept in the yard or stable, and all green food is carried to them. They are let out into a yard half of each day during summer, for water and exercise. We do not like this plan when it can be avoided, though it is not so objectionable where, as in this case, the stables are kept perfectly clean and sweet by a full and often renewed bedding of peat or straw.

[Examiner.

Interesting Discoveries at Naples.

The extraordinary amount of antiquarian treasure constantly brought to light in the classical sites of the modern kingdom of the Two Sicilies would keep the British archæological world in a state of excitement almost dangerous. The antiquary of the north is a much more excitable animal than this brother of the "sunny south." "Here," writes a correspondent of *The Morning Post,* "you will observe a group of the curious 'assist' at an excavation in Pompeii with as much stoic placidity as if the workmen were digging for potatoes, instead of art-objects 2,000 years old. The finding of a bronze, a terra-cotta, or a marblestatue, produces no flutter among the lookers-on. They are familiar with such things, and a sort of unexpressed contempt illustrates the old proverb." Within the last few weeks another public bath-house has been discovered at Pompeii. Nothing beyond the *frigidarium* is at present cleared, but there is every reason to suppose that the building in question is more extensive than that containing the circular bath, discovered in 1824, with its six entrances, vestibule, atrium, &c. Signor Abbate, who painted the Roman interior of the Crystal Palace, is employed in making drawings of the portions of this building already laid open. In connection with Pompeii, a glass has been discovered about the size of a crown piece, with a convexity, which leads one to suppose it to be a magnifying lens. Now, it has been said that the ancients were not aware of this power, and the invention is given to Galileo by some; to a Dutchman, in 1621, by others, while the compound microscope is attributed to one Fontana, in the seventeenth century. But, without a magnifying glass, how did the Greeks and Romans work those fine gems which the human eye is unable to read without the assistance of a glass? There is one in the Naples Royal Collection, for example, the legend of which it is impossible to make out unless by applying a magnifying power. The remarkable fact is, that the glass in question was found with a stone ready cut and polished for engraving thereon, which stone is now also to be seen in the Museum of Naples. It would appear, therefore, that a worker of gems possessed and used this instrument.

To preserve young chickens, keep them in coops raised some inches from the ground until they are six or eight weeks old; if they droop after this, the next hour of warm sunshine will bring them up again. A correspondent says the last time he tried to raise them on the ground, he lost 59 out of 60; he has often raised 60 or 70 at a time since without losing one, simply by cooping them away from the ground until six weeks old.

Career of a Poet.

It is seventy years ago since George Crabbe published his poem of "The Village." His age was twenty-nine. He was then in orders, and was domestic chaplain to the Duke of Rutland. But what a life the young man had passed through before he attained that social position! Born in what was then a wretched fishing hamlet, Aldborough, roughly brought up, imperfectly educated, apprenticed to a surgeon, without means to complete his professional studies, lingering hopelessly about his native place, he at last resolved to cast himself upon the wide ocean of London, and tempt the fearful dangers that belong to the career of a literary adventurer. Here he struggled and starved for a year. During the first three months of his London life, he sent manuscript poems to the booksellers, Dodsley and Becket, which they civilly declined. He addressed verses to Lord Chancellor Thurlow, who informed him that his avocations did not leave him leisure to read verses. He sold his clothes and his books, and pawned his watch and his surgical instruments. His one coat was torn, and he mended it himself. He was at last reduced to eighteen pence, but the brave man never despaired. He had a strong sense of religion, and he was deeply attached to one who became his wife after thirteen years of untiring constancy. His faith and his love held him up, and kept him out of degradation.

At last he wrote a letter to Edmund Burke. It contained this passage:

"In April last I came to London with three pounds, and flattered myself this would be sufficient to supply me with the common necessaries of life till my abilities should procure me more; of these I had the highest opinion, and a poetical vanity contributed to my delusion."

Burke saved Crabbe from the fate of many a one who perished in those days when patronage was dying out; and the various resources for the literary laborer that belong to the extension of reading had begun to exist. Burke persuaded Dodsley to publish "The Library;" and the Bishop of Norwich to ordain its author without a degree. His lot in life was fixed. Thurlow invited him to dinner, and telling him he was "as like Parson Adams as twelve to a dozen," gave him two small livings. He published "The Village" in 1773, and the "Newspaper" in 1785. From that time to 1807, the world had forgotten that a real poet, of very original talents, had appeared for a short season, and was no more heard of. When Crabbe was fifty-three years of age, he again published a poem. This was "The Parish Register." "The Borough" speedily followed. His "Tales" were in the same vein. Their success was triumphant. The author, whose worldly possessions were reduced to 3d in 1790, sold the copy-right of his poems, in 1817, to Mr. Murray, for £3,000.

Curiosities of China.

Here is a man leading a white goat with only three legs, which he wishes to sell, but on a careful examination we perceive that one of the fore legs had been neatly amputated while the animal was young. There are half a dozen gaming-tables, each surrounded by its crowd of players and spectators. The Chinese are inveterate gamblers, and as the stakes at many of these tables are as low as a single cash, few are so poor that they cannot make a venture. One of the methods has some resemblance to the "little jokers," so well known at our race courses. The player has three sticks, the ends of which are thrust through his fingers. There is a hole through each of the other ends, which are held in his hand; a cord is passed through one of them, and the play consists in guessing which one, as the cord may be transferred from one to the other by a quick movement of the fingers. I put a "cash" on the board, made a guess, and won a cake of suspicious looking candy, which I give to the nearest boy, to the great merriment of the bystanders. There are also stands for the sale of pea-nuts, reminding us of the classic sidewalks of Chatham street, and for the sake of Young America, we must invest a few cash in its favorite fruit. But here is an entertainment of an entirely novel character. A man, seated on the pavement, holds in his hand a white porcelain tile, about a foot square. This he overspreads with a deep blue color, from a sponge dipped in a thin paste of indigo, and asks us to name a flower. I suggest the lotus. He extends his fore-finger—a most remarkable fore-finger, crooked, flexible as an elephant's trunk, and as sharp as if the end had been whittled off—gives three or four quick dashes across the tile, and in ten seconds or less, lo! there is the flower, exquisitely drawn and shaded, its snowy cup hanging in the midst of its long, swaying leaves. Three more strokes, and a white bird, with spread wings, hovers over it; two more, and a dog stands beside it. The rapidity and precision of that fore-finger seems almost miraculous. He covers the tile with new layers of color, and flower after flower is dashed out of the blue ground.

[Bayard Taylor.

Sugar in the Living Animal.

One of the greatest discoveries of our day, says a French paper, is that made by Claude Bernard, of the constant formation of sugar in the liver of animals. Feed an animal how you will—with food containg saccharine matters, and with food containing no trace of them, you will always find the animal has, from the blood, formed sugar for itself. This sugar which is secreted by the liver, is, like all secretions, under the influence of the nervous system; you have only to cut what are called the pneumogastric nerves, and in a few hours all the sugar vanishes. The amount of sugar thus formed in every healthy animal, may be increased by certain influences, and then it gives rise to, or is the indication of various diseases. In one disease the quantity is so great, that M. Thenard extracted fifteen killogrammes of sugar—something like thirty pounds—from the secretion of one patient; real sugar, too, and of irreproachable taste, according to Boussingault, who tasted it. But now attend to this; what nature does in disease, man can do in the terrible theatre of experiment. Claude Bernard has proved that there is a very small region of the spinal column—by anatomists styled *medulla oblongata*—the wounding of which—between the origin of the pneumogastric and acoustic nerves—provokes this increased secretion of sugar, and if, with a sharp instrument you wound a dog or rabbit, in this place, you will find that, in a little while, sugar has accumulated to an immense extent in the blood and other liquids.

VARIETY.

A Troy paper says:—The death of Samuel Wilson, an aged, worthy and formerly enterprising citizen of Troy, will remind those who were familiar with incidents of the War of 1812, of the origin of the popular subriequet "Uncle Sam" for the "United States." Mr. Wilson was an extensive packer, had the contract for supplying the northern army with beef and pork. He was everywhere known and spoken of as "Uncle Sam," and the "U. S." branded on the heads of barrels for the army were at first taken to be the initials for "Uncle Sam" Wilson, but finally lost their local significance and became, throughout the army, the familiar term for "United States."

The Binghamton *Republican,* says G. L. Colegrove, of the town of Union, in this county, recently purchased in Troupsburg, Steuben Co., N. Y., 2,004 acres of land at $10 an acre, and has since fortunately discovered on his new possessions coal and iron mines, and plaster richer than that of Cayuga. He receives from the State $5,000 bounty as the first discoverer of coal in New York. He has been offered and refused $50,000 for his property. The mines seem to be excellent and inexhaustible, and the extent of his good fortune and that of the State remains to be ascertained. Mr. Colegrove's mines are only about 6 1-2 miles from the New York and Erie Railroad.

It is stated in the London *Inquirer,* that the Rev. William H. Channing has been invited to take charge of the Unitarian church in Ranshaw-st., Liverpool, the pulpit which has recently been vacated by the Rev. Mr. Thom. This is the second instance in which an American minister has been invited by that society to become their pastor; the late Rev. Dr. Parkman of Boston, having been so invited more than forty years ago, on the completion of his studies in Edinburgh.

The Legislature of Massachusetts, at its last session, granted twenty thousand dollars for a State Reform School for Girls, on condition that twenty thousand more should be raised for the same purpose during the year. Within a few weeks the citizens of Boston have taken the matter up in good earnest; several subscriptions of one thousand dollars each have been secured, and no doubt remains that the whole sum will be obtained.

One peculiarity of the Turkish soldiery is, that they *will* smoke. It is a very common thing to see a sentinel with a cigar in his mouth; and it is not unusual in passing a corps de garde to be respectfully asked, "Have you any tobacco, sir?" Nothing is commoner when one happens to be smoking than to be checked by a military voice between entreaty and command, "Wait, sir, a light if you please!"

One of Cromwell's followers, who filled the important station of an Irish Justice, at the period of 1661, having occasion to write the word *usage,* contrived to spell it without using even a single letter of the original word; his improved orthography was "yowzitch." When some remarks were made on similar feats, he averred that "nobody could spell with pens made from Irish geese."

Perry, Wyoming Co., with 3,000 inhabitants, has not had a licensed liquor-selling establishment for many years past, nor any open sale of the destroyer. As a consequence, the people are eminently moral, thrifty and comfortable, and the churches well attended. They have just built a fine Academy, 87 by 58 feet, and three stories high.

The Boston *Cultivator* notices an Alderney cow, owned by Mr. Thomas Mottey, Jr., of Jamaica Plains, which produced 511 3-4 pounds of butter from the 11th of May, 1853, to the 26th of April, 1854—being at the rate of about 1 lb. 7 1-3 oz. per day. Her owner says it to took exactly five quarts of milk to one pound of butter.

St. Peter's Church, Rome, will accommodate 54,000 persons; Milan Cathedral, 37,000; St. Paul's, Rome, 32,000; St. Paul's, London, 25,000; St. Petronia, Bologna, 24,000; Sophia's, Constantinople, 25,000; the Florence Cathedral, 24,000; Notre Dame, 21,000.

We learn from the Buffalo *Democracy,* that seventeen hundred dollars were stolen, on Tuesday evening, from the safe of the steamer Mayflower. The clerk had left his office for a few moments to accompany some ladies to a carriage, and when he returned he found the safe open and a thousand dollar draft and seven hundred dollars in cash missing.

The Dublin *Tablet* says: "We understand that the Very Rev. Dr. Newman has received from the Most Rev. Dr. Hughes, Archbishop of New York, the sum of £223, being a present made to the illustrious Oratorian from the Faithful of that diocese in memorial of the Achilli affair.

The *Alta California* says the proprietors of a San Francisco steamboat line, advertise to send out two boats on Sunday, to a certain place not far distant, one to carry passengers to a camp meeting, the other to a bull fight.

A gentleman asked a little boy in London, "What occupation does your father follow for a living?" He replied with great simplicity. "He is a dreadful accident maker for the morning papers."

In the Hudson River, near New York, on the 8th inst., a row boat in which nine persons were returning from an excursion, was capsized, and five of the company were drowned.

A passenger and freight train on the Covington and Lexington Railway came in collision Aug. 9th. The conductor of the freight train was killed, and eight of the hands more or less injured.

It is stated in a Paris paper, that out of 16,000 persons accustomed to use daily the baths in that city, Bordoux and Marseilles, only two cases of cholera occurred.

On the night of the 3d inst, ten persons escaped from the jail in Detroit by cutting a hole through the wall, and letting themselves down to the ground by means of a cord.

A baggage car on the Fall River Railroad took fire from a spark Aug. 9th, while the train was on the way to Boston, and with its contents was badly damaged.

From the 1st August the postage between Great Britain and Nova Scotia, New Brunswick and Newfoundland will be reduced to sixpence.

There is a Bible in the library of the University of Gottingen written on 6476 palm leaves.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial,* bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor,* bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder,* vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P. M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Fri day.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.,* made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their Hangings, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C.,
Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me
Yours, with respect, JOHN C. WHITLOCK
Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.
Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & CO., and by all Druggists, everywhere. 37-3

STULTIFYING THE SCRIPTURES.

BY W. M. FAHNESTOCK, M.D.

The monks of St. Jago, we are informed, have a tradition among them, which relates, that Satan once appeared to a popular young preacher of their order, and offered to do great things for him—make a Bishop of him, or, perhaps, a Cardinal—provided he would commit one of three things: 1, violate his sister; 2, murder his father; 3, or get drunk. While he revolted, with horror, at the first and second, he assented to the last named, regarding it as a mere *peccadillo*—a venial sin. Reeling home the next night, he attempted his sister, and his father coming to her assistance, was struck a fatal blow. The Arch-Enemy achieved his purpose fully; and the reader will be able to make the proper application, when he arrives at the end of my article, without any comments from my pen

The significance of the singular, yet apposite Spanish proverb: "Heaven preserve me from my friends; I will take care of my enemies"—is daily becoming more apparent, in every pursuit of life, social, literary, scientific, and theological. While opposition to Revelation is confined to avowed Infidels, we know how to understand their assaults; but when the Father of Lies instigates the professed friends of the Bible, to tamper with the vain conceits of men—"their philosophy falsely so called"—whose ulterior object is to circumvent the Word of God, and destroy its credibility, then, truly, we have to be chary, very chary indeed, even of those whom we would fain believe to be the honest, firm, undaunted friends of the Most High; but who first delude themselves, and afterward delude others, by compounding with error, and thereby wrest the Word to their own destruction.

There are many methods to stultify the Scriptures, and make void the Inspired Word, through the disaffection of its avowed supporters; but none more so, than pusilanimous cringing to the assumptions of geological speculations. The great defection of the professing Church, in the present day, unquestionably, is, *want of profound faith in the Word of God.* Great, unwarrantable license is, unblushingly, taken with that precious Word of Truth, of late years, which, unfortunately, is too often bandied about like a foot-ball, by its own professed friends. Integrity of faith toward God—strict, tenacious adherence to *all* that he has revealed for our instruction, as well as for our comfort, is the only Sheet-Anchor of Christian consistency; yea, implicit obedience and submission to His expressed will concerning *all things,* is the *sine qua non* of the Christian's profession. Many learned men, who set out with stout pretensions of not forfeiting the claims of that Sacred Book, in pandering to popular science, yet compromit the Word of the Majesty of Heaven, by hugging to their bosoms the astute, treacherous speculations of the enemies of truth and righteousness.

One distinguished divine, whose character we have always revered, ever since we were capable of estimating worth, Dr. Chalmers, boldly asserted, fifty years since, that "there is a prejudice against the speculations of the Geologist, which I am anxious to remove. It has been said that they nurture infidel propensities. It has been alleged, that geology, by referring the origin of the globe to a higher antiquity than is assigned by the writings of Moses, undermines our faith in the inspiration of the Bible, and all the animating prospects of the immortality which it upholds. This is a false alarm. The writings of Moses do not fix the antiquity of the globe." With all due deference to so good a man, and so gigantic an intellect, we shall test that position by the fruits of his own folly.

On a former occasion, I remarked, that there were two ways to destroy, unwittingly, the very best cause, namely, by exposing to its enemies its vulnerable points, and then by frittering away every vestige of its foundation, as unimportant, non-essential, until every thing to facilitate its overthrow is conceded; and this worst of all stabs, is ever, and can only be inflicted, by its professed friends. The indiscretion of professed friends of a good cause, may wound it more vitally, a thousand times more effectually, than can, possibly, be perpetrated by the halbret of an enemy; and in not any controversy does this obtain with greater celerity, and to greater extent, than in the culpable concessions made by the professed friends of the Bible, to *geolcgical speculations.*

Not content with the oldest and most authentic Record, which professes to give the history of the creation of the Universe, and that from the mouth of the great Creator himself, we have, in modern times, those who, aiming at being wise above what is written, deride its explicit details, and set about to invent fine-spun theories, to subvert its authority, and, eventually, to destroy its influence altogether.

With the Infidel, geological speculations, or *revelations,* as he dubs his own vague fancies, conflict with the teachings of the Bible, and, forsooth, a production which conflicts with his own crude notions of Nature, must be a false system; and, in many instances, this conclusion is arrived at, more to effect the "consummation so devoutly to be wished," among that class of irreverent thinkers, than from any real scientific interest. Geological revelations—*delusions*—are a mass of assumed *postulates,* which cannot be tested in one, or two, or more generations, and, therefore, we have good right to distrust their bold, hasty conclusions, when put in opposition to the Inspired Word of the Almighty; which takes upon itself, as the Oracle of God, to declare all the necessary knowledge on that subject; for the conclusions of the Geologist cannot be certified by higher authority than mere human surmise.

The progress of the infidel mind, from simple doubt to absolute disloyalty to the moral government of the Architect of the Universe, has been graphically delineated by X. B. Saintine, in his inimitable nouvelette, Picciola, or the Prisoner of Fènestrelle, from the simple initiative, "Chance is the Parent of Creation," up to the climax of reckless hardihood and insensibility, "Death is an eternal sleep;" so in geological speculations, the first assumption is, "The writings of Moses do not fix the antiquity of the globe;" the next is to contradict the philology of the Bible; and then to deny the integrity of its inspired Penman. This—"the writings of Moses do not fix the antiquity of the globe"—yielded, the poor, heavenless wanderer, is let loose at sea, without sail or rudder, to grope his way over shoals and reefs, enveloped in thick fog, and is driven by every whiff of wind, to encounter any disaster that may await his presumptuous temerity. But while the simile holds good respecting the awful vortex into which it hurries the hapless wanderer from the counsels of his Maker, God, yet geology fails, and falls immeasurably behind the former, in not leading its wayward votary back to God by the discovery of His handy-work, as it does in the former, by the contemplation of an insignificant plant; for the Geologist, emboldened by the seeming incongruities in the "two records," the Mosaic and the Geological, clings to the latter, and repudiates the former, as erroneous and fabulous. Filing off from their leading point, namely, "the writings of Moses do not fix the antiquity of the globe," they set about to fix it *themselves,* from their own crude imaginings of *probabilities* and *possibilities,* far beyond their own ken, and raise up the golden calf, vociferating, most lustily, "Great is Diana of Ephesus!"

Next to denying that the writings of Moses fix the antiquity of the globe, they insist, that a Scriptural day—a day of Creation—was not a "natural day," but "undefined ages!" And upon what grounds? *Vague surmises.* Yes, reader, nothing more than vague surmises. Finding some strata in one position, containing some extinct vegetable tribes; then finding some extinct animal tribes in another; and some other fossil remains in another, which they vaguely surmise *must* mark distinct periods, far beyond the Mosaic Record, they assume that the Record must mean something more than it expresses—yea, infinitely more. It was a shrewd remark of the redoutable Joe Smith, the founder of the Mormon fraternity, in his account of that order, when he declared: "We believe the Bible to say what it means, and mean what it says." It would be well had he, and others who profess the same axiom, which is truly a correct one, and the only correct one, acted out the sentiment like honest believers in it; we should then have much less wrangling among Christian sects, and among vain Christian philosophers. But Christian geologists, like the Mormons, who have added a *new book* of their own concocting, must append a new chapter of "geological fact," which not only mars the consistency, but stultifies the original Scriptures completely.

To be more specific in regard to geological vagaries and delusions, I proceed to notice the dubious foot prints assumed by their most orthodox authorities, or rather as endorsed by prominent disciples of the Lord; not by disciples, however, who are content to walk by faith, reposing confidently in the Wisdom from on high, but those who stalk forth on rickety crutches, and loom out on hazardous stilts.

It is not the design of the writer to review all the vagaries of geologists in detail, and point out all their inconsistencies; were that my object, I should take for my subject, the *Difficulties of Geology;* but as my aim is, simply, to expose the fallacy and the danger of tampering with geological speculations, a mere glance at a few glaring absurdities, which ingulf the faith, or at least the consistency of believers in Revelation, by making void the Word of God, when led into the bog of Infidelity, by this *ignis fatuus,* and left there to be overwhelmed by their folly; for I candidly regard geological speculations as the greatest *ignis fatuus* of modern times—the most specious and the most potent lever to overthrow all confidence in Revealed Truth; and, therefore, the more dangerous to encounter, or to tamper with, even by the most expert polemics, and the profoundest theologians, who leave the Written Word, as their guiding star, and are tempted by the delusive bait, pride of science; for it is my abiding conviction, after nearly two score years of unremitting research, in many departments of science, that all speculations which tend to invalidate Revealed Truth, are the vainest science—the vanity of vanities.

The celebrated Dr. Chalmers, as already intimated, led the van among Christian philosophers, of the present age, in this matter, and by the force of his talents and character, enlisted hundreds of others, to perpetuate like or worse blunders, in attempting to bring the Mosaic narrative into harmony with what is styled the present "geological fact." Not wishing to compromit the Scriptural account, yet nibbling at geological representations, he was soon caught in the wily net of the enemies of Revealed Truth. Adam was pure, and, unquestionably, wished to walk uprightly before his Maker, but when the Tempter came and offered him knowledge which his Creator thought proper to withhold, Adam nibbled at the bait, and fell; likewise so great a man as Dr. Chalmers, in wishing to be wise above the Written Word—harmonize Revelation with man's subtleties—has perpetrated a folly of almost if not of equal magnitude. Hugh Miller, in a recent *Lecture,* delivered in London, before the "Young Men's Christian Association," says:—

> "Dr. Chalmers' scheme teaches, and teaches truly, that between the first act of creation, which evoked out of previous nothing the matter of the heavens and earth, and the first act of the first day's work recorded in Genesis, periods of vast duration may have intervened; but further, the days themselves were but natural days of twenty-four hours each; and that ere they began, the earth, though, *mayhap,* in the previous period, a fair residence of life, had become void and formless, and the sun, moon, and stars, though, *mayhap,* they had before given light, had been, at least, in relation to our planet, temporarily extinguished. In short, while it teaches that the successive creations of the geologist may have found ample room in the period preceding the creation to which man belongs, it teaches also, that the record in Genesis bears reference to the existing creation, and that there lay between it and the preceding ones, a chaotic period of death and darkness."

Clear as mud, certainly! What child's play for a man professing his faith on the Word of God! It is absolutely, to all intents and purposes, denying the Written Word; and is only equaled by the defection of Peter, if not that of Judas. When man leaves the Fountain of Truth, and dabbles in the filth at the bottom of broken cisterns, he virtually denies his Master, and bedaubs his first love; and no one more emphatically than the professed friend of Revelation, tampering with geological assumptions, and attempting to reconcile the puny, clumsy deformities of man's vague speculations, with the imperishable monument of Creative Power. God, in the first act of the first day, create the matter of the heavens and earth, yet periods of vast duration may have intervened!—may have been a fair residence of life, but become void!—and the source of light, *mayhap,* have been temporarily extinguished! Was ever such a ridiculous piece of clap-trap imposed on the credulity of man by any vagabond Juggler, to hoodwink his audience to one of his tricks of legerdemain? Was there ever such a useless waste of time, and such a trifling with *creative energy,* sported to so little purpose? "*Mayhap*"—(I thank thee, good Sir, for that word)—neutralizes the whole force of the position. "She that doubts is lost." *Mayhap* is a beautiful auxiliary to the assumptions of the Geologist! Genuine geology rarely, if ever, deals in "*mayhaps;*" none but sickly bantlings, cowardly spawns, do it. Geology has grown too old for such qualifications. It stooped at first; now it wields a sceptre. *Mayhap,* in Hugh Miller, or Dr. Chalmers, displays a sycophancy to men of science, while it betrays a faithlessness to their sovereign, the mighty Jehovah.

How unremittingly poor worms of the dust strive to dethrone the Almighty—to inflate themselves and assume some short-lived importance; and how sad the end of their vain philosophy—their unfortunate attempt to be wise above the Written Word. To what a ridiculous position—ineffable folly—can tampering with the vain conceits of men, reduce the most elevated and the most venerated of frail mortals.

The folly of Dr. Chalmers' scheme, as seen by those who were capable of detecting its absurdity, yet, itching to tinker and patch a better one, to obtain some eclat in vain science, has not deterred others from following in the like path of equivocal distinction, in compromiting Revealed Truth. In this class we find another distinguished writer—no less a personage than Dr. John Pye Smith, who, also, has entered the lists in the vain attempt to serve both God and Mammon: the most absurb position, certainly, in which man can place himself, as the sequel will show. In the analytical language of Hugh Miller, which will suit my purpose better than the author's detail, cramped as I am to a few columns of a weekly paper, we have the following bird-eye view of his "*scheme:*"—

> "The scheme propounded by the truly admirable Dr. Pye Smith, and since adopted by several writers, differs from that of Dr. Chalmers in but one circumstance, though an important one. Dr. Smith held with the great northern divine, that the Mosaic days were *natural days;* that they were preceded by a chaotic period; and that the work done in them related but to the last of the creations, to which the human species belongs. Further, he held, in addititon, that the chaos of darkness and confusion, out of which that creation was called, was but of limited extent, and that outside its area, and during the period of its existence, many of our present lands and seas may have enjoyed the light of the sun, and been tenanted by animals and occupied by plants, the descendants of which continue to exist. The treatise of Dr. Pye Smith was published exactly a quarter of a century posterior to the promulgation, through the press, of the argument of Dr. Chalmers; and this important addition, elaborated by its author, between the years 1837 and 1839, seems to have been made to suit the more advanced state of geological science, at the time. The scheme of reconciliation perfectly adequate in 1814, was found in 1839 to be no longer so."

Mirable dictu! The Mosaic account—that nose of wax—must be altered, to adapt it to *geological progress!*—to infidel assumptions. But to proceed:—

> "It is a great fact, says the same commentator, now fully established, in the course of geological discovery, that between the plants, which in the present time cover the earth, and the animals which inhabit, and the animals and plants of later extinct creations, there occurred no break or blank, but that, on the contrary, many of the existing organisms were contemporary during the morning of their being with many of the extinct ones during the evening of theirs. *We know* further, [no *mayhap,* now,] that not a few of the shells which now live on our coasts, and several of the wild animals which continue to survive, amid our tracts of hill and forests, were in existence many ages ere the human race began. Instead of dating their beginning only a natural day, or at most two natural days, in advance of man, they *must* have preceded him many thousand years. In fine, in consequence of that comparatively recent extension of geological fact, (? assumption,) in the direction of the later systems and formations, through which we are led to know, that the present creation was not cut off abruptly from the preceding one, but that on the contrary it dove-tailed into it at a thousand different points, we are led also to know, that any scheme of reconciliation which would separate between the recent and extinct existences, by a chaotic gulf of death and darkness, is a scheme which no longer meets the necessity of the case. Though perfectly adequate forty years ago, it has been greatly outgrown by the progress of geological discovery, and is, as I have said, adequate no longer; and it becomes a important matter to determine the specific scheme that would bring it into completest harmony with the course of creation as now ascertained by the geologist, and that brief but sublime narrative of its progress which forms a meet introduction, in Holy Writ, to the history of the human family. The first question to which we must address ourselves in such an inquiry is of course a very obvious one, What are the facts, scientifically determined, which now demand a new scheme of reconciliation?
>
> . . . .
>
> The scheme of reconciliation adopted by the late Dr. Pye Smith, though, save in one particular, identical with that of Dr. Chalmers, is made, in virtue of its single point of difference, to steer clear of the difficulty. Both schemes exhibit the creation, recorded in Genesis, as an event which took place about six thousand years ago; both describe it as begun and completed in six natural days; and both represent it as cut off from a previously existing creation by a chaotic period of death and darkness. But while, according to Chalmers, both the Biblical creation and the previous period, of death are represented as coextensive as the globe, they are represented, according to Dr. Pye Smith, as *limited* and *local.* They (death and darkness) may have extended, it is said, over *only a few provinces of Central Asia,* in which, when all was light and life in other parts of the globe, there reigned for a time only death and darkness amid the welterings of a chaotic sea; and which, at the Divine command, was penetrated by light and occupied by dry land, and ultimately, ere the end of the creative week, became a center in which certain plants and animals, and finally man himself, were created. And this scheme, by leaving to Geologists in this country, and elsewhere, save, *mayhap,* in some *unknown Asiatic district,* his unbroken series, certainly does not conflict with the facts educed by geological discovery. It virtually removes Scripture altogether out of the field."

What mockery! What straining at a gnat and swallowing a camel! It absolutely beggars all conception of human presumption and human folly. The Lord perpetrate such a cheat, and enact such a puppet-show farce? What a humiliating picture of human purblindness, and how derogatory to Omnipotent Wisdom! The creature, emulous of outstripping the Creator, has found a *scheme* of his own, by which he can reconcile God's revelation with his own crude and incongruous vagaries; and when a bolder adventurer assumes a bolder front, and defies the Almighty with a more brazen face, the *Christian Geologist*—poor, vain, deluded man—sets about, again, to form some other "*new scheme,*" to compromit his Maker, to the presumption of the impious creature. It is not a whit better than the building of the tower of Babel; and, unquestionably, it will prove not any less disastrous in its results. It has already produced a confusion of language among Geologists, in many points of their "geological fact;" while the Christian philosophers, who attempt to reconcile their geological vagaries, have reduced themselves to the dilemma of the foolish virgins, who went out to meet the bridegroom, without oil in their lamps, and were left in the dark, and cut off from the marriage feast. They have but the husks of the Infidel geologists to feed upon.

Who can imagine a greater absurdity, or a greater imposition on the credulity of poor, short-sighted mortals, than to admit, that the earth, teeming with light and life, had existed centuries before the Mosaic period, and yet, with a little exercise of juggling, a small space of "limited extent" was enveloped in darkness, for the Lord to play off a trick on silly man, and deceive the sons of earth in regard to his creative power? Shame, shame, on such puerile philosophy. This is so perfectly absurd, that Hugh Miller, the admirer of Dr. Smith, acknowledges, that he has stumbled at it; and no wonder. But hear him:

> "I have stumbled at the conception of a merely local and limited chaos, in which the darkness would be so complete, that when first penetrated by the light, that penetration could be described as actually a *making,* or *creation* of light; and that, while life obtained all round its precincts, could yet be thoroughly void of life. A local darkness, so profound as to admit no ray of light, seems to have fallen for a time on Egypt, as one of the ten plagues; but the event was evidently miraculous; and no student of natural science is entitled to have recourse, in order to extricate himself out of a difficulty, to supposititious, unrecorded miracles. Creation cannot take place without miracle; but it would be a strange reversal of all our previous conclusions on the subject, should we have to hold, that the dead, dark blank out of which creation arose, was miraculous also. And if, rejecting miracle, we cast ourselves on the purely natural, we find that the local darkness dependent on known causes of which we have any record in history, were always either *very imperfect,* like the darkness of your London fogs, or very temporary, like the darkness described by Pliny, as occasioned by a cloud of volcanic ashes; and so altogether inadequate to meet the demands of a hypothesis such as that of Dr. Smith."

Bulwer, in the very best of all his numerous writings, "England and the English," pertinently remarks, in reference to the amount of church funds expended, and the listless, heartless preaching supplied in return for it: "It often happens, when we compare the largeness of the *living* with the *apathy* of the Preacher, that we cannot but exclaim with the Prince of Conti, Alas! our good God is but very ill served for his money." How shamefully, I would add, is the Almighty requited for his goodness in giving unto man his Written Word, to be a lamp unto his feet and a light to his path; which professes to be given by inspiration of God himself, and which is declared, by the same authority, to be profitable for all things unto the Church. O, shame, shame, where is thy blush? Why will not man take the Lord at his word? Why continue to tinker at His perfect work, and succor its enemies in their attempt to overthrow that precious treasure, the sure testimony of God?

But let us try another of the redoubtable champions of geological speculations, who attempts to bolster the falling fortunes of his favorite theologico-geological dreamers. Seeing and feeling the absurdity of both the *schemes* of Dr. Chalmers and Dr. Pye Smith, and with the profession, that he believes the Bible, Hugh Miller sets out to spin a theory to reconcile the "Two Records," the Mosaic and Geological; and let us see how he harmonizes them.

> "Waving, however, the question as a philological one, and simply holding with Cuvier, Parkinson, and Silliman, that each of the six days of the Mosaic narrative, in the first chapter, were what is assuredly meant by the day referred to in the second—not natural days, but lengthened periods—I find myself called on, as a geologist, to account for but *three* of the *six.* Of the period during which light was created; of the period during which a firmament was made to separate the waters from the waters, or of the period during which the two great lights of the earth, with the other heavenly bodies, became visible from the earth's surface, we need expect to find no record in the rocks—[the Infidel Geologists Oracles.] . . . . The sun, moon, and stars, may have been created long before, though it was not until this fourth period of creation that they became visible from the earth's surface.
>
> "The Geologist, in his attempts to collate the divine with the geological record, has, I repeat, only three of the six periods of creation to account for—the period of plants, the period of great sea-monsters and creeping things, and the period of cattle and beasts of the earth. He is called on to question his systems and formations. regarding the remains of these three great periods, and these only! And the question once fairly stated, what, I ask, is the reply? All geologists agree in holding, that the vast geological scale naturally divides into three great parts. There are many lesser divisions—divisions into systems, formations, deposits, beds, strata; but the master divisions, in each of which we find a type of life so unlike that of the other, that even the unpracticed eye can detect the difference, are simply three—the Palæozoic, or oldest fossiliferous division; the Secondary, or middle fossiliferous division; and the Tertiary, or latest fossiliferous division.
>
> "In the first, or Palæozoic division, we find corals, crustaceans, molluscs, fishes, and, in its later formations, a few reptiles. But none of these classes of organisms give its leading character to the Palæozoic, they do not constitute its prominent feature, or render it more remarkable as a scene of life than any of the divisions which followed. That which chiefly distinguished the Palæozoic from the Secondary and Tertiary periods, was its gorgeous flora. It was emphatically the period of plants, "of herbs yielding seed after their kind." In no other age did the world ever witness such a flora—(no *mayhap;*)—the youth of the world was peculiarly a green and umbrageous youth—a youth of dusk and tangled forests—of huge pines and stately araucarias—of the reed-like calamite—the tall tree-fern—the sculptured sigillaria—and the hirsute lepidodendron. Wherever dry land, or shallow lake, or running stream appeared, from where Melville Island now spreads out its ice wastes, under the star of the Pole, to where the arid plains of Australia lie solitary, beneath the bright cross of the south—[no *mayhap* now, but very poetical]—a rank and luxuriant herbage cumbered every foot-breadth of the dank and steaming soil; and even to the distant planets earth must have shone through the enveloping cloud, *with a green and delicate* ray.(?) Of this extraordinary age of plants, we have our cheerful remembrances and witnesses in the flames that roar in our chimneys, when we pile up the winter fire, in the brilliant gas that now casts its light on this great assemblage, and that brightens up the streets and lanes of this vast city, in the glowing furnaces that smelt our metals and give moving power to our ponderous engines, in the long dusky trains that, with shriek and snort, speed dart-like athwart our landscapes, and in the great cloud-enveloped vessels that darken the lower reaches of your noble river, and rush in foam over ocean and sea. The geological evidence is so complete as to be patent to all, that the first great period of organized being was, as described in Mosaic record, peculiarly a period of herbs and trees, "yielding seed after their kind."
>
> "The middle, or great period of the geologist—that of the Secondary division—possessed, like the earlier one, its herbs and plants, but they were of a greatly less luxuriant and conspicuous character than their predecessors, and no longer formed the prominent trait or feature of the creation to which they belonged. The period had also its corals, its crustaceans, its molluscs, its fishes, and, in some one or two exceptional instances, its dwarf mammals. But the grand existences of the age—the existences in which it excelled every other creation, earlier or later, were its huge creeping things—its enormous monsters of the deep, and, as shown by the impressions of their foot-prints stamped upon the rocks, its gigantic birds. It was peculiarly the age of egg-bearing animals, winged and wingless. Its wonderful whales, not, however, as now, of the mammilian, but of the reptilian class—ichthyosaurs, plesiosaurs, and cetiosaurs must have tempested the deep; its creeping lizards and crocodiles, such as the teleosaurus, megalosaurus, and iguanodon—creatures some of which more than rivaled the existing elephant in height, and greatly more than rivaled him in bulk, must have crowded the plains, or haunted by myriads the rivers of the period; and we know that foot-prints, of at least one of its many birds, are fully twice the size of those made by the horse or the camel. We are thus prepared to demonstrate, that the second period of the geologist was peculiarly and characteristically of whale-like reptiles of the sea, of enormous creeping reptiles of the land, and of numerous birds—some of them of gigantic size; and in meet consideration of the fact, we find that the second Mosaic period with which the geologist is called to deal, was a period in which God created the fowl that flyeth above the earth, with moving [or creeping] creatures, both in the water and on the land, and what our translation renders great whales, but what I find rendered in the margin great sea-monsters.
>
> "The Tertiary period had its most prominent class of existences. Its flora seems to have been no more conspicuous than that of the present time; its reptiles occupy a very subordinate place; but its beasts of the field were by far the most wonderfully developed, both in size and numbers, that ever appeared upon the earth. Its mammoths and its mastodons, its rhinoceroses and its hippopotami, its enormous dinotheriam and colossal megatherium greatly more than equaled in bulk the hugest mammals of the present time, and vastly exceeded them in number. . . . Truly this tertiary age—this third and last of the geological periods—was peculiarly the age of great beasts of the earth after their kind, and of cattle after their kind. . . . . Man came into being as the last born of creation, just ere the close of the sixth day—the third and terminal period of organic creation—to which the great mammals belong."

There, reader, you have the great "*geological fact,*" PAR EXCELLENCE, the geological discoveries, which are to be the perfect "*open sesame,*" and make a ninny of Moses, to glorify the vain conceits of man. Moses describes six periods of creation—six natural days—but the Geologist, not finding any "*record in the rocks*" of but three, is therefore willing to make the whole creation in three periods, with this slight difference, he demands "*undefined ages*" to each period—some six thousand years for each period. It would certainly take all that time for *man* to do it; but God is competent, and has accomplished it all, in *six natural days,* or falsifies, stultifies his own Record. Surely, all the acumen of pseudo-Christian geologists, however learned, or however good men they may be, is needed to make the writings of Moses conform to such presumptuous assumptions; they do not, and were not intended to, quadrate with the ever changing philosophy of man—with the philosophy which the Scriptures style "falsely so-called." They can no longer, we are boldly told, meet the necessity of the case; and new concessions are demanded to reconcile them with geological facts, "scientifically determined." Geology has a maw which can never be filled or satisfied, until it has ingulfed the ever-standing monument of God's testimony to his own omnipotence.

There is very little if any serious clashing in the foregoing geological schemes of the three great luminaries, Chalmers, Smith, and Miller; save the lengthened periods—some give a thousand years to *each* period—instead of *all* natural days. But that is not all the clashing. The scheme of Hugh Miller presents a far greater and an infinitely more glaring absurdity in its application. Having chimed so far in geological speculations, he is thrown, of necessity, into the predicament of other of his predecessors, who have claimed lengthened periods, and, by a natural sequence, has encumbered himself with a *six thousand year Sabbath!* He, like others before him, is caught in his own net—has fallen into the pit he himself hath digged. This predicament was clearly pointed out and irrefragibly established by Faber, and there can be no extenuation for his blunder. Indeed, he seems to be fully aware of the dilemma into which he has gotten himself, for he labors lustily, in a most bungling way, to extricate himself from his unenviable position:—

> "It has been urged, however, (says he,) that this scheme of lengthened periods is irreconcilable with that Divine reason for the institution of the Sabbath, which he, who appointed the day of old, has in his goodness vouchsafed to man. .... God the creator, who wrought during six periods, rested during the *seventh period;* and as we have no evidence whatever that he recommenced his work of creation—as, on the contrary, man *seems* to be the last formed of creatures—*God may be resting still.* The presumption is strong, that his Sabbath is an extended period, not a natural day; and that the work of Redemption is his Sabbath day's work."

What absurdities, and what paradoxes, does being wise above the Written Word lead man into. If it be an extended Sabbath the Lord is now enjoying—religiously observing—mankind should be exercising the same sacred rest; for our obligation on that point arises from the circumstance of His example—of His resting on or during it. He enjoins six days work, and to rest on the seventh day, after his own example, and for the same "reason." How can frail mortal man work thirty-six thousand years, to gain a rest of one period of six thousand years! What a puerile absurdity. If we could persuade ourselves, that God is resting a six thousand year Sabbath, and that we are really enjoying a perfect Sabbath of that extended period, without knowing it, what kind of a Sabbath is it?—and what kind of a Sabbath have the nations of the earth been observing for some thousands of years past? Bloodshed and carnage have followed in the train of man ever since he has entered upon that extended Sabbath—bloodshed and carnage, which have rendered the earth one vast, overflowing aceledama. Good Lord, deliver us from such "continued rest," of such an "extended period." Who can imagine a greater absurdity? What does science, and, more particularly, what does religion, gain by such vague speculations? Better let God be true, though it make all men liars.

If not with professed believers on the Bible, yet it unquestionably is the sole purpose of Infidels, to stultify the Word of God, that many of those vague speculations are promulgated; and sad is it to behold so few theologians, who once get an itching for geological speculations, ever discover their first ill-advised step, until they become involved in innumerable and inextricable blunders. No one, certainly, but an avowed Infidel, would set out with the purpose of destroying the authenticity of the Scriptures, and no one, I am sure, who respects Revelation, has the most distant idea of such a design, until he becomes intoxicated with the vain conceits of men; and then he is left to the "delusion to believe a lie."

In taking this position against such a popular delusion, I am quite sensible that I may incur the imputation of being unscientific, behind the age, opposed to progress and developement; and I am prepared to bear it imperturbably, because that is ever the reward a man gains by setting his face against fashionable follies. I still profess to be the friend of advancement, in every legitimate department of knowledge, but not the friend or defender of arrogant assumptions, in science or religion. In science I yield to all that science can establish without becoming presumptuous; but in theology, I accept not any thing for which we have not a "*thus saith the Lord;*" and when both science and theology enter into the estimate, I never adopt the *postulate* of man for the *revelation* of the Almighty. To His unlimited Wisdom and Power, I bow unreservedly; believing that He can see the end from the beginning, and has ordered all things "*sure and right.*" That for which man requires ages of geological development to accomplish, God can speak into perfect existence, in an instant—that which geologists may regard as chance, or the progressive work of unknown ages, I believe, for the Scriptures so teach me, was the fiat of Omnipotent Power; and whose fiat could speak creation into existence as perfect as it is now presented, in the twinkling of an eye. If he could not, he would not possess power to create an *atom* of matter out of which the mass is formed; and if he did it for wise and benevolent purposes, why would he waste so many ages for *secondary causes* to accomplish that which all wisdom and true benevolence would prompt with the least possible delay? I can readily comprehend why Infidel cavilers would procrastinate the work for thousands of years, but I cannot comprehend the detraction of the Christian philosopher, who would desire to rob God of his prerogative to create and destroy, as is clearly set forth in his Written Word.

I do not arraign the motives of either of the foregoing writers, but only challenge the results of their tampering with a *speculative science.* A *certain science,* one whose results are uniform and fixed—whose analyses and syntheses respond and correspond, in reducing a substance to its elementary constituents, and recomposing them again, we may rely upon—may repose implicit confidence, and not entertain the slightest apprehension that it will ever conflict with the word of God, with the Author of Nature, and the Author of the Bible; but I cannot attach any importance to the vague, incongruous assumptions, or postulates, of Naturalists, without being submitted to the test of certain experiment, and not left to be determined by mere s[illegible]ise. Creation was a *miracle;* and *natur*[illegible] so[illegible]e is not competent to fathom, or contro[illegible]ich miracle; it has only one greater folly, n[illegible] the professed friends of Revelation pa[illegible] to their assumptions—evincing a cringi[illegible]animity of which a Believer ought nev[illegible] be guilty.

How careful, how exceedingly careful, should the friends of he Bible guard against any cause for imputations which threaten to invalidate the credibility of that precious Word of Truth, and not inflict a fatal stab on its integrity. It was one of the most touching passages in the checkered life of the lowly Jesus, which induced him to exclaim, while surrounded by his disciples, at his own board: "He that eateth bread with me lifteth up his heel against me;" and David, in the same tender strain, bemoans the treachery of his professed friend: "Yea, mine own familiar friend, in whom I trusted, which did eat of my bread, hath lifted up his heel against me." Heaven, forfend thy disciples from vain, presumptuous philosophy.

AN EFFECTUAL REBUKE.

A Christian King of Hungary, being very sad and pensive, his brother, who was a gay courtier, was desirous of knowing the cause of the sadness. "O, brother," said the king, "I have been a great sinner against God, and know not how to die, or how to appear before God, in judgment."

The brother making a jest of it said, "These are but gloomy thoughts." The king made no reply, but it was the custom of the country that if the executioner came and sounded the rumpet before any man's door, he was presently led to execution. The king, in the dead of night, sent the executioner to sound the trumpet before his brother's door; who, hearing it, and seeing the messenger of death, sprang into the king's presence, beseeching him to know in what he had offended. "Alas! brother," said the king, "you have never offended me. And is the sight of my executioner so dreadful? and shall not I, who have greatly offended, fear to be brought before the judgment seat of Christ?"

OUR OBSCURITY.

Why is the Seventh-day Baptist denomination so little known to the world? Comparatively few are aware of our existence, notwithstanding it is more than two hundred years since the first churches of our order were planted in America. Yet "a city that is set on a hill cannot be hid." What then? Are we not set on the hill of God? Something very *high* and *sublime* is the Christian life, to which we cannot attain without great pains. It elevates believers above the level of worldly men, so that they necessarily become conspicuous. And why is it not a justifiable inference, that our obscurity as a people argues unfavorably of our piety?

We are aware that there are those among us, who deny the fact that we are obscure. All things considered, they suppose that we are about as well known as other orders of people, and that we are exerting, proportionally, as great an influence. It would be a great pleasure, if we could agree with them in this. But we have so often met with those who had never heard that there was a sect of Christians observing the seventh day of the week as the Sabbath, and so many fresh instances of this kind are continually coming to our knowledge, that we cannot help feeling that we are more unknown to the world than we ought to be, and that the natural inferences from the fact are not particularly flattering to us.

One thing that helps to keep us in such obscurity, is that so many of our number are ashamed to confess their faith. If they go from home, and circumstances render it necessary for them to pass the Sabbath in a Sunday-keeping community, they are ashamed to make an exhibition of their principles, but go on with their business as on other days. The Sabbath makes no interruption of their buying and selling, or of their pursuits of pleasure. They spend weeks in this manner, and the people among whom they are passing the time, never receive the least hint of their faith in regard to the Sabbath. Perhaps, when they come to take their departure for home, it is the Sabbath day; but that makes no difference. As they have already transgressed in one form, they find it easy to do so in another; and so, from the time of their leaving home to their return, nobody has ever seen any thing in their behavior, which would create the least suspicion that they were a God-fearing, Sabbath-keeping people. Is it any wonder that we are not known?

Another reason of our obscurity is found in the lack of evangelical piety amongst us. True, we have some in all our churches, to whom Christ is precious in all His names and offices; and nothing affords them greater delight than to dwell upon His love. Indeed, we hope well of large numbers of our people, but we cannot resist the conviction, that that religion which makes Christ all in all is had in too little practical esteem. A moral people, in the popular sense of the term, our brethren certainly are. We believe there is no class of religionists, who are more just in their dealings, temperate, industrious, and free from gross vices. And certainly, without this their religious profession would be but a satire upon the sacred name of God. But if morality is all that a people have to characterize them, they will never become conspicuous as a city set on a hill. We can become influential, and consequently well known, only by preaching Christ as the Lord our Righteousness. Both our words and our lives should preach Him; for this being the way by which God has chosen to save sinners, we shall find ourselves wofully disappointed, if we expect to make an impression upon the world by any instrumentality, or agency, which does not make the Great Atonement first and last. Our people, as a general thing, do not make Christ prominent enough. Is it any wonder then, that we are not better known?

We can conceive of reasons why it would be better for us to be unknown than to be better known. And it might be a wholesome inquiry, though a humiliating one, to ask whether our hitherto comparatively unknown condition has not been a wise provision, in Providence, to keep our Sabbath-breakings, and other inconsistencies, shut up from the observation of the world. We have had scarcely any existence in cities, and other large places. Even our country locations have been measurably secluded and unimportant. In the present low state of our piety, perhaps it is better that it should be so. We are not yet prepared to "ride upon the high places of the earth."

T. B. B.

Indian Missions.—A letter to the *Congregational Herald*, dated Stillwater, Minnesota, July 18th, says that Rev. Mr. Treat, Secretary of the American Board, has recently paid a visit to the Indian Missions in Minnesota, and has discontinued the Ojibway mission at Crow Wing, where Rev. Sherman Hall has labored twenty-three years. The letter says:

"The fact is, our missions among the Indians of the North-west are almost entirely a nullity, as far as any permanent good influence is expected. As long as the tribes have free intercourse with the whites, all the attempts to Christianize them are so much labor and money and time entirely lost. And even worse than that, for the educated Indian will invariably return to his Indian habits again, and his education has only so much the more increased his power for evil. There are now many evidences still existing of the good accomplished by the mission schools fifteen or twenty years since, before the whites came in contact with the Indians. But since the whites came, and government furnished the Indians with regular annuities, missions have been useless, and the tribes have been sinking still lower and lower in degradation. But a very few years longer will government have need to pay them annuities, for they will all be gone. As long as the government continues its present policy in dealing with the Indians, there is emphatically no hope for them, and while the world is everywhere calling, our Mission Boards had far better send their money and men where some good can be effected in the name of the Lord."

LETTER FROM MR. CARPENTER.

From a letter of Mr. Carpenter, dated Shanghae, May 29, 1854, we copy the following paragraphs of general interest:

Mr. Goddard's Chinese version of the New Testament is completed, and on some accounts I like it better than any I have seen; it is more literal, in a style more diffuse, and consequently more easily understood, though not so much admired by the literati as the Delegates' version, previously given out. But in the translation of *mia toon sabbatoon*, none of them are literal, and I fear none are correct. By comparing scripture with scripture, I see no good reason for, but every reason against, the common rendering. It appears that in our English New Testament the word *mia* in all the 68 passages in which it occurs, is translated "one," or something equivalent to one, except in the disputed passages and one other. And in that one other—viz. Titus 3: 10—the difficulty is only imaginary. The authors of the Septuagint did in some 30 instances, out of nearly 700, imitate the Hebrews in using the ordinal in the place of the numeral. But the New Testament writers do not appear to have followed them in this. The term for Sabbath in Hebrew and Greek occurs about 107 times in both the Testaments, and with the exception of the passages translated "first day of the week," and one other, I think it is always rendered Sabbath, and never week. And the passage rendered, "I fast twice in the week," has been shown to deserve a better translation. The usus loquendi of this word being thus established, if it may mean "week," why may not baptize mean to "sprinkle," and repentance "do penance?" Now, must we use Scripture to interpret Scripture in such a case as this, or should we take the statement of Horne as sufficient authority, saying the Evangelists all appear to have adopted the Syrian Calendar?

On the 31st of the 3d month, at 2 o'clock A. M., we observed a fire in the city, in the direction of our house, and at 10 o'clock I went to the spot and found that our house and chapel barely escaped. The street on which our house is located was traversed by the fire for a considerable distance. The devouring flames threw upon our premises a large quantity of cinders and dust, and destroyed a house within ten feet of ours. A respectable shopkeeper across the street from us had his goods taken from him some time previously, by the rebels, and now his house being destroyed, he came to me with an expression of unfeigned anxiety, which I shall never forget, to ask for shelter under my roof. Of course I was happy in being able to give him substantial proof of the real sympathy which I felt for him, and as he has since conducted himself well, I have never regretted it.

From the papers which I now send you regularly, you will learn about the disturbance of the quiet of the foreign community here, and some of the results of it. The part acted by foreigners will appear to some at a distance as rash and unjustifiable. I am heartily sorry that as a community we have not so much moral power as to render a resort to physical force unnecessary. If holiness to the Lord were written upon the life of every foreigner, I believe we might safely dispense with most of our warlike preparations, and hostile demonstrations. For a heathen people, I think the Chinese are peculiarly susceptible of the influence I refer to. But as society here is at present constituted, we had arrived at a period when a demonstration seemed called for. And though attended with serious loss, the result has shown that the lesson was a salutary one to the imperialists. The community has enjoyed more quiet since, than it had for a long time before.

The city of Shanghae is still in the hands of the insurgents who took possession on the 7th of September. And the time has fully come when we can no longer defer to make some provision of house room for our two families. Rent is hardly to be obtained at any price. So we have concluded to build a shelter for ourselves, and have already taken some steps in that direction. Mr. Cunningham, former United States Vice-Consul, learning our intention, has made us the princely donation of two hundred dollars to assist in the work. With it we have already bought a lot containing two Chinese acres ($\frac{1}{3}$ of an English acre) for one hundred and twenty dollars, and fenced it. We have also bought some material and set about the work. As there is some prospect that our family will occupy the house after peace is restored, so I build the house, and expect to do it mostly upon borrowed capital. But we hope to be able to pay for it without any extra appropriation from the Board. As soon as we get into the new house, Mrs. C. expects to take charge of two or three more children, for which service she expects to be liberally rewarded. Notwithstanding this prospect, we should not build now if we could avoid it. I have already brought from our house in the city as many doors and windows as can be safely spared from it. I do not intend at present to expend upon the new house more than about seven hundred dollars.

Our Commissioner has taken the great steam-ship Susquehannah and the tug-ship Confucius and gone up the Yang toz Keang. As far as we know, they do not intend to go to Nankin, but to a place this side of Ching Keang, and not to visit the patriots but a high officer of the imperial government. Dr. Bridgman and Mr. Culbertson are on board. Mr. Roberts is still in Shanghae.

The last time I saw the mother of Chung, deceased, she was more inclined to listen to the word than I have known her to be before. Still it may be nothing but an appearance. Affliction may do her good.

Some time ago, when our cook Le Chong made us a visit, I was gratified to learn from him, that in his own house and in the midst of his own family he had erected the family altar to the Most High. I have now called him back to his wonted duties in assisting us.

Yours in Christ, S. Carpenter.

SECRET SOCIETIES.

To My Rev. Bro. N. V. H:

In your last article, you say, "Please doff your humility, and don your legitimate character, or down with the quill." Perhaps I ought to comply with so reasonable a request, so far as to lay down the quill, and think I will at the close of this article. But as to doffing my humility, I do not know as I ought to spare any, or that I have assumed any more than properly belongs to an humble seeker after truth, who is more accustomed to handling the *hammer* than the "*quill*," but who, believing that he has found *truth*, would hold on to it, ever ready to give a reason for the hope that is within him. I am the more ready to lay down the quill, from the fact, that I have failed entirely to obtain a solution of the great question from which has originated this somewhat rambling discussion.

You say, "Our discussion may seem somewhat pointless." If it be so, it strikes me it is not for the want of points on your part, (as in your last two articles I believe you have laid down eleven,) but because the first point has not been met, on which must turn the whole question of the right or wrong of secrecy, in and of itself, or when used and enjoined by an association "organized for the purpose of shielding ourselves from the evils of intemperance, and elevating our characters as men," and governed in the use of secrecy by the gospel principles of "temperance, benevolence, and brotherly love." But perhaps, in laying down so many points, you may have had in mind the fact asserted by some philosophers, that if a cloud charged with electricity were passing over our heads, and a sufficient number of points (being good conductors) were presented, the electricity would so gradually pass off that no one would be injured, and there might not be even any report. How true this may be, I shall leave for philosophers to decide.

As to the several propositions laid down in your last, I cannot entertain them for a moment, as they assume that the very question at issue (and the only one) which I have sought a solution of has been decided in your favor, and admitted by me; while, on the contrary, I deny, most emphatically, that a person exposes himself to temptation in organizing a so-called "secret society," any more than any other having the same objects in view.

You say, you think it can be shown, from testimony the most reliable, that a Christian is as much out of place in a secret society as in a gambling hall. I do not know what your opinion of gambling may be, but it must be very different from that of other "Christian ministers," or you have been most grossly deceived as to the objects and interests of one society, at least, which you are pleased to call secret. You have had the object of the organization of Sons of Temperance presented to you, and the principles on which they propose to accomplish their object, and the testimony of such men as the venerable Dr. Lyman Beecher, who has spent nearly double the years that you can claim in the service of the church, and who has grown gray indeed in her service, that the organization was eminently worthy of the support of the ministers of the gospel. The late Rev. Charles Van Loon, of Poughkeepsie, said that there was nothing in the private ceremony of the Order which the angels in heaven might not look down upon and smile. This testimony may not convince you, but, added to my own opinion and observation for the last eight years, deserves at least the consideration of the unprejudiced Christian. I might adduce further proof to convince you that you may be in an error on this subject, were not your declarations too much like a certain good deacon's in a church meeting, when the subject of "secret societies" was under consideration. When the proposition was made to hear what might be said in their favor, he said he did not want to hear anything on the subject; he had made up his mind more than twenty years ago, and no power on earth could alter it. Now, I hold, that in violation of all the rules of argument, as well as of the gospel, you have assumed the very question in debate, and, acting upon that assumption, have handed over your poor lay brother to the buffetings of satan, until such time as he shall, on the faith of your convictions, see black where he can not see anything but white if he trusts his own eyes.

I will pass over your remarks in which you attempt to convict me of deception in the matter of "society secrets" and "secret societies," and where you ask me never to attempt to deceive again. Now, my dear brother, did it ever occur to you, that you might possibly be the one who would deceive yourself, if not others, in supposing that the Sons of Temperance are in reality a secret society in a logical sense? Is not the object, time and place of meeting public? Are not their Constitution and By-Laws and Rules of Order all public? Then how, as a society, are they secret? I answer, in no way; but are simply a society with a secret. "Please look at this, dear brother, until you can see the logical difference," &c.

Do not understand me as attempting to convict you of error in supporting Missionary, Tract, and kindred Societies; on the contrary, I believe you do well to do it, and that you are acting on the principles of the gospel; and yet there is no positive "thus saith the Lord" for their organization. Nor is there any thing in the Scriptures, that I have ever seen, to prevent their being organized as a "secret society," or as much so as some which are so-called. And yet I cannot infer any thing else from your argument, but that you would oppose them on the ground of being a "secret society," even if they had the same objects in view that they now have.

You seem to think it would be lost time to investigate the subject personally, and that you can derive sufficient knowledge of the working of these societies from the "*goats*" who were once of the fold, but who are now running at large. I doubt not but what you can obtain information even from these, but perhaps it would be more reliable if it came from "goats" who were less fond of "horns;" and allow me to say still further, there are evidently some "goats" who were never in the fold, who might possibly be benefited by becoming so, even if they have no "horns." I would not by any means advise the brother to go where the rich man did to learn to preach to sinners, not only on the account that he mentions, but for fear that he might not get back safe and sound.

I will pass over your remarks in which you perhaps inadvertently place a temperance institution and its supporters side by side with the institution of slavery and slaveholders, and do not profess to see any difference, because, forsooth, the temperance institution is a "secret society."

You ask me if I believe St. Paul would, if he were on earth, join the Masons, &c., that he might save some? I believe, that if St. Paul were on earth at this time, he would preach "temperance, benevolence, brotherly love;" and that he would do now as then, "make himself all things to all men, that he might save some;" and I believe further, that if those who have been called to follow in the footsteps of St. Paul would labor as zealously to preach "Christ and him crucified," and the church was what Paul would have it to be, there would be far less need of any society, secret or open, to do the work which she ought to do.

And now, in conclusion, dear brother, as one who loves the church, and who would sacrifice much to see her prosper and become "as a city set on a hill;" as one who also loves the temperance cause—who has suffered much indirectly from the evils of intemperance; as one who has vowed unceasing war against the use and traffick in intoxicating drinks, and conscientiously believes that the institution known as the Sons of Temperance is well if not the best calculated to effect this great and philanthropic object; and who, from an experience of eight years, can say with an honest heart, that there is nothing required by this institution in any of its workings inconsistent with the Christian character; as one who has looked with pain on the unholy persecution by the church of some of its best members, not for any moral wrong, but because they dared to differ with some of their brethren in matters of a personal character, and in which they supposed themselves to be the best judges; as one who holds to liberty of conscience—I protest against the demolition of the church at your hands, by the laying on of burdens and requirements about which ye received no commands. In that great and terrible day of the Lord, when we shall all stand at the bar of God, that no lost soul shall rise up and say, "I might have been saved from a drunkard's grave, and a drunkard's hell, but for the influence of Christian ministers against the means God has blessed to the saving of many," is the earnest desire and prayer of your unworthy

Lay Brother.

COMMUNION.

I now proceed to show that the true basis of Christian unity is an acknowledged belief in God, and Jesus Christ, the Son of God, as the Saviour of the work, connected with a life of practical love to God and love to man. Such a faith, and such a practice, ingenerate in the heart, will so unify all who possess it, as to patiently and charitably wait for that more full and perfect unity of faith and practice, which will one day cause the whole body to grow up into the stature of the fullness of Christ. The church, therefore, which is the body of Christ, embraces all who give evidence of having exercised "repentance toward God, and faith toward our Lord Jesus Christ," and love our Lord Jesus Christ in sincerity. All such persons, living in any locality, are the church in that place. All such Christians are entitled to the privileges of *Christ's* house. I say Christ's house, for I repeat, there may be a great discrepancy between the sectarian organizations and the real body of Christ. I admit the right of a sect to control the internals or externals of its particular sectarianism; but I deny its authority to oppose a barrier between a real Christian and a duty or privilege, imposed or granted by his Head, while there is a full admission of his being a Christian. The Lord's Supper is a Christian institution, given by Christ to Christians, or Christ's disciples. And all such are not only permitted but required to eat of it. It is true, that a man is to "examine himself," so as not to "eat unworthily," and also, I would suppose that each disciple must be his own judge whether he is or is not qualified to participate. Yet wherever and whenever the Christian, the true child of God, desires in all sincerity to remember his Lord in this way, who may assume the responsibility of forbidding him? To his own Master he standeth or falleth. I have yet to learn that any such responsibility was imposed on me, either as a laic or cleric. If sufficient evidence exist of personal Christianity, however I might advise or admonish, I quite doubt the jurisdiction to judge or set at nought my brother, as we both will stand before the judgment seat of Christ. Such I believe to have been the course pursued by the Apostles and primitive Christians. Whether expediency demands a contrary course at the present day, is altogether another question.

I have no desire to innovate the practice of our denomination, merely to gratify a notion or whim; and while I admire and respect their usage in this thing, as the result of their honest conviction of right, yet I must not lose or sink my individuality in the denomination or mass. Nor is it owing to any want of respect to those who, differing from me, have published occasional articles, that I have not referred to them. I preferred advancing my own views first, and then examining the objections of each of the writers if necessary; although, if I thought no exceptions would be taken by my opponents, I would prefer not further to encroach upon the columns of the *Recorder*, lest more valuable matter be crowded out. I can truly say, that I love the church of God, and feel anxious that it should become the true light of the world—a pure, holy church, without spot or wrinkle—a church built up on the teachings of Jesus Christ, and embodying those principles of regeneration whereby the race of man can only be saved. To ascertain what those principles are, has been the chief object of my life. In the language of another, I am "growing old, and wrinkled, and blind," in this search. May "What is Truth?" ever be my motto.

S. S. G.

JUVENILE TEMPERANCE PIC-NIC AND CELEBRATION.

The young Misses and Gents of this village, (Clarksville, Brookfield, Madison County, N. Y.,) between the ages of ten and fifteen years, held a Temperance pic-nic and celebration, August the 2d, with the following exercises.

They met at the Hotel of Mr. Keith, (who kindly opened his house for their reception,) formed themselves into a procession, and were conducted by an excellent band of music to a beautiful grove a short distance from the village, and listened to a brief and appropriated address from Rev. Wm. H. Card. From thence they were conducted to the table, which was neatly decorated with flowers, and abundantly supplied with cakes, sweetmeats, etc., and excellent lemonade. After the repast they gathered around the table with their glasses filled with *cold water*—"sparkling and bright as the liquid light"—and drank in merry glee to the following sentiments:

1st. *The Temperance Reform*—We approve it, and here pledge ourselves to total abstinence from all that can intoxicate as a beverage, and will use our best efforts to speed on that day when drunkenness shall not be seen in our streets, or known in our midst.

2d. *The Orator of the Day*—Our sincere thanks to him; may his life long be spared to deeds of usefulness, and may he witness many such happy gatherings as this.

3d. *Our Musicians*—We tender to them our sincere thanks; may their future lives be as pleasant to them as their music has been agreeable to us.

4th. *Our Parents and Friends*—May their future days be as joyous to them as the present is to us; may we ever love and obey them in return for the present, and the many kindnesses that we are daily receiving at their hands.

The first was followed by three hearty cheers of approval. The second ditto, attended by an earnest call upon the speaker for a response, and complied with in a beautiful and appropriate manner. The last sentiment was drank to, and welcomed by three times three cheers heartily bestowed.

After a pleasant "*tete-a-tete*" the procession was again formed, and marched back to the hotel, where the first sentiment was adopted as a pledge, and signed individually by the whole company except three; after which they separated, when the smile of satisfaction was seen beaming from every countenance. Their "fete" had passed off harmoniously, joyously, with nought to mar or disturb. When they separated, some of the young gents procured teams and had a ride, (of course some of the young misses were with them.) During their excursion, they stopped at a hotel some five or six miles from the place, and called for lemonade. When asked (by the publican *and great sinner*) if they would have some wine or other liquor in it, they promptly responded, "No sir! we have just signed the temperance pledge."

Would it not be a fine thing for every village and hamlet in the land to follow suit? Would not the influence of such exercises, properly conducted, benefit the rising generation, who will soon be actors in the great drama of life, both moral and political?

A. A. S.

SABBATH-SCHOOL CELEBRATION.

The Shiloh and Marlborough Sabbath-Schools united in a very interesting pic-nic celebration on Fourth-day, August 2d. They met at the session-room in Shiloh, at 9 o'clock A. M., and thence went in a procession of some sixty carriages about four miles to the county alms-house. We were kindly received by Mr. Fithian (the superintendent of the house,) and much pleased with the order and neatness that universally prevailed. While the assembly were convening in the front yard, the juvenile choir saluted the inmates, who appeared at the windows, with "Childhood's Song."

The house is pleasantly located on a rise of ground that commands an extensive view of Bridgeton, the country bordering on Cohansey Creek, and Delaware river. It is magnificent and spacious, having been recently erected of brick, at a cost of about $12,000, and now contains about fifty inmates. The basement is neatly arranged, for purposes of washing, baking, cooking, and eating. It contains the furnaces for warming all of the upper rooms. The second, third, and fourth stories are arranged into large, well ventilated rooms, on either side of a spacious hall. There are large folding doors crossing the hall on each story, separating the house into male and female departments. We were conducted through the upper stories, and led to admire the industry of those first shown to us, and the apparent comfort of those unable to labor. The idiots, and the maniacs in chains, were objects of great attention.

After a full survey of the house and inmates, we assembled in the session-room and halls, and the choir sung "The Happy Meeting," "Here we suffer grief and pain," &c.; when the house resounded with the chorus by nearly 300 children:

"Oh, that will be joyful, &c.,
When we meet to part no more."

Then Dr. E. Buck, of Bridgeton, their attending physician, offered the following in behalf of the assembled youth:

"Whereas, God hath chosen the *poor* of this world, rich in faith, as heirs of the kingdom of heaven, therefore, *Resolved*, That we will ever be kind to the poor, remembering our Saviour's instructions, 'that inasmuch as ye have done it unto these the least of my disciples, ye have done it unto me.'"

His remarks were very appropriate and humorous, contrasting our present advantages with those of former times, illustrating very happily by the interest in erecting such a splendid house for the benefit of the poor, the practice of spending our holidays under a moral and religious influence, instead of attending military parades, as formerly, near the grove where we were to assemble for dinner. He spoke feelingly of the accidents of life, and of the possibility of needing the same attentions that were given to the inmates there, and of the responsibilities of youth. In conclusion, he expressed much pleasure in meeting so many youth—that it appeared to him that he was growing younger, not in intellect, but in feeling.

We then took leave of our friends who had entertained us so pleasantly, and repaired to the grove near Bowentown, where we found tables loaded with choice victuals, and swings arranged for the gratification of the children. The woods were made vocal with the joy of this festal occasion. About five hundred dined, and then arrangements were made for an intellectual feast. The following, with appropriate and impressive remarks, was presented by Eld. Clawson:—

Resolved, That we have great cause of thankfulness to God, for another year's prosperity, for giving us kind friends and teachers, for conferring upon us his sacred Word, and providing for us a way of salvation.

After singing, Eld. Gillett offered the following:—

Resolved, That the Sabbath-School Teachers, next to the parent and pastor, are God's chosen means of bringing children to Christ for salvation.

The prospect of a shower prevented further exercises; and after prayer by W. B. Gillett the assembly left the grove, pleased with the occasion, but regretting its termination.

J. C. West, } Superintendents.
J. C. Bowen, }

NOTE TO "STULTIFYING THE SCRIPTURES."

Afraid of overrunning a full page, I omitted to add the concluding remark of the Lecture of Hugh Miller, with a single comment; yet having an important bearing on a full *exposé* of the tendencies of geological speculations, I avail myself of this opportunity to add it:

"In the history of the earth which we inhabit, molluscs, fishes, reptiles, mammals, had each in succession their periods of vast duration; and then the human period begun—the period of a fellow-worker with God, created in God's own image. What is to be the next advance? Is there to be merely a repetition of the past?—an introduction a second time of man, made in the image of God? No! The geologist, *in the tables of stone*, which form his *records*, finds no example of dynasties, once passed away, again returning. There has been no repetition of the dynasty of the fish—of the reptile—of the mammal. The dynasty of the future is to have glorified man for its inhabitant; but it is to be the dynasty—"*the kingdom*"—not of glorified man made in the image of God, but of God himself, in the form of man. In the doctrine of the two conjoined natures, human and divine, and in the further doctrine that the terminal dynasty is to be peculiarly the dynasty of Him in whom the nations are united, we find the required progression beyond which progress cannot go. We find the point of elevation never to be exceeded meetly coincident with the final period never to be terminated—the infinite in height harmoniously associated with the eternal in duration. Creation and the Creator meet at one point, and in one person. The long ascending line from dead matter to man has been a progress Godwards, not an asymptotical progress, but destined from the beginning to furnish a point of union; and occupying that point as true God and true man, as *Creator and created*, we recognize the adorable Monarch of all the Future!"

What is this progress but *pantheism?* and pantheism in its worst form?—in a phase to destroy all true, vital, individual responsibility? If my reading of the Scriptures is correct, man is a *creature*, a dependent creature, at the disposal of the Almighty—a sinful creature, who has forfeited his first estate, and whose only hope is the restoration to his pristine form with his Maker—not to become his *co-equal*, or *incorporated* with the Majesty of Heaven—the Universe. To claim more than *acceptance* through Christ Jesus, is not only presumptuous, but blasphemous; but instead of the retribution which the Scriptures teach, sinful rebels, by the teachings "*of the fables in stones*," are to become coequal with the great Jehovah! Pantheism in its worst form. Lord save us from such blind guides—such blind guides.

W. M. F.

To the Anniversaries.—Bro. T. B. Brown informs us that for persons attending our Anniversaries, conveyance from the railroad at Friendship to Little Genesee (a distance of twelve miles) will be provided by the brethren of the latter place. Those leaving New York at 6 o'clock on Third-day evening, will reach Friendship by express train at 8.37 A. M., or by mail train at 2.20 P. M. Fourth-day. The express train does not ordinarily stop at Friendship, but will probably do so to accommodate a number of passengers. It might help to perfect this arrangement, if those intending to go would send their names to this office a few days beforehand.

MINISTERIAL SUPPORT.—The *Christian Advocate & Journal*, the organ of the Methodists in New York, treating of the lack of ministers to supply the destitute churches, says:—

"*We want preachers*. Our church is suffering for the want of them. *We want members.* Our church is crippled in her energies, and impeded in her progress, and chilled in her soul, and faint in her spirit, because the Word is not successful as it ought to be—as it used to be. What is the reason? One reason at least is apparent. The church is, to a great extent, niggardly to the preachers. When the church was poor, God sent them men who were willing to partake of their poverty and their penury. They gave liberally, and God blessed them and their preachers together. Now the church is comparatively rich, and God expects them to share his bounty with the preachers. The church should gladly share its comforts with those who minister to them in holy things. The whole population of the country has increased its physical comforts; those of the ministry should be increased in proportion. We do not wish to be understood to say, that the preachers should be able to live in luxury, or to amass money. Comparatively with men of equal education, and ability, and refinements, we would have them always provided for rather humbly than otherwise. It is infinitely better that the employments of the world should draw away covetous ministers from the church, than that the employments of the church should draw away covetous people from the world. But we would have preachers made comfortable; we would save them from care for worldly things; we would save them from the horrors of hopeless debt; we would save them from the most frightful of all prospects—penury in old age. When God sent Elijah a billet upon a poor widow, the man of God was bound to content himself with the widow's fare; but when Elijah went to the house of the rich Shunamite, he had a right to expect other treatment, and indeed was cared for with all care. Had she attempted to act as the other woman did, she would have found that He who could cause his preacher to endure famine with patience, would not permit him to be treated with neglect and contempt with impunity. We do not believe that God will bless a people who are unjust and ungenerous toward their preachers."

SUCCESS IN FOREIGN LANDS.—While a religious dearth spreads over this and other nominally Christian lands, very cheering news comes to us from heathen lands. At a recent meeting of the Executive Committee of the American Tract Society, a letter was read from Rev. J. N. Herod, Royapooram, India, in which he says: "Two Sabbaths ago, eleven native converts were baptized in the Hall of the Free Scotch Church. One was a Mohammedan woman, the first that has been baptized in Madras." Rev. Mr. Doty writes from Amoy, China, that "twenty-seven persons have recently been received by the London Mission and our own to church fellowship; others are inquiring." Rev. Amos Sutton, of Orissa, India, gives information of the baptism of twenty-seven native converts, and furnishes an affecting narrative of the death of Erun, a native Christian, more than 100 years old, who honored his profession in the trying hour, and when beset with heathen scoffers. "I shall soon be in heaven," he exclaimed, "and shall then meet the Lord Jesus." He clasped his hands with the exclamation, "Blessed Lord!" and so passed to heaven in the attitude of prayer.

RELIGIOUS INTELLIGENCE.

Three out of the four orders or houses of the Swedish Diet have voted in favor of allowing Jews to settle in every town of the kingdom. This is a step in the right direction. Another one will be the repealing of the law forbidding any Protestant subjects of Sweden to change their religion, under pain of perpetual banishment from the kingdom. There are at present two Swedish ladies threatened with that penalty.

Dragonetti, the celebrated double-bass player, left a considerable sum of money in trust for masses and requiems for his soul, and for the souls of the poor of St. Mark's, Venice; but the vice-chancellor has decided that such were superstitious uses, and therefore void. The money consequently falls to the next of kin, who was discovered in Venice.

Rev. William Goodell, of Constantinople, who was awarded the degree of D. D. by Hamilton College, on the same day received the same degree at Columbia College. He has translated the entire Bible into Armeno-Turkish, speaks the Italian language, the French, the Turkish, the Armenian, and the Greek.

Rev. E. Baird, who has had a brief taste of editorial life in connection with the St. Louis *Presbyterian*, says:—"He expects, Providence permitting, to continue at his post till the first of October, and thus finish out two years of the most oppressive labor he ever underwent, and the worst requited."

We learn from the *Savannah Republican*, that Dr. William Terrell, of Sparta, Ga., has made a donation of $20,000 to the Franklin College, at Athens, Ga., for the purpose of endowing a professorship of agricultural chemistry.

The total number of persons who have been connected officially with Union College, in the fifty-nine years of its existence, is stated at 4850, of whom 4309 were students. It is a curious coincidence, that in each of the years 1844 and 1854, the last two decades of Dr. Nott's presidency, the graduates were 81, which is his present age.

The next annual meeting of the American Board of Commissioners for Foreign Missions is to be held in Hartford, Conn., commencing Tuesday, September 12th, at four o'clock P. M, and will continue till the following Friday. The Rev. Dr. White, President of Wabash College, is appointed to preach the annual sermon.

Rev. George R. Noyes acknowledges, in the *Christian Register*, that the Divinity School, in Cambridge, has received from Mrs. Parkman between six and seven hundred volumes of theological works, being part of the library of the late Rev. Dr. Francis Parkman.

The Trustees of Union College have formally resolved (says the Buffalo *Express*) that no more honorary degrees shall be granted by that institution.

The missionaries of the American Board, laboring among the Nestorians, writing on April 18th, say that the revival was going on wtih unabated interest.

European News.

European news to Aug. 12th has been received.

The war news, although brief, is important. On the 9th Prince (Alexander) Gorchakoff announced to the Austrian Government that Moldavia as well as Wallachia will be immediately evacuated. Consequently the Austrian troops on their way to Gallicia, the Bukovina and Transylvania have received orders to halt for the present. Simultaneously with this announcement is a telegraphic statement, that 3,000 French troops have effected a lodgment in the island of Aland, and that an equal number have landed on the Isthmus of Perekop to prevent Russian reënforcements from reaching the Crimea. Sir Charles Napier was to attack Bemarsund "next day," and a formidable expedition against Sevastopol was making ready to embark on board the fleet of transports that had assembled in the bay of Varna.

The Dobrodja has been entirely abandoned by the Russiane, and is now occupied by 36,000 Turks and French. The Turks are at Babadagh, and are said to be under orders to attack Tultsha, while the French are to attack Galatch.

On the 16th of July, the little town established by the Russians at the Sulina mouth, which was already partly dismantled, is said to have been completely destoyed by the English steamers Spitfire and Vesuvius, no buildings having been spared except the lighthouse and the church.

In the White Sea, the English have effected a landing on some point on the Coast of Onekaia and destroyed a village.

On the 9th of August the carriage in which the King of Saxony was driving was overturned at a place called Imst, near Innapruck. The King was thrown among the horses' feet and received a kick which fractured his skull. He died half an hour afterward.

The Queen of Spain has been indicted before the Cortes on a charge of treason.

Five prisoners were executed at Parma on the 4th, for having taken part in the recent insurrection.

A letter published in the London *Times* makes public the very important information that a treaty exists between the Hudson's Bay Company and the Russian Government, by which the Hudson's Bay Company enjoy, from the date of June 1, 1840, for a specified period, the exclusive use of the Russian American coast from 54° 40′ north to Cape Spencer, near 58° north, in consideration of the payment of two thousand otter skins annually to the Russian Company. On this arrangement it is understood that Britain can found a claim to present actual possession of the cnly really valuable portion of the Russo-American coast, and will thereby interpose an effectual stop to the negotiations at present pending for the sale of that territory to the United States.

California News.

California papers to August 1st have been received, from which the following items are gleaned:

A great fire had occurred at Marysville. Five squares of buildings were destroyed, and the loss reached $250,000.

The State Democratic Convention assembled according to announcement, and after great disturbance a regular split occurred and two tickets were nominated.

The trial of the City Marshal of San Francisco for official misconduct has resulted in his conviction.

From the different mining regions the news continues encouraging, and several new discoveries are reported.

Trade in San Francisco, and indeed throughout California, generally ruled dull, and prices for the leading articles of produce had suffered a decline.

The papers continue to warn parties in the Atlantic cities against further and excessive shipments of merchandize.

William B. Sheppard had been hanged for the murder of Henry Day.

The Wheat crop had been all harvested. The yield was very large, and great quantities were being exported.

GROWTH OF ROMANISM.—A cotemporary argues that there is less danger of Catholic ascendancy in our country than is apprehended. He gives the following figures from the last United States Census:—

"In Maryland, there are about 800 Protestant churches, and only 65 Papal. Out of 152 churches in Florida, there are only 5 Papal. In Louisiana there are 223 Protestant churches, and only 55 Papal. In Texas there are 164 churches, only 13 of which are Papal; and at the present time, the Protestant is greatly the predominant influence in California. The census just published reveals the fact that in all the country the Papists have but 1,112 churches, accommodating 621,000 persons, which is not one-eleventh of the Methodist churches; scarcely one-eighth of the Baptists, and not one-fourth of the Presbyterians. The Protestant population of the United States is to the Catholic population as 12 to 1.

REVIVAL IN CHINA.—A letter from Canton, dated April 18th, brings cheering intelligence from Amoy. A few Sundays before, Mr. Doty, of the American Board of Missions, baptized ten individuals, and the missionaries of the London Society seventeen. There were also many inquirers. "Mr. Doty," says the writer, "is free to call it a 'revival,' because of the unusual interest in the preaching of the Gospel." At a place fifteen miles from Amoy, where Mr. Burns, of the English Presbyterian mission, has been laboring for two months, there is a remarkable reformation. The people, finding their idols vain sources of help, have begun to use them for fuel, and cook their rice with the wooden images.

A GOOD EXAMPLE.—A few days since a gentleman came into the rooms of the American Board in this city, (says the N. Y. *Evangelist*,) and laying a thousand-dollar bill on the table, requested one half to be paid over to another Society, and the remaining half to be received as a donation to the treasury of the Board. He was a stranger, and declining to give his name, he stated that he had previously given what he intended as his contribution to foreign missions for the year; but on seeing the announcement of an apprehended deficiency in the receipts, and *considering the uncertainty of the times*, he felt impelled to do something more.

THE GREYTOWN AFFAIR.—The London *News*, in noticing the destruction of Greytown by the U. S. ship Cyane, gives the following statement of the origin of the difficulty:—

Some time back a native captain of the Mosquito shore was shot in a quarrel which took place between himself and an American captain, named Smith. On the news of this reaching Greytown, the Marshal of that place proceeded to arrest Smith, who had then arrived at Punta Arenas, on his ascent up the river to St. Juan. Mr. Borland, the American Consul, who was on board a contiguous vessel, went on board Smith's ship and found him keeping his assailants at bay. The Consul immediately interposed, telling the Marshal that the American Government recognized no authority existing at Greytown to interfere with any American citizen, and ordered him and his men away. The same evening an attempt was made to arrest Mr. Borland; he was wounded in the face with a missile, and kept prisoner in the consulate all night. On receipt of intelligence communicating these facts, the Government of the United States dispatched the Cyane, man-of-war, to the spot, to demand redress for the insult offered to their Consul. The authorities and residents refused to make the slightest apology, and the town was bombarded and burned down.

HUMAN BODIES FOUND AT SEA.—Capt. Klockgether, of the ship Hindor, which arrived at New York a few days since from Bremen, met with quite an incident on the passage over. When forty days at sea, the weather being clear, an open boat was descried in the distance with, as it was supposed, no one in it. The captain immediately bore down upon it, when, on examination, it was found to contain four human beings, or in other words, skeletons, as the flesh had been entirely stripped from the bones. The boat was filled with water, but being of a light, airy structure, had continued to float for days, perhaps months, upon the turbulent deep. In the boat were a large number of fish, which no doubt preyed upon the bodies. A few remains of clothing were found in the frail bark, but so much torn as to preclude the possibility of telling whether they belonged to seamen or passengers. There can be no doubt that the bodies were those of some of the many unfortunates who were wrecked in some of the missing vessels.

PRE-EMPTION RIGHTS IN KANSAS AND NEBRASKA.—The Washington *Union* publishes Attorney-General Cushing's opinion on pre-emption rights in the Territories of Kansas and Nebraska. He says the act of Congress gives pre-emption only in such of the lands ceded by the Indians as are not required first to be offered at public sale; that the lands ceded under the condition of being first offered at public sale are no more opened to pre-emption by act of Congress than was the Military Reservation at Fort Leavenworth; that those lands cannot be taken up by settlers under a claim of pre-emption; and that such claims will be void in law, and confer no right on which to demand a patent from the Commissioner of Public Lands; moreover, it will be the duty of the President to maintain by force the plighted faith of the United States in this matter.

BANK FAILURES.—Four Banks failed last week, namely, the Bank of Carthage, N. Y., the Drover's Bank of Ogdensburg, N. Y., the Bank of Milford, Md., and the Merchant's Bank of Memphis, Tenn. Several others were thought to be in danger of breaking—among them the Sackett's Harbor Bank and the Bank of Lewis County, N. Y., the Bank of Castleton and the South Royalton Bank, Vt., and the Erie and Kalamazoo Railroad Bank. The Bank of Carthage and the Drover's Bank have securities in the Controller's office which will probably redeem most of their bills. There may be a loss of 10 or 20 per cent.

SUMMARY.

The papers of Monday, Aug. 28th, have accounts of two very disastrous fires. One destroyed a large portion of the village of Waldoboro, Maine, including every store, two or three ships, two banks, the Custom-House and the Post Office. Loss probably more than a quarter of a million. The other made sad havoc in the City of Troy, N. Y., sweeping away between two and three hundred buildings along the river; among them the freight depot, machine shop and car houses, and several cars of the Hudson River Railroad, a large chair factory, a bell foundery, and an immense amount of lumber. The loss is guessed at a million. It is the most disastrous fire that Troy has yet known.

Beekman, Dutchess County, on Thursday night, was the scene of an occurrence so heart-rending that it has thrown a gloom over the whole neighborhood. In the absence of Mr. Abraham Simpson, his dwelling house took fire, while his wife and five children were asleep within. So rapid was the spread of the flames, that ere the inmates could make their escape, the whole building was enveloped in the fiery mantle. Mrs. Simpson, after almost superhuman efforts, escaped with her life, but in so doing sustained burns and injuries of the most shocking nature; while, horrible to relate, her five children were burnt to death.

On Sunday morning, Aug. 20, the meeting-house in West Orange (Irvingsville) was blown up with powder, and completely ruined. The powder had been introduced underneath the house through an aperture in the underpinning. It was evidently in a keg, as the fragments remain. The explosion took place about 2 o'clock. The underpinning throughout was shattered or loosened, and the walls of the house forced out some 18 inches. The pews were thrown into perfect ruin, the rafters unlocked, and, in short, the house was so damaged as to render repairs very expensive, if practicable.

On Saturday afternoon, Mr. Niles P. Starkey, of Deep River, while riding in Essex, in company with his wife and another lady, was seized with a fit, drove his horse into a stream, and was drowned. The ladies were rescued, but not till Mrs. S. had nearly shared her husband's fate. Mr. Starkey was a man highly respected, but had for some time been subject to fits.

The Chicago *Tribune* of Wednesday, says that the dwelling of Mr. Merchant, near Picatonica, was struck by lightning on Saturday, Aug. 12th, killing him and four of his children. Mrs. Merchant and one child escaped.

Mr. John Giles of Woodstock, Conn., a gentleman well known to all dealers in improved stock and rare fowls, sailed last week for England and the Continent, for the purpose of procuring specimens of the best cattle and sheep that can be found, but more especially to visit Germany and France, in order to procure any description of rare aquatic birds and domestic poultry, particularly Ducks, which abound in Germany in greater perfection, it is said, than any where else in the world.

The white inhabitants on the shore of Lake Superior are agitating the question of forming a State, and apart from the present organization, taking what of Michigan lies west of Lake Michigan, and the points of Wisconsin and Minnesota bordering on the lake, and naming it the State of Superior. The formation of this new State has been recommended by the Wisconsin Legislature, and is much desired by those interested from geographical and political reasons.

We receive accounts from all parts of the country of the prevalence of the most severe drouth. In sections of Missouri, Illinois, Indiana, Ohio, Pennsylvania, New York, Vermont, and New Hampshire, it is destructive to all growing crops, and has exhausted feed and water for cattle to such a degree that they have to be driven outside of the drouth-parched region for subsistence.

One of the greatest triumphs of the invention for cutting staves out of solid blocks of timber that cannot be split, is the use of Cotton wood; hitherto considered one of the most worthless, yet most common trees of the West, and one that grows more rapidly than any other. The wood is sweet and sufficiently strong for flour barrels and all the casks. It is considerably used in the neighborhood of Alton, Illinois.

The entries of government lands in Iowa, at the present time, far exceed all former precedents, even the great speculative times of 1846. The gross amount of land entries in this State for the last thirty-days, has not been far from 100,000 per day, and the receipts for the current year will be more likely to exceed than be less than seven millions of dollars.

The papers announce the suspension of Messrs. Alfred Edwards & Co. Silk Goods Importers in Park-place, New York. They are understood to have imported $300,000 worth of goods this fall, which probably involves considerable loss, and to have $100,000 of Southern paper under protest. Nominally the assets show a considerable surplus.

A dispatch dated Bangor, Me., Wednesday, Aug. 23, 1854, says: Fires are raging to a terrible extent in every section of this county, and the damage to the woodlands and crops will be enormous. Buildings have been burnt down in Corinth, Charleston, Garland, and other towns. In many places the entire population are engaged in fighting the fire.

There is perhaps more wheat grown this year in Connecticut than in any year before during half a century. The yield is estimated from twenty five to thirty bushels per acre. This is very encouraging, and will probably stimulate to further efforts. There is no difficulty in growing wheat in that State, by the proper application of specific fertilizers.

At the Commencement of Madison University, the degree of LL.D. was conferred on Orrin B. Judd, editor of the New York *Chronicle*, and that of D. D. on the Rev. S. Dryden Phelps of New Haven, Conn., the Rev. J. L. Burrows of Philadelphia, and the Rev. Lemuel Porter of Pittsfield, Mass.

John Muller, who confessed that he murdured a man about ten months ago by the name of Meyers, in Burlington County, New Jersey, died of typhoid fever in the county prison of Philadelphia, Aug. 25. It is not yet known with certainty whether he committed the murder.

It seems that the great victory at Greytown is to be overhauled before our Courts. Mr. Calvin Durand, a merchant of New York, has caused the arrest of Capt. Hollins on a charge of destroying his property at San Juan. The gallant Commander gave bonds in the sum of $20,000.

A Convention of Colored Men was held at Cleveland, Ohio, Aug. 24th, which adopted a platform favorable to the segregation of the colored race, to establish a Board of Commissioners, and reported a plan for issuing a quarterly periodical, to be called the *Colored American Quarterly*.

The telegraph announces the death of the Rev. Leonard Woods, D. D., of Andover Theological Seminary, father of the President of Bowdoin College. Dr. Woods was 80 years of age. His death has been expected at any moment for several weeks.

A correspondent of the *Post* announces the death, a few days since, in Pawtucket, R. I., of the mother of the world-renowned Sam Patch. She died a humble and faithful Christian, at the advanced age of 80 years.

A dispatch dated Boston, Tuesday, Aug. 22, 1854, says, The steamer Penobscot, from Portland, while coming up the harbor to-day, ran down a sailboat, and four men who were in the boat at the time were drowned.

The Massachusetts Legislature, at its last session, appropriated funds to the New England Female Medical College, located in Boston, to pay the tuition of forty students annually for five years.

In New York the drouth seems to prevail the most severely in those counties affected last year and year before; that is, Chautauque, Allegany, Jefferson, and St. Lawrence. In Tompkins and Yates counties also, it has been very severe.

Several commercial letters from Constantinople state that the Ottoman government was not at all averse to declaring Jerusalem to be henceforth a free city, under the joint protection of the European great powers.

The *Pacific Recorder* is the title of a new semi-monthly Baptist paper, issued from San Francisco and Sacramento, California, Edward J. Willis editor. The first number looks well.

Advices from Texas to the 13th inst. state that the No License law had undoubtedly been largely sustained at the ballot-box by the people of that State.

The steamboat Sylvester Webb capsized at a landing on the Mississippi River a few days since, and the captain and three others were drowned.

New York Markets—August 28, 1854.

Ashes—Pearls $6 00; Pots 7 00.

Flour and Meal—Flour 8 75 a 9 25 for State, 9 75 a 10 12 for common to good Ohio, 10 75 a 11 50 for extra Genesee. Rye Flour 6 25 a 8 37. Corn Meal 4 12 for Jersey.

Grain—Wheat 1 70 a 1 87 for Western red, 1 90 a 1 92 for Western mixed, 2 10 a 2 15 for white Genesee. Rye 1 25 a 1 28. Barley not in market. Oats 54 a 56c. for Jersey, 56 a 57c. for Western. Corn 85 a 86c. for Western mixed, 87 a 88c. for round yellow.

Provisions—Pork, 11 37 for new prime, 13 87 for new mess. Beef 10 37 for city prime, 12 00 a 16 00 for mess. Lard 11c Butter 14 a 18c. for Ohio, 20 a 22c. for fair to prime, 23 a 25c. for Orange County. Cheese 9 a 10½c.

Hay—65 a 70c. for River.

Lumber—15 00 for Eastern Spruce and Pine.

Potatoes—3 75 a 4 25 per bbl. for Jerseys and Pinkneys, 4 25 a 4 50 for Long Island Mercers.

Seeds—Clover 11c. Timothy 17 00 a 19 00 for mowed, 21 00 a 24 50 for reaped. Flaxseed 1 70 a 1 75.

Tallow—12½c. for Butchers' Association.

Wool—28 a 30c. for native, 42 a 45c. for American Saxony Fleece.

MARRIED,

On the 16th of August, by Eld. A. W. Coon, Mr. JACOB WHIRLEY, of Dunkirk, to Miss EUNICE BEVINS, of Fulton, all of Wisconsin.

At Albion, Wis., Aug. 20th, Mr. FREEMAN J. ATWOOD, of Indiana, to Miss SOPHIA WILLIAMS, of Albion, Wis.

In Hopkinton, R. I., August 21st, by Eld. P. S. Crandall, Mr. GEORGE S. BROWN to Mrs. SARAH A. RANDALL, both of Voluntown, Ct.

DIED,

In Albion, Wis., June 13th, Mrs. NANCY LAWTON, wife of Joseph Lawton, in the seventy-second year of her age. Sister Lawton has left an aged husband and a large family of children to mourn the loss of a kind mother and an affectionate companion. She made a public profession of religion some fifty years ago, and in 1837 embraced the Sabbath of the Bible, and united with the first Seventh-day Baptist Church in Verona, N. Y. In 1848, she and her family came to Albion, Dane county, Wis., where by her well ordered life she won a large circle of friends, who deeply feel their loss. She died with the fullest confidence in the religion she had long professed.

At Washington, Coventry, R. I., Aug. 12th, AMEY ANNA, daughter of John and the late (dearly beloved and much lamented) Mary Ann Vars, of N. Y., aged 4 months and 12 days.

In Fulton, Rock Co., Wis., in the 67th year of his age, by inflammation on the base of the brain, May 18th, EPHRAIM S. DAVIS, Esq. Bro. Davis experienced religion in Brookfield, Madison Co., N. Y., and has adorned his life with a Christian course of living, and died in the triumphs of faith, respected by all who knew him, and mourned by an afflicted family. V. H.

LETTERS.

Varnum Hull, Edwin Burdick, W M Fahnestock, L A Davis, A W Coon, Jepthah F Randolph, L Woolworth, J L Spencer, L M Cottrell, O Snowberger (often done,) John Congdon, G N Rossiter, T H Dunn, H P Burdick, Wm F Randolph.

RECEIPTS.

FOR THE SABBATH RECORDER:

E R Brooks, New London, Ct	$2 00	to vol. 11	No. 52
Jonathan K Rogers "	2 00	11	52
Geo C Stillman "	2 00	11	52

Anna Buten	1 00	11	52
Frederick Chase, Greenport, L I	2 00	11	52

FOR THE SABBATH-SCHOOL VISITOR:

P L Berry, for Church at Waterford, Ct	$3 50
Maria Fifield, South Otselic	1 00

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Maria Fifield, South Otselic, vol 3	$1 00

WILLIAM M. ROGERS, Treasurer.

Our Anniversaries.

THE Eleventh Anniversary of the Seventh-day Baptist Missionary Society will be held at Little Genesee, Allegany Co., N. Y., on the fifth day of the week before the third Sabbath in September, (14th day of the month.) The Anniversaries of the American Sabbath Tract Society and the Seventh-day Baptist Publishing Society will be held at the same place on the following day.

☞ The Educational Committee appointed by the General Conference will hold a session at Little Genesee during the Anniversary season. The Committee consists of T. B. Stillman, W. B. Maxson, W. C. Kenyon J. R. Irish, L. Crandall G. B. Utter, J. M. Allen, and O. P. Hull.

☞ The next meeting of the Executive Board of the Seventh-day Baptist Western Association will be held at Little Genesee during the season of Anniversaries.

Board Meetings.

The Executive Boards of our Missionary, Tract, and Publishing Societies will hold meetings at Plainfield, N. J., on First-day, Sept. 10th.

North-Western Association.

THE Eighth Anniversary of the Seventh-day Baptist North-Western Association will be held with the Milton Church, commencing on the fourth day of the week before the fourth Sabbath in September, 1854, at 10 o'clock A. M. Introductory discourse by Eld. O. P. Hull. V. HULL, Cor. Sec.

Milton Academy.

A. C. SPICER, Principal, and Professor of Mathematics and Natural Sciences.

ALBERT WHITFORD, Professor of the Greek and Latin Languages and Literature.

MRS. S. M. SPICER, Preceptress, and Teacher of Painting, Penciling, French, German, and Italian.

First Term for 1854 commences Wednesday, Sept. 6th—closes Wednesday, December 6th.

A commodious academic edifice, constructed in the best style, is in progress of erection by the Trustees. An ample apparatus for a complete illustrative course of experiments in the departments of Philosophy, Chemistry, and other natural sciences, of a much improved style and quality, has just been purchased at Boston. Other teachers will be employed, and no pains will be spared to advance the interests of pupils and patrons. Absolute thoroughness of discipline is our aim.

Aug. 10, 1854.

New Market Seminary.

THE Academic Year of this Institution, for 1854 and '55, is divided into three terms, each fourteen weeks long.

The Fall Term commences Sept. 5, and closes Dec. 8.
Winter " " Dec. 13, " " Mar. 20.
Spring " " Mar. 28, " " July 4.

The Department of Instruction is in the care of Mrs. R. H. WHITFORD, Preceptress, who will be assisted by competent teachers, as occasion may require.

INSTRUCTION.—The Common English Branches, Reading, Writing, Geography, Arithmetic, and Grammar, will be taught each term. The Higher English Branches taught as follows:—In the Fall Term, Chemistry, Geometry, and Book-Keeping; in the Winter, Natural Philosophy, Physiology, and Astronomy; in the Spring, Botany, Geology, and Moral Science. Algebra, Etymology, and Rhetoric taught all terms in the year. Classes in French and the Extras will be taught whenever desired.

EXPENSES.—*Tuition, per term*—for Common English Branches, $3 50; for Etymology and Book-Keeping, $4 50; for Higher English Branches and French, $5 00; for Incidentals, $ 25.

Extras, per term—Penciling, $1 00; Crayoning, $2 00; Embroidery, $3 00; Oil Painting $7 00; Piano Music, $10 00.

REGULATIONS.—No student is admitted for less than half a term. No deduction in price of tuition made for absence, except in cases of sickness. Nothing sectarian is taught or countenanced in the school.

A new and commodious building will be ready for the shcool at the opening of the Fall Term.

DAVID DUNN, Pres. of Board of Trus.
ISAAC H. DUNN, Sec'y.
NEW MARKET, N. J., July 20, 1854.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A. M., 12 M., and 4 and 6 P. M.

Leave Plainfield for New York at 6.55 and 8.30 A. M., 12.20 and 5.10 P. M., passenger, and 7.30 P. M., freight.

Leave Plainfield for Easton at 9.35 A. M., 1.40 and 3.35 P. M., passenger, and 6.30 A. M. freight; and for Somerville at 7.30 P. M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

Hudson River Railroad.

NEW ARRANGEMENT.—On and after Monday, August 14th, 1854, the Passenger Trains will run daily (Sunday excepted) as follows: Leave New York from the station corner Chambers-st. and College Place, at

6 00 A M—Express Train for Albany and Troy, connecting with Northern and Western Trains. Through in 4 hours from 31st street.

7.00 A M—Poughkeepsie Way Passenger Train.

8.00 A M—Mail Train for Albany and Troy, stopping at Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, and all Mail Stations North of Poughkeepsie.

9.00 A M—Peekskill Way Passenger Train.

12.00 M—Way Train for Albany and Troy, stopping at Yonkers, Tarrytown, Sing Sing, Crugers, Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, Hyde Park, Rhinebeck, Tivoli, Oakhill, Hudson, Stuyvesant, and Castleton, and connecting with the Express Train leaving Albany at 6.30 P M for Buffalo, and at Troy with Northern Trains for Saratoga and Montreal.

1.00 P M—Po'keepsie Freight and Passenger Train.

3.30 P M—Peekskill Way Passenger Train.

4.30 P M—Express Train to Albany and Troy, stopping at Tarrytown, Sing Sing, Peekskill, Garrisons, Fishkill, Poughkeepsie, and all Time Table Stations North, and connecting at Albany with Western Express Train at 10.30 P M for Buffalo.

5 00 P M—Poughkeepsie Passenger Train.

5.30 P M—To Peekskill, stopping at all Way Stations.

6.30 P M—Emigrant and Freight Train for Albany and Troy, stopping at all Time Table Stasions.

8.30 P M—To Tarrytown, stopping at all Stations.

Sunday Mail Train at 9 A. M. from Canal-st. for Albany, stopping at all Way Stations

OLIVER H. LEE, Superintendent.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Election Notice.

STATE OF NEW YORK—SECRETARY'S OFFICE, ALBANY, Albany Aug. 10, 1854.—*To the Sheriff of the County of New York*—Sir: Notice is hereby given that at the General Election to be held in this State on the Tuesday succeeding the first Monday in November next, the following officers are to be elected, to wit:

A Governor, in the place of Horatio Seymour;

A Lieutenant Governor, in the place of Sanford E. Church;

A Canal Commissioner, in the place of Henry Fitzhugh; and

An Inspector of State Prisons, in the place of Henry Storms;

All whose terms of office will expire on the last day of December next.

A Representative for the Thirty-fourth Congress of the United States, for the Third Congressional District, composed of the Ist, IId, IIId, Vth, and VIIIth Wards in the City of New York; for the Fourth District, composed of the IVth, VIth, Xth, and XIVth Wards of the City of New York; for the Fifth District, composed of the VIIth and XIIIth Wards in New York, and the City of Williamsburgh in Kings County; for the Sixth District, composed of the XIth, XVth, and XVIIth Wards in New York; for the Seventh District, composed of the IXth, XVIth, and XXth Wards in New York; and for the Eighth District, composed of the XIIth, XVIIIth, and XIXth Wards in New York.

County Officers also to be elected for said County:

Sixteen Members of Assembly;

A Surrogate, in the place of Alexander W. Bradford;

A Recorder, in the place of Francis R. Tillou;

A City Judge, in the place of Welcome R. Beebe;

A Mayor, in the place of Jacob A. Westervelt;

A Register, in the place of Garrett Dyckman;

A Commissioner of Streets and Lamps, in the place of George G. Glazier, who was appointed to fill a vacancy caused by the resignation of Henry Arcularius;

A Police Justice for the Second District, in the place of Daniel W. Clarke, who was appointed to fill a vacancy caused by the death of John McGrath;

Two Governors of the Alms-House, in the place of Gustavus A. Conover and William Pinkney, appointed to fill vacancies;

A District Attorney, in the place of Lorenzo B. Shepard, who was appointed to fill a vacancy caused by the death of Nathaniel B. Blunt;

A Civil Justice and a Police Justice for the Seventh Judicial District, composed of the XIIth, XIXth, and XXIId Wards;

A Police Justice for the Eighth Judicial District, composed of the XVIth and XXth Wards.

Yours respectfully,
E. W. LEAVENWORTH, Sec'y of State.

SHERIFF'S OFFICE. New York, Aug. 14, 1854.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided. JOHN ORSER, Sheriff of the City and County of New York.

All the public newspapers in the County will publish the above once in each week until the Election, and then hand in their bills for advertising the same, so that they may be laid before the Board of Supervisors and passed for payment. See Revised Statutes, volume 1, chapter 6, title 3, article 3, part 1, page 140.

aug 21 JOHN ORSER, Sheriff.

Miscellaneous.

Social Life in England.

We never remember to have read more pointed truth on the social phenomena of England, compressed in a small space, than is contained in the following, from the London correspondent of the New York *Express :*

"The first thing that strikes an American in England is not alone the civility, but the servility of its population. The servility is painful on whatever side, or on whatever class we look. The beggar begins—where beggar exists (for public beggary scarcely exists out of Ireland and the ocean frontiers of Scotland)—the beggar begins in this servility, and workman, peasant, farmer, gentry, nobleman, all follow on in graduation and in regular servile course, more or less. The nation, at once, to an American eye, seems to be a nation of castes—a nation of Hindoos—not Hindoos of the East, by any means, but Hindoos transplanted from the East into a northern, invigorating clime—and transplanted with their castes, their artificial organizations, and their social invincible prejudices. True, English laws look upon all classes of men alike, and the principles of Magna Charta cover the low-born as well as the high-born—but what the British subject has won in civil and political liberty he has altogether lost in social organization. He is not free—he is not equal. I do not mean to say he is not a political freeman, for he is now politically—that is, in the eye of the laws—equal in almost all things, whatever his condition. But, nevertheless, he is a social slave. From royalty to peasantry there are castes, there are ranks, about as hard to overcome and about as unendurable as the castes among the eastern Hindoos. A lord is worshiped as is an idol in the East. To know my lord, to have shed on you the sunshine of his presence, is inspiring always. Hence one terrific, civil, social war seems ever going on here. True, it is not fought in field, as in Cromwell's day, but in saloon, in hall, in boudoir, in park, in equippage, in livery, with pretense or with insolence, or in pounds, shillings and pence. Money, though, makes no man, while blood makes a man of any thing; but money buys blood at times, and gold thus gets the guinea's stamp. The terrific struggle is for rank, for position, for social peace. The soap-man's daughter has had bought for her a princess' education, and would be a princess; but the struggle is all in vain. What was born soap must die soap, unless it be through some mighty struggle in the priesthood or the bar. Soap may froth up, and it may bubble in England; and the bubbles may have the violet, the blue, green, all the colors of the rainbow—but still it is soap. The grease, and the ashes, and the lye stick to it, and it always smells of soap. Despite all this, the astonishing thing is, that the lower Hindoo looks up and really reverences the Hindoo higher in caste as a superior, better made clay! Hence, not only what the Queen is doing with her prattling babyhood, but what road she rides over, what hour she rides, what elements, of sunshine or of fog-damp are over her, what maids attend her, what clothing all have on, and such things, one and all, not in royalty alone, but throughout the allied ranks, have an interest for Squires and Squeers, as he reads them fully recorded in the *Morning Post*—such as might have the bombardment of Sevastopol or the taking of Cronstadt.

Mulching.

This process, although known and practiced for many years by a few cultivators, has become extensively adopted only at a very late period. It seems peculiarly adapted to our hot and dry summers, and operates chiefly in preserving the moisture of the surface, and in preventing the growth of weeds. The moisture on the surface of the earth from rains and dews is quickly dissipated under a hot sun; and if this surface is allowed to become covered with a dense growth of living grass and weeds, these pump out of the soil and throw off into the air a much larger quantity of moisture than is evaporated by a bare surface of earth only. But if this surface is covered with a few inches of old straw, hay or leaves, the moisture is retained in the soil, and the growth of weeds prevented. As a general rule, we have found it most advantageous to leave the surface bare and keep the soil well mellowed till near midsummer, and then to apply the mulching. For a covering of litter, while it promotes the humidity, also prevents the heating of the soil, and in this way may retard early growth if applied too soon. There are exceptions, however; one in the case of large, deeply rooted trees not affected by mulching, nor needing it; and the other where small plants, which are removed in summer, need the careful and constant retention of the moisture of the earth. We have succeeded, with scarcely one failure in fifty, in transplanting the strawberry in the drouth and heat of summer, by simply giving the surface a mulching of two inches of barn manure, and on which the watering was poured when necessary. Indeed, there is nothing that better prevents the ill effects of baking by surface watering, than a covering of this sort of a moderate depth. Mulching will, however, promote moisture in the soil, even when neither artificial nor natural watering is given, simply by arresting such as rises upwards through the earth. In one instance a striking illustration of this effect was furnished during a very long season of drouth, which injured and threatened to destroy a row of newly transplanted apple trees. Their leaves had already begun to turn yellow, and growth had ceased, but on coating the ground about them with a crop of mown weeds, a change was soon effected, and in three weeks the leaves had returned to their deep green hue, and in some instances growth had recommenced. But in no kind of tree is mulching more necessary than on newly transplanted cherry trees. Thousands of these are lost every season, after they have commenced growing, by the drying heat of mid summer. and the evil is sometimes increased by superficial watering. A deep mulching will generally prove a complete remedy if seasonably applied.

Some interesting facts on this subject were stated, and valuable suggestions made at one of the Conversational Meetings of the Massachusetts Horticultural Society. S. Walker remarked that he had used tan, sawdust, litter, leaves, &c., but he believed short, newly mown grass one of the best things. He had mulched a great deal with it, and found it laid close to the soil. He also recommended the succulent weeds of the garden or roadside. He found tan and sawdust to be useful merely by retaining the moisture. D. Haggerston had found sedge from salt marshes best, particularly if cut short. A good watering upon it made it lay close to the ground. He found it excellent for strawberries. He had also found tree leaves excellent, if they had partly decayed, so as not to be likely to be blown away. Old hot bed materials made of leaves and manure, had proved particularly fine. Several spoke of the ill effects of too deep a mulching; but we think the more common error is in spreading the covering of the soil too thinly.

Mulching is a very easy and cheap practice; and the season is now at hand when our readers may prove by varying experiments, the best mode of performance.

[Country Gentleman.

Employment of Women in France.

I am imduced to say a word upon the very numerous employments open to females in France, which are not open to them at home. The books of nine-tenths of the retail shops in Paris are kept by women. I do not remember a cafe or estaminet in the city the counter of which is not presided at by a woman. The box-offices of all the theatres are tended by women—not only those of the evening, but those open during the day for the sale of reserved places. The box-openers and audience-seaters are women. And not only do women act as sellers in such establishments, as are naturally fitted to them, but even in groceries, hardware stores, wood-yards, fruit stores, butcheries, &c., &c. In all these places the book-keeper is a woman, fenced in and separated from the rest by a framework of glass.

The ticket-sellers at the railroad stations are principally women. I have the pleasure of purchasing a seat daily of a good looking young person of about 24 years. From appearances, I should say she was engaged to the conductor of the 4 o'clock train. Women even guard the stations and some of the less frequented crossings. Women cry the rate of exchange, every afternoon, after Bourse hours; and more numbers of the *Presse* and the *Mousquetaire* are disposed of by women than by men. I never yet saw a newsboy in France. In the porter's lodges of the city there are as many portresses as porters; and a landlord would prefer to take, for this service, a woman without a husband than a man without a wife. In small houses, where one person only is required, that one person is a woman. Omibus conductors submit their waybills at the transfer offices, to women, for inspection and ratification. Women book you for a seat in the diligence. Women let donkeys for rides at Montmorency, and saddle them too. Women undertake the moving of furniture, agree with you as to price, and you find them quite as responsible as men.

Without multiplying instances, you will see what a number of avenues are open to females here, which in America are closed. At home, nearly all the situations obtainable by them, are either menial or involve subordination. Women are either servants, clerks, operatives, waiters or type-setters. The foreman is rarely a woman, if I may be allowed the expression. Here, however, females hold positions of authority, responsibility and consideration, in the various employments of overseers and book-keepers, and even as heads of establishments. It has not been found that the weakness of the sex causes the empire to be any the less energetically asserted, or obedience to be less promptly rendered.

There are other capacities in which women are employed in France, which I trust and believe would never be accepted by women at home; a brigade of street sweepers contains an equal number of males and females. There are female chiffoniers, and old clo' women. A complete establishment of a fruit or vegetable pedlar, consists of a small cart, a man to shout and sell, and a woman and a dog harnessed into straps, to drag. In the country, women labor in the fields, and thresh and winnow in the barns. I might say that from a motive of pity, I employ an old grandmother to weed an alley, tend a strawberry bed, and hawthorn grove, in which I take an unnatural interest—considering that they grow on land not my own. American women were not born for such occupations are these; but I think there are many employments yet monopolized by men, to which their labor might be usefully and conveniently diverted.

[N. Y. Times.

Consumption.

Mr. Willis, one of the editors of the *Home Journal*, has closed his series of interesting papers from "Idlewild." He has for months been an invalid, yet in the series has written several articles on the preservation of health, which have been widely copied. In his last and closing letter, speaking of consumption, he writes :—

Consumption, mourned over as it is, seems to me a gentle untying of the knot of life, instead of the sudden and harsh tearing asunder of its threads by other disease—a tenderness in the destroying angel, as it were, which greatly softens, for *some*, his inevitable errand to *all*. It is a decay with little or no pain, insensible almost in its progress, delayed, sometimes, year after year, in its more fatal approaches. And it is not alone in its indulgent prolonging and deferring, that consumption is like a blessing. The cords which it first loosens are the coarser ones most confining to the mind. The weight of the material senses is gradually taken from the soul with the lightening of their food and the lessening of their strength. Probably, till he owns himself an invalid, no man has ever given the wings of his spirit room enough—few, if any, have thought to adjust the ministerings to body and soul so as to subdue the senses to their secondary place and play. With illness enough for this, and not enough to distress or weaken—with consumption, in other words, as most commonly experienced—the mind becomes conscious of a wonderfully new freedom and predominance. Things around alter their value. Estimates of persons and pursuits strangely change. Nature seems as newly beautiful as if a film had fallen from the eyes. The purer affections, the simpler motives, the humbler and more secluded reliances for syspathy, are found to have been the closest linked with thoughts bolder and freer. Who has not wondered at the cheerfulness of consumptive persons? It is because, with the senses kept under by invalid treatment, there is no "depression of spirits." With careful regimen and the system purified and disciplined, life, what there is of it, is in the most exhilarating balance of its varied proportions. Death is not dreaded where there is thus such a conscious breaking through of the wings of another life, freer and higher.

An Important Invention.

On one or two occasions recently we have referred to the invention of our fellow-citizen, Henry Miller, Esq., for braking cars by the use of steam from the locomotive. For some time past this invention has been in operation upon the Pontiac train of cars. The apparatus, as we described in a previous notice, consists simply of a steam pipe extending from the locomotive to a cylinder attached to each car of the train, and in which there is a piston that operates upon the brake by means of an iron rod. This apparatus is extremely simple, and is under the absolute control of the engineer. The power can be applied to the brakes almost instantaneously upon the first indication of danger. Yesterday a short trip was made upon the Pontiac road for the purpose of giving the invention a practical test. The brake was first applied while the train was going at the rate of twenty miles an hour, and the train was brought to a dead stop in a distance of fifteen rods, without reversing the engine or causing the slightest jar. It was next applied while the train was going at the rate of thirty miles an hour, and in a distance of thirty rods, and in twenty seconds of time, the train was again brought to a dead stand. This was repeated the second time and with the same result as to time and distance, and again without reversing the engine. If this had been done, the cars would have been stopped in about two-thirds of the distance and time.

But perhaps the best practical test of the great importance of the invention was previously afforded. While on its outward trip, and going at the rate of twenty miles an hour, several horses were suddenly discovered on the track, entirely in front of the engine, and by applying the brake the train was almost immediately stopped. By the old plan, it is admitted, that it would have been impossible to have stopped it in time to avoid running over them. Before the brakemen could have been at their posts the mischief would have been done. This is one of the benefits that must result from Miller's invention. The engineer can apply the brakes to every wheel in the train before he could give the alarm to brakemen. Another advantage it possesses is in the great saving of car wheels. It operates upon every wheel equally and with the same power. Again, in case of danger, the first impulse of the brakmen is self protection, and he never fails to jump from the car when there is a reasonable probability of a collision or other accident that might hazard his life. But to apply the brake by this invention is but a work of an instant on the part of the engineer; and then, no matter whether he continues at his post or looks out for his own safety by flight, the power continues to be exerted upon the brake all the same. Steam never becomes frightened or deserts its post. This is a most important consideration in its favor, and one that cannot fail to have great weight with railroad companies.

[Detroit Advertiser.

Green Manures.

In answer to the inquiries of O. W., we would suggest that the profitable use of green manures is, as he supposes, dependent in part upon the condition and character of the soil.

Soils that are wet and sour, are not improved by the plowing under of green crops, but for soils properly under-drained, or which are dry, and are deficient of organic matter, in the absence of a cheaper source of supply, green manures may be profitably used; and in England, with such soils, the farmers are in the habit of plowing under turnip tops before sowing to wheat in the autumn. In this country clover or buckwheat is more generally used, and in some cases the ordinary field pea. Those green manures of course should be selected, which receive the largest amount of their constituents from the atmosphere, as such will give a greater amount of carbon to the soil, and such also as are apt to be deep rooted plants, thus bringing inorganic constituents from the sub-soil, and depositing them by their decay in the surface-soil. Field peas are often used for this purpose, and we have known Indian corn stocks to be plowed under with admirable effect, particularly in soils fairly charged with clay.

In heavy clay soils, where ridging and back furrowing are used, leaving these ridges for disintegration during winter, by frequent freezings and thawings, thd plowing under of green crops so as to occupy the center of these ridges, is an admirable practice; for as they decay they leave channels for atmospheric circulation, and with the addition of the freezings of the ridges during winter, the spring finds the soil not only freer to work, but in lively heart for earlier vegetation—and this is particularly true when a sub-soil plow is run between the ridges in early spring to a great depth, afterwards splitting the ridges with a two way plow.

As we have before remarked, where muck of a good quality can readily be procured, it is cheaper, after proper treatment, for the renewal of organic matter in the soil, than the plowing under of green crops, as most such crops have a value greater than the cost of decomposed muck, and therefore should be sold or fed in preference to being used as manure.

[Working Farmer.

A SITUATION VACANT.—Some years ago a black man called on a clergyman in Western New York, avowed himself a fugitive slave, and asked for food and shelter, which was freely accorded. Two or three persons being cognizant of the fact, called in to see the "runaway nigger," when the following dialogue ensued :

"S'pose you had pretty hard times down South—lickings a plenty?"

"No—I never was whipped."

"Wasn't!—Well, you had to work awful hard?"

"My work was very light."

"Guess your clothes wan't very nice?"

"I was always well clothed—I was a good servant."

"Reckon your victuals wasn't uncommon fine?"

"As good as I desired."

"Well! I should give it as my opinion that you was a mighty big fool for running away from such a place as this, just for the sake of shirking for yourself."

"Gentlemen! my place down South is vacant. Any of you can have it by applying for it."

The Mississippi by Night.

By night the scene is one of startling interest and magical splendor. Hundreds of lights are glancing in different directions, from the villages, towns, farms, and plantations on shore, and from the magnificent "floating palaces" of steamers, that frequently look like moving mountains of light and flame, so brilliantly are these enormous river leviathans illuminated outside and inside. Indeed, the spectacle presented is like a dream of enchantment. Imagine steamer after steamer coming sweeping, sounding, thundering on, blazing with these thousands of lights, casting long brilliant reflections on the fast rolling waters beneath. There is often a number of them, one after another, like so many comets in Indian file. Some of these are so marvelously and dazzlingly lighted, they really look like Aladdin's palace on fire, (which it, in all likelihood, would be in America,) sent skurrying and dashing down the stream, while, perhaps, just then all else is darkness around it. I delighted too, in seeing, as you very frequently do, the twinkling lights in the numerous cottages and homesteads dotted here and there; and you may often observe large wood fires lit on the banks, looking like merry-making bon-fires. These I believe, are usually signals for the different steamers to stop to take up passengers, goods, and animals.

Iron Houses.

We attended recently an informal meeting of business men, at the auction rooms of M. N. Croft, Court street, Brooklyn, New York, at which Mr. Sexton, the inventor of a new plan of iron buildings, explained his system. He constructs the frame-work of his buildings entirely of cast iron, in sections, which are made to interlock by very close-fitting and ingenious joints, secured by keys. This method of building avoids the labor of drilling and bolting, which has been a great inconvenience of iron buildings. It also allows the house to be taken down in sections, and removed at a very little expense. He covers the frame-work on the outside with plates of iron, by a similar system of interlocking, without any bolts or other fastenings, the joints being packed with gutta-percha, so as to exclude water under hydraulic pressure. To finish the dove-tailings of the joints, he has invented a machine that can perform the work of forty men. The walls are made hollow, and the enclosed space is filled in with a non-conducting composition of beach sand and other substances, so that, as Mr. Sexton observed, his house becomes, when finished, a perfect fire-proof safe.

The roofs and floors are made of cast-iron frames, resembling heavy window sashes, the interstices being occupied as in the case of windows, with *plates of glass*, of any required thickness and transparency. The glass used is not our common glass, but is in itself a new and valuable invention, being called *malleable* glass, from its wonderful property of toughness, allowing it to bend freely without breaking. It can be drawn out into threads of any fineness, and so strong and flexible that they are said to be commencing the manufacture of piano and violin strings from this material. Mr. Sexton handed round a piece of this glass string for inspection. It was as small as the E string of a violin, and could be bent around the finger, or tied in a knot, apparently like catgut.

Plates of this glacs being let into the frame-work of the floors, the whole is then covered over with a peculiar transparent cement of Mr. Sexton's invention, which makes the whole floor look like one solid plate of glass. The cost of roofing with this material is seventy-five cents per square foot. The walls inside can be covered with plaster, or finished with iron or glass, at the option of the builder. All the interior ornamentation, such as mantel-pieces, pannels, &c., may be of malleable glass.

The advantages claimed for this style of building are, first, its great cheapness, and the rapidity with which it allows of construction. It effects a saving of one-third the cost, and three-fourths the labor, over every other method. Mr. Sexton stated that he could complete an ordinary dwelling-house in forty days. Second, the variety of style and finish that can be obtained at small cost, by different combinations of the same pattern. The inventor remarked that in the constructing of the whole Crystal Palace, but six different patterns were required. Third, the facility with which such a building can be taken down and removed. Fourth, its security from damage by fire or lightning—thus saving all the expense of insurance. Other incidental advantages are, its durability, freedom from vermin, &c.

[New York Leader.

Rules for Butter Making.

The Massachusetts Committee on Dairies says :

Your Committee having had much experience in butter making, offer the following rules at the result of their experience :

The newer and sweeter the cream, the sweeter and higher flavored will be the butter.

The air must be fresh and pure in the room or cellar where the milk is set.

The cream should not remain on the milk over thirty-six hours.

Keep the cream in tin pails, or in stone pots, into which put a spoonful of salt at the beginning, then stir the cream lightly each morning and evening; this will prevent it from moulding or souring.

Churn as often as once a week, and as much oftener as circumstances will permit.

Upon churning add the cream upon all the milk in the dairy.

Use nearly an ounce of salt to a pound of butter.

Work the butter over twice to free it from the buttermilk and brine, before lumping and packing.

Be sure that it is entirely free from every particle of buttermilk, or coagulated milk, and it will keep sweet as long as desired.

In Scotland, a syphon is sometimes used to separate the milk from the cream, instead of skimming the pans.

BATHING.—Sir Astley Cooper was a great believer in the efficacy of bathing. He says : "Immediately on rising from bed, and having all previously ready, take off your night dress, then take up your earthern pan of two gallons of water, a towel, quite wet, but not dripping; begin at your head, rubbing hair and face, and neck and ears well; then wrap yourself behind and before, from neck to chest, your arms and every portion of your body. Remand your towel into the pan, charge it afresh with water, and repeat once all I have mentioned except the head, unless that be in a heated state, when you may do so, and with advantage. Three minutes will now have elapsed. Throw your towel into the pan, and then proceed with two coarse long towels to scrub your head, face, and body, when four minutes will have you in a glow; then wash and hard rub your feet, brush your hair, and complete your toilette, and trust me that this will give new zest to your existence. A mile of walking may be added with advantage.

DECLARATION OF INDEPENDENCE.—The following story of the first annunciation of the Declaration of Independence from the bell tower of Independence Hall, in which that momentous document was signed, is told in Lossing's Field Book of the Revolution :—

"From the hour when Congress convened in the morning the old bellman had been in the steeple. He placed a boy at the door below to give him notice when the announcement should be made. As hour succeeded hour the grey-beard shook his head and said, 'They will never do it! they will never do it!' Suddenly a loud shout came up from below, and there stood the blue eyed boy clapping his hands and shouting 'Ring! ring!' Grasping the iron tongue of the old bell, backward and forward he hurled it a hundred times, its loud voice proclaiming 'Liberty throughout all the land unto all the inhabitants thereof.' The excited multitude in the street responded with loud acclamations; and with cannon peals, bonfires, and illuminations, the patriots held a glorious carnival that might in the quiet city of Penn."

A NEW ENGLAND COLONY IN IOWA.—Rev. Josiah B. Grinnell, lately of New York City, has, with a number of other eastern people, emigrated to Iowa, purchased a large amount of land—some 30,000 to 40,000 acres—in one spot, and commenced the work of building up an enterprising, moral, and religious town. It is located between Iowa City and Fort Des Moines, in Poweshiek Co., is named Grinnell. A large portion of the land is set apart for educational purposes; teetotalism is one of the principles of the place, and good industrious mechanics who will build this season are promised a lot gratis. We have heard of several like cases at the West, where temperance is secured to a new settlement or town, and apparently forever, by a few parties, the founders of the village, obtaining possession of all the land embraced in its limits and neighborhood, and incorporating in every deed of sale an entire prohibition of the sale or use of intoxicating liquors upon the land sold. In case of violation of this provision, the property reverts to its first owner. So the monster rum is fairly and legally hooted out.

THE GULF OF BOTHNIA.—There is not an inch of the Gulf of Bothnia but we have crossed over; it is a very strange place; the effect of the irregular refraction is very singular; the other morning we saw a lighthouse up in the air, and on looking at the chart it proved to be fully 50 or 60 miles off. Ships appear when they are nearly a day's sail from them, now with three hulls, now without sails, in a moment with a cloud of canvas, now turned upside down, and half a dozen ships are over the other, all as large as the biggest three-decker; when you come up with her she is some insignificant little coaster. We are within a couple of degrees of the Arctic Circle; the sun does not set until 10 P. M., and rises about 2; we have broad daylight all the time he is below the horizon. We are going on up to the head of the Gulf, and when there we shall see the sun at midnight.

[Letter from an Officer in the Napier Fleet.

TO BOIL RICE.—Rice is one of those vegetables which is easily injured by poor cooking, and may be made really unpalatable by a little over boiling. Rice should be carefully looked over, and thoroughly washed in two or three waters. The kernel will then have a pearly lustre. It should be put into boiling water, in which a little salt has been thrown, and allowed to boil fifteen or seventeen minutes. The water should then be drained off—and the kettle set back from the violent heat of the fire—when it has steamed in this way about fifteen minutes, it will be perfectly soft, of snowy whiteness, and each kernel will retain its individuality, and not be lost in one solid mass of paste. A pint of rice may be boiled in three quarts of water.

A California paper calls upon the people of that State, for the love of posterity, to reform their nomenclature, and to show their present taste in the matter, he says the recent election has brought to light such delectable localities as Whiskey Creek, Jackass Gulch, Humbug City, One Horse Town, One Mule Town, Drunkard's Bar, Murderer's Bar, Shirt Tail Canon, Lower Humbug, Negro Hill, Fiddletown, Coon Hollow, Jay Hawk, Condemned Bar, Grizzly Flat, Mosquito Canon, Poverty Bar, Mule Canon, Greenhorn, Mugginsville, Mad Muletown, Sucker Flat, Rattlesnake Bar, Yankee Jim's, Peppermint Bar, Mad Canon, Humbug Canon, Rough and Ready, French Corral, &c.

The last number of Punch contains a pictorial guess at the distance at which ladies' bonnets will be worn from their heads at the next remove. The tendency has been further and still further rearward, and the next change, Punch thinks, will carry them off the head entirely; so he represents the next fashion by two young ladies in full dress and bare-headed, sailing along the street, with a footman walking some ten feet behind, *carrying the bonnets on a waiter.*

Thomas and Jerusha Bacon, of Ware, Mass., who have recently deceased, the former at the age of 90 years, the latter at 84, enjoyed their matrimonial life sixty-six years. They had twelve children, fifty-nine grand children, and ever so many great grand children, one of whom, aged fifteen years, is already married, and the mother of a child of the fifth generation. Thomas Bacon was a patriot of the revolution.

There are two classes of people who find their way through the world without eliciting serious notice—those who say too little and talk too much. There is still another class—a fusion of the above mentioned classes who *talk* a great deal, but *say nothing.*

"Books," says Bacon, "can never teach the use of books." The student must learn by commencing with mankind to reduce his speculations to practice, and accommodate his knowledge to the purposes of life.

It is said there are two words, and two only, in our language, which contain all the vowels in their regular order. They are "abstemiously" and "facetiously."

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave Pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock, P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns* and *process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound* and *quality of tone.* The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM *(a Silver Medal)* of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited.

A. MENEELY'S SONS, West Troy, N. Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world.

I am yours, with great respect,
J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me
Yours, with respect, JOHN O. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy.

Yours very respectfully,
D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass.

Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere. 37-3

UNIVERSAL PEACE—NO 5.

BY C. ROLLIN BURDICK.

War and its Consequences.

In our last, we only had a view of the expenses of war, taking into account the destruction of property always attendant on it. The loss in capital, or productive labor, does not end here. It reaches every avenue of human industry. Belligerent nations mar the commerce of the world. The superabundant produce of one country is often left to rot in its depositories at home, because legalized pirates are abroad on the high seas to rob and destroy, thus preventing its transportation to the countries which consume it. This causes a double loss, viz., loss of the produce to the original owners, and loss to the consumers by the increased price of the article, always resulting from a scarcity. This takes away the stimulants to active industry in this department. It throws upon society for support, a class of men, useful, it is true, on their own element, but comparatively useless on any other. War draws from the soil its cultivators. Its products are consequently diminished, and improvements in agriculture are neglected. The tendency is to make a desert of the fruitful field. War draws from the workshop its operators, making a scarcity of mechanical products, and putting a quietus upon all mechanical improvement. The loss to society in these departments is incalculable. We have no means of estimating it, but we may be assured that society would have been immensely ahead of what it is, had the clangor of arms never rung upon the ears of man. Generations long since gone down to the grave, might have listened to the clatter of the railcar, the whistling of the engine, the snorting of the steamboat, in short, they might have witnessed all the triumphs of art and science which this day greet the vision of men. The arcana of what is now in future might have been penetrated, and the means of physical enjoyment augmented a thousand fold.

But hand in hand with physical improvement go the intellectual and the moral. What retards one or causes it to retrograde, retards and retrogrades the rest, and whatever contributes to the advancement of one, moves forward the others. War breaks up schools and literary institutions, by swallowing up, in its greedy maw, all their means of support, and the youth grow up in ignorance, prepared to curse the world with their vices. The development of mind necessary to elaborate and embody the great truths of art and science, which act as motive powers in moving society onward, is wanting, and the secrets of nature remain unpenetrated. The fine arts share the same fate. Music and sculpture must be in a measure neglected, and painting is almost abandoned, or prostituted to the celebration of military achievements. War moulds the literature of a country, and thus reproduces and perpetuates the vices which are its legitimate offspring. The lyre of the poet is strung and tuned to marshal measures, and the orator breathes belligerent sentiments from the rostrum. That literature which elevates and refines—that literature which touches the chords of human sympathy and affection, and causes them to vibrate with thrilling intensity—that kind of literature which should alone be cultivated—is neglected, and briars and thorns grow up in its place on the rich soil of the human heart.

War's deepest wounds upon humanity have been in the moral world. Its blighting influence is unspeakable. It scathes, withers, and dries up the better nature of men. Wherever war directs its desolating track, an innumerable train of evil passions follow, scathing and blighting every green thing. Profanity rears its impious head, and provokes the just vengeance of a blasphemed God. The curses of soldiers, their known profanity, confirm this. A vast company of soldiers herded together, away from the restraining influence of refined society, and cut off, in a great measure, from intercourse with the chaste of the opposite sex, cannot but breed moral contagion in its worst form. They bear it upon them, and when they return to that society from which they have been exiled, they, in too many instances, scatter it broadcast among their friends. The sacking of cities, the ravishing of innocent, helpless women, gives abundant evidence of the depravity of war. An event which happened only a few weeks ago in a Russian town, proves most conclusively, that war in the nineteenth century has lost none of its enormity. The case of English soldiers ravishing helpless Russian women of a conquered town, affords a kind of fancy scene—an interlude in the villainous drama of war; and perhaps the tyrant Czar loves to gloat upon such scenes. The very spirit of war is in opposition to the command, "Thou shalt not kill," and all who engage in it must cultivate the habit of disregarding human life. The spirit of cruelty which it engenders is truly appalling. An Alexander, under the stimulants of war, could hang two thousand illfated Tyrians upon as many crosses, and gaze with fiendish rapture on a city sinking amid flames kindled for mere amusement; and a Jhengiz Khan could crush two thousand human beings in mortars, and mingle their flesh and bones, thus jammed into a shapeless mass, with mortar to lay in the walls of a fortification. Such horrors are common in the annals of war, but time and space will not permit a further enumeration.

We have dwelt thus far upon war, showing its destructiveness of human life, of property, and the embarrassments it throws in the way of all improvement. We have seen that it has depopulated the world fourteen times of as many people as now dwell upon the earth—that it has destroyed enough capital to have changed the world into a beautiful field, had it been thus expended, giving every man an ample competence, and all the means of improvement, moral and mental, together with all the facilities for travel and transportation, free of charge forever, and that it has put back the progress of the world thousands of years. We will, in our next, enter more directly upon our subject.

ALMOND, N. Y., August 11, 1854.

For the Sabbath Recorder.

THE RESURRECTION OF CHRIST ON THE SEVENTH DAY.

To say, as many do, that our Lord was crucified on the sixth day of the week, and that he rose on the first day of the week, appears to be an error.

1. He was to be "killed, and *after three days* rise again." Mark 8: 31, Matt. 27: 63. Now, supposing he was killed on the sixth day of the week, called Friday; *after one day*, would be the seventh day, or Sabbath; *after two days*, would be the first day of the week; and "*after three days*" would be the second day of the week, called Monday; and none will admit that he arose the second day of the week; consequently he could not have been crucified on the sixth day of the week.

2. Again, it was on "the first day of the week" that the two disciples which went with Christ to "Emmaus," said to him, "*To-day is the third day since these things were done.*" Luke 24: 13–22. Then the *second day* since these things were done, must have been the seventh or Sabbath day; and the *first day* since these things were done must have been the sixth day, called Friday. This must have been one day after, or "since these things were done;" so that these things must have been done, or finished, *one day at least before* the sixth day of the week, called Friday. This is my second witness that he was not crucified on the sixth day of the week.

3. Now, to be plain and easy to be understood on the subject, our Lord gives it as a "*sign*" to the Jews, that, "as Jonas was *three days* and *three nights* in the whale's belly, so shall the son of man be *three days* and *three nights* in the heart of the earth." Matt. 12: 40. We understand, therefore, that Jesus was to be in Joseph's new tomb precisely three days and three nights—no more, nor no less. And to find the exact time of day when he arose, we must find the time of day at which he was laid in the new tomb. If he was laid in the new tomb at "even," before the commencement of the high Sabbath of the Jews, (Matt. 27: 57–60, Mark 15: 42, John 19: 31,) then he must have arisen at "even," precisely three days and three nights after he was laid in the tomb. This is my third witness to prove that he was not crucified on the sixth day of the week; for it is impossible to make out "three *days* and three *nights*" between what is called Friday "*even*" and the "*even*" before the first day of the week.

"*In the end* of the [seventh-day] Sabbath, as it began to draw *toward* the first day of the week, came Mary Magdalene, and the other Mary, to see the sepulchre; and behold there was [*had been*, in the margin,] a great earthquake; for the angel of the Lord descended from heaven, and came and rolled back the stone from the door, and sat upon it." Matt. 28: 1, 2. This was "in the end" of the seventh-day Sabbath, and "toward" the first day of the week; and the Saviour was risen before the came to the sepulchre; consequently he must have risen before the first of the week commenced.

Many people seem to notice but one "Sabbath" while Jesus was in the new tomb; but there were *two Sabbaths*, distinguished by Luke and John. "The Sabbath day *according to the commandment*," (Luke 23: 56,) and "that Sabbath day (which) was *an high day*," (John 19: 31.) This last mentioned was the next day after he was crucified, (Mark 15: 42;) the other, according to the fourth commandment, in which he appears to have risen at "even." The *plain truth* on this subject appears to be this:—

1. That our Lord was crucified for us on the fourth day of the week, "at the ninth hour," three o'clock, P. M., Mark 15: 35.

2. At "even," as it was the preparation day for the high (ceremonial) Sabbath of the Jews, and as that "Sabbath drew on," which would be on the fifth day of the week, Joseph took the body, "and wrapped it in clean linen cloth, and laid it in his own new tomb." Matt. 27: 29.

3. "Now, the next day that followed the day of the preparation," which would be on the higbm cereonial Sabbath, i. e., the fifth day of the week, "the chief priests and the Pharisees came together unto Pilate," and obtained authority to set a watch, &c. Matt. 27: 62, 66. (This work, we should think, they would hardly do on the weekly Sabbath.) Thus the two disciples which went with Christ to "Emmaus," could say, on the first day of the week, "To-day is the third day since these things were *done*," i. e., sealing the stone and setting the watch on the fifth day of the week.

4. After the body was laid in the new tomb, the women that followed him "returned, and prepared spices and ointments;" (this they could do on the sixth day of the week between the two Sabbaths;) and then "rested the Sabbath day according to the commandment." Exod. 20: 10, Luke 23: 55, 56.

5. As the "Son of Man" was to be "three days and three nights in the heart of the earth," we count that from fourth day "even" to fifth day even, is one day and one night; from fifth day even to sixth day day even, is two days and two nights; from sixth day even, to seventh day even, is "three days and three nights." Then, if the body of Jesus was laid in the new tomb at "even" *before the commencement of the high sabbath* (as all their sabbaths commenced at evening,) then, according to the Scriptures, Jesus must have risen at "even" on the seventh day of the week, *before the commencement of the* first of the week.

Then ought not the Sabbath of the Lord our God, the Sabbath of our Lord Jesus Christ, to be doubly precious to the believing Christian. B. C.

COMMUNION.

Reply to William B. Maxson.

I have hesitated some about replying to Bro. Maxson, and if it were for the sake of mere argument, I would not do it. I was aware that I had taken a stand against his views, and the sentiments and practices of the denomination generally; but does it follow, that nothing shall be advanced on the subject on that account? If nothing is to be said or advocated but general sentiments, it is of course to be taken for granted, that no error can exist. Now I would ask, whether this is not altogether papal in its pretensions? Are we, as a denomination, sure that we are right in every particular? For my part, I must confess that I am liable to err, and I may err on the subject of Communion, though I think I am right. Bro. M. will not admit that the First-day Baptists are considered guilty of such immorality as would class them among the vile, and yet he considers them Sabbath-breakers, and classes Sabbath-breaking with incest, idolatry, covetousness, railing, drunkenness, and extortion. I must confess that such logic is too much for my weak capacity. I know they are not treated as such, except in consideration of the celebration of the Lord's Supper. They may do every thing religiously with us, and we with them; but when these same persons would publicly profess their attachment to Christ by showing forth his death, we say, Stand off from us, for we have no fellowship with the unfruitful works of darkness. I do ask, earnestly, if there is any consistency in this? They can not certainly be godly men—men of faith and Christian love and zeal for God and the kingdom of Christ in the world—when preaching, praying, and Christian effort is concerned, and when first-day observance for the Sabbath comes into consideration, be transformed at once into perpetrators of the darkest deeds. In the first case, they are considered and treated by us as children of the light; in the last, as actors in that dark and polluted drama in which is exhibited those crimes previously mentioned. Verily, if any brother can reconcile these things, it would be a great relief to one individual at least. For myself, I do deny that first-day keeping as Sabbath is a deed of darkness, or a kind of Sabbath-breaking which is to be identified with that category of immoralities condemned in Paul's letter to the Church at Ephesus. This kind of Sabbath-breaking is not secret at all, but carried out publicly. A deed of darkness is done in secret, and not on the house top. Our First-day Baptists have no wish to conceal their practice—indeed, they are as well satisfied, as a body, of the truth of their position, as we are, and observe that day as conscientiously as we do.

On the subject of baptism, I would remark, that I believe pedobaptists are in error as to the mode, and most as to the subjects, of baptism. I believe in immersion as the right mode, and the believer in Christ as the right person to be immersed; yet I dare not treat individuals of sterling character, piety, and usefulness, as willful rebels against the authority of Christ, any more than I dare consider or treat a first-day Sabbath-breaker as such. Indeed, a willful rebel he can not be, and a Christian at the same time. That professing Christians are mistaken on these points, I admit; and were it not for the knowledge of the influence of education and example, I should soon become uncharitable and narrow-minded. With regard to these erring brethren, no doubt it is perfectly right on all suitable occasions to argue with them, and admonish them too; but the cold shoulder will never serve as an argument or admonition. I do not admit the absolute impossibility of being mistaken on those very points which I hold the most tenaciously, nor the absolute impossibility of those who differ from me being right—I am persuaded in my own mind, and he the same. The pedobaptist thinks his baptism valid, and I think mine is. The first-day man reckons he is keeping the fourth commandment, and I think I am by keeping the seventh day of the week literally—both parties are satisfied. If we ever come together, it must be effected by the means of kind and reasonable argument, and by additional light from the divine Spirit to what they now possess.

I am surprised that my brother should entertain the idea that the practice of open communion would open the flood gates for all the vile wretches in creation to rush in to partake of the solemn memorials of a Saviour's death. I believe all Christian bodies which have a respectable standing in the Christian world are as strict in their discipline as we are, and their members as free from immorality as ours. To be sure, it is possible for a slaveholder to intrude—not very likely for an abettor of intemperance to make his appearance—and I expect the brothel-keeper will be sure to keep out of the way. Besides, such persons living in a community would be very notorious, and hence no danger of our being deceived. Nor is there a church that ever came under my observation that would hold such persons as members upon any consideration—(except it were a State Church, which swallows all such as have been christened and confirmed, whatever their character; and of such a church America knows nothing, and with an unbroken Constitution never will)—I have never seen any thing detrimental to the churches in the practice of open communion, though I have witnessed its practice for many years. Indeed, so far as my knowledge goes, it has promoted their welfare—it has thrown the chord of love around all who love our Lord Jesus Christ in sincerity and truth.

Perhaps my brother has a different view of open communion, as to its nature and practice, for what I do, or others of the same sentiments. It does not embrace the idea of a first-day and a Sabbatarian Church always coming together which live in the same town or neighborhood—or of a union in church membership—but simply an open door for any member of a respectable body to come being far away from their own denomination, the privilege of celebrating the Saviour's death could be embraced, and thus one powerful means of keeping alive the love of Christ in the soul. With the present restriction, there is a danger of apostacy from Christ, or of compromising with other churches and abandoning the Sabbath altogether for expediency or accommodation. This last idea I have seen exemplified in more than one instance, within a very few years, and in one case within six months.

Far be it from me to wish to advocate any practice that would prove suicidal to any portion of our denomination. Whether a church composed of both parties would be broken by such an union, I am not prepared to say; but this is not what I am contending for. The precise idea is to admit any consistent Christian, known as such, to the celebration of the Lord's Supper—and this I can not see would be more than opening our pulpits and our meetings for prayer to them. As to the practice of the ancient fathers and mothers in Israel, who first started the Sabbatarian enterprise, I would pay all due deference to their judgment and piety. No doubt they did what they thought right. But the idea carried out, that what our forefathers did was so perfect that nothing can be added and nothing taken away, would stop all progress, and things would remain at a stand-still for ever. Our Missionary Societies, Tract and Publication and Education Societies, would never have arisen, to bless the denomination and the world, had we made no advance. The fathers are dead, and blessed be their memory; but we have to do with the living, and we have to change in our modes of operation with changing times, and improve our cause as opportunity offers. Let it be remembered, however, that our cause can never be advanced and improved by any concealment, either of character or error.

I will conclude by observing, that it is my decided conviction, that if we allowed other Christians than our own membership to commune with us when they chose, and we could do the same with them, both parties would be essentially benefited. And it is some consolation to know, that I am not entirely alone in my convictions. GEO. R. WHEELER.

FORCE OF FEELING.

Nearly forty years ago, I attended church one Sunday, and saw a stranger in the pulpit. There was something benevolent and kind in his appearance, and he spoke with an earnestness to which I had not been accustomed. His text was, "What will ye do in the end thereof?" I did not pay much attention to the introduction and forepart of the discourse, but at length I saw the tears running down his cheeks, and this fixed my attention. It was the first sermon I was ever interested in. I do think, that had I not seen those tears I might have gone home without benefit. I saw that the preacher felt the importance of his subject. And as he brought up all classes of sinners to the trial of the word of God, he dismissed each with these words, "And 'what will ye do in the end thereof?'" How often have I thought of those tears! He sowed that day in tears, and a precious harvest followed, and over eighty were gathered into the church. And even now the good old man ministers to the same flock he then did, and as often as I see his name, I see his form in the pulpit as it then was, with the tears on his cheeks. And long as I live shall I have an affectionate remembrance of him. Such tears are not shed in vain, nor are they easily forgotten. O, that there was more of this sowing in tears! We might then hope to see a joyful harvest.

From Chambers' Journal.

GOOD NIGHT.

Good night! a word so often said,
  The heedless mind forgets its meaning;
'T is only when some heart lies dead
  On which our own was leaning,
We hear in maddening music roll
That last "good night" along the soul.

"Good night"—in tones that never die
  It peals along the quickening ear;
And tender gales of memory
  Forever waft it near,
When stilled the voice—O crush of pain!—
That ne'er shall breathe "good night" again.

Good night! it mocks us from the grave—
  It overleaps that strange world's bound
From whence there flows no backward wave—
  It calls from out the ground,
On every side, around, above,
"Good night," "good night," to life and love!

Good night! Oh, wherefore fades away
  The light that lived in that dear word?
Why follows that good night no day?
  Why are our souls so stirred?
Or rather say, dull brain, once more,
"Good night!—thy time of toil is o'er!"

Good night!—Now cometh gentle sleep,
  And tears that fall like gentle rain.
Good night!—Oh, holy, blest, and deep,
  The rest that follows pain.
How should we reach God's upper light
If life's long day had no "good night?"

NOTES OF A WEEK IN PALESTINE.

RIVER KISHON.

May 8—The event which signalized this day, was an ascent to the top of Carmel. It took us four hours to cross the plain in a somewhat diagonal direction. We passed on the way a high mound, which appeared to be artificial, the top of which was smoothed off to serve as a threshing floor. It was thrown up, probably, for military purposes, in the time of the crusaders, who fought so many bloody battles on this field. We came out on the beach just north of El-Mukatta, the modern name of the Kishon, mentioned in the song of Deborah, as "that ancient river," which "swept away" the hosts of Sisera. Modern said that some of the Turkish troops whom Napoleon defeated in the battle of Mount Tabor, lost their lives in this stream. It was easily forded at the mouth, being partially filled up with sand from the sea, though at the distance of a few rods inland, it was so wide and deep as to defy any such attempt. The natives of whom we inquired the way, told us that we must strike the river near its mouth, as otherwise we should find it impassable. The water was brackish where we crossed, in consequence of the vicinity of the sea, though not so much so that our thirsty animals were not willing to drink of it. It was on the banks of this stream, and probably not far from this part of its course, that Elijah slew the prophets of Baal. The contest between him and those idolaters, had taken place on Carmel; and from thence, it is said, he "brought them down to the brook Kishon and slew them there." (1 Kings 18: 40.)

MONASTERY OF THE CARMELITES.

Just beyond Haifa, a flourishing town on the south of the bay of Akka, we began to climb the ascent to Carmel. The path is rocky and steep, but so well worn that we could ride the whole way. It took us twenty minutes to arrive at the summit. The height is said to be ten or twelve hundred feet. The Carmelite monks, at present fifteen in number, have a monastery here, unquestionably the finest edifice of its kind in all the east. They affect the ascetic rigor of their prototype, Elijah the Tishbite. They wear no shoes, but sandals; they abstain from meat, though, as I can testify, they offer to the weary, grateful traveler, other viands which cause him to forget the want of that particular article. The rooms set apart for the use of strangers, are very commodious. As compared with eastern houses generally, our reception here reminded us of a hotel in Europe or America. The chapel has altogether a modern air. The altar is erected over a natural grotto, said to have been one of the abodes of Elijah, and held therefore to be specially sacred. The good brother who had me in charge, set forth its claims to veneration with much pathos, but made no objection to procuring a hammer and helping me chip off a liberal piece of the hard rock as a souvenir.

THE VIEW FROM CARMEL.

The best position for viewing the prospect from Carmel is that furnished from the flat roof of the convent. Standing here with my face towards the east, the attitude of the Hebrew in naming the points of the compass, I had behind me, of course, "the great wide sea," as the Psalmist calls it, which suggested to the sacred writers so many of their grandest images for setting forth an idea of God's power. Before me lay an extensive reach of the plain of Esdrælon, and the summits of Gilboa and the lesser Hermon. On the south-east was a mountainous tract, known as that of Ephraim or Samaria, filled up with a rolling sea of hill-tops to an indefinite extent. Looking to the south along the coast, at the distance of ten miles, was Athlit, the site of a famous castle of the Crusaders, one of the last footholds which they relinquished to the Saracens. A few miles beyond there, though not in sight, were the ruins of Cæsarea, so interesting from its connection with the fortunes of the great Apostle. The line of vision on the north was bounded by the hills near Nazareth and Safet. The projection of Ras el Abied, the White Promontory, concealed from view Sur, the ancient Tyre. The graceful curve of the bay of Akka, sweeping from that city to the head of Carmel, was seen here to great advantage. It was a glorious panorama, rich, too, in historical memories. More distinctness of outline would have added to the effect. The distance and magnitude of the objects, excepting a few near at hand, caused them to appear very much in the mass—a disadvantage which may have impaired the impression.

FERTILITY OF CARMEL.

Carmel is often mentioned in the Bible as remarkable for its fertility, and the beauty of its vegetation. Though the region has long been neglected, and exhibits on the whole a sterile aspect, the soil when examined still gives evidence of being naturally very productive. "The Flora of Carmel," says Schubert, one of the most eminent of living naturalists, "is one of the richest and most diversified in all Palestine, since it unites the products of the mountain with those of the valley and the sea coast." He enumerates forty-seven different kinds of flowers found there, without pretending to complete the list. "A botanist," he remarks, "might spend a year there, and every day be added new specimens to his collection."

The plain between Haifa and the base of Carmel, though washed by the sea, is still cultivated, and is very fertile. One large tract was covered with wheat, the stalks of which could hardly support the heavy ears that weighed them down. There were orchards in which I noticed olives, a few date-trees, fig trees and pomegranates. The Indian fig, or prickly pear, was abundant. Vegetables, especially cucumbers, were ripening under the eye of watchers who occupied lodges on the margin of the gardens, to protect them from depredation. [Prof. H. in Ch. Review.

LEFT BY THE CARS.

See that man who is just too late, or the other, who was sitting quietly at his breakfast when he heard the departing signal. Neither can believe *he* is in fault. Oh no! *his* watch is right. The conductor hurried the train; the agent's watch is out of order. He feels as if there had been a conspiracy to delude and vex him. He is positively fretted; he blames every body except himself, and he only is to blame. Good humor may be restored, as he reflects—it can not be helped; I must just take the next train. But very great and permanent evils may result. He has learned a lesson, and will be in time to-morrow. Let us moralize on this very usual event.

1. There has been error. His watch was wrong, after all. He did not take care to set it by the true standard. Men fail of success because they adopt wrong principles. They fail of God, because they will not consult his standard. They blame the Bible, the church, the ministry; any thing, any body, every thing, every body, rather than self.

2. Our sincere belief that we are right will not save us. God has a certain, fixed and immutable and holy law. If we follow its teachings, we shall grow wiser and better; but if we follow our own notions, he makes no provision for our faults; we are just left to suffer.

3. There are favored times for obtaining God's favor. When the Spirit strives and calls, and the word is sinking in our hearts, in the accepted time and the day of salvation, we should be ready. While we are tarrying and halting, the hour may pass. We flatter ourselves that our time will answer—that we shall not be too late; and ere we are aware, the accepted hour may pass away unimproved, and when we call, he will not answer.

4. And here the illustration fails. There will be no other train for the finally impenitent. The negligent traveler can go to-morrow, but alas for the negligent sinner! his to-morrow may never come. Then

While God invites, how blessed the day,
  How sweet the gospel's charming sound!
Come, sinner, haste! O haste away,
  While yet a pardoning God is found.

[Home and Foreign Record.

ORIGIN OF THE BOOK OF MORMON.

The following account of the origin of the Book of Mormon was given to the writer of this article by the widow of the writer of said book, and confirmed by another relative of the said author. She was a native of Pomfret, Conn., of respectable family and connections, and her statement is entitled to full credit, which is in substance as follows:—

"A Mr. Spalding, her former husband, was a native of Ashford, Conn., a clergyman by profession, who removed with her into the State of Ohio. After some years' residence in that State, he became unable to follow his professional calling, from feeble health, which confined him to his domicil. In this situation of health, mind, and location, the various ancient mounds and fortifications, so common in that region, attracted his attention; and the probable science and civilization of their builders, so far in advance of the natives of the country, led him to inquire by whom they were constructed, and from whence a people came, who could perform these stupendous labors. For his own amusement, and the exercise of his mind and imagination, he commenced writing, in the solemn style, his ideas of the migration of mankind, from the time of their dispersion after the deluge, through the regions of the East to this Western continent, giving such romantic names and descriptions of persons and places as his imagination furnished him with. His neighbors also enjoyed the fruits of his labors, and, as he progressed, spent their evenings at his house, to hear and enjoy the effusions of his vivid imagination. These manuscripts, after the death of their writer, falling into the hands of the designing Mormon prophets, have by them been claimed to be miraculously given and discovered; and, though written without any evil design, have been made the instruments of leading many honest, credulous minds into this fallacious delusion."

WHERE IS YOUR MEMBERSHIP?

A certain looseness prevails in our denomination, which we would be glad to see reformed. We allude to what grows out of the removals of brethren from one locality to another. In a church located somewhere at the East, for instance, are some who propose to emigrate to the West. They take with them their certificates of standing, and upon arriving out, unite with some church there. But the church from which they have gone is never informed whether they have been received into another church, or not. Of course, it still retains their names on its records. If a church of one hundred members dismisses twenty of them in this way, thereby reducing its number to eighty active, resident members, it nevertheless reports its number as one hundred to the Association the next year. A church at the West, consisting of eighty members, receiving these twenty, reports itself to the Association to which it belongs as having been increased to one hundred. Accordingly, whoever compiles the aggregate statistics of the denomination, gives it an increase of twenty per cent. above what it is entitled to.

Others take their certificates of standing, but never present them to any other church. They are known, where they go, to have once been under the jurisdiction of a church, but now they seem to feel it a privilege to be free from all ecclesiastical restraints, or covenant obligations. This, too, is a great evil. If there is any importance in being connected with a church at all, it is important to hold the connection where the privileges of a church can be enjoyed, and not where there is no opportunity of enjoying them. To hold membership in some locality so far distant that the ordinances of religion cannot be enjoyed, nor covenant obligations fulfilled, nor discipline received, nor any of the duties and responsibilities implied in church membership met, is not in accordance with the design of Christ. And we hold, that persons who do so are quite as much out of the line of their duty, as those are who have experienced a change of heart, but refuse to make any public profession of Christ whatever. Let brethren who are holding their certificates in their pockets, at once offer themselves to some church in the vicinity of their present location, (if a church of like faith and order can be found there,) and free themselves from the guilt of exerting such an unfavorable influence upon the cause of religion as their present position necessarily does.

It is a great mistake, however, to suppose that such persons are not actually members of a church, and amenable to discipline, because they have received certificates, and are gone to reside in some distant locality. They are still members of the church that has given them certificates. They are accountable to its authority, and will continue to be thus accountable, till they shall have placed themselves under the discipline of another church by uniting with it. It is true, their remote position renders it difficult to enforce discipline against them, or to inquire into their behavior; but church members they are, and hence the propriety of retaining their names upon the records, till due notice is had of their being received elsewhere.

There are others, again, who remove their residence, but take no letters, or certificates of standing, with them. This is also an evil. All that we said above with respect to the importance of holding membership in some place where the privileges of a church can be enjoyed, applies with equal force here. There was no reason why they should unite with the church in the first place, except that they might enjoy its ordinances and watch-care, and coöperate with their brethren in discharging those responsibilities which devolve upon the disciples of Christ. And now that their removal to a remote locality has rendered it impossible to enjoy privileges and discharge duties in the place where they have been accustomed to do so any longer, reason dictates that they are called to do so in their new situation. As they have removed their location, therefore, they ought to remove their membership also.

Various are the excuses for neglecting to do so. Some say, they cannot bear the idea of sundering a relation which has always been so dear to them. The church to which they have always belonged, was the place of their spiritual birth. There they first received the ordinances of the Lord's House, and there they first were greeted by the saints as fellow citizens, and brethren in Christ. But the apology is a poor one. Need they love the mother church any less, because circumstances have created reasons for uniting elsewhere? Need they cherish less affection for the brethren with whom they were first associated, or feel less at home, if providentially, at any future time, they should visit the dear honored spot? Certainly not. Besides, so far as sundering the relation is concerned, they have already taken the principal step towards it by removing their residence. And if they can do so much, (merely for pecuniary interest's sake, as the probability is,) why not do a little more for duty's sake? If they can make the greater sacrifice from selfish motives, it is their shame not to make the less out of love for the cause of Christ. For Christ's cause is certainly concerned in this matter; and whatever be their affection for the church where they first enjoyed the communion of saints, they have no business to let it be stronger than their love for the Head of the Church himself. They should remember that, however dear the mother church is to them, it is not any more dear to Christ than the church in or near to their new location.

Others say, that they know not whether they shall long continue in their present location; they may go somewhere else, before long, or they may go back to the place they came from. Very true; they may not remain very long where they now are, and it is quite as true that they may not live very long. But we doubt whether the Christian was ever found, who refused to unite with the church on the ground that he might die soon. Such a reason would be apt to operate the other way. It would rather be a reason why he should make haste, and delay not, to keep the commandments of God. And if the uncertainty of life is a motive to be quick, and do with his might what his hands find to do, the uncertainty of long residence in a place should operate in a similar way. We consider this excuse quite as poor as the other.

A third class stand aloof, because the church of their new location does not exactly answer their mind. There is some trouble in the church, or the preacher is not such a one as suits them, or discipline is not maintained in a right manner, or some other reason about as valid. Poor excuses all of them. If the church is not what it ought to be, throw in your influence to make it so. You will never benefit it any by standing without and finding fault. Become one with your brethren; make them feel that you love them, and have the cause of God at heart; then show them where they are wrong, and you will probably be listened to. But outside complainers are not apt to be much regarded.

But we cannot follow out all these excuses at this time. We say to all, unite with the church where you are. If you have certificates of your good standing from the churches whence you have emigrated, present them at once; if you have not, send and get them; and when you are received into another church, be sure to have information sent to the churches, respectively, which have given them.

On this point, however, we beg leave to say, that the duty of conveying information, properly and rightfully, belongs to the church which receives these certificates, and not to the members presenting them. It is an act of courtesy, which every church owes to its sister churches, after receiving members by certificate, to give the earliest information of the fact; and the business should be devolved upon the Clerk. If left to the members who present the certificates, the probability is that it will never be attended to; the evil will go on just as it always has. But if it is made a part of the Clerk's official duties, as it ought to be, the evil may be in a great measure corrected. We move for a reform. Our motion is, that henceforth it be the duty of church clerks, where members have been received by certificates from other churches, to convey immediate information to the churches, respectively, from which such certificates have come. What church will second the motion?

T. B. B.

"I LOVE ALL CHRISTIANS ALIKE."

This remark is made, generally, by those who refuse to carry out their convictions of duty. For worldly considerations, they have left the religion of their fathers, and the principles for which they once earnestly contended, and now quiet their consciences by saying there is nothing in the name, if we are only Christians. There is not a more delusive sentiment than this. It paralyzes every aspiration for advancement in piety and truth. We can both see and feel its withering influence upon the church of God. It is simply saying, No matter what we embrace, if it only passes among men as Christianity. The spirit of Christianity is the same always and every where; whether it is exhibited by the Episcopalian, Presbyterian, Methodist, or Baptist, it is the spirit of love. It is a meek, teachable, and honest spirit. It leads both old and young, rich and poor, learned and unlearned, to say, "Lord, here am I, what wilt thou have me to do?" Men actuated by this spirit embrace the truth when it is understood, whatever sacrifice it may cost. This is the spirit of union. It binds Christian hearts together on earth and in heaven. We love this spirit wherever exhibited. We love the Christian spirit of "all Christians alike." But are we not to be sanctified through the truth? Are we not to worship God in truth as well as in spirit? By the truth we are set apart to a holy walk and a godly life. This distinguishes us from those who are in error and darkness. There can be no other difference in Christians except that which the truth makes. That some men have more truth than others, is evident. That some denominations embody more truth, and consequently come nearer to the primitive platform, than others, is a very plain matter. For us to say, then, that we love all Christians alike, amounts to this, that we either have no respect for obedience to God, or else we have no regard for truth. For, while there is this difference in the amount of truth embraced, some must be more worthy of our love than others. If we are true to ourselves, and true to God, we shall love that denomination most, that embodies the greatest amount of truth—that one which comes nearest to the primitive platform. We shall identify ourselves with it, and labor with all our powers to bring the multitude up to this standard.

ARA.

A LONE SABBATH-KEEPER.

A gentleman to whom we sent a parcel of Sabbath Tracts a year or two ago, acknowledges the receipt of them in a letter from which the following is taken:—

"For the money enclosed, after paying for the *Recorder*, you may send me some of your best publications; and that you may know how to make a proper selection, I will say, that I want them for circulation among my neighbors, who are Baptists, Presbyterians, Methodists, Seceders, and Unionists. Those Tracts you sent me last year I esteemed very highly, and circulated very extensively, having them read over and over a great many times. But I kept losing them one at a time, until they are all gone now, except the bound volume. As I have just moved to a new field, I should like to have a new supply, for myself and others. I believe that investigation is the first step towards reformation. I know it was so with me, and think it is universally so. I was brought up a Presbyterian, but have got a great way from that now. First, I gave up sprinkling, or circumcision. Then the Sabbath question came up, with its perplexities. I had been taught to keep the first day with all the strictness imaginable; but after moving to the West, and seeing the loose manner in which the people kept it, I was disgusted with their doings, and went to searching the Scriptures, supposing I should find some account of the change of the Sabbath from the seventh to the first day of the week. But, to my surprise, I found no account of a change, and no directions how to keep the first day. After giving the matter a thorough investigation, I came to the conclusion, that the seventh day was the Sabbath, and that in order to be consistent I must change my practice. I immediately began to keep the Sabbath, and then my trials began. There was not a Sabbath-keeper in the region, nor had I ever seen one in my life. I recollected of hearing my father say, when I was a small boy, that there were such people some where in the State of Pennsylvania; but knew not in what part, nor whether they were yet in existence. Besides, my family opposed the doctrine, and my neighbors said I would soon get tired of it; and so the time passed on about nine years before there appeared to be any change. Up to that time I neither saw nor read any thing but the Bible on that side of the question; but on the other side every first-day argument was sent to me, and I read them with all care, but they only served to make me stronger, instead of staggering me. Since then the aspect of things has materially changed. Your paper and those Tracts you sent me, have been of great service to me. I wish you to continue the paper, and send me as many Tracts as you can afford to for the money, and I will do the best I can with them. May the Lord give you a great deal of wisdom, and may you do a great deal of good in turning men from darkness to light."

FUNERAL OF A RICH MAN.

SHANGHAE, China, Jan. 20, 1854.

I attended a religious meeting, outside the north gate. Soon after leaving home, found myself joining a singular procession, moving in the same direction. It proved to be a funeral, that of a rich man. The hearse, which was very large, was of a bright crimson, and was supported on the shoulders of sixteen bearers, each in his holiday dress, with mandarin cap, and crimson tassel. Festoons of blue, yellow, and green paper, and silk, covered the crimson top of the hearse, and hung over the sides, the curtains of which were thrown up, and revealed the crimson coffin within, also richly ornamented. The mourners were in the plainest of sedans, which were also covered with mourning drapery, that is to say, having course white muslin wrapped about the top, like a turban, and tied in a knot at the left side.

We were obliged to float along with the crowd, for my coolies, attempting to pass the procession, which was frequently stopping to make offerings and lamentations, had become entangled in the throng, as much to *their* amusement, as to *our* annoyance. Seeing me along side the chief mourners, and close to the hearse, excited no little mirth, as one after another looked roguishly in at the sedan windows or door, and inquired why I was among the mourners? Some asked if such were the customs of my country? Others, if foreigners were pleased with such ceremonies? At length we contrived to leave them, as they turned down another street, while we, by keeping on, took a more circuitous route, for the sake of a more quiet one, to the north gate, at which, however, we arrived first, and found the street leading through it lined on either side with priests, in crimson gowns, having broad phylactories, and richly embroidered backs, and frontlets. These moved slowly on, to join a still larger number, who were stationed without the gate, similarly attired, two of their number supporting an elevated tablet, in the middle of the street, a significant token of honor to the merit of the deceased, whose corpse they were patiently expecting. Others carried smaller tablets, (each having some tributary characters inscribed thereon;) others again had banners; some bore ornamental umbrellas, such as are always carried in processions, with flat radii, and deep crimson frills; and some bore high, waving shades, which screened nothing; while a goodly number carried musical instruments, which gave forth such strains as only a Chinese band can utter. Then came the basket bearers, with their offerings of rice and gilt paper, dispensing them at intervals through all the journey.

The hearse coming up, the procession moved on, which had by this time become increased to a great multitude, completely blockading the narrow streets, until they passed without the suburbs of the city. Other mourning sedans had also joined the train, each accompanied by a servant or footman, in mourning, and all, except the three which were in company when we first joined them, had, also, a waiting-woman (*too-mah*) on foot, dressed, also, in white. The wife, whose place was next the hearse, kept a constant audible wailing, beseeching her departed lord to return to his desolate home, his disconsolate wife, and bereaved children. These lamentations were joined in by the other mourners, diminishing in intensity, however, as their distance from the corpse increased, until it was lost in silence. The crowd gradually dispersed as the procession passed into the open country, until mourners, pall-bearers, and priests, constituted nearly the whole of the procession. This was the "pomp of woe," in which, however, were retained the simple elements of all funeral rites peculiarly Chinese; for even the common people are carried to their burial with torches, and offerings, as of rice, which is scattered here and there, and gilt paper, which is burnt at intervals along the way, particularly in turning a corner, or crossing a bridge, (where the water spirits are to be propitiated;) the coffin resting upon the ground while the offering is consumed, and then carried forward, accompanied by its two or three female mourners, with no other ostentation, except the clamorous grief with which they follow their dead to his last resting place.

L. M. C.

SUNDAY IN ENGLAND.

In our religious exchanges, we find frequent allusions to the movements in England unfavorable to the "sanctity" of Sunday. Most of them treat the subject as though Sunday were really the Sabbath of the fourth commandment, and its observance was thereby rendered obligatory. Of course they denounce the attempt to open places of amusement on Sunday, and prophesy all sorts of evil results. The prospect is, that things will come to such a pass as to set the people to thinking upon the authority by which they attempt to sustain the Sunday observance. Here is an article on the subject from the Philadelphia *Christian Observer*:—

For some years past, in Britain, the most strenuous efforts have been made to sweep away our Sabbath land-marks; and never was the tide of opposition to this divine institution so powerful, as at this moment. Thousands of petitions having, during the past year, been presented to our Legislature, praying for the closing of beer and spirit-shops on the Lord's day, a Parliamentary committee was appointed to inquire into the subject; and their report has just been made public. With astonishment, indignation, and sorrow, we lament to say, the recommendations of this Report are in conflict with our Sabbath, and therefore with the Lord of the Sabbath. If this Report had been dictated, word for word, by the Crystal Palace Company, it could not be more clearly stamped with a partial and one-sided character, than it is. For instance, it recommends that with the exception of one hour in the morning, and of three in the evening, public-houses shall be closed upon the Sabbath day; and yet, in the next paragraph, goes on to recommend the opening of the Crystal Palace, after two o'clock in the afternoon, authorizing, on a gigantic scale, that very sale of intoxicating liquors in the one case, (for in the *present* Palace these things are sold,) which it forbids in the other. By the alteration of the Company's charter, all the ingredients of godless revelry are provided within the walls of the Palace, upon a scale that only adds new fascinations to profane riot and the temptations of the drunkard.

The signs of the times are ominous, when on the most flimsy pretense, a Parliamentary Committee can sweep away the barriers of our English Sabbath, and assimilate its observance in this country to the Continental pattern. The law of God, setting apart one day in seven for himself—the great interests of men's souls, requiring a day of holy rest, to make themselves acquainted with God, and be at peace—the solemn convictions of Christian men outraged by what must ever seem to them a national sin—the legal boundaries by which for centuries the sanctity of the Sabbath has been guarded in this country, are all to be disregarded, in a specious but unsound sentimentalism, that swamps, in loose generalities, all the distinctive features of the Christian faith.

SECRET SOCIETIES.

TO MY LAY BROTHER:—

Having read your rejoinder of Aug. 31, and finding that you have eschewed the *points* in my argument on "Secret Societies," choosing, for reasons doubtless well known to yourself, to *declaim* rather than to *argue* the question, I have only to say, that I have neither time nor inclination for such an entertainment, and therefore cannot respond. Should you at any time see fit to attempt a reply to my argument, it is before you; and should you succeed in overthrowing the positions taken, the palm will be yours.

In regard to "the venerable Dr. Lyman Beecher," perhaps I have intelligence later than yourself. The Rev. Joel Wakeman, of Almond, has a letter from the Doctor, which I have read, in which he asserts to the effect, that by being deceived he was induced to join the Sons of Temperance, *whom he soon left, and has never returned to them.* If his testimony is good for any thing, please set it down as so much against you.

N. V. H.

THE CENTRAL ASSOCIATION.—The churches of the Central Association, not having forwarded the amounts of apportionment to the treasury, are respectfully requested to do so, as there are demands on the treasury unsatisfied. Those, if any, who *decline*, will be so kind as to inform us of their purpose.

J. MAXSON, Treasurer.

DERUYTER, August 28th, 1854.

PUBLICATIONS FOR NEBRASKA.—The Directors of the American Reform Tract and Book Society, whose head-quarters are in Cincinnati, have issued an appeal for aid to scatter over Kansas and Nebraska, by special agents and colporteurs, such publications as shall help to create and sustain a public sentiment in favor of freedom. They say:—

"We wish to send at once the Corresponding Secretary of our Society to visit and examine these new Territories, and it is desirable that he should take with him one or more, who shall remain and act as agents and colporteurs, distributing our publications, and collecting useful information in regard to the country, its resources and prospects, by which our future efforts may be guided. We need funds for the publication of our tracts and books, and for sending them and these agents and laborers at once into this important field. Emigrants are pouring in, and what is done must be done quickly. May we not ask from you a special donation to meet this exigency, and for the common cause of freedom? If we can be promptly supplied with means, we will fill these territories with men and publications that will speak for God and humanity. Should you think proper to aid us, please inclose your donation to T. B. Mason, Treasurer, No. 180 Walnut street, Cincinnati."

STATISTICS OF DOCTORS OF DIVINITY.—A correspondent of the Cincinnati *Christian Herald*, New School Presbyterian paper, furnishes the following as the "D.D. statistics in our Church:"—

"Since D.D.s may be regarded as exerting quite an influence in the Church, especially in maintaining a 'masterly inactivity' on the slavery question, as a matter of curiosity, if not of interest, it may be well to know their number, whereabouts, and occupation. According to the minutes of our last General Assembly, of the 1562 ministers in our connection, *eighty-eight are D.D.s*, located as follows: In the State of New York, forty; Pennsylvania, seven; New Jersey, four; Massachusetts, four; New Hampshire, one; Connecticut, one; Ohio, eight; Indiana, one; Illinois, three; Michigan, two; Wisconsin, two; District of Columbia, one; Maryland, one; Virginia, three; Kentucky, one; Tennessee, six; Missouri, one; Alabama, one; and Mississippi, one. Forty-two are pastors, eight stated supplies, six professors in theological seminaries, five presidents of colleges, four professors in colleges, two teachers, four secretaries, one editor, and sixteen without charge."

MINISTERIAL DILIGENCE AND FAITHFULNESS.—An exchange says that Rev. Dr. Tucker, rector of St. George's church in Bermuda, buried upwards of three hundred victims of yellow fever during the months of September and October last year. He administered to the greatest portion of these persons such consolations of religion as the appalling brevity and violence of their illness permitted; he frequently performed the funeral service during the hottest hours of the day, over bodies for which, from want of time and rapidity of decomposition, it was impossible to procure coffins; he was detained in a pestiferous burial-ground sometimes till after midnight, and had for many successive days to resume his mournful task at sunrise; during all this period he continued to perform divine service, and to preach four times every Sunday, besides attending to the soldiers in the hospital, and the prison during the week.

"SABBATH DESECRATION."—The increase of what is called "Sabbath Desecration"—meaning labor and pleasure-seeking on Sunday—is very manifest in the vicinity of New York. Most of the city railroads run on Sunday, and find that the most profitable day of the week. The railroads running from New York to distant cities, nearly all have their Sunday trains; while excursion steamboats are so plenty as scarcely to attract attention. If things go on for the coming three years as they have gone for the past three, it will then be difficult to distinguish between Sundays and "week days."

A PRACTICAL QUESTION.—One of the local agents of the *Recorder* requests us to discontinue sending the paper to a subscriber who owes $6 50, and adds:—

"He has never paid any thing for the paper, and probably never will. Himself and wife have been members of the Seventh-day Baptist denomination some thirty years, during which time they probably never paid one dollar for a religious paper, though they have in that time used tobacco enough to cost one hundred dollars. Can such professors be considered wholesome Christians? And have the churches to which they belong no duty to do in relation to them?"

THE RUSSIAN PRIESTHOOD.—The following fact, says the Paris *Pays*, will give an idea of the state of degradation into which the lower class of the Muscovite clergy has fallen:—

"A Russian gentleman relates that when passing one day through a village, he saw a number of peasants assembled, and stopped to inquire the cause. 'Oh,' replied one of them, 'it is only the priest whom we are going to lock up in the barn.' 'And why do you do that?' 'Because it is Saturday. The priest is a drunkard, and we always lock him up on Saturday, in order that he may be in a condition to perform divine service on Sunday. On the Monday he is free to drink as he likes for the other days of the week.'"

JESUITISM IN AMERICA.—A late number of the *Edinburg Review*, in an article on European emigration, says:—

"We hear often of the power of Jesuitism in America, and of the spread of Catholicism in the valley of the Mississippi; but the facts in the census indicate no such thing. There are in the Union 36,011 churches of all denominations, affording accommodations for 13,848,896 persons, of which only 1,112 are Roman Catholic, with accommodations for 620,950. In the lake country and valley of the Mississippi, out of 13,661 churches, accommodating 4,891,002 persons, only 551 are Roman Catholic, accommodating 276,291."

TOUCHING INCIDENT.—The following touching incident is related as having occurred at the last Commencement of Rochester University:—

"One member of the graduating class, Mr. R. C. Fenn, of Rochester, is totally blind. When his theme was announced, President Anderson remarked to the audience, that Mr. Fenn, at the close of his junior year, performing some chemical experiments in private, lost his eyesight entirely, from the effects of an explosion; but that from unflagging energy, and by the aid of a devoted brother, and attached classmates, he had been able to complete the studies of the course with honor to himself, and satisfaction to his teachers. He was then led forward by his brother, while there was scarcely a tearless eye in all that vast assemblage of near two thousand souls. His subject was, 'The Lost Senses,' the object of which was to demonstrate the proposition that blindness is preferable to deafness. It was discussed in an agreeable, able and earnest manner, after which Mr. Fenn retired amid the prolonged applause of the audience."

ANARCHY IN CHINA.—The Boston *Traveler* states that private letters and circulars received in that city from China, give accounts of a sad state of affairs in that country, the result of the civil war which has been so long raging there. The old government having its hands fully occupied in repelling the attacks of the insurgents in the vicinity of Pekin, bands of armed robbers are devastating the country, particularly the Central Provinces. One letter says that forty-eight tea companies had returned to Shanghae from the Central Provinces, having been robbed of all their means of purchase. The great commercial mart of Honan has been burnt by an armed mob. Ningehow, the district from whence the Moning teas are brought, is stated to be in possession of an armed rabble, who have beheaded the Mandarins and taken possession of the government. In some Provinces the Mandarins have forbidden teas to be grown, for fear that it will attract the attention of the insurgents. As to the insurgents at Pekin, it is difficult to ascertain correctly their condition. It is thought that they are still victorious; indeed, a rumor prevailed at Shanghae that Pekin was taken, but that is believed to be premature.

"JOHN BROWN'S TRACT."—The history of this locality, well known to sportsmen, is given by a writer in *Putnam's Magazine* as follows:—

"More than fifty years ago, John Brown, Governor of Rhode Island, bought 200,000 acres of wild land in Herkimer and Hamilton Counties, New York, near the waters of Moose River, for the purpose of carrying on the iron business. A colony was sent on, 3,000 acres of land cleared up, veins of iron ore found and opened, and a forge built. But the mines were not so productive as expected, the soil cold, much money was expended without a return or a prospect of one. The overseer sent out by Governor Brown killed himself, the others became discouraged, and the place was abandoned. At present one family by the name of Arnold live there, occupying some 2,000 acres, run over with foot shrubs and wild grasses."

RELIGIOUS INTELLIGENCE.

An interesting and suggestive package was received some time ago, at the rooms of the American Bible Society, being the charred and mutilated remains of a number of Bibles, bearing the Society's imprint, which had been burned by a party of Irish Catholics in the highway in the neighborhood of Cumminsville, N. Y. The innocent books were distributed to such Catholic families as would receive them, by a colporteur; some sinister influence appears to have changed the feelings of the recipients afterward, and they were publicly burned in the highway.

Williams College, Mass., recently celebrated its sixtieth annual festival. It has educated 1500 men in its day, of whom near 1100 remain on earth, and of these 320 are ministers, 254 lawyers, and 76 doctors. The class that graduated this year is the largest that ever went forth with its appendage of A. B. to their names—62 in number; and the classes that tread in its rear, number respectively 57, 47, and 62 pupils. The new freshman class promises to be 60 to 70, and there will be additions to the other classes.

A new Chinese chapel has been dedicated in San Francisco, the first ceremony of the kind that ever took place in the United States. The cost of this building and lot was $25,000; and besides the audience room, there are accommodations for the pastor's family, for a school, study, etc. The interior walls all around are ornamented with tablets, covered with Chinese hieroglyphics, embodying appropriate texts of Scripture.

The Executive Committee of the American Home Missionary Society state in the last number of "*The Home Missionary*," that it is their desire and purpose to occupy Kansas and Nebraska as missionary fields, as soon as possible, and arrangements are being made by the Society with that end in view.

Oregon City, says the *Western Recorder*, has enjoyed its first revival the present winter, as the fruit of which a number of persons have joined the different churches. There have been added to the Baptist Churches in Oregon about one hundred and twenty-five by baptism, and a number more by letter.

The British and Foreign Bible Society have, at a great expense, translated and printed the Bible in the language of the Mongol Tartars; but the Emperor of Russia, who is the master of the Mongols, has forbidden its circulation, and the whole edition remains useless on the Society's shelves in London.

The North-American Fire Insurance Company acknowledge the receipt of two thousand three hundred and thirteen dollars, through "Father Larkin," from some unknown person. This must be put down as a case of conscience.

An institution called the Clergy College has been founded in England, the object of which is to aid old and infirm preachers. The sum of near $15,000 has been subscribed toward its endowment.

One of the results of the large influx of Swedes into this country, is the erection of Swedish churches at Chicago and St. Paul's, Minnesota.

General Intelligence.

European News.

Of the European news received since our last, we make the following summary.

Bomarsund surrendered to the allies on the 16th Aug.; two thousand Russians were taken prisoners, and the French lost 160 men.

It was reported that the inhabitants of Aland had risen against the Russians, and that Russian sway on the islands had ceased.

The aspect of affairs on the Danube remained without change. As yet nothing has been done in the Black Sea. The expedition against the Crimea was still in progress, but embarkation was deferred on account of the cholera.

From Asia, we learn that an offensive and defensive alliance had been concluded between the Porte and Shamyl. The Porte agreed to recognize the independence of Circassia, and Shamyl in return offered the assistance of 50,000 mountaineers to act in concert with the Turkish forces. The Emperor of Morocco announced his intention to present the Sultan with thirty millions of piasters and 12,000 troops annually while the war lasts.

From Spain, we learn that the Cortes are convoked for the 8th of November, on the basis of the electoral law of 1837—a Constituent Assembly, meeting in one Chamber, with one Deputy for every 35,000 inhabitants. Riots had occurred at Tortoso and Barcelona, and a few fights had taken place between the troops and the people. Otherwise the country appears quiet.

From France, we learn that the fete of St. Napoleon had passed off quietly, but the Emperor was absent in consequence of a rumor that a conspiracy against him had been discovered.

The cholera was slightly subsiding at Genoa, but there were still seventy deaths daily; at Naples it was very violent.

Accounts of the potato disease in the north of Ireland, are more discouraging. It seems to be spreading, though not rapidly.

The London *Daily News* contains a remarkable special correspondence, stating that the British troops in camp at Monastir, near Devna, are decimated by malignant cholera, totally destitute of medicine, famishing for lack of food, and are discontented and almost disorganized. The *Times* correspondent partly confirms the statement.

Tornado at Louisville, Ky.

The Louisville (Ky.) *Democrat* says that 12 o'clock, August 27, 1854, will long be remembered as a terrible epoch in the history of Louisville. With that hour came death to many persons assembled in the house of God, engaged in worship, and destruction to a vast amount of property in the city. One of the most violent storms which has ever swept over this section of Kentucky left its dreadful footprints in the city on that day. After a severe drouth of many weeks duration, the sky, early in the day, indicated rain. The clouds gathered, and we had what persons, not within reach of the tornado accompanying it, would call a thunder shower. But within reach of its sweeping breath was the Third Presbyterian Church, corner of Eleventh and Walnut streets, which it completely wrecked—blowing from a westerly direction, the entire building fell in, roofs, rafters, brick walls and all, crushing some twenty of the congregation to instant death, and wounding seriously, perhaps mortally, some ten or twelve others. The scene is described as most heart-rending. Soon a large crowd assembled, and began their search for the victims. A mother and her three children were grouped in death; another presented a father, mother and babe—the father dead, and the mother mortally wounded, while their little child, placed beneath them, escaped unhurt, protected by the forms of its parents. In other instances some of the victims were found terribly bruised and maimed. The catastrophe has stricken consternation into the very heart of the city, and its people are appalled beyond belief.

The Louisville papers of August 29th, say that on the day following the catastrophe the city presented a solemn spectacle. Business was in a great degree suspended, and the bells were tolled for several hours in the middle of the day. The First Presbyterian Church, where the funeral services of most of the deceased were held, was densely crowded. The bodies of the dead were placed upon a platform under the tower, and the exercises were conducted by several clergymen.

At the opening of the exercises, Rev. Dr. Morrison, who officiated at the ill-fated church, remarked that on the day so disastrous to life, he was requested to preach, but it was not generally known that there would be divine service—hence the small number that were assembled. There were not more than eighty-five persons in the house at any time. During the sermon, which had been commenced at a later period than usual, a storm came up, and the main door of the basement room, where the meeting was being held, was blown open. An elder of the church immediately arose and closed it. Again the door was blown open, and again closed. A third time the violence of the wind blew the door open, notwithstanding the elder was pressing it at the time. Instantly the whole house was filled with particles of sand, and the speaker had his eyes filled with the fine dust. This caused some disturbance in the assembly, and most of the persons present rose to their feet, some jumping out of the windows near where they were sitting. Mr. Morrison said he had not time to recover from the effects of the gusts of wind that struck him with particular fury, before he heard a cracking sound overhead, and in a moment of time after the tempest blew open the door with violence, filling the room with sand, and he saw that the whole walls had fallen in. Immediately about the pulpit, in which he was standing, the plastering was not broken, and to his right several old ladies and others escaped unhurt. He expressed himself as being greatly shocked at the suddenness of the calamity; and when he fairly recovered from the blindness caused by the ascending dust, &c., a most terrible sight presented itself before him. He saw two men already dead—the head of another man, greatly mangled, just appearing among the rubbish—a lady clasping her child in the agonies of death, and a young lady with her body bent across one of the seats, and her face most horribly distorted. From different parts of the building he could hear the groans of the dying, and the stifled screams of the crushed.

Capt. Greenlow, of the steamer Memphis, which boat was badly damaged, thus describes the tornado: He was on the forecastle of his boat when the first blast of the hurricane struck her. He saw the block of houses of Tom Beatty crumble to the ground, and before he could utter a warning cry to those around, the storm was upon him. He clasped his arms around a stancheon to sustain himself. In an instant he heard a rushing sound over his head, and a noise that was like the crack of an immense wagon whip, and saw the greater portion of his cabin roof sailing over his head, and alighting in the river fifty to seventy-five yards ahead of him. A moment after, the ponderous hull of the boat received a tremendous blow, as it were, and was whisked from its moorings over to a reef of rocks in about the space of time required to draw breath.

Three Hundred Men bound for Kansas.

The Albany *Evening Journal* of Aug. 30th, says:—The second Kansas party from Massachusetts (with twenty-five from New York,) reached this city last night about eleven o'clock. They were three hundred strong! New-England, which has given millions of her sons and daughters to the great West, never sent out a more sturdy set of men, nor one having a more holy mission. They will place their mark upon the political, intellectual and social character of Kansas. Involuntary servitude can find no resting place where such men rule. And that they, and others like them, will rule Kansas, is becoming every day more and more apparent. An over-ruling Providence will frustrate the wicked designs of the Propagandists, and render them subservient to the cause of Liberty and Justice. It was very gratifying to witness the interest felt by a large number of our citizens on the arrival of these three hundred freemen. A meeting had been called early in the evening to make arrangements for their reception, and a large crowd remained together until 1½ o'clock to bid them welcome. The interview was deeply interesting and impressive. The *purpose* of their mission, and the gratifying enthusiasm with which they have entered upon it, could not fail to awaken emotions, which found expression in befitting congratulations. The meeting—held in the large parlor of the Delavan House—was continued until after midnight. We have seldom witnessed a more interesting reünion, or one better calculated to awaken the zeal of the patriot. There was real sublimity in the spectacle presented by these three hundred men, leaving their old New-England homes for the Far West, in order to rescue a vast territory from the sin and curse of Slavery. Never was there a more holy crusade, or one pregnant with more glorious results. All honor to the noble men who have given their hands and their hearts to the holy work.

Awful Fatality.—There has been a terrible visitation of the cholera in the family of Mr. Aaron Daniels, a respectable farmer, residing about three miles north of Ottawa, Ill., and east of Fox River. The first victim was Mrs. Minerva Daniels, aged 17, who died on Saturday evening; on Monday night, Jonathan Daniels, son, aged 20 years; Ruth Ann Daniels, aged 14 years; Judith Daniels, aged 11 years; Aaron Daniels, 4 years; and on Thursday morning, Mrs. Aaron Daniels, aged about 40 years. The family was widely connected, and among the visitors the following fell victims: On Monday evening, George Head, son of Thomas Head, aged 18; Louisa Parker, child of Mrs. Parker, daughter of Aaron Daniels; Mrs B. Flemings, sister of Mrs. A. Daniels; Alvah Channel, living with A. Daniels; Miss Kingsley, school teacher, who had been boarding in the family; and Mr. Garret Galvin, who had assisted in burying the family of Mr. Daniels. The disease spread into no other families.

Broken Banks.—The Bank Panic is over for the present. Thompson's Bank Note Reporter gives the following as the prices of the bills of the recently broken banks:—

Drovers' Bank, Ogdensburgh, N. Y., failed at 11 A. M, August 24	75c.
Bank of Milford, Delaware, failed at 11 A. M., August 24	25c.
Bank of Carthage, N. Y., failed Aug. 21	85c.
Erie and Kalamazoo R. R. Bank, Michigan, failed at 12 M., August 21	50c.
Bank of Washtenaw, Michigan, failed at 12 M., August 21	—
Farmers' & Merchants' Bank of Memphis, Tenn., failed at 12 M. Aug. 16	25c.
Adrian Insurance Co.	50c.

SUMMARY.

In Saratoga, N. Y., a short time ago, a boy 12 years of age, named Moor, was sent to the county jail for stealing. In jail he met a brother in confinement for crime; also a brother-in-law waiting for the Grand Jury to investigate a charge of perjury. A sister of Moor's (the wife of the one in jail for perjury) is in the county poor-house on the charge of being a prostitute and vagrant. Another one of the family was arrested two days after for malicious mischief. The father is a laboring man, somewhat given to indulgence in spirituous liquors.

The Providence *Post* says: "As the New York freight train on the Stonington Railroad was on the way to this city Wednesday morning, the connecting rod of the locomotive snapped and broke through into the boiler. The two firemen were seriously and it is feared fatally scalded. The engineer was stunned for a time by falling upon his head in attempting to jump from theengine. No other person was injured, and we do not learn of any damage to property."

Mr. George Henry Hull, of Wallingford, who was drowned in the Quinnipiac River on the 27th, in company with three others, went to the river to bathe, taking his horse with him. He undertook to swim his horse across the stream, but after reaching where the water was ten or twelve feet deep, his courage failed, and in attempting to turn the animal, he was thrown off. Being unable to swim, he sank almost immediately, and before assistance could reach him.

A sale of a free white woman was recently made at Freemansburg, Lehigh County, Pa. The parties have been residents of that place for some time, are natives of Germany, and the transaction consisted in a man disposing of his wife to another man for the sum of one dollar. The parties were represented as being of intemperate habits. Writings are said to have been signed by the trio—the wife, the new husband, and the old husband.

A dispatch dated Albany, Tuesday, Aug. 29, says: The Express train on the Central road, which reached this city at 7 o'clock this evening, ran over two ladies at Canastota, seven miles this side of Syracuse, instantly killing them. The ladies were just descending from the Mail train, going West, which was waiting for the Express train to pass; unfortunately, they got out on the wrong side of the cars, and were caught by the passing Express train, and horribly mangled. They were literally torn asunder, their limbs being rent from their bodies.

At Lexington, Ky., recently, a white boy, about twelve years of age, was observed lying in a wagon, which had stopped on the road about three miles from Lexington. It was thought he was asleep, but upon examination he was discovered to be dead. It appears, his father had promised him a severe whipping, and to avoid being punished he had taken strychnine. Dr. Bell, of Lexington, held a post mortem examination upon the body, and the verdict was in accordance with the facts.

By the way of New Orleans, we have late and important advices from the Rio Grande. The revolution in Tamaulipas was spreading to an alarming extent, and it is reported that there is no doubt of the ultimate success of the insurgents. Col. Cruz and army were rapidly advancing upon Matamoras, and Gen. Caravajal had again entered the field, and was marching his army against the Government forces. The occupation of Tampico and Matamoras would be hotly contested by the revolutionists.

The Troy *Budget* says:—On Tuesday morning, as a double wagon containing a number of persons from the nail factory, who were on a blackberry excursion, was crossing the bridge over the Poestenkill, on the Poestenkill and Berlin Plankroad, one side of the bridge gave way, precipitating some thirty in number, wagon, horses, &c., into the river, a fall of some ten feet. Nearly all the party were more or less injured, but none seriously, except James Peabody, who had both his thighs broken.

An Ohio Yankee has just shown us an improved "candle holder" which he has invented, which seems to be a good thing. Instead of a round tube, the candle is held by four spring wires of the size of knitting needles, approaching each other at the top, which adjusts their capacity to whatever is inserted between them, so that the largest candle is readily received, while the smallest is tightly held, and may be reversed and violently shaken without dropping the candle.

A great National Cattle Show is to be held under the auspices of the United States Agricultural Society, (of which Hon. Marshall P. Wilder is the President,) to take place at Springfield, Ohio, on the 25th of October, and continue three days. It will of course be one of the greatest exhibitions of the kind ever witnessed in this country. The large amount of $6,000, in the shape of premiums for the best cattle, &c., is offered, and the competitors will not be few.

A terrific tornado passed over the City of Louisville, Ky., at 12 o'clock on Sunday, Aug. 27th. The Third Presbyterian Church was blown down during service, causing the instant death of twenty of the congregation, and severely injuring ten or twenty others. About one hundred other buildings were unroofed and blown down. The total loss of property is estimated at $100,000. The same tornado passed over Jeffersonville, blowing down four houses.

The ship Antarctic, Capt. Stoufer, which arrived at New York last week from Liverpool, brought One Hundred and Eighty head of cattle, consisting of Durham bulls, cows, heifers and calves, Alderney cows, fine sheep and swine and one horse, for the Kentucky Stock Importing Company. The ship was forty-one days on the passage, and yet of this large and valuable cargo but three sheep were lost.

The New York Central Railroad have made the purchase of one of the five wires of the Morse Telegraph between Albany and Buffalo, for their own use. Offices are to be erected at stations along the line of the road where there are none at present. Workmen for the past month have been engaged between Utica and Buffalo, in repairing and erecting offices, &c.

Mr. Lorance, a worthy citizen near Cornersville, Giles Co., Tenn., was murdered recently by one of his negro fellows. Mr. L. ordered the negro to mow at a certain place, which he refused to do. Mr. L. struck him with a fork he had in his hand, when the negro made a stroke at him with the scythe, severing his body nearly in two.

The greater part of Central America has suffered severely, for the past two years, from the devastations of a species of flying grasshopper called "chapulin" or "langosta." These traverse the country in columns of incomputable millions, filling the air like flakes of snow in a storm in winter. Wherever they alight they devour every green thing.

The suit instituted before Esq. Wooley against the Jeffersonville Railroad, claiming damages because the company refused to carry as a passenger a colored person who could not prove his freedom, has been decided against the road. An appeal will be taken to the Circuit Court, and, if necessary, to the supreme tribunal of Indiana.

The excitement in New York in relation to Western money has all blown over. Indiana is now bought at 3, and Wisconsin and Illinois at 2 per cent. discount. There have been no recent failures. The Brokers report an unusually large quantity of counterfeit and altered notes in circulation.

At the late commencement of Harvard University, a son of Robert C. Winthrop inserted into his spoken address a passage reflecting upon certain officers of the College, which passage he had been ordered to omit. He was in consequence deprived of his degrees.

The Grand Trunk (Canada) Railroad Company will open an additional section of 100 miles of their line to Quebec on the 2d of October. Arrangements, it is stated, are being made to run an express train between Boston and Quebec, viâ Portland, in 16 hours.

Mrs. Saran P. wife of the Rev. W. F. Williams, formerly of Utica, lately missionary in Syria, died on the 1st of July, near Mosul. She had left her home in the town, for a journey to recruit her health, which had long been failing, but died at two days' distance from the town.

At Newport, R. I., a few days since, a little boy found in the water, close by a wharf, a needle book, containing what appeared to be a few useless papers. They were dried, and proved to be notes to the value of nearly $400, drawn in favor of a lady. Subsequent inquiry proved that the notes belonged to a lady in Lowell, and they were her only property.

On the 25th of August, a storm of wind, hail, and rain, passed over Genesee, Allegany Co., N. Y., doing considerable damage. The grist-mill of J. & D. Edwards was split from top to bottom by a falling tree. The roof, two floors, and seven beams were cut through, and the sides of the building were left standing. Two persons in the mill escaped uninjured.

A patent has been granted by the French Government for making sugar from pumpkins; it is said the quanity produced will be at least as great as could be obtained from an equal weight of beetroot. This invention comes at a time when it has been found that beetroot can be more profitably employed in making brandy than sugar.

The Woburn *Journal* says that there is a poor debtor in the Cambridge jail, who has been there since last April, from inability to pay a claim of $23, made against him by a lawyer of Boston. The debtor has a wife and four children in destitute circumstances.

The Mexican papers record a number of deaths in Chihuahua and other places from actual starvation. The crops in nearly half of the State were a complete failure, and unless speedy relief was procured, the loss of life from famine would be frightful.

Our countrymen may prepare to witness shortly an immense increase in European emigration to our shores, growing out of the legislation of Congress at the last session, whereby so many new public land directed to be opened in all quarters of the great West.

A correspondent of the Gardener's *Chronicle* says:—"Every one finds great difficulty in keeping garden seats more than a year without constant painting. Gutta percha thinly laid on, and turned round the sides and nailed, will last forever; it looks garden like, and costs no more than one painting."

The Rev. Dr. Converse, editor of the *Christian Observer*, Philadelphia, whose office was recently burnt with all his library, letters, and a part of his mail books, calls upon postmasters, and clergymen in particular, to assist him in restoring his mail books.

Quite a panic prevailed in Savannah at last accounts, in consequence of the increase of the yellow fever, and the citizens were rapidly leaving. At Charleston, also, great uneasiness was manifested, and preparations were making to open a yellow fever hospital, should the disease become epidemic.

The Superintendent of the Michigan Central Railroad Co. announces that no through freight trains will be run hereafter on that road on Sunday, and no other train excepting an evening passenger train from Detroit to Chicago.

The Oneida *Sachem* states that Lyman L. Kingham, County Treasurer of Madison County, has made an assignment of all his property for the benefit of his creditors. It is said his liabilities exceed his means to pay in the sum of $50,000.

All the parties of Government engineers recently engaged in running experimental Washington, busily engaged [illegible] Pacific railroad, are now in their several reports, which are to be ready for promulgation by the meeting of Congress.

Hon. John Wentworth, in a letter to his paper from Washington, says "there is no earthly doubt but the Homestead bill was beaten because it would induce free laborers to go to Kansas and compete with slave labor."

At the auction sale of tickets for Grisi and Mario's first concert in New York, the minimum price was fixed at $5 and $3. The first ticket sold at a premium of $250; the second $20; and so downward.

Several small riots were got up in New York on Sunday last, between the Irish Catholics and the "Wide Awakes." In one case pistols were fired, and two or three persons seriously injured.

A young woman shot her little brother at Indianapolis on the 11th inst., by foolishly snapping a pistol at him that she did not know was loaded. The ball entered his mouth, and mangled his head in a dreadful manner.

Mrs. Doctor Clark, of Boston, who graduated about two years ago, has sailed for Paris to avail herself of the medical and surgical advantages which so preëminently distinguish that city.

The Directors of the Syracuse and Binghamton Railroad have fixed upon the 20th of September next for the formal opening of their road. A grand celebration is contemplated.

It is said that notwithstanding the recent draft of seven millions to meet the payment on account of the Gadsden treaty, there is now in the treasury of the United States about twenty-five million dollars, subject to draft.

The British government have been trying experiments with cannon balls, made of antimony. They break wherever they strike, and hence are more destructive to human life.

Rev. Dr. Spring lately preached on the occasion of the forty-fifth anniversary of his settlement as pastor of the Brick Presbyterian Church, New York.

On and after the 1st of October, the circulation of foreign bank notes below $10 will be prohibited in the State of Ohio by a law passed last winter.

The coal product of the world in 1853, is estimated at 75,000,000 tuns, of which amount 40,000,000 were produced by Great Britain, and 9,000,000 by the United States.

The cholera broke out among the Irish at Fall River, Mass., on Saturday, Aug. 26, and up to the 28th nineteen deaths occurred.

Nineteen thousand six hundred and eighteen emigrants arrived at New York during the first twelve days of August.

Mr. B. F. Demeritt arrived at Eastport, Maine, on Friday evening, in just *forty-nine hours* (including all stops) from Chicago, Ill.

Nine thousand dollars were obtained from the Chemical Bank in New York, last week, on a forged check.

Baron James Rothschild has contributed a further sum of 50,000 francs ($10,000) to the support of his co-religionists in Jerusalem.

New York Markets—September 4, 1854.

Ashes—Pearls $6 00; Pots 7 00.

Flour and Meal—Flour 9 75 for Canadian, 9 62 a 10 25 for common to good State, 10 62 a 11 25 for extra Genesee. Rye Flour 6 00 a 6 75 for fine, 8 00 a 8 62 for superfine. Corn Meal, 4 25 for State, 4 37 for Jersey.

Grain—Wheat 1 95 a 2 04 for Southern white, 2 10 a 2 20 for white Genesee. Rye 1 20. Barley 90 a 95c. Oats 47 a 49c. for Jersey, 52 a 53c. for Western. Corn 85 a 86c. for Western mixed, 87 a 88c. for yellow. White Beans 1 00 a 1 25.

Provisions—Pork 11 50 for prime, 14 12 for mess. Beef 12 00 a 13 00 for country mess. Lard 11½c. Butter 14 a 17½c. for Ohio, 18 a 21c. for fair to prime. Cheese 9 a 10½c.

Hay—70 a 75c. per 100 lbs. for shipping.

Lumber—15 50 a 16 00.

Potatoes—A marked decline within the past week. Mercers and Pinkeyes 3 25 a 3 62 per bbl. Sweets 3 00 a 3 25.

Seeds—Clover 11½ a 12c. Timothy 2 62 a 3 00 per bushel for mowed, 3 12 a 3 50 for reaped.

Tallow—12½c. for Butchers' Association.

Wool—28 a 30c. for native, 42 a 45c. for American Saxony Fleece.

MARRIED,

In North Brookfield, N. Y., August 21st, by Eld. Joshua Clarke, Mr. Henry F. Funck, of Leroy, N. Y., to Miss Tirzah M. Read, of the former place.

By the same, in Sangerfield, N. Y., Aug. 29th, Mr. Ethan A. Babcock, of Brookfield, N. Y., to Miss Olive Brusie, of the above place.

DIED,

In Hampton, Ct., on the 1st of August, 1854, after a long and painful illness, Mrs. Sarah Lewis, wife of Enoch B. Lewis, Esq., and daughter of the late Col. J. M. Knowles, of Westerly, R. I., aged 48 years. She embraced religion in youth, and soon commenced the observation of the Sabbath of the fourth commandment. She connected herself with the 1st Seventh-day Baptist Church of Hopkinton, R. I., where for more than thirty years she was a bright ornament to the cause of Christ, and only shone the more brilliantly as death approached. She was among those who first led in the work of Sabbath-School instruction, and doubtless many will rise up in the judgment and call her blessed, for her work of love in this department. "The memory of the just is blessed." c. m. l.

In Stephentown, N. Y., Mercia Content Maxson, daughter of Joshua B. Maxson, in the twenty-fourth year of her age. The subject of this notice was one whose amiable qualities endeared her to all who knew her. Although she had not made a public profession of her faith in Christ, by baptism, yet she has left an evidence, in her daily life, in her patience and resignation, that gives us strong consolation in her death. Her last words were, "I give my Saviour all I have."

In Alfred, August 31st, Abby Jane Sisson, daughter of George and Huldah Sisson, in the 23d year of her age. Her sickness was dysentery, accompanied with canker. Just before death had done its work, with great composure she divided her clothing and other valuables to her brothers and sisters, gave all her parting address, and offered up her last prayer to God for them. This done, she fell asleep. n. v. h.

In Westerly, R. I., Aug. 23d, Leonce Edwin, son of Edwin G. and Mary A. G. Champlin, aged 11 months and 14 days.

Of cholera, at Indianapolis, Miss Frances M. Osgood, eldest daughter of Rev. S. M. Osgood, late missionary to Burmah.

RECEIPTS.

FOR THE SABBATH RECORDER:

I C Chapman, Ashaway, R I	$2 00	to vol. 11	No. 52
A G Boss, Mystic Bridge, Ct.	2 00	11	52
Aaron Coon, Petersburg	2 00	11	52
Russell Stillman "	3 00	4	13
David Maxson, Adams	2 00	11	52
Mrs Warren, Alfred Center	2 00	10	52
Mary Collins "	1 50	11	7
W C Whitford, New York	2 00	11	52

FOR SEVENTH-DAY BAPTIST MEMORIAL:

David Maxson, Adams	$1 00
W C Whitford, New York	1 00

WILLIAM M. ROGERS, Treasurer.

☞ This number of the *Recorder* completes the first quarter of the current volume. Payments for the volume are now due, and would be very acceptable. We hope it is only necessary to mention the subject to secure attention to it.

Our Anniversaries.

THE Eleventh Anniversary of the Seventh-day Baptist Missionary Society will be held at Little Genesee, Allegany Co., N. Y., on the fifth day of the week before the third Sabbath in September, (14th day of the month.) The Anniversaries of the American Sabbath Tract Society and the Seventh-day Baptist Publishing Society will be held at the same place on the following day.

☞ The Educational Committee appointed by the General Conference will hold a session at Little Genesee during the Anniversary season. The Committee consists of T. B. Stillman, W. B. Maxson, W. C. Kenyon, J. R. Irish, L. Crandall G. B. Utter, J. M. Allen, and O. P. ull.

☞ The next meeting of the Executive Board of the Seventh-day Baptist Western Association will be held at Little Genesee during the season of Anniversaries.

Board Meetings.

The Executive Boards of our Missionary, Tract, and Publishing Societies will hold meetings at Plainfield, N. J., on First-day, Sept. 10th.

North-Western Association.

THE Eighth Anniversary of the Seventh-day Baptist North-Western Association will be held with the Milton Church, commencing on the fourth day of the week before the fourth Sabbath in September, 1854, at 10 o'clock A. M. Introductory discourse by Eld. O. P. Hull. V. Hull, Cor. Sec.

Milton Academy.

A. C. Spicer, Principal, and Professor of Mathematics and Natural Sciences.
Albert Whitford, Professor of the Greek and Latin Languages and Literature.
Mrs. S. M. Spicer, Preceptress, and Teacher of Painting, Penciling, French, German, and Italian.

First Term for 1854 commences Wednesday, Sept. 6th—closes Wednesday, December 6th.

A commodious academic edifice, constructed in the best style, is in progress of erection by the Trustees. An ample apparatus for a complete illustrative course of experiments in the departments of Philosophy, Chemistry, and other natural sciences, of a much improved style and quality, has just been purchased at Boston. Other teachers will be employed, and no pains will be spared to advance the interests of pupils and patrons. Absolute thoroughness of discipline is our aim.

Aug. 10, 1854.

New Market Seminary.

THE Academic Year of this Institution, for 1854 and '55, is divided into three terms, each fourteen weeks long.

The Fall Term commences Sept. 5, and closes Dec. 8.
Winter " " Dec. 13, " " Mar. 20.
Spring " " Mar. 28, " " July 4.

The Department of Instruction is in the care of Mrs. R. H. Whitford, Preceptress, who will be assisted by competent teachers, as occasion may require.

Instruction.—The Common English Branches, Reading, Writing, Geography, Arithmetic, and Grammar, will be taught each term. The Higher English Branches taught as follows:—In the Fall Term, Chemistry, Geometry, and Book-Keeping; in the Winter, Natural Philosophy, Physiology, and Astronomy; in the Spring, Botany, Geology, and Moral Science. Algebra, Etymology, and Rhetoric taught all terms in the year. Classes in French and the Extras will be taught whenever desired.

Expenses.—*Tuition, per term*—for Common English Branches, $3 50; for Etymology and Book-Keeping, $4 50; for Higher English Branches and French, $5 00; for Incidentals, $ 25.

Extras, per term—Penciling, $1 00; Crayoning, $2 00; Embroidery, $3 00; Oil Painting $7 00; Piano Music, $10 00.

Regulations.—No student is admitted for less than half a term. No deduction in price of tuition made for absence, except in cases of sickness. Nothing sectarian is taught or countenanced in the school.

A new and commodious building will be ready for the shcool at the opening of the Fall Term.

David Dunn, Pres. of Board of Trus.
Isaac H. Dunn, Sec'y.
New Market, N. J., July 20, 1854.

Mountain Glen Water Cure and Summer Retreat,

For the Reception of Patients and Boarders,

PLAINFIELD, N. J.

THE location of this establishment is peculiarly inviting, being on the mountain side, where fresh breezes always abound, and musquetoes never come. The buildings are nearly new; the water is soft and pure; the air is dry and healthful; and the scenery is romantic and beautiful. In every direction there are pleasant walks or drives. The celebrated Washington Rock is only two miles distant.

No pains will be spared to make the Glen a "home" to such as seek its quiet retreat for recreation or the restoration of health.

A. UTTER, M. D.,
Physician and Proprietor.

Central Railroad Company of New Jersey.

THE cars will run as follows until further notice, commmencing Monday, April 10, 1854:—

Leave New York at 8 A M, 12 M., and 4 and 5½ P.M.

Leave Plainfield for New York at 6.55 and 8.30 A.M., 12.20 and 5.10 P.M, passenger, and 7.30 P.M., freight.

Leave Plainfield for Easton at 9.35 A.M., 1.40 and 3.35 P.M., passenger, and 6.30 A.M. freight; and for Somerville at 7.30 P.M.

Passengers will be required to purchase tickets before entering the cars, or pay five cents in addition to the regular fare. GEO. H. PEGRAM, Sup't.

Hudson River Railroad.

NEW ARRANGEMENT.—On and after Monday, August 14th, 1854, the Passenger Trains will run daily (Sunday excepted) as follows: Leave New York from the station corner Chambers-st. and College Place, at

6 00 A M—Express Train for Albany and Troy, connecting with Northern and Western Trains. Through in 4 hours from 31st street.

7.00 A M—Poughkeepsie Way Passenger Train.

8.00 A M—Mail Train for Albany and Troy, stopping at Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, and all Mail Stations North of Poughkeepsie.

9.00 A M—Peekskill Way Passenger Train.

12.00 M—Way Train for Albany and Troy, stopping at Yonkers, Tarrytown, Sing Sing, Crugers, Peekskill, Garrisons, Cold Spring, Fishkill, New Hamburgh, Poughkeepsie, Hyde Park, Rhinebeck, Tivoli, Oakhill, Hudson, Stuyvesant, and Castleton, and connecting with the Express Train leaving Albany at 6.30 P M for Buffalo, and at Troy with Northern Trains for Saratoga and Montreal.

1.00 P M—Po'keepsie Freight and Passenger Train.

3.30 P M—Peekskill Way Passenger Train.

4.30 P M—Express Train to Albany and Troy, stopping at Tarrytown, Sing Sing, Peekskill, Garrisons, Fishkill, Poughkeepsie, and all Time Table Stations North, and connecting at Albany with Western Express Train at 10.30 P M for Buffalo.

5 00 P M—Poughkeepeie Passenger Train.

5.30 P M—To Peekskill, stopping at all Way Stations.

6.30 P M—Emigrant and Freight Train for Albany and Troy, stopping at all Time Table Stasions.

8.30 P M—To Tarrytown, stopping at all Stations.

Sunday Mail Train at 9 A. M. from Canal-st. for Albany, stopping at all Way Stations.

OLIVER H. LEE, Superintendent.

New York and Erie Railroad.

TRAINS leave pier foot of Duane-st., New York, as follows:

Buffalo Express at 6 A. M. for Buffalo direct, without change of baggage or cars.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Way Express at 12.45 P. M. for Dunkirk.

Night Express at 6 P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M.

On Sundays only one express train, at 6 P. M.

These Express Trains connect at Buffalo with first-class splendid steamers on Lake Erie for all ports on the Lake; and at Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicogo, &c. D. C. McCALLUM, General Sup't.

☞ The following figures from the time-table will be useful to our readers in Allegany County. A * indicates that the trains so marked do not stop at that place.

Election Notice.

STATE OF NEW YORK—Secretary's Office, Albany, Albany Aug. 10, 1854.—*To the Sheriff of the County of New York*—Sir: Notice is hereby given that at the General Election to be held in this State on the Tuesday succeeding the first Monday in November next, the following officers are to be elected, to wit:

A Governor, in the place of Horatio Seymour;

A Lieutenant Governor, in the place of Sanford E. Church;

A Canal Commissioner, in the place of Henry Fitzhugh; and

An Inspector of State Prisons, in the place of Henry Storms;

All whose terms of office will expire on the last day of December next.

A Representative for the Thirty-fourth Congress of the United States, for the Third Congressional District, composed of the Ist, IId, IIId, Vth, and VIIIth Wards in the City of New York; for the Fourth District, composed of the IVth, VIth, Xth, and XIVth Wards of the City of New York; for the Fifth District, composed of the VIIth and XIIIth Wards in New York, and the City of Williamsburgh in Kings County; for the Sixth District, composed of the XIth, XVth, and XVIIth Wards in New York; for the Seventh District, composed of the IXth, XVIth, and XXth Wards in New York; and for the Eighth District, composed of the XIIth, XVIIIth, and XIXth Wards in New York.

County Officers also to be elected for said County:

Sixteen Members of Asssembly;

A Surrogate, in the place of Alexander W. Bradford;

A Recorder, in the place of Francis R Tillou;

A City Judge, in the place of Welcome R. Beebe;

A Mayor, in the place of Jacob A. Westervelt;

A Register, in the place of Garrett Dyckman;

A Commissioner of Streets and Lamps, in the place of George G. Glazier, who was appointed to fill a vacancy caused by the resignation of Henry Arcularius;

A Police Justice for the Second District, in the place of Daniel W. Clarke, who was appointed to fill a vacancy caused by the death of John McGrath;

Two Governors of the Alms-House, in the place of Gustavus A. Conover and William Pinkney, appointed to fill vacancies;

A District Attorney, in the place of Lorenzo B. Shepard, who was appointed to fill a vacancy caused by the death of Nathaniel B. Blunt;

A Civil Justice and a Police Justice for the Seventh Judicial District, composed of the XIIth, XIXth, and XXIId Wards;

A Police Justice for the Eighth Judicial District, composed of the XVIth and XXth Wards.

Yours respectfully,
E. W. LEAVENWORTH, Sec'y of State.

Sheriff's Office, New York, Aug. 14, 1854.

The above is published pursuant to the notice of the Secretary of State and the requirements of the statute in such case made and provided. JOHN ORSER,
Sheriff of the City and County of New York.

All the public newspapers in the County will publish the above once in each week until the Election, and then hand in their bills for advertising the same, so that they may be laid before the Board of Supervisors and passed for payment. See Revised Statutes, volume 1, chapter 6, title 3, article 3, part 1, page 140.

aug 21 JOHN ORSER, Sheriff.

Miscellaneous.

Chinese Battle in California.

A correspondent of the *Shasta Courier*, writing from Weaverville, in Trinity County, under date of July 19, says:—

The Chinese have been for some time preparing for a general fight—the cause for such preparation is the same here as in other parts of the State, a sectional hatred and clannish difference, brought from their native land. From day to day these differences have increased, although numerous attempts have been made by their leaders and Americans to settle them, but all endeavors were in vain. Patience with them ceased to be a virtue on Saturday last, when they met to fight out their "pent-up wrath," and a bloody fight it was. The parties met in all their accustomed modes of warfare—their banners, shields, lances and helmets, the same as used in their wars at home. On Saturday morning both parties were out skirmishing and drilling; they were designated as the small party and the large party, the former consisting of 140 men, and the latter of about 400. At about 3 o'clock in the afternoon the small party charged upon the other. The conflict was short but destructive; the small party were victorious, killing eight of the larger party, and driving the remainder from the ground, and capturing their flag as a trophy of war; the small party had but two men killed. Some ten or twelve on both sides were severely wounded. One white man, who was interfering in the fight by discharging his pistol at one of the parties, was shot dead by some spectator of whom there were about one thousand. All day the greatest excitement prevailed throughout town; some were for, others against their fighting. Our Sheriff did all in his power to stop the difficulty, up to the very latest hour, but he could accomplish nothing—fight they would, and fight they did. But their differences are in no better condition now than they were before. Neither dare go to work; one is afraid of the other, consequently both are idle. So matters stand at present. On Sunday the large party collected their dead together and burned them, in the same manner as do the Indians of this country, and then buried their ashes. The small party buried theirs with all the imposing ceremonies of war; they all turned out in funeral procession and followed the bodies to their graves, accompanied by music, as white men would. The white man killed was also buried the same day. It was a day of funerals.

The Remains of the Steamer Erie.

From the Buffalo Democrat.

For thirteen years has the engine of this fire-consumed steamer laid at the bottom of the lake. Portions of the machinery are almost unaffected by the water. The starting bar for instance, is as good as new. The lower part of it looks fresh. The walking beam is but little touched by rust. In places the water has not acted on it at all. Portions of the condenser are also quite fresh. It will sound strange for us to say that after a thirteen years' soak some of the nuts of the machinery turn freely—the grease having been preserved in the threads of the screws. The water has acted with unequal effect on different kinds of iron. A pair of tongs, for example, and a steel yard, look only as if exposed to mild autumn's usage. A stub-and-twist double barrel, of German make, is honey combed and full of holes. Another double barrel gun, seemingly English, is not nearly so much injured. Cast iron has stood the bath better than wrought, of course. Some of the heavy castings could be used again to-day.

Had they lain in salt water thus long instead of fresh, they would have been totally destroyed. Most all of the engine work, and most of the tools and utensils belonging to the crowd of immigrants upon the ill-starred steamer show the action of fire upon them. The frame of the walking beam still has the blue scales and bluish tinge given to wrought iron by intense heat—by "burning," so called.

A curious effect of the heat is exhibited by three watches, recovered from the wreck. They all stopped about the same time—at 10 o'clock, 40 minutes. The crystals melted down, and united with the dials—the cases soldered themselves together at the joints. Yet the pressure of the water upon them at the depth of 69 feet was so great that they filled with the fluid, and now hold it tight within them. A deposit has taken place, which seems to have closed the fine passages through which the water entered.

Axes, hoes, spades, forks, rakes, cow bells, flat irons, knives and forks, scissors, and every conceivable iron article in use in a German or Norwegian household, came out of the wreck in profusion. Fire and water have marked them all. The tone of a cow bell now in our office is, however, quite good, the clearness of its ring, though, being somewhat abated by its thirteen years drowning. The chief injury, after all, done the iron work, and to the iron portion of the cargo of the steamer, was by fire and not by water. Masses of stove plates are soldered together by intense heat, and bundles of wire and sheet iron are welded together.

Much gold and silver coin, as we have recently stated, was found upon the floor of the steamer, and between her timbers on each side of the kelson. She was badly broken forward when raised, and some thirty feet from the bows aft was taken ashore at Point Abino and searched. The first parcel of five franc pieces was there found, and so close by the fracture as to induce the belief that more or less of the coin must have fallen out into deep water and been lost. This part of the wreck was afterward towed out into the Lake, and dropped. The portion now out near the Marine Railway astonished everybody with the spectacle of a great steamship burned down in the water, to within a foot of the kelson, in two or three places. She is almost as thoroughly burned down as she would have been if she had been on dry land, instead of a rolling sea.

Even at the depth of 69 feet there has been such action in the tideless body of water, Lake Erie, that the wreck is covered with blue clay, in places over a foot thick. As she lies, the industry of the wreckers takes the California shape. Hoes worked between the timbers fetch up a mingled mass of cinders, broken crockery, clay, scraps of iron, sand and rubbish of all sorts. It is lifted into a long, many chambered gold washer, and thoroughly washed with water thrown from a forcing pump. Silver, gold, lead, copper and iron shot fall to the bottom, and are carefully gathered.

The Erie has been raised by a Company composed of Mann, Vail & Co. of this city, and Mr. Gowen of Boston. The diving apparatus was the submarine armor of Wells and Gowen. Two schooners and a steam tug were employed in lifting the wreck. A heavy frame work of wooden timber a little wider than the Erie was rigged up and made fast abaft the mainmasts of the two vessels, and stretching from one to the other; a similar erection was made right aft their foremasts, very heavy compound iron blocks were attached in the center to each of these frames, and the lifting power was applied by capstans from the decks of each of the schooners. But the scientific and delicate work was done under water, and by means of the indispensably necessary armor, by which Mr. Gowen makes man a really amphibious animal. One of the Nantucket Coffins, we believe, was the superintendent of the operations at the scene of the memorable disaster.

How horrible was the calamity—how inexplicable! If our memory serves us correctly, some 340 human beings perished fearfully in the alternative of a grave in the fire or in the deep water. How stirred the sympathies of this city! How wild was the excitement here—and how for weeks we sickened and shuddered over the ghastly companies, of swollen, burned, and disfigured corpses that were laid in ranks upon our wharves and upon the beach. May a like disaster never again happen upon this beautiful water!

A Model Letter.

We see it stated in various papers that the following letter was actually received in Oberlin, Ohio, from an old acquaintance in Georgia, and the parties all being known there, it was published in the *Oberlin Evangelist*. Its authenticity was never questioned:—

"B——, Georgia, Sept. 4, 1845.

"DEAR SIR: I take up my pen to write to you once more, though it is not I that write, but the Lord that writeth through me. Permit me to inform you that since I wrote to you last I have come out and embraced the religion of the Lord Jesus Christ, and am now living in the light and liberty of the children of God. We have had quite an interesting church meeting here last week in relation to Deacon D——. It was thought by many that he would be disfellowshipped, but finally his case was set forth in such a vivid light by the influential members of the church, our pastor among the rest, he was honorably discharged. For fear you will think the case worse than it is, I will just state the facts, (although that you are such an Abolitionist, I suppose you will think it bad enough as it is.) The Deacon had an old slave that had been in the habit of running away, but had always been caught, until finally about two weeks ago he made another escape. No sooner was the old thing missing than cousin H—— borrowed neighbor P——'s hounds and started in search of him. He had not proceeded far in the woods before he found the old man perched upon a limb of a large tree. He ordered him several times to come down, but the old man, stubborn as an ass, still maintained his position. The deacon then becoming excited, fired his gun at him. The ball passed through his ankle, and mangled it in such a manner that it mortified and he died. But as I have before stated, our good pastor, (may the Lord bless his soul,) held for the justification of the deacon in such a vivid and heaven-approving style that he was discharged upon the ground that he had a right to do what he pleased with his own property—a judgment which would have been passed by any righteous man. Your uncle J—— buried his youngest child last week. Your cousin W—— thought some of studying at Oberlin, but it is such an abolition hole, I do not think his father will let him go. I have partly bargained for about fifty slaves belonging to Mr. ——. If I can get them as cheap as I expect to, I shall make profit on them, for I understand that the Orleans market is quite good now. I expect to send them down as soon as my driver recovers; for in flogging one of my old slaves the other day, he received a very severe wound from him, he having struck him with his hoe, whereupon the driver instantly drew his pistol from his pocket and shot him dead upon the spot, a fate which he justly merited. From his extreme age (being nearly 80 years old) I consider his death a gain and not a loss to me.

In your last you spoke of visiting us next year. If you come, I pray you to leave your abolitionism behind and show yourself a man. It is now time to go to prayer-meeting, and I must close. My wife joins me in love to you.

"Yours, J. F. F."

Important Discovery.

The *Gazette Hebdomadaire de Medecine et de Chirurgerie* gives an account of some experiments equally important in a practical as in a theoretical point of view, and from which it results that air passed through cotton no longer produces either fermentation or putrefaction. The journal describes as follows the plan of proceeding of two German servants, who have made these experiments. The apparatus made use of is simply composed of a glass globe, hermetically closed by a cork covered with wax, and provided with two tubes, one of which is in communication with one of the extremeties of the filterer, which is itself terminated by a small tube at right angles. The second tube serves as an aspirator; it goes down almost to the bottom of the globe, and communicates hermetically with a gasometer. The globe contains the fermentable substance. When it has been ascertained that the joints are perfectly closed, the globe is placed in a vessel containing boiling water, where it is kept until the different tubes of communication have become hot, after which a second examination takes place to see that every part remains hermetically close, and then the cock of the aspirator is placed in such a manner that the water runs drop by drop. A first experiment was made on muscular meat, with water added; and in order to make a proper comparison, there was placed near the apparatus a second globe containing the same kind of meat, and communicating freely with the atmospheric air. At the end of a fortnight the matter contained in the second globe was in a complete state of putrefaction, while that in the globe which only received the filtered air was not at all changed, and when, at the end of twenty-three days, the apparatus was opened, the meat was just as it was on the first day. From those experiments it results that meat recently boiled, and fresh broth, may be kept thus good for several weeks.

Alexander Hamilton.

Hamilton was most thoroughly imbued with a sense of Burr's unworthiness, and deemed it due to his country to balk his election over Jefferson; and did so. His letters to the federal members of Congress painted Burr in his true character, and dashed far from his grasp, and for ever, the gilded prize his hand was touching. For that frustration of his hopes, four years afterward, he killed Hamilton in a duel, having on the part of Burr the spirit of an assassination—cold-blooded, calculated, revengeful, and falsely pretexted. He alledged some trivial and recent matter for the challenge, such as would not justify it in any code of honor; and went to the ground to kill upon an old grudge which he was ashamed to avow. Hard was the fate of Hamilton—losing his life at the early age of forty-seven, for having done justice to his country in the person of the man to whom he stood most politically opposed, and the chief of the party by which he had been constrained to retire from the the scene of public life at the age of thirty-eight—the age at which most others begin it, he having accomplished gigantic works.

He was the man most eminently and variously endowed of all the eminent men of his day—at once soldier and statesman, with a head to conceive, and a hand to execute; a writer, an orator, a jurist; an organizing mind, able to grasp the greatest system; and administrative, to execute the smallest details; wholly turned to the practical business of life, and with a capacity for application and production which teemed with gigantic labors, each worthy to be the sole product of a single master-intellect; but lavished in litters from the ever-teeming fecundity of his prolific genius. Hard his fate, when he felt himself constrained to appeal to posterity for that justice which cotemporaries withheld from him. And the appeal was not in vain; Statues rise to his memory; history embalms his name; posterity will do justice to the man who, at the age of twenty, was "the principal and most confidential aid of Washington," who retained the love and confidence of the Father of his country to the last; and to whom honorable opponents, while opposing his systems of policy, accorded honor and patriotism, and social affections, and transcendental abilities. This chapter was commenced to write a notice of the character of Colonel Burr; but that subject will not remain under the pen. At the appearance of that name, the spirit of Hamilton starts up to rebuke the intrusion, to drive back the foul apparition to its gloomy abode, and to concentrate all generous feeling on itself.

[Col. Benton

Green Fodder.

The late Col. Pickering in an address before the Essex County, (Mass.) Agricultural Society, once said:—

"Every farmer knows how eagerly cattle devour the entire plant of Indian corn in its green state; and land in good condition will produce heavy crops of it. Some years ago, just when the ears were in the milk, I cut close to the ground the plants growing on a measured space, equal, as I judged, to the average product of the whole piece; and found that, at the same rate, an acre would yield twelve tons of green fodder, probably richer and more nourishing food than any other known to the husbandman. And this quantity was the growth of less than four months.

"It has appeared to me, that the sort called sweet corn, yields stocks of richer juice than the common yellow corn. It is also more disposed to multiply suckers—an additional recommendation to it when planted to be cut in a green state for horses and cattle, and especially for milk cows; and at the time for planting may be so regulated as to furnish supplies of food just when the pastures usually fail. I am inclined to doubt whether any other green food will afford butter of an equal quality."

To Preserve Beans and Peas.

A new method for keeping the above fresh for any length of time, so that they shall lose neither their taste nor original softness, has been lately introduced to notice by A. Albert, of Paris. Take the beans when not much larger than peas, and pursue the following directions for both vegetables:—

Plunge them for a minute in boiling, and afterwards in cold water, spread them out for several hours on canvas frames. Then place them in an oven slightly heated, on frames covered with paper, leave them long enough to be at the same warmth as the oven, and then expose the frames to a current of air till the articles are cold. The frames are then replaced in the oven and again exposed until the beans are perfectly dry, not so as to break, but almost like beans dried naturally.

The articles should be gathered and dried the same day, if not they should be left during the night in the oven. They should be kept in dry and clean bottles, and to each bottle of beans there should be added a bunch of dry savory. Before using the vegetable they should be steeped some hours, in tepid, or over night in cold water; if they are beans the water is thrown away, and they are cooked in the usual manner, but if peas, they are only just covered, and they are cooked like green peas. Vegetables prepared in this manner are as good as if they had just been gathered.

A New Way to Make Tea and Coffee.

In the refreshment department of the Sydenham Crystal Palace is introduced a new mode of making coffee and tea by hydrostatic pressure. It is the invention of M. Loysel, a French chemist, and by its agency he proposes to achieve the following results, namely: The production of tea and coffee of peculiar flavor and clearness, and a great economy and saving in the use of the material. With a pound of coffee, valued at one and fourpence, he undertakes to produce an imperial gallon of the infusion, too strong for ordinary use, and of a limpid clearness that would be quite unattainable by any other means. His process is by scientific appliances, and a recognition of the known tendency of liquids to find their level, to force the boiling water twice through the coffee, and thus to get hold of the entire principle called cafeine—a thing which he alledges is never done by the ordinary mode of preparation. In the preparation of tea his great discovery is a very simple one, and one of which every housewife may avail herself. M. Loysel says that he has discovered that by grinding the tea in the same manner as coffee, before infusion, the quantity of exhilerating fluid obtained is nearly doubled. The experiment is a very simple one, and may be safely recommended to all connoisseurs in the preparation of "the cup that cheers but not inebriates." Having, says our London authority, had an opportunity of tasting the tea and coffee as prepared by M. Loysel's apparatus, we can vouch for the delicacy of flavor and limpidity of both. The strength did not strike us as satisfactory, but that is a matter of taste, and of course is influenced by very simple governing circumstances.

New Process of Tanning.

Roswell Enos, of Woodstock, Ill., has invented a new process of tanning sole leather, which he claims is more expeditious and economical than the usual method. He uses two sorts of tanning-liquor, prepared with sumac and salt, and hemlock or oak, mixed in various proportions. The first liquor, it is claimed, prepares the hide to receive the tan rapidly, and so changes the nature of the gelatine of the hide, that after it has remained three or four days in the liquor it will not become hard when dried. It also so opens the pores of the hide that the strongest liquors can be applied without in any way injuring or binding it. It has been found that more tan can thus be taken up or applied to the hide in six days than is generally taken up or applied in six weeks by the old method. The sole-leather made by this process, of Sweat Buenos Ayres hides, will make sewed-work equally as well as the limed slaughter hides. The leather is also tough and strong. The length of time required for tanning a dry Buenos Ayres hide is ninety days, with seventy-five per cent. gain. The time required for tanning an Oronoco hide is much less, with a gain of eighty or eighty-five per cent. This method will tan slaughter sole-leather in thirty days; harness or upper leather in the rough in twenty days, and calf-skins in from six to twelve days. How far these pretensions are true we have no means of judging from our own knowledge, but we have seen specimens of leather made by the process which had every appearance of excellence. If experience shall prove the invention to be a good one, it wil be a great benefit to all who wear shoes, or otherwise use leather.

[Tribune.

WHAT IS DIRT?—Old Dr. Cooper, of South Carolina, used to say to his students: "Don't be afraid of dirt, gentlemen. What is dirt? Why, nothing at all offensive, when chemically viewed. Rub a little alkali on that 'dirty grease-spot' upon your coat, and it undergoes a chemical change and becomes soap. Now rub it with a little water and it disappears. It is neither grease, soap, water, nor dirt, you observe there. Well, scatter a little gypsum over it, and 'tis no longer dirty. Every thing you call dirt is worth your notice as students of chemistry. Analyze it! It will separate into very clean elements. Dirt makes corn, corn makes bread and meat, and that makes a very sweet young lady that I saw one of you kissing last night. So, after all, you were kissing dirt, particularly if she whitened her skin with chalk, or fuller's earth. There is no telling, gentlemen, what is dirt, though I may say that rubbing such stuff upon the beautiful skin of a young lady is a dirty practice. Pearl-powder, I think, is made of bismuth—nothing but dirt."

CURIOUS CASE.—The New Orleans *Crescent* of August 17, says: The Coroner yesterday held an inquest on the body of a child named Julia Eagle, aged five days, found dead at the house of its parents in the Third District. The Jury after hearing the evidence returned a verdict of "death from convulsions, caused by its mother having been been greatly frightened, and her breast-milk thus poisoned, by her husband." The husband, whose name is Theophile Eagle, and who is a notorious character, it appears, had assaulted and brutally treated his wife, threatened to kill her, and all that sort of thing. The fright she experienced from these threats, the physician who examined the child stated, had operated as a poison on her milk, which being imbibed by the child, convulsions and death ensued. On the strength of this verdict Eagle has been arrested and awaits an examination on a charge of having caused the death of his own child. The mother, too, is not expected to live.

HEAVY PENALTY.—Mr. Z. B. Porter keeper of the Cambridge Market Hotel, was recently examined before Justice Ladd, on a charge of having violated the liquor law, and was found guilty. There were eighteen counts in the indictment, and the court passed the following sentence—"that on the first count, the defendant pay a fine of $10 and costs, and give bonds in the sum of $1,000, not to violate the law for one year; on the second $20 and costs; and on the third and remaining fifteen counts to pay a fine of $20, and also to be imprisoned in the common jail on conviction on each count for the term of three months. The combined sentence amounts to $350 fine, and four years imprisonment." Mr. Porter appealed, and gave bonds in $600 to appear and prosecute the same at the October term of the Court of Common Pleas, to be holden in Lowell.

IMPORTANT DECISIONS.—Judge S. F. Norris, in a case recently tried before him in the Common Pleas of Clermont county, Ohio, decided that when a master had permitted a slave to visit Ohio, by that act he made him free. The case in which the above, decision was made was this: a Mr. Anderson of Kentucky had been in the habit of sending a slave, named Poindexter, on errands to Ohio. Four or five years since, and after Poindexter had been sent to Ohio by his master, he purchased himself, giving his master his own notes with indorses. The suit was brought to recover on these notes. The counsel for the defendant pleaded a want of consideration, and the above facts were given in evidence. The Court held the plea good, the evidence showing that Poindexter had often been sent to Ohio by his master before the notes were given, and on the case being decided, the Court dismissed the case at plaintiff's cost.

COTTON SEED OIL.—Mr. Shepherd, of Galveston, Texas, it is announced, is perfecting a valuable invention by which he can produce oil by compressure from cotton seed. One hundred pounds of seed yields from twelve to fifteen pounds of oil, which, properly clarified, is equal to sweet oil, for machinery, and is superior to ordinary lamp oil, while it can be sold at one half or one third the cost of either. Another source of income is the cake formed of the seed, when the oil is pressed out. It is valuable for feeding hogs and other farm stock. Cotton seed has heretofore been regarded as entirely useless.

VARIETY.

A melancholy accident occurred to Mr. Charles Smith, of Hart's Village, Dutchess Co., on Saturday, Aug. 19, by which he was almost instantly killed. Mr. Smith was leading to the stable a spirited horse, which had on an old fashioned collar with an iron hook on each side, in which to attach the trace. On passing through the door, the horse rubbed against a jam of it, and jumping one side caught the hook on the collar into the waistband of Mr. Smith's pants. The horse became frightened, and ran off into the fields, dragging the unfortunate man after him, bruising and mangling him so dreadfully that he soon died.

Three little girls, daughters of Mr. Reed, a gentleman living near Independence, Ky., were playing but a short distance from their house, when a large tree standing near where they were, fell with a loud crash, the limbs of which striking two of the children killed them instantly. The wind was blowing very hard at the time, and the surviving child says, that though they heard the cracking of the tree, they thought they were beyond its reach, and made no effort to escape. The survivor stood between the other children, and yet escaped unhurt.

The Niagara Falls *Iris* says that a slave escaping from servitude arrived in that village on Tuesday evening, and reached the ferry just in time to get into the little boat as it was preparing to leave for the Canada side. His master was on the same train in pursuit, and reached the ferry only in time to see his chattel midway across the foaming waters of the Niagara. The slave was last seen by the master at Cleveland; yet, although both were on the same train, the fugitive succeeded in eluding his vigilance and placing himself beyond pursuit.

Moses S. Puss, an aged fugitive slave, died about the 1st inst. in Westchester Co. He escaped from the American Egypt in 1851, and was bound for Caanan, *alias* Canada; but becoming very much exhausted while passing through Westchester, he gave up all hope and begged the privilege of lying in a barn or other shelter till death should come to his relief. He had, however, fallen into the hands of a man instead of a brute, and there he remained in seclusion and security until his death.

A venerable matron of North Adams, Mass., only 93 years of age, gave an Old Folks' Tea Party, a few days since, and among the guests who were present were four ladies of the respective ages of 86, 82, 80, 70, and three gentlemen of 85, 80, 73, making the united ages of the eight persons (including the hostess) 649 years, an average of 81. And what is most remarkable, adds the *Sentinel*, six of the above persons own farms on which they reside, all in one neighborhood of less than a mile square—and have been residents of the town over fifty years.

The Crystal Palace Directors have authorized their President to sell the entire concern, with all the fixtures and property of the Association, deliverable on or after 1st November next, for one half its actual cost. The first cost is understood to have been about $700,000. Competent engineers and architects have decided that the Palace can be taken down—removed to the Battery, and put up again for $50,000 or less; or be taken down, removed to Philadelphia or Boston, and put up for less than $75,000.

Mr. D. R. Anthony, of Rochester, who accompanied the pioneer Kansas party to that Territory, has returned. He reports that it is one of the most inviting countries he ever saw; and that the whole party are in raptures with the prospect before them. The old settlers, of whom there is a goodly number, welcome all wholesome immigrants, without reference to their notions about Slavery. And nobody need fear being molested, even though they are not "sound on Nebraska."

Two colored men, Dr. J. H. Snowden and Dr. Daniel Laing, Jr., both thoroughly educated physcians, under the care and expense of the Massachusetts Colonization Society, have sailed for Liberia, the one to be employed at Sinou, and the other on the St. Paul's river, to attend to the newly-arrived emigrants during their acclimation; so that now there are four regular physcians in the employ of the American Colonization Society in Liberia.

A correspondent of the Cleveland *Plaindealer*, writing from La Pointe on Lake Superior, states that the white inhabitants on the shore of the lake are now agitating the question of forming a State separate and apart from the present organization—taking what of Michigan lies west of Lake Michigan, and the points of Wisconsin and Minnesota, bordering on the Lake, appropriately naming it the State of Superior. Of course it will be free.

The Calhoun monument committee have published an able and eloquent appeal to the planters of South Carolina, in behalf of the Calhoun monument. Some $11,000 are already pledged to the monument. The design consists of an unfluted doric shaft, surmounted by a statue of Mr. Calhoun, in the attitude of speaking.

An enterprising German is about to secure a patent for his discovery of flax, or its equivalent, in fifteen different kinds of common weeds. The discovery is to be turned to account in the manufacture of numerous articles of which flax is the principal, but especially in the manufacture of paper, which is a matter of deep interest just now to the publishing world, the scarcity of rags being a great embarrassment to business.

John Ward, a soldier of the Revolution, died at the residence of his son in Johnsonburg, N. Y., on the 3d day of June last, aged 101 years and 19 days. Mr. Ward was born in Union, Massachusetts, May 15, 1753. In 1775 he entered the service of his country, under Capt. Smith, at Belcher, Mass. He also served under Capt. Lyman, at Boston, and was at the battle of Monmouth.

E. P. Christy, one of the originators of the Christy Minstrels in New York, in a statement relative to his concerts, says that the gross receipts of 12 years have been $317,589 37, of which $160,873 60 were profits. The whole number of concerts is stated at 2792.

Mineral Phosphate of Lime has been discovered in a bed of iron ore upon the borders of Lake Champlain. When crushed, pulverized, etc., it is a very useful fertilizer, and is much used by planters. The most approved mode of using it is to combine it with Peruvian Guano.

Bound Volumes.

ON hand, and for sale at this office, the first and second volumes of the *Seventh-day Baptist Memorial*, bound together, in cloth and leather. Price in cloth $2 50; half roan $2 75; half calf $2 87; half morocco $3 00. Also, the first and second volumes of the *Sabbath-School Visitor*, bound together in cloth; price $1 00. We have also on hand several sets of the *Sabbath Recorder*, vols. 2 to 10 inclusive, which will be bound to order for those wishing them, at $2 00 per volume and the cost of binding. As the number of these books is limited, those wishing them should send their orders without delay.

Norwich Line to Boston,

WORCESTER, Lowell, Fitchburg, Nashua, Concord, Bellows Falls, &c. Via Norwich and Worcester, Worcester and Nashua, Boston and Worcester New London and Willimantic, and Palmer Railroads.

Passengers by this Line leave pier No. 18 North River, foot of Cortlandt-st., every day, at 5 o'clock P.M., (Sundays excepted.)

Steamer CONNECTICUT, Capt. J. W. Williams will leave New York every Tuesday, Thursday, and Saturday.

Steamer WORCESTER, Capt. Wm. Wilcox, will leave New York every Monday, Wednesday, and Friday.

Passengers by this Line arrive in time to take the early trains out of Boston.

Passengers taken at the lowest for New London, Norwich, Willimantic, Stafford, Munson, Palmer, Worcester, Boston, Fitchburg, Lowell, Lawrence, Nashua, Concord, Bellows Falls, and other places in Northern New Hampshire and Vermont.

For further information inquire of E. S. Martin, at the office, pier No. 18 N. R., foot of Cortlandt-st.

Bells! Bells! Bells!

FOR *Churches, Academies, Factories, Steamboats, Plantations, etc.*, made, and a large assortment kept constantly on hand by the subscribers, at their old established and enlarged Foundry, which has been in operation for Thirty Years, and whose *patterns and process of manufacture* so perfected, that their Bells have a world-wide celebrity for *volume of sound and quality of tone*. The present Proprietors have recently succeeded in applying the process of loam moulding in Iron Cases to *Bell Casting*—which secures a perfect casting and even temper; and as an evidence of the unimpaired excellence of their Bells, they have just received—January, 1854—the FIRST PREMIUM (*a Silver Medal*) of the World's Fair in New York over all others, several from this country and Europe being in competition; and which is the 18th Medal, besides many Diplomas, that have been awarded them. They have patterns for, and keep on hand, Bells of a variety of tones of the same weight, and they also furnish to order CHIMES of any number of Bells, or key, and can refer to several of their make throughout the States and Canadas. Their *Hangings*, comprising many recent and valuable improvements, consist of Cast Iron Yoke, with moveable arms, and which may be turned upon the Bell; Spring acting upon the Clapper, prolonging the sound; Iron Frame, Tolling Hammer, Counterpoise, Stop, etc. For Steamboats, Steamships, etc., their improved Revolving Yoke, or Fancy Hangings in Brass or Bronze of any design furnished. We can supply whole sets, or parts, of our Improved Hangings, to re-hang Bells of other construction, upon proper specifications being given. Old Bells taken in exchange.

Surveyors' Instruments of all descriptions, made and kept on hand.

Being in immediate connection with the principal routes, in all directions, either Railroad, Canal or River, orders can be executed with dispatch, which, either personally or by communication, are respectfully solicited. A. MENEELY'S SONS, West Troy, N.Y.

Ayer's Cherry Pectoral,

For the rapid Cure of Coughs, Colds, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption.

AMONG the numerous discoveries Science has made in this generation to facilitate the business of life—increase its enjoyment, and even prolong the term of human existence, none can be named of more real value to mankind than this contribution of Chemistry to the Healing Art. A vast trial of its virtues throughout this broad country, has proved, beyond a doubt, that no medicine or combinations of medicines yet known, can so surely control and cure the numerous varieties of pulmonary disease which have hitherto swept from our midst thousands and thousands every year. Indeed, there is now abundant reason to believe a remedy has at length been found which can be relied on, to cure the most dangerous affections of the lungs. Our space here will not permit us to publish any proportion of the cures effected by its use, but we would present the following, and refer further inquiry to my American Almanac, which the agent below named will always be pleased to furnish free, wherein are full particulars, and indisputable proof of these statements.

Office of Transportation, Laurens R. R., S. C., Aug. 4, 1853.

J. C. Ayer, Dear Sir,—My little son, four years old, has just recovered from a severe attack of malignant Scarlet Fever. His throat was rotten, and every person that visited him pronounced him a dead child. Having used your Cherry Pectoral in California, in the winter of 1850, for a severe attack of Bronchitis, with entire success, I was induced to try it on my little boy. I gave him a tea-spoon full every three hours, commencing in the morning, and by ten o'clock at night I found a decided change for the better, and after three days use he was able to eat or drink without pain.

Its use in the above-named disease will save many a child from a premature grave, and relieve the anxiety of many a fond parent. For all affections of the Throat and Lungs, I believe it the best medicine extant. A feeling of the deepest gratitude prompts me in addressing you these lines—but for your important discovery, my little boy would now have been in another world. I am yours, with great respect,

J. D. POWELL, Supt. Trans., L. R. R.

Rock Hill, (Somerset Co.,) N. J., July 21, 1852.

Dr. J. C. Ayer,—Since your medicine has become known here, it has a greater demand than any other cough remedy we have ever sold. It is spoken of in terms of unmeasured praise by those who have used it, and I know of some cases where the best they can say of it is not too much for the good it has done. I take pleasure in selling it, because I know that I am giving my customers the worth of their money, and I feel gratified in seeing the benefit it confers.

Please send me a further supply, and believe me

Yours, with respect, JOHN C. WHITLOCK

Windsor, C. W., June 26, 1852.

J. C. Ayer, Sir,—This may certify that I have used your Cherry Pectoral for upwards of one year; and it is my sincere belief that I should have been in my grave ere this time if I had not. It has cured me of a dangerous affection of the lungs, and I do not overstate my convictions when I tell you it is a priceless remedy. Yours very respectfully,

D. A. McCULLIN, Attorney at Law.

Wilkesbarre, Pa., Sept. 28, 1850.

Dr. J. C. Ayer, My dear Sir,—Your medicine is much approved by those who have used it here, and its composition is such as to insure and maintain its reputation. I invariably recommend it for pulmonary affections, as do many of our principal physicians.

I am your friend, CHAS. STREATER, M. D.

Prepared by J. C. AYER, Chemist, Lowell, Mass. Sold at wholesale in New York by A. B. & D. SANDS; retail by RUSHTON, CLARK & CO., and by all Druggists, everywhere. 37-3

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the times to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders and remittances should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to nolify the Publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store, or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

RELIGIOUS BELIEF.

There is, perhaps, no more common mistake than the vulgar opinion, that every person is entitled to his "*belief*," and particularly his "*religious belief*," irrespective of the grounds of his faith, but simply because it is his "*belief*"—whether it has any foundation in the only legitimate source of faith, the Fountain of Truth, or not. It may be unpopular to deny such a fallacy; but while I question its soundness, I would be the last person to interfere with *conscientious* belief, if it be a conscience in some measure enlightened by the Word of God, and a belief presumed to be based on the requirements of the Almighty; even if not so, I should not, under any circumstances, persecute any individual for his belief, however erroneous that belief may be. Every person is entitled to his belief *in one sense;* even the Infidel has his rights, and there can be no legitimate authority on earth to coërce him from that belief, or that want of belief. God is his judge, not man. So with those who profess "religious belief," the Word is to be their judge, not sinful man; yet, the religious belief of those who profess to receive the Bible as their rule of faith, to obtain respect from those quickened by the Truth, must be founded on an express "thus saith the Lord."

I most unhesitatingly advocate the most enlarged liberty of conscience, and unreservedly denounce all meddling with the "religious belief" of any individual, whatever that belief may be, to coërce him into the belief of another. I may strive to enlighten him, by holding up the only infallible source of faith, and by exposing the fallacy of *traditional* belief; yea, may strive earnestly to repudiate all belief which is not founded, solely, on the explicit Word of God. This is the duty of every one who professes to have been with Jesus and learned of him—who has "received the law from his mouth"—from his Record; but in doing so, we must be careful that we, ourselves, are not tinctured with the traditions of men, and are ensconced in all our belief within that impregnable fortress, the sure testimony of God. It is, certainly, our duty, not only to "be ready always to give an answer to every man that asketh you a reason of the hope that is in you," but we are to contend, valiantly, for the faith once delivered to the saints, *as recorded in the Inspired Word;* and we are equally admonished, to "prove all things;" but in doing it, we have but one guide, and but one rule to determine all these matters, namely, 1, "What saith the Scriptures," and 2, "Thus saith the Lord." When, therefore, we encounter a belief which cannot or will not come to "What saith the Scriptures," and be tested by the "Thus saith the Lord," we may have much reason to question that belief, and feel "a great necessity laid upon us," to strive to overcome that darkness which has led a fellow immortal creature into "the delusion to believe a lie." Still, our only plan must ever be *suasion*—the sword of the Spirit—an exhibition of the Truth; and we must not feel it our duty to condemn and crucify him. We are not compelled to fellowship him; neither need we denounce him, as an individual, nor as an integral part of a communion, though we cannot approve the source nor the details of his "belief." But that does not release us from the responsibility laid upon us, as the disciples of the Lord Jesus, to protest against error, and not to blink at perversions of the Truth. We are called upon, not only to bear our testimony to the truth as it is in Christ Jesus, but against delusions, errors, and all the crafty inventions of men. While I contend, and contend earnestly, for the integrity of the unadulterated Word of God, and the consistency of Protestants in their integrity towards that Word of Truth, I concede the fullest liberty of conscience to others, whether that conscience is a mere *natural* conscience, or a *religious* conscience; for I recognize two distinct consciences, or rather, two distinct conditions of conscience, which virtually makes two distinct consciences, namely, a *natural* conscience, which is of earth, *earthy,* and an enlightened, *religious* conscience, which is of the Spirit, *spiritual.* I therefore endorse, most cordially, the big thoughts of Dr. John Walker, and the liberal doctrine of Oliver Cromwell, on this subject; which I may have presented to the readers of the *Recorder* before, but which cannot be too frequently reduplicated, for they deserve to be printed in letters of gold, and hung at the hearth-stone of every family throughout the land, for daily contemplation; and are peculiarly appropriate in combining wholesome liberty with conservative restraint:—

"*Toleration* (says Dr. Walker) is not the *opposite of intolerance,* but is the *counterfeit* of it. Both are despotisms. The one assumes to itself the right of *withholding liberty of conscience,* and the other of *granting it.* The one is the Pope armed with *fire and faggot,* and the other is the Pope *selling indulgences.* The former is *Church and State,* the latter is *Church and Traffic.* But intolerance may be viewed in a much stronger light. Man worships *not himself,* but *his Maker;* and the liberty of conscience which he claims is not for the service of himself, but of his God. In this case, therefore, we must necessarily have the associated idea of two beings; the *mortal* who renders the *worship,* and the immortal *Being* who is *worshiped.* Toleration, therefore, places itself, not between Church and Church, nor between one denomination of religion and another, but between the *being who worships,* and the Being who is worshiped; and by the same act of assumed authority, by which it tolerates man *to pay his worship,* it presumptuously and blasphemously sets itself up to *tolerate the Almighty to receive it.* Were a bill brought into any Parliament, entitled, 'An Act to tolerate or grant liberty to the Almighty to receive the worship of a Jew or Turk,' or 'to prohibit the Almighty from receiving it,' all men would be startled and call it blasphemy. There would be an uproar. The presumption of toleration in religious matters would then present itself unmasked; and the presumption is not the less, because the name of '*man*' only appears to those, for the associated idea of the worshiper and the worshiped can not be separated. Who then art thou, vain dust and ashes, by whatever name thou art called, whether a King, a Bishop, a Church or State, a Parliament, or any thing else, that obtrudest thy insignificance between the *soul of man* and its *Maker?* Mind thine own concerns. If he believe not as thou believest, it is a proof that thou believest not as he believest, and there is no earthly power can determine between you."

"So long (remarks Oliver Cromwell) as there is liberty of conscience for the Supreme Magistrate to exercise his conscience in erecting what form of church government he is satisfied he should set up, why should he not give the like liberty to others? Liberty of conscience is a *natural right,* and he that *would have it, ought to give it.* Indeed, that hath been one of the vanities of our contest. Each sect saith, 'O, give me Liberty!' But give it him into his power, he will not give it to any one else. Where is your ingenuousness? *Liberty of conscience is a thing which ought to be very reciprocal.* I may say it to you, I can say it: All the money of this nation would not have tempted men to fight upon such an account as they have been engaged in, if they had not had hopes of liberty of conscience, better than Episcopalians granted them, or that would have been afforded them by a Scot's Presbytery, or an English either. This, I say, is fundamental. It ought to be so. It is for us, and for generations to come. And if there be an absoluteness in the imposer, without fitting allowances and exceptions from the rule, we shall have the people driven into the wilderness, as were those poor and afflicted people, who forsook their estates and inheritances, here, where they lived plentifully and comfortably, were necessitated for enjoyment of their liberty, to go into a waste howling wilderness in New England, where they have, for liberty's sake, stript themselves of all their comfort, embracing rather loss of friends, and want, than be ensnared in bondage!"

* * * * *

"Men who believe in Jesus Christ are answerable to that faith,—men who believe in the remission of sins through the blood of Jesus Christ, who live upon the grace of God, are members of Jesus Christ, and are to him the apple of his eye. Whoever hath this faith, let his *form* be what it will, he walking peaceably, without prejudice to others under other forms, *it is a debt due to God, and Christ, and he will require it,* if that Christian *may not enjoy his liberty.*"

I repeat, that I endorse the foregoing most cordially, and, perhaps, would go a little further, for even a more expanded liberty; and have inserted them, with the above explicit approval, that what I have to add may not be misconstrued into a disposition to infringe on the most enlarged *liberty of conscience.*

On a former occasion I defined "religious conscience" to mean, the active exercise of the monotorial principle of the soul, enlightened and quickened by the Spirit of Grace; which impels man to do the bidding of the Father of Spirits, at all times, and under all circumstances, derived from a profound and abiding conviction of such duty being founded on the Word of God, and the requirements of his Maker—an impelling conviction, which prompts him to fulfill, at all hazards, the express will of his Lord and Judge; and not to leave undone, from any consideration whatever, anything He has required at our hands. It is likewise a principle which constrains man to contend, and contend manfully, for the integrity of God's holy law; a law which is wounded, deeply wounded, by any impediment to the *free exercise* of God's truth, or any coercion to compel him to submit to the *commandments of men* in his *religious duties.*

More recently I have had to define and expound *Religious Belief,* to a private correspondent, under the following circumstances. My correspondent, a bright, well-educated young lady of New England, now residing in Cincinnati, and a Presbyterian by profession, expressed a desire to examine the *Sabbath question,* and requested me to send some works on the subject to her; which I complied with promptly and most cheerfully.

The force of truth, evidently, confounded her; yet, not willing to be convinced, she planted herself behind the circumstance of so many good and learned men, who had investigated the subject, having defended the first day of the week as the "Christian Sabbath." That being easily knocked away, by showing that such investigations are, generally, undertaken against their will, and *not to see the truth,* but to justify a dogma, by the most specious pretexts; and by exhibiting the follies of other good and more erudite men, in maintaining, pertinaciously, equal or greater errors in other matters. She then fell back on Professor Lee's newly-vamped scheme, namely, that in the time of Moses the Sabbath was put back one day, which was restored by Christ to the original period, and consequently the observers of Sunday are now keeping the original Sabbath.

My reply was as follow: You say you "*believe* that you, and not the observers of the seventh day, are keeping the Sabbath set apart at the creation, and not the Jewish Sabbath." *Belief,* religious belief, to be abiding, must ever be founded on the Word of God, and not on the sophistry of man. Where does the Bible teach you this setting back of the Sabbath in Moses' day, and its restoration or pushing forward again in the time of the Saviour? Nowhere, I confidently assert, and challenge the whole world to prove it. It is a ridiculous fallacy, an imposition, vamped up, over and over again, by astute quibblers, to throw dust into the eyes of the credulous. Its very originators became ashamed of so gross a folly, and abandoned it years ago. I am aware that that silly subterfuge has been revived, lately, by Professor Lee; but it is scarcely reiterated, until it falls flat-foot to the ground. Respectable theologians are too chary of their scholarship to endorse it. You are not posted up, dear friend, but seem to be deep in the mud at the bottom of the O-hi-ho! Think you not that Christ knew which was the *true* Sabbath—not the "Jewish," for there is no Jewish nor "Christian Sabbath" named in the Bible. The Sabbath of the Lord—the only Heaven-appointed Sabbath—was instituted twenty-five hundred years before there was a Jew in the world. Christ, who knew all things, recognized and observed the seventh day, now called Saturday, and ordained no other—neither He, nor his Apostles. There has not been the loss of an hour since his day, and therefore we are fully certified of what He understood to be the Sabbath. Poor, vain dust and ashes, art thou wiser than HE? You are behind, far behind the true state of the question. Sunday—the first day of the week—is kept expressly, by nine thousand nine hundred and ninety-nine of every ten thousand advocates for that day, *because* it is the *first day of the week,* and not the *seventh,* the original Sabbath—as the "*Resurrection-day,*" in contradiction to the original Sabbath—of which there is no proof that the resurrection really occurred on that day; and if it did, it has not anything to do with the observance of the Sabbath, as it was never connected with it, in any of the prophecies respecting the Messiah. Sunday is kept purposely to repudiate and oppose the *original Sabbath.* You have no right to believe in opposition to the solemn declarations of the Almighty, on any subject—without an explicit "*thus saith the Lord,*" to revoke or annul a former injunction. The inventions of men will not stand in the great day of trial. Thou canst not kick against the pricks. *Human reason,* in opposition to an express scriptural declaration, for belief, *is no testimony.* It must be a "thus saith the Lord." When you find that, let me have it. "To the law and the testimony." Build not on sand. The Lord hath spoken; hear ye Him.

The world, but more especially sectarians, have a strange idea of "intolerance." The masses think that all persons must possess a surplus stock of "Christian Charity," to slur over all differences of opinion, however vague and confounded their opinions may be—must admit the privilege to embrace any heterogeneous views of divine truth, from earthly, broken cisterns, and claim the same respect for them as if founded on the ungarbled Word of God, or you are "*intolerant,*" a "bigot." Do such persons, generally, exercise a like liberality toward the Roman Catholics? I wot not. My fair correspondent complained of my definition of Religious Belief, and pronounced the writer as being "intolerant;" which elicited the following defense of the position I had taken.

My dear friend, all I said on "religious belief," is nothing but fair, legitimate, Protestant principle, and what every true Protestant theologian, who is true to his cause, and true to himself, would endorse, unqualifiedly, apart from any special application to any of his own inconsistencies. I repeat, that *in the sight of the Scriptures,* I have no right, you have no right, and no one else has any right, to "religious belief," for which they have not a "thus saith the Lord." A simple scriptural truth must not be denounced as "intolerant," because it may pinch us a little in our preconceived views or practice. Were we true to ourselves, as Protestants, none would ever complain of my definition of *religious belief.*

In enforcing scriptural truth against popish errors, many of which have been, unwittingly, retained in the Protestant Church, I may at times display a zeal, which, apparently, amounts to warmth; but never, if I know myself, to any thing like "intolerance." I have ever been thought, by all classes of Christians, with whom I am in constant intercourse, as remarkably liberal in my Christian sympathies. They respect my zeal for Bible truth. By some of my strait-jacket, or hide-bound brethren, I am regarded as entirely too lenient. The bed of Procrustes, unfortunately, is too uniform a guage with most sects. I never "unchurch" persons for their "belief," however erroneous that belief may be, on some points, provided they possess the imputed lineaments of the crucified Redeemer. I even have temerity enough to admit, that the Roman Catholic Church, though a wayward, a froward, and a dangerous member, is, still, a member of the Christian family; which shocks some of my Baptist and Presbyterian friends; yet, they cannot force me to be "intolerant" enough to exclude her in toto, as the "Man of Sin," the "Mother of Harlots," and the "Whore of Babylon." I may use some earnestness, if not warmth, I confess, in treating some of the follies of professing Protestants, for hanging to the ragged skirts of the "Romish Church;" but Lord Bacon has very justly remarked, "Earnest writing must not be hastily condemned, for men cannot contend coolly and without affection about things which they hold dear and precious."

While I do not admit the charge of being "intolerant," I am aware that I am frequently thought *satirical.* Well, I suppose that may be the case, sometimes, for I cannot help emulating the sentiment of Alexander Pope, and carrying it out also in writing:—

> "Whether the charmer sinner it or saint it,
> When folly grows romantic, I must paint it."

And in not any thing is it more needed than where

> "Faith enters in Fancy's masquerade,
> Accoutred for religious revelry,"

as it is forcibly expressed in the terse language of the accomplished authoress of "*Passion Flowers.*"

It is a false and a disingenuous position, in which Sabbatarians, who are not mealy-mouthed enough to take a sop of flattery, to silence their zeal, are ofttimes placed, when denounced for *making too much* of the Sabbath question. In like manner, our Baptist friends are often charged with making baptism too prominent a topic, yea, even sometimes twitted with making it a "saving ordinance," for their strenuous adherence and irresistible advocacy of it? Does that make it less true, or them greater bigots? By no means. Neither should Sabbatarians ever refrain from "crying aloud," so long as a palpable infraction of the Lord's holy day is upheld by professing Protestants—a violence to the law of God, and a dishonor to their profession.

Feeling that many young, inexperienced Sabbatarians, may be thrown into a like position, at any time, I have deemed it worth advertising them of my mode of meeting it in this instance; peradventure, it may suggest something to them to have in readiness to repel a matter so much calculated to confuse one who is not prepared to contend against such a restraining influence as being denounced "intolerant." There can be no *intolerance* in demanding a "thus saith the Lord" for *religious belief,* and no *intolerance* in resisting the presumptuous inventions of men, designed to supersede the explicit commandments of the Almighty. W. M. F.

BORDENTOWN, N. J., Sept. 3, 1854.

BLESSED POVERTY.

Worldly reverses are often blessings. They who forget God while the world smiles upon them and plenty crowns their board are sadly grieved when their comforts are withdrawn; yet it is then, in the day of adversity, that they consider. On a Saturday evening, one of the Missionaries of the New York City Tract Society listened to the piteous tale of a woman. She was a widow, and had one child, a boy about five years old. She was in a very delicate state of health, but so far from having the nourishment her condition required, was altogether destitute of food, even of the coarsest kind, and, instead of a comfortable bed, the floor was her only resting-place. The weather was cold, and she was shivering; but she had no fire, or fuel, or money with which to procure it. Her state was indeed distressing; her prospects were dark; she knew not God, and self-destruction presented itself to her view as the only mode of escape from her sorrow; and upon this mode she would probably have rashly ventured, had she not been checked by the sight of her darling boy, whom she feared to leave an orphan exposed to the world's buffetings. Thus it was when the missionary entered her room. It was doubtless the Spirit of God that taught him what to say, for his words were seasonable, and she felt them. Food was speedily provided; but the bread of life also was presented to her attention, and now it is believed that she not only enjoys the bread that perisheth, but feasts upon that which endures to everlasting life. In the day of adversity she considered.

Here is another case: A daughter called upon a missionary, and asked him to visit her mother. He did so, and found her sick. Her husband had become intemperate, lost his employment, left his family, and now, from far away, had made known where he was, and that he also was sick and destitute. The temporal condition of this family very much resembled that of the woman above described; for the absolute necessaries of life were wanting. But this was a woman who once enjoyed religion and the fellowship of an evangelical church; she had back-slidden, and lost her religious enjoyments; adversity had been sent to admonish her. She was thus taught to consider her ways, and to the miseries of poverty was added the torture of a wounded spirit. Doubly acceptable to her, therefore, was the visit of the missionary. God made him the means of relieving her temporal wants and of leading her soul to Christ; and not many days elapsed before she visited him with a glad heart and cheerful countenance, glorifying God for having healed her back-slidings, and restored her to the joy of his salvation. This was the end divine grace would accomplish by sending her adversity; and now, her feet again treading the ways of God's testimonies, the stream of domestic comfort has again begun to flow.

CHOOSING A FIELD.

A young licentiate, on leaving the Theological Seminary a few years since, accepted an invitation to a very feeble congregation, whose aspects were, in every respect, discouraging. Going into the study of a city pastor not far distant, he mentioned his intention. The pastor expressed some surprise. The licentiate was quite talented, very energetic, and was blessed with unusually pleasant social qualities.

"How, my friend, does it happen that you have chosen that forlorn place?" said the pastor. "The prospects there are very unpromising, so much so, that they have been unable for years past to prevail upon any one to settle there." "That is the reason I am going there," replied his visitor. "Other churches have invited me to become their minister, but all of them can easily get some one else; indeed, they are rather in demand. But this little flock nobody else will have, and I think that is reason enough why I should cast in my lot with them." The pastor could say nothing more. The young minister's spirit rebuked him, and at the same time excited his admiration. The call proved to have been a providential one, for no sooner had the earnest, faithful laborer entered on his work, than the neglected vine began to revive, and soon brought forth fruit to the glory of God. The congregation increased to a respectable size, the house of worship was repaired, many souls were converted, and, in a few years, when the church had attained such a degree of prosperity that somebody else "would have" it, the young minister accepted a call to a wider field, and is now the pastor of a city church. The time spent with this cast-off people was the means of building them up, and at the same time gave him a better preparation for the wider field upon which he has since entered.

DEATH-BED REPENTANCE.

I have come to the conclusion that it is best to be *decided,* as far as the denunciation of this subject is concerned.

I can not believe that it is a frequent occurrence that one is truly converted at the close of life, for the following reasons:—

1st. It is contrary to all the plans of God's providence in life. The design of God is to try men for eternity in this life, and that they mature a character for eternity. Now if a man who has been tried, and has matured a wrong character, by a death-bed repentence can slip off so very easily his character and enter heaven, it is clear that it contravenes the law of God's usual providence. Now God does not often break his own laws; and hence it is clear that men can not often thus repent, for they are beyond it when about to go to that world for which their character is already decided.

The Bible tells us of thousands of conversions, and only one or two who were saved when about to die. And these (that one or two) were not those who had often heard the Gospel, but those who, when about to die, heard and embraced it at once. So I can not conclude that the repentance of those who have often heard the Gospel is worth a single straw; while I may hope that he who never heard a word about repentence and faith in Christ, until on his death bed, may repent. Now the latter case I may never meet with, so it is not probable I shall ever witness, or ever have seen a genuine death-bed repentance.

2d. Most of the supposed cases of death-bed repentance will not bear scrutiny, for they are not built on Christ. I have seen what was called *sorrow* and *forsaking of sin,* and *resignation;* but in all these cases it was the forced admission and the compelled quietude which deceived. So of all reference to Christ, it was apparently because they could not deny his name and be saved, and not the leaping of a pious heart to one loved *in and of* himself. So that from this time forth I must deem them all false; while I deny not the power and truth of a few, *very few* cases indeed, on the whole globe since the Christian era.

I might add the influence of pain and derangement, lassitude and medicine, want of reflection, and all the other concomitants as well as the fact that the Bible has no promise, except by implication, to the eleventh hour of sickness, did I need further confirmation.

THE OLD PARSONAGE.

CONFIRMATION OF SCRIPTURE.

After all the attention which has been given to Layard's discoveries among the ruins of Nineveh, we doubt whether the public mind in general is fully aware of the nature and extent of the confirmation which they bring to the truth of the Scripture history. It may be useful here to set out, in the briefest form, specimens of some of the general results of these discoveries.

They show, in conformity with the tenor of Scripture, that the earliest ages were not, as many think, barbarous ages; but that the race of men, originally enlightened from a divine source, had, at first, a high degree of general knowledge, which they gradually lost through their defection to idolatry. It has been demonstrated by these excavations, not only that a high state of the arts existed in Nineveh a thousand years before Christ; but, also, that in the *earliest ages* of that city, dating but a few centuries from the flood, their sculptures were the *best.* In this remarkable result the Egyptian and Assyrian antiquities agree.

It is also proved, contrary to the general impression, that idolatry was introduced when men had a better knowledge of the true God than afterwards prevailed; that it did not grow up as a religion of nature by the ineffectual attempts of man to find the true God. But it was introduced as an expedient of men, in order to obscure what knowledge of God they possessed, because they did not like to retain God in their knowledge. This is shown in the fact, that the earliest representations of God, found in these sculptures, are the best, and immeasurably exceed every thing of the kind existing in after ages; especially in their approach to the true idea of God. So that idolatry came in not for want of light, but by an abuse of light. Men knew God, and yet not willing to glorify him as God, became vain in their imaginations, and their foolish hearts were darkened.

The Scripture accounts of the great antiquity of Nineveh and the Assyrian empire agree with these records dug out of the ruins of Nineveh. The Scriptures date the building of the city not long after the flood; and by the fact that the same marble materials have been used in successive structures, and that ancient buildings have been placed on the ruins of those still more ancient, and other unmistakable indications, the conclusion is made clear, that the city had all the antiquity which the Scriptures ascribe to it.

The monuments also bear upon them the records of the fulfillment of prophecy. Nahum prophesied that the city would be plundered of all its treasures so that none would be left. Layard has found, in all his excavations, nothing in the form of gold or silver; a fact which is remarkable, if the city had not been thoroughly plundered before it was burnt. The prophet foretold that the invaders would obtain easy access to some portions of the city; and that, wherever the inhabitants should resort to the strong holds, these would be burnt. Now, the ruins show just this result; that some parts of the city were destroyed by fire, and others escaped.

But a more striking confirmation is found in the fact, that inscriptions, on the ruins of one of the palaces, give the records of the military career of Sennacherib, with just such a series of conquests, and just such boasting of them, as the Scriptures ascribe to him. For instance, the Bible tells us that Hezekiah rebelled against the king of Assyria; that in the fourteenth year of Hezekiah's reign, Sennacherib came up against all the fenced cities of Judah, and took from Hezekiah three hundred talents of silver, and thirty of gold. Now, compare this with the historical inscriptions on Sennacherib's palace: "Because Hezekiah, king of Judah, did not submit to my yoke, I took and plundered forty-six of his strong fenced cities and innumerable smaller towns, but I left him Jerusalem, his capital city; and because Hezekiah still refused to pay homage, I attacked and carried off the whole population which dwelt around Jerusalem, with thirty talents of gold and eight hundred talents of silver." This agrees with the Bible account, except in respect to the quantity of silver. As to this, the one account may describe what was delivered by Hezekiah, and the other the whole product of his plunder.

One chamber of Sennacherib's palace presents, in sculptures and inscriptions, the siege of the Jewish city, Lachish. The king is sculptured, in royal pomp, on his throne, and over his head is this inscription: "Sennacherib, the mighty king, king of the country of Assyria, sitting on the throne of judgment before the city of Lachish; I give permission for its slaughter." In the Scriptures, the destruction of the city of Lachish is represented to have been his most difficult work; and, of course, it was a victory on which he would most plume himself, as the sculptures show that he did.

Another instance appears in this, that in the historical sculptures there are marks of sudden and final interruption of the work, such as would naturally follow from the violent death of the king as described in the Bible.

In the ruins of Babylon there is no sculptured marble. The city was built of brick. Yet the bricks often have characters stamped on them. In one instance a huge palace is formed of bricks thus stamped; and the same characters repeated, upon one and another; and these characters exhibit the name of "Nebuchadnezzar." The prominent characteristic of Nebuchadnezzar was his pride—such as was revealed in that speech: "Is not this great Babylon that I have built, by the might of my power, and for the honor of my majesty?" Now, these ruins of the palace, in every brick of them, give just the echo of that boasted speech. Thus, after so many centuries, God has brought forth, from the ruins of these cities, voices in response to what the inspired penman has recorded so many centuries before.

WHAT A SAILOR THOUGHT OF MISSIONS.

At the anniversary of the London Missionary Society, Rev. Mr. McLeod related the following incident: Twenty-one years ago he had read in the account of some voyage things to the discredit of the missionaries of this society. Shortly after, meeting with the captain of a ship that voyaged to the South Seas, I inquired of him, he said, "Do you think that Missions have done much good in the South Seas?" He looked at me and said, "I do not know what you know about Missions, but I will tell you a fact. Last year I was wrecked on one of these islands, and I knew that eight years before, an American whaler had been shipwrecked on the same island; that the crew had been murdered; and no doubt you may judge my feelings, when we anticipated that we should either be dashed to pieces on the rocks during the night, or if we survived to the morning, subjected to a dreadful death. As soon as the day broke, I saw a number of canoes, manned, pulling away between the island and the ship. We prepared for the worst consequences. Judge of our amazement, when the natives came on board in a European dress, and spoke to us in English. In that very island I heard the gospel on the Sabbath day, and sat down at the communion table, and sang the same psalm that I sang in Scotland." He added, "I do not know what you think of missions, but I know what I think of them."

AN ALLEGORY.

A venerable old man was toiling through the burden and heat of the day in cultivating his field with his own hand, and depositing the promising seeds into the fruitful lap of the yielding earth. Suddenly there stood before him, under the shade of a huge linden tree, a divine vision. The old man was struck with amazement.

"I am Solomon," spoke the phantom, in a friendly voice. "What are you doing here, old man?"

"If you are Solomon, "replied the venerable laborer, "how can you ask this? In my youth you sent me to the ant; I saw its occupation, and learned from that insect to be industrious and to gather. What I then learned I have followed out to this hour."

"You have only learned half your lesson," resumed the spirit.

"Go again to the ant, and learn from that insect to rest in the winter of your life, and to enjoy what you have gathered up."

MENTAL CULTIVATION NO FOE TO RELIGION.—Mrs. H. S. Herschell beautifully says: "The experience of many years has disabused me of early prejudices. I have had ample proof, not merely that frivolous gaiety is a greater enemy to spiritual religion than intellectual occupation is, but that where intellect slays its hundreds, uncultivated *animalism* slays its thousands. I have seen among the children of religious parents, who have been sedulously kept from the gay pleasures of the world, an eager grasping after worldliness in its lowest and most revolting forms."

A SUNDAY ACCIDENT.

A terrible Sunday accident took place in Louisville, Ky., on the 27th ult. We were tempted, on reading the account, to start the query, whether it was to be looked upon as a judgment for keeping the first day of the week. We may have been wicked in so doing; perhaps some will say, that our temptation was of the evil one. But all the justification we have to offer, is that our text has been furnished us by the keepers of Sunday themselves. Had they not been in the habit of treating of Sunday accidents in this way, perhaps we should never have thought of doing so. But they have done it; why should not we?

We were indulging such reflections, when it occurred to us, that a Teacher, whose wisdom is not to be disputed, had once made an allusion to a company of some eighteen persons, "upon whom the tower in Siloam fell, and slew them," and that he asked the significant question, "Think ye that they were sinners above all men that dwelt in Jerusalem, because they suffered such things?" And then it occurred to us, perhaps those eighteen or twenty persons worshiping in the Third Presbyterian Church of Louisville, upon whom the building fell, and crushed them to instant death, were not sinners above all others, because they suffered such things; and that it might be well not to be too hasty in passing our opinion. Perhaps they were very good people who thus suffered—the very salt of the city; and conscience began to say to us, "Who art thou that judgest another man's servant? To his own Master he standeth or falleth."

While we were thus ruminating, another passage from an old writing came to our mind. It was a little scrap of history about a certain preacher, who was in the habit of journeying a good deal, and even of making voyages by sea. That he was a good man, we have never heard it questioned. Well, he was shipwrecked once, and being cast upon a certain island, he gathered some sticks to make a fire. And there came a viper out of the heat, and fastened on his hand. Now this was regarded by the people who saw it it as a certain indication that he was a murderer, and that the vengence of Heaven was overtaking him. But as no farther harm happened, they changed their minds, and said that he was a god. Acts 28: 1—6.

We thought this story had a moral in it. Here was, in the first place, an unjust censure, then a foolish applause. The barbarians of Melita formed about as reasonable a judgment with regard to the Apostle Paul, as many people of the present day do of others upon whom some calamity falls. They both err in supposing that God in this life avenges the insults offered to his law. They overlook the fact—at least, they *seem* to overlook it—that judgment against an evil work is not executed speedily; that not till death shall have finished its work upon our race, will the day come for inquest into all the deeds that men shall have done in the body. This life is one of probation merely, and to render our probation as complete as possible, God employs such calamities and trials as seem to Him best adapted to the purpose. The tornado at Louisville, involving so many in sudden affliction, was doubtless thus intended, though as to the particular manner in which it shall bring about the result, we are ignorant. Let us leave it with God; He is his own interpreter, and will make it plain.

The case of Job and his three friends is a lesson of the same kind. When that good man was involved in such trials as had not before happened to mortals, his "miserable comforters" professed to find in it the evidence that he had greatly offended his Maker, and that he was suffering on that account. But they darkened counsel by words without knowledge. They did not speak of God that which was right. God himself had testified, that he was an upright man, fearing God, and eschewing evil, and that his like was not to be found in all the earth; and his calamities were no proof that he was not one of the best of men. Job's comforters were of a class that finds its counterpart in this age of the world. They only did what thousands daily do—they misapprehended the question at issue. There was much truth in what they advanced, but their fault lay, chiefly, in the misapplication of truth, and in pressing their sentiments to an extent which real religion, and just views of the moral economy of God, would not justify. The result shewed that, though God was no less wise and good than they had represented Him, yet *His wisdom was unsearchable, and His ways past finding out*, to men such as they were.

Seriously, we have no idea, that the Louisville tragedy was intended as any token of the divine displeasure with those who keep holy the first day of the week. Neither do we suppose that a railroad accident, or a steamboat explosion, or the capsizing of a pleasure boat on Sunday, is any proof that God is angry with those who refuse to keep it holy. Neither in the one case, nor in the other, are we authorized in passing any opinion. Yet it is so common, whenever a calamity befalls those who are making a secular use of the Sunday, to herald it to the world as "a fearful warning," "an awful judgment," and so on, that we could not forbear a significant hint to those who have been in the habit of thus making capital for their favorite day of worship, and of frightening others into the observance of it.

T. B. B.

MOUNT VERNON.

We took passage on a steamer running semi-weekly between Washington and Mount Vernon, distant fifteen miles, for the accommodation of pilgrims to this Mecca of Americans. The morning was bright and hot, very hot. A trip down the Potomac is delightful. The quiet river, with groves of almost primeval stillness bordering its banks, save as now and then the residence of some planter, occupying some picturesque spot, broke upon the sight, presented a scene of placid beauty.

The present proprietor, J. A. Washington, was passenger on the boat. He is a relative of Washington, and bears a faint resemblance to him, but wanting in that noble figure and bearing which characterized the Father of his Country, yet possessing a fine social nature—kindly and urbane.

After leaving Fort Washington, where the boat stopped a short time to give the passengers time to reconnoitre, we were soon in sight of Mount Vernon, which is a promontory, jutting out into the Potomac, winding gracefully at its base. The mansion stands on the summit, looking down from among trees upon the river, like an eagle looking down from its aerie. The little steamer swept around to the wharf for landing visitors.

Leaping ashore, the company proceeded along a plank walk that wound up the ascent, shaded by the overhanging forest. On coming to a level plat of ground, about half way up the ascent, we found ourselves standing before the tomb of Washington, surrounded by his kindred. Mr. Washington, the proprietor of the grounds, instinctively uncovered his head—we could but imitate his example. A sense of awe rushed over us. We stood by the most hallowed spot in America—a spot we had longed to see—a Mecca to our soul. The genius of American independence and American institutions perpetually hover here. From the ashes of the Father of his Country, spring with perpetual life and growth the principles of national prosperity and honor. The tomb is of brick. The front is open and defended by an iron railing. In the front chamber is a Sarcophagus, containing the body of Washington, and another by its side containing that of his wife, with simply their respective names engraved on the lids of each, and the arms of the country on that of the former. Back of these is a vault entirely enclosed, containing other members of the family. There are also two or three monuments erected to different members of the family. The spot is embowered in trees, and looks down in solitary grandeur upon the placid Potomac, with naught to disturb the repose and quiet, save the sighing of winds, songs of birds, and the gentle tread and suppressed voices of pilgrims that flock here.

On the top of the eminence, which Washington named Mount Vernon, after Admiral Vernon, stands the mansion, with its accompanying slave quarters. The edifice is ninety-six feet long, two stories high, with a piazza extending the whole length on the side towards the river. It is built of wood, but so constructed and painted as to give it the appearance of stone. Standing as it does looking down upon the Potomac, with some twenty or thirty miles of its waters in view, it presents a scene of quiet beauty and loveliness. Visitors are not permitted to enter any of the rooms except the sitting-room and the drawing-room. The rooms, as well as the mansion, remain in the simplicity in which Washington left them. They still contain the same antique looking chairs, tables, candlesticks, glasses, pictures, with a few specimens of mineralogy and conchology. In one of the rooms there was a folio volume that seemed to attract much attention from the visitors. It was a *fac simile* of the account book kept by Washington during the war of the Revolution. We turned to the title page and read, "*Accounts, G. Washington, with the U. S., commencing June*, 1775, *and ending June*, 1783—*comprehending a space of eight years*." In the preface it was stated that Washington made no charge of his services; but he kept an accurate account of all his expenditures, which were afterwards paid by Congress. On turning to the back part of the volume, we found the closing of the balance sheet to be "16,311 *pounds*, 17 *shillings, and* 1 *penny—expenditure of* 8 *years*."

There seemed to be a neglect, unthrift, decay, about the whole plantation, and on going to the slave quarters the reason was apparent. The spirit of slavery is the spirit eating up and destroying Mount Vernon, the fair home of Washington. It has already given to many portions of the surrounding country the appearance of a barren wilderness. The inmates of the quarters appeared as if Mr. Washington was an easy task-master, as he undoubtedly is. At the door of the cabin nearest to the mansion, there were a couple of cradles freighted with immortality. The occupant of one of them, with just enough of imported blood in his veins to give a rich southern hue, looked up from amidst rags, filth, flies, and burning sunshine, and with as bright sparkling eyes and intelligent face as we ever beheld in one of his years, gave us a most hearty welcome, evidently having an instinctive impression that he was addressing an abolitionist. The occupant of the other, carefully attended and shielded, lay in silent dignity. We inquired of the attending servants, if it was Master Washington, and received an affirmative answer. We were about to ask if the other was his servant; but, it needed no questions to determine that, and we turned away with a heavy heart, feeling the assurance, that as long as *Washingtons* and *Slaves* are cradled side by side on Mount Vernon, so long will America groan under the curse of slavery.

On returning by the tomb of Washington, we heard several Southernors, as they reclined in the shade of trees, fast by the grave of the Father of his Country, discussing the question of the dissolution of the Union—affirming that the least encroachments of liberty upon the present power and ascendancy of slavery, ought and would result in dissolution, and tauntingly ask, What could the North do without the South? Chase, Seward, and Sumner, were denounced as traitors, who ought to be hung, or, at least, expelled from the Senate of the United States. Fillmore and Douglas were affirmed to be two great, self-sacrificing, pure-minded statesmen, and patriots too good to live North, and ought to come South, where they would be duly appreciated. Such sentiments sounded harsh, and not perfectly jermane to the occasion and associations that one would like to have cluster around the hallowed spot; yet taking into account all of the circumstances and institutions that surrounded us, we could but feel that they were perfectly legitimate. We left the spot with the prayer that as Washington was the father of his country, so may this generation be her true sons. May we complete the battle of Liberty, so nobly commenced by our forefathers, and as they conquered all foreign foes, so may we conquer the great internal foe that is continually gnawing at the vitals of Liberty.

*

"STULTIFYING THE SCRIPTURES"

REVIEWED.

The appearance of an article under the above head, in the *Recorder* of Aug. 31st, by W. M. Fahnestock, M. D., led to a train of reflections, which must serve as an apology for the appearance of my name in your columns.

Half a century since, when the researches of certain persons led them to conclude that the Mosaic account of the creation (as popularly accepted) did not satisfactorily account for certain appearances as observable in the earth's rocky beds, a decided sensation was produced in theological and scientific circles. The infidel school of France seized with avidity upon this apparent discrepance between divine revelation and the deductions of geologists, and believers in the truths of the Bible found themselves called upon to vindicate the very authenticity of the Word itself against the scepticism which fancied itself greatly strengthened by geological phenomena. This discussion engaged some of the most brilliant minds, as well as devout men, of that day. Foremost among them was Dr. Good, (see his unanswerable exposition, in Good's Book of Nature,) and the later Dr. Chalmers, whom the writer refers to with so much sarcastic severity. It is not shown that any of these men became less devout or less believers in the great truths of the Bible, from having taken the ground they did. Indeed, they took their position after much research and a careful collation of facts, as the only one tenable. For they knew, that *facts* were stubborn things, and that if their antagonists stood upon them, they could not hope even to silence, much less to convince them, without looking these facts in the face. Their first business, then, was to investigate; and what Dr. Fahnestock terms *geological speculations, delusions*, they found to be physical truths, and were obliged to meet them as such. How triumphantly they did so, we may judge by the fact that infidelity was effectually silenced, and at this day geology is not referred to as proof against Divine Revelation, except perhaps by a very few, who have never given themselves the trouble to examine that Revelation, as vouchsafed both in the Bible and in God's handiwork. I cannot for a moment doubt the sincerity of the writer in discarding geological facts. It teaches us charity, as we behold how differently different individuals see the same thing from particular stand-points. Nor have I a doubt that if the Doctor had been obliged to meet the arguments that infidels put forth when the battle raged, he would have taken essentially the same grounds occupied by Good, Chalmers, Smith, Lyell, Hitchcock, and a thousand others, no less zealous for God's word than himself. His article appears to have been elicited by a recent lecture of Hugh Miller, delivered before the Young Men's Christian Association in London; and I confess myself deeply interested in this most eloquent of scientific lecturers, and most profound of geological investigators; and the more so, as we view him first drawn to the consideration of this subject by noticing the peculiar impressions upon the slabs of sandstone upon which he was engaged as a quarryman in his native parish. Thus interested, his mercurial nature could not rest, but his research developed discovery after discovery, till, by much reading and extensive travel, he has become not only one of the first geologists of his age, but a master of many sciences, and a public speaker of unrivaled eloquence.

My greatest astonishment is, that in so long an article, so few arguments are found against the alledged stultification of the Scriptures. They sum up as follows: "The conclusions of geologists cannot be certified by higher authority than mere human surmise." In answer to this, I will only refer to the position which Good, Chalmers, and Smith, all divines, and Silliman, with his compeers, were obliged to assume, in explaining them as *facts*, and so interpreting the Scriptures as to make them coincide!

Second—In contrasting the interpretation of the Scriptures by geologists with the doctrine of *chance*, he says, "But while the similee holds good respecting the awful vortex into which it hurries the hopeless wanderer from the counsels of his Maker, God, yet geology fails and falls immeasurably behind the former, in not leading its votary back to God, by the discovery of his handiwork, as it does in the former, by the contemplation of an insignificant plant. For the geologist, emboldened by the seeming incongruities in the 'two records,' the Mosaic and the Geological, clings to the latter, and repudiates the former, as erroneous and fabulous." In relation to the last part of this charge, his own position confutes itself; for instead of *abandoning* the Bible, geologists have endeavored to reconcile the "two records," and it is Mr. Miller's argument for this very object, that he assails.

Whether the study of Geology leads other minds to infidel views, I cannot say; but to myself, no science has ever so forcibly impressed my own with the manifest designs of Deity in fitting up this earth for man's abode, and hence with a belief in his benevolence to man, as the study of Geology. How can it be otherwise? Contemplate the distribution of various rocks suitable for building, the accessibility of the precious metals and base ores, upon which civilization itself is dependent; the formation of soils from whose dark bosom the earth is clothed with vegetation, both for use and ornament; the deposit in the mountain depth of beds of coal sufficient to supply us with fuel for thousands of ages; all which results have, in God's wisdom, been effected by a *progression* of events, each exactly suited to consummate the end desired.

Third—That the doctrine of the Sabbath is ignored, if we suppose the six days of creation and one of rest spoken of are extended and indefinite periods. To my mind, as a Sabbath-keeper, I can see no difficulty in either supposition, whether the six days of creation were actually of twenty-four hours each, but at long intervals perhaps of thousands of ages, or whether they are regarded as days signifying an indefinite age. God rested on the seventh of what he called his days of creation, and in imitation commanded us to rest on the seventh of what we know are our days. Where is the difficulty? Besides, the doctrine of the Sabbath is so often reaffirmed in the Bible, that there is no possibility of a mistake, more than there is that "Thou shalt not kill."

One more objection appears: "That for which man requires ages of geological development to accomplish, God can speak into existence in an instant." No doubt of that, and no one who holds to the doctrine that the writer discards, doubts it. Yet he did *not* speak it into existence all in an instant. Six days, at least, were employed. Now, what special reason was there for employing just six days, of twenty-four hours? The fact, of course, that he saw fit to do so, would be reason sufficient; but if God saw fit to employ days of much greater length, is there any good reason why he should not?

Again—"Sad it is to behold so few theologians, who once get an itching for geological speculations, ever discover their first ill advised step, until they become involved in innumerable and inextricable blunders." This doubtless may be explained upon the principle that theologians, as well as others, have "an itching" for truth, and if prejudice or interest does not operate too strongly for the weakness of the flesh, when they discover what they believe to be truth, are apt to embrace it. Perhaps it was upon the same principle that the theologians of the seventeenth century, who got an itching for investigating Galileo's speculations, never discovered their first ill advised step, but espoused the infidel doctrine, that God had not "appointed the foundations of the earth;" but that it was suspended in space, and various other speculations equally repugnant to the accepted teachings of the Bible. Confessedly, we have much to learn in all directions, and nothing is plainer than that the explanations of many physical phenomena are but partially understood. Yet this cannot be a good reason for discarding investigation, wherever the Creator has manifested his power or goodness in creating a world or opening the tender flower. Truth never can suffer by comparing all of his handiworks, or by placing his written word by the side of his created works. To extend the principle involved in Mr. F.'s review, would destroy itself, by covering too large grounds. For I understand him, by inference, at least, that "the first ill-advised step" must not be taken. Hence we must tread only where the scripture, as we understand it, exactly corresponds with physical phenomena. This would have crushed the germs of our present magnificent system of astronomy in its first development. The consequences to navigation, hence to the evangelization of the world, I need not portray. The exalted estimate of Deity impressed by the system of the heavenly bodies, and the deep lessons of humility and reverence, lost to the world, need not be named. Akin to these, though perhaps in a subordinate degree, always dependent upon the taste and habits of the individual, are the pleasures derived from the study of geology.

To indicate my good will in this article, I propose, that if Dr. Fahnestock will spend a few weeks with me in traversing the geological formations of central and northern New York, I will confess him most pertinacious in his adherence to his position, if he does not essentially modify his views upon *Geological Speculations*.

GURDON EVANS.

IOWA AND MINNESOTA.

A correspondent who has settled in the Far West, writes as follows in regard to Iowa and Minnesota as a field for Sabbath-keepers who desire a location at the West:—

"So far as I have been able to learn—and I have taken some pains to inform myself, both by traveling and inquiry—Iowa and Minnesota present the best locations for settlement of any section so accessible. Without going into details, the land is very good, and the timber is good and convenient to the prairies. The country is well watered, by rapid streams, with bold and hard banks, and stony or gravely bottoms. Springs of the purest water are also plenty. The timber on the streams is thick and heavy, and the land there is rough; but as soon as you leave the timber, the land is very fine, neither too level nor too broken. I have in my mind one section of Minnesota which is specially inviting as a location for a settlement. It is on the Zombro River, about thirty-five miles from the south line of Minnesota, and about sixty miles from the Mississippi River, on a direct line from Dubuque to the Big Bend of St. Peters, the most feasible route for a railroad connecting the two places. There is fine timber, plenty of prairie land, good water, and good water power. The land is not yet in market; but the Homestead Bill being passed, now is the time for young and old to secure them a home. Could you see this country, I think you would be satisfied with its natural advantages. The country is filling up rapidly, and those who desire to secure the best locations, should lose no time."

Sabbatic Interest.—A letter from Clarence, Erie Co. N. Y., informs us that for four or five weeks past there has been considerable interest upon the subject of the Sabbath in that vicinity. It seems that the Seventh-day Baptist preacher (Eld. Rowse Babcock) and the Disciple or Campbellite preacher each delivered a discourse on the subject, in compliance with requests from some of their members. The Methodists then sent for one of their ablest preachers, who discoursed on the subject. Subsequently, the Campbellite reviewed Eld. Babcock's discourse; and at last accounts Eld. Babcock had an appointment to review the discourses of the Methodist and the Campbellite, and also to preach on the subject in other places. The letter says, "It is often conceded in my hearing, that the seventh day is the Sabbath; but it is one thing to convince men, and quite another thing to get them to practice according to their convictions; although I heard it remarked yesterday, that if some one should 'break the ice,' many would follow."

The Presbyterians on Slavery.—The Presbyterian Synod of Utica recently adopted a report by "the Committee on the relations of the Presbyterian Church to Slavery," which sets forth that the General Assembly of the Church has, in 1850–3–4, declared "that the holding our fellow-men in the condition of slavery, except in those cases where it is unavoidable by the laws of the State, the obligations of guardianship, or the demands of humanity, is an offense in the proper import of that term as used in the Book of Discipline, chap. i. sec. 3, and should be regarded and treated in the same manner as other offenses." And further charges, that the reason why slaveholding members of the church have not been brought to discipline lies in the fact that the General Assembly cannot act in the way of discipline, except on appeal from an inferior judicatory, or by way of review and control on inspection of the records of the next lowest judicatories.
